CUTLER, BENJAMIN CLARK, D.D., born in Roxbury, Mass., Feb. 6th, 1798, died at Brooklyn, N. Y., Feb. 10th, 1863. He was for some time a clerk in the mercantile house of Messrs. Benjamin Andrews & Co., of Boston, and, at the age of 17, was confirmed as a member of the Episcopal Church, in the parish of St. Paul's in that city. At about this period he began his classical studies, under the direction of Dr. Jarvis, then rector of St. Paul's, and commenced to prepare for the ministry. He entered Brown University in 1818; graduated in the class of 1822, and pursued his theological studies under the direction of Bishop Griswold, then of Bristol, and by him was ordained deacon, in November, 1822. His first settlement was in Quincy, Mass., where he remained about seven years, leaving his charge only on account of failing health. After a few months he took passage for Savannah, where he spent the winter of 1830. He returned to New England, on horseback, and his health was greatly benefited by the exercise. He subsequently passed about a year as rector of the Episcopal church in Leesburg, Va. In the summer of 1832, he took charge of the first city mission of the Episcopal church in the city of New York; and in April, 1833, he accepted the call of St. Anne's Church, in Brooklyn, to become its rector, in the place of Rev. Dr. Mellvaine, who had been chosen bishop of the Episcopal diocese of Ohio. Here Dr. Clark spent the last thirty years of his life, a faithful pastor of a large and rapidly increasing congregation. Though his health was never strong, his labors were crowned with abundant success, and few pastors enjoyed more completely than himself the entire confidence and love of a people, or the respect and esteem of a community. In 1835 he received the degree of Doctor of Divinity from Columbia College. The immediate cause of his death proved to be an ulcer in the stomach, which at the last was attended with severe suffering.

D

DALTON, the capital of Whitefield county, Georgia, is situated on the Atlantic and Western railroad, one hundred miles N. N. W. of Atlanta, and thirty-eight miles from Chattanooga. It is located in a beautiful and fertile valley, environed by mountains. Large quantities of grain are produced in Whitefield and the adjacent counties. It was strongly occu-

pied by the Confederate forces under Gen. Johnston, during the winter of 1863-'4.

DANNEWERKE. (See DENMARK.)

DELACROIX, FERDINAND VICTOR EUGÈNE, an eminent French painter, born at Charenton Saint Maurice, near Paris, April 26th, 1798, died August 13th, 1863. He was the son of Charles Delacroix de Constant, a prominent

conventionalist, and at eighteen years of age became a pupil of Guérin, the leader of the Classical school, the dogmas of which were then predominant in French art. A revolution in art as well as in political and social ethics was, however, in progress in the French capital, and young Delacroix, with a few others, renouncing the academic traditions of their master, became the founders of the new Romantic school, which was destined to supplant that of David and his followers. His first picture, representing "Dante and Virgil making their Passage around the Infernal City," was exhibited in 1822, and indicated a radical departure from the cold correctness of manner in vogue. A somewhat embittered newspaper controversy was the result, and Thiers, then a writer in the "Constitutionnel," predicted for the painter a distinguished career in his profession. "The Massacre of Scio" followed in the succeeding year, and Delacroix, at the age of twenty-five, found himself the acknowledged chief of the new school. Both pictures are now in the national collection at the Luxembourg.

During the next few years he produced a number of works received with enthusiasm by his constantly increasing body of disciples and admirers, and which the advocates of the Classical school endeavored in vain to have withheld from public exhibition. Among these were "The Execution of Marino Faliero," "Christ in the Garden," "Mephistopheles appearing to Faust," "Milton dictating Paradise Lost to his Daughters," and "Cardinal Richelieu officiating in the Chapel of the Palais Royal." The revolution of July gave a fresh impulse to his genius, and supplied him with new subjects, one of the most happily executed of which was "Liberty leading the People at the Barricades." A journey to Morocco, in 1831, in like manner opened the rich repertory of oriental life and scenery, and his "Women of Algiers," exhibited in 1834, placed him in the estimation of Parisian critics on a level with Rubens as a colorist.

At this period Thiers, who occupied the position of minister of the interior, appointed him to paint the walls of the Salon du Roi, at the Palais Bourbon, on which, during the next three years, he executed a series of symbolical works representing justice, war, peace, agriculture, industry, &c., regarded as among the best specimens of his more elevated style. Many other commissions for public buildings and churches followed, in addition to which he produced a succession of gallery and cabinet pictures, exhibiting a remarkable range of subjects, and the mature development of his style. Among these may be named his famous "Medea," now in the gallery of the Luxembourg, the battles of "Nancy" and "Taillebourg," the "Taking of Constantinople by the Latins," "Cleopatra," "Hanlet with the Skull of Yorick," the "Justice of Trajan," the "Death of Marcus Aurelius," "Ovid in Exile," "Christ at the Tomb," and the "Resurrection of Lazarus," beside nu-

merous other scriptural and eastern subjects, illustrations of Shakespeare, Goethe, Scott, and Byron, and a few portraits, including a well known one of Madame Dudevant (George Sand), in male attire, and one of Talma. At the Exposition Universelle of 1855, he exhibited, in addition to a collection of his most remarkable works, a new picture, "The Lion Hunt," exceeding in color and composition anything that he had previously produced. On this occasion he received one of the grand medals of honor; and, in 1857, he succeeded to the seat in the institute, made vacant by the death of Paul Delaroche. At his death he was also commander in the Legion of Honor. As an author he is known by several characteristic papers on art, published in the *Revue des Deux Mondes* and other periodicals.

Delacroix painted in a bold, free manner, despising apparently careful finish and minute detail; and in his eagerness to obtain striking effects he was frequently inaccurate in drawing, and inharmonious in color. An impetuous energy of style, which permitted no pauses for correction or revision, was one of his chief characteristics; and the result, as seen in some of his pictures, may naturally account for the distaste with which they were once regarded by his old opponents of the Classical school, to whom nicety of drawing and a severely formal style had been long familiar. He, nevertheless, had true artistic feeling, a fertile fancy, and was a surprising colorist, although the claim of his admirers that in the latter respect he equalled Rubens and the Venetian masters will not be universally allowed. He will not, perhaps, ultimately take the rank which has been assigned to him; but that he exerted a great and beneficial influence on contemporary French art, cannot be questioned.

DELAWARE, which is the smallest State in the Union, except Rhode Island, is about 96 miles in length, and 37 miles in its greatest breadth, including an area of 2,120 square miles, or 1,356,800 acres. Its population in 1860 was 90,589 whites; 19,829 free colored, and 1,798 slaves. The State is divided into three counties, viz.: Kent, Newcastle, and Suffolk. The total vote of the State in 1860 was 16,039. In 1862 the vote for governor was 16,199; for members of Congress 16,065.

The governor elect of the State, William Cannon, was inaugurated in January, at which time a biennial session of the Legislature commenced. This body consists of nine senators, and twenty-one representatives, which were divided as follows: Senate—Administration 4, Opposition 5; House—7, Administration, 14 Opposition. Soon after the commencement of the session the following resolutions passed both Houses:

Whereas the Government of the United States and the several States are governments of laws, within the limits of which all officials find their rightful powers, and outside of which no official has any just claim to power or to obedience from his fellow citizens; and whereas William Cannon, the Governor of this State,

his inaugural address, has avowed the false and dangerous doctrine that "reasonable ground for suspicion" can justify the arbitrary arrest and incarceration in prisons, far removed from the district of their residence, of citizens against whom no warrant has been issued or charge made according to law; and has unabashedly published his approval of these cruel and lawless arrests of his own fellow citizens; and whereas he has thus proved himself by this avowal the weak and willing tool of Federal usurpation, and a Governor unworthy the respect and confidence of his fellow citizens—one to whom they can look for no just protection of their rights of person and of property; therefore be it

Resolved, That the doctrines of Gov. Cannon's address, in regard to arbitrary and lawless arrests are, if carried out, fatal to constitutional liberty, destructive of the peace and security of our people, and deserve and hereby receive, at the hands of the Legislature of Delaware, prompt and indignant repudiation, and are declared worthy of the severest reprehension of a people who inherit the privileges of freemen and wish to preserve them unimpaired.

These resolutions were followed by the passage of an act to prevent "illegal arrests." The governor has no veto under the Constitution of the State over bills passed by the Legislature; he, therefore, immediately sent the following special message to that body:

STATE OF DELAWARE, EXECUTIVE DEPARTMENT, }
March 3d, 1863. }

To the Senate and House of Representatives of the State of Delaware in General Assembly met:

The passage by the General Assembly of the act entitled "An act to prevent illegal arrests in this State," renders it proper that I should briefly communicate my views and purposes in relation to it.

The preamble of the act refers to the Constitution of the United States, as providing that no person shall be deprived of life, liberty, or property without due process of law; but it ought also to have been recollected that the same Constitution provides that in case of rebellion or invasion that privilege of the writ of habeas corpus may be suspended when the public safety requires it, and that dangerous persons may be arrested, and held without bail or mainprize. This provision overrides the Constitution of the State of Delaware, or any statute that may be enacted by her Legislature.

To whom the right to decide when the exigency has happened requiring the exercise of the power of suspension is a question of constitutional construction upon which jurists differ. That it is a necessary power admitted. That it exists there can be no doubt. Whoever is invested with the power to suspend is the sole judge of the occasion of its exercise. Being incidental to the general duty of the enforcement of the laws and now called into exercise for the suppression of armed insurrection, I am satisfied that it properly belongs to the national Executive, and in my official acts I shall regard it as vested in the President of the United States.

The preservation of the Government is the highest duty of those charged with its administration, and the personal liberty of the individual is only to be regarded when compatible with its safety. That the citizen should have the right fairly to discuss public measures, is true. That the people should be permitted peaceably to assemble and petition for a redress of grievances, is undeniable. But there is a wide difference between the exercise of this right and the disloyal opposition which proceeds from sympathy with a public enemy. The former supposes that all parties are well affected toward the common government, and differ only as to the mode of its administration. The latter is based upon hostility to existing institutions, and aims at their forcible subversion. The idea that

the Government is bound to await the development of a conspiracy until the actors shall have perfected their plans and committed some overt act necessary to bring them within the technical definition of treason, is, to my mind, absurd. The object is not punishment, but prevention. That the power is liable to abuse, is true; all discretionary powers necessarily are so. To decide against its existence because it is capable of excess, would destroy all human government. The best mode to avoid liability to arrest, is to be faithful. No man who is truly and unequivocally loyal, has ever been in danger of being molested by the National Government.

Still it is possible that arrests may be improperly and unadvisedly made; and while it is my duty to co-operate with the General Government in the maintenance of its authority, I will, at the same time, to the extent of my power protect peaceful and loyal citizens, whatever may be their political sentiments. While, however, such is my purpose in relation to them, it is also my duty to take care that the State of Delaware shall not be made the refuge of foreign traitors or domestic conspirators.

That there has been from the beginning of the rebellion a considerable number of our people ready to participate in armed resistance to the lawful authorities, whenever a fair opportunity should occur, I have no doubt. Sympathy with the Southern States in insurrection is sympathy with the overthrow of the National Government. No man can bear with gratification of a reverse to our arms who is not at heart a traitor.

My predecessor, in an official communication, expressed the opinion that "a majority of our citizens, if not in all our counties, at least in the two lower ones, sympathize with the South." Without admitting the correctness of his estimate of numbers, I do not doubt of the existence of wide-spread disaffection. That there has been no outbreak here is the result of want of opportunity. It is the duty of the Executive, not only of the United States, but of this State, to take care that no opportunity shall be afforded. If, to secure the public peace and to prevent insurrection, it becomes necessary to arrest any individual within this State, whether he be a citizen or a non-resident, I will not only assent to the act, but will maintain it.

Invested by the Constitution with no power of veto or review of the action of the Legislature, the Governor has a general control over the operation of criminal enactments, and such control I will exercise to its utmost extent to protect any person acting under the authority of the President of the United States, or any citizen aiding such person in bringing to light any conspiracy, or in arresting any one guilty of disloyal practices or treasonable designs against the Government.

I shall issue my proclamation in conformity with these views, giving to the people of the State of Delaware information of my intended action.

WILLIAM CANNON.

On the 11th of March, he issued the following proclamation:

To the People of the State of Delaware:

In a special message communicated to the General Assembly on the third day of March instant, I informed that body of my purpose to issue my proclamation in relation to the act entitled "An act to prevent illegal arrests in this State," and therein briefly set forth the reasons which impelled me to this conclusion.

Its provisions are at variance with the interests of the State—calculated to lessen the estimation in which her people are held, as faithful to the Government of the United States—to embolden those who sympathize with rebellion, and to discourage loyal men from the performance of their duty, in discovering and thwarting the designs of the emissaries of treason.

To the end, therefore, that the evil operation of the enactment may be averted, and loyal citizens may feel secured in their efforts against foreign traitors and domestic conspirators, I William Cannon, Governor

of the State of Delaware, do, by this proclamation, enjoin upon the good people of this State that they hold true allegiance to the Government of the United States as paramount to the State of Delaware, and that they obey the constituted authorities thereof before the Legislature of the State of Delaware, or any other human authority whatsoever.

I further enjoin that they be vigilant in detecting any conspiracy against the National Government, and diligent in preventing aid and comfort to the public enemy; that they promptly assist the national magistracy whenever invoked, and that they freely communicate any information which may the better enable it to suppress insurrection or to intercept supplies designed for those in arms against its authority; and any one so acting, I will save harmless from the operation of the statute aforesaid, or of any other statute, of like nature, that may be enacted, so far as it shall be attempted to be enforced against him for faithfully discharging his duty to his country.

In testimony whereof I have hereunto set my hand, and caused the great seal of the said State to be affixed, at Dover, this eleventh day of March, in the year of our Lord, one thousand eight hundred and sixty-three, and of the State the eighty-seventh.

WILLIAM CANNON.

At this session of the Legislature, James A. Bayard was reelected to the United States Senate for the term of six years, from March 4th, 1863. The vote was: Bayard 19; Bradford 10. Mr. Bayard subsequently resigned his seat a few days after the commencement of the ensuing session.

Delaware has but one representative in Congress. William Temple had been elected in November 1862, and died. (*See OBITUARIES.*) On October 7th, Nathaniel B. Smithers, Secretary of State, was nominated to fill the vacancy by the friends of the administration. The Opposition nominated Charles Brown. The day of election was November 19th. On the 13th of November, Gen. Schenck, in command of the Middle Department of the United States, issued the following general order:

General Orders, No. 59.

HEADQUARTERS, MIDDLE DEPARTMENT,
EIGHTH ARMY CORPS, }
BALTIMORE, MD., November 13th, 1863. }

It is known that there are many evil disposed persons now at large in the State of Delaware, who have been engaged in rebellion against the lawful Government, or have given aid or comfort or encouragement to others so engaged, or who do not recognize their allegiance to the United States, and who may avail themselves of the indulgence of the authority which tolerates their presence to attempt to take part in or embarrass the special election in that State. It is therefore ordered:

I. That all Provost Marshals and other military officers do prevent all disturbance and violence at or about the polls, whether offered by such persons as above described, or by any other person or persons whomsoever.

II. That all Provost Marshals and other military officers commanding in Delaware, shall support the judges of election on the 19th of November, 1863, in requiring an oath of allegiance to the United States, as the test of citizenship of any one whose oath may be challenged on the ground that he is not loyal or does not admit his allegiance to the United States, which oath shall be in the following form and terms:

"I do solemnly swear that I will support, protect, and defend the Constitution and Government of the United States against all enemies, whether domestic or foreign; that I hereby pledge my allegiance, faith,

and loyalty to the same, any ordinance, resolution, or law of any State Convention or State Legislature to the contrary notwithstanding: that I will at all times yield a hearty and willing obedience to the said Constitution and Government, and will not, directly or indirectly, do any act of hostility to the same, either by taking up arms against them, or aiding or abetting, or countenancing those in arms against them; that, without permission from the lawful authority, I will have no communication, direct or indirect, with the States in insurrection against the United States, or with either of them, or with any person or persons within said insurrectionary States; and that I will in all things deport myself as a good and loyal citizen of the United States. This I do in good faith, with full determination, pledge, and purpose to keep this, my sworn obligation, and without any mental reservation or evasion whatsoever."

III. Provost Marshals and other military officers are directed to report to these headquarters any judge of election who shall refuse his aid in carrying out this order; or who, on challenge of a vote being made on the ground of disloyalty or hostility to the Government, shall refuse to require the oath of allegiance from such voter. By command of

Major-General SCHENCK.

W. H. CHESEBROUGH, Lieutenant-Colonel and Assistant Adjutant-General.

E. L. TYLER, Aide-de-Camp.

The governor of the State, at the same time, issued the following appeal to the people:

STATE OF DELAWARE, EXECUTIVE DEPARTMENT, }
DOVER, November 13th, 1863. }

All civil officers and good citizens of this State are enjoined to obey the above military order, issued by the commanding general of the Middle Department, and to give all needful aid for the proper enforcement of the same.

WILLIAM CANNON, Governor of Delaware.

On the next day, the following order was issued by the general in command of the Delaware district or department:

General Orders, No. 14.

HEADQUARTERS, DELAWARE DEPARTMENT, }
WILMINGTON, DEL., November 14th, 1863. }

The enforcement of General Orders, No. 59, issued from headquarters Middle Department, Nov. 13th, 1863, by Major-General Schenck, and confirmed by the order of his Excellency Governor Cannon, is confided to the troops in this Department.

The objects of this order, as construed by the General Commanding, are:

I. To secure to every loyal citizen the right to vote as he pleases.

II. To protect the polls from that outside violence which has heretofore, in some parts of the State, prevented loyal and peaceable citizens from voting.

Special instructions will be issued to the officers in command of detachments which will be implicitly obeyed, and for the enforcement of which every officer will be held strictly responsible. By order of

Brigadier-General TYLER.

E. L. TYLER, Acting Assistant Adjutant-General.

On the next day, the following order containing instructions was issued:

HEADQUARTERS, DISTRICT OF DELAWARE, }
MIDDLE DEPARTMENT, WILMINGTON, DEL., }
November 15th, 1863. }

The following instructions have been received from the General Commanding, and will be strictly and carefully observed by all detachments of officers and soldiers within the "District of Delaware," while carrying out the provisions of Department General Orders, No. 59, during the election to be held on the 19th instant:

"Every officer or non-commissioned officer in command of a detachment will be held strictly accountable

for the good conduct and obedience of the men in his charge.

"Officers and soldiers must be strictly sober, and while preventing disturbance by others, must avoid all disturbance themselves, and are required not to hang around the polls nor engage in political discussions.

"It will be borne in mind that the whole object of the order of the Commanding General is to preserve peace at the places of voting, to sustain the judges or inspectors of election, to protect loyal voters, and to prevent from voting disloyal and traitorously disposed persons who refuse to take the oath of allegiance.

"In enforcing paragraph I. of the General Order, to prevent violence and disturbance at the polls, care will be taken that disloyal citizens of other States do not, as it is apprehended they will attempt to do, intrude themselves at the places of voting, and endeavor to intimidate the lawful and loyal voters of Delaware."

DANIEL TYLER, Brig.-Gen. Commanding.

On the 17th of November, a public meeting of the Opposition was held at Newcastle, at which a resolution was passed, "that the following address be issued to the Democrats of the county."

NEWCASTLE, DELAWARE, November 17th, 1863.

To the Democrats of Newcastle County, Delaware:

The undersigned, Democratic voters of Newcastle county, represent:

That at the Democratic State Convention held at Dover, September 18th, 1863, to nominate a candidate to fill the office of Representative in Congress, made vacant by the death of the Hon. William Temple, the Convention unanimously nominated the Hon. Charles Brown, of Dover Hundred, in the county of Kent, for the office designated; and ever since the adjournment of the said Convention the canvass has duly and quietly proceeded with every reasonable prospect for the success of our candidate, all of which facts are of public knowledge.

To our astonishment and regret, however, we are informed by a public military and civil order, dated November 13th, 1863, and made known to us on the 16th of the same month, that the constitutional and legal rights of the citizens of the State of Delaware to regulate their own elections, and make and prescribe all qualifications for voters at the ensuing special election on the 19th instant, have been utterly subverted, and new qualifications and tests, unauthorized by the Constitution of the United States, and contrary to the constitution and laws of the State of Delaware, imposed upon her citizens by military power.

With the several and collective knowledge and belief of the undersigned, they utterly deny the existence within this State, now or in any past time, of associations or individuals hostile to the welfare of the Government of the United States and of its Constitution and laws; and considering the said military order (to which the unauthorized recognition of the Executive of Delaware gives no sanction) as uncalled for, illegal, and unjust, do earnestly protest against the same—and against the interference of the Federal Government in the election held within our State, and in view of the presence and intimidation of a large military force of the United States in our State, and the indisposition of our people to produce collision with the armed forces of the General Government—do hereby recommend to the Democrats of Newcastle county, whether officers of election or voters, to submit to their disfranchisement and take no part in the said special election, but to rely upon the official oaths and consciences of the next House of Representatives in the Congress of the United States, to declare null and void an election so held, and conducted contrary to the laws of the State of Delaware in that behalf, and controlled by a power unknown to the constitution and laws of our State.

The address was signed by a considerable number of citizens. The result of this address

VOL. III.—22 A

was, that the Opposition declined to vote, and on the day of election Mr. Smithers received 8,220 votes, and Mr. Brown 13. The vote at the election for member of Congress in November, 1862, was: Fisher, Administration, 8,014; Temple, Opposition, 8,051.

On the invasion of Pennsylvania by Gen. Lee, 2,000 men who had been organized for State defence turned out to aid the regular forces to guard important positions. At that time, the State had furnished to the army seven regiments, including the three months' men, a battery, and a battalion of cavalry.

DENMARK, a kingdom in Northern Europe. The king is Christian IX., Charles Frederick Augustus. He was born July 19th, 1798, and ascended the throne November 15th, 1863. The kingdom consists of Denmark Proper, embracing the islands and Jutland; also the Duchies of Schleswig, Holstein, and Lauenburg, and a number of dependencies, including the Faroe Islands (17 in number), Iceland, Greenland, and three islands in the West Indies, viz.: St. Croix, St. Thomas, and St. Jean. The following table exhibits the area (in geographical square miles), and the population according to the census of February 1st, 1860:

1. KINGDOM OF DENMARK.		
Copenhagen.....	} 134	155,143
Zealand and Möen.....		419,663
Bornholm.....	10.50	29,304
Fuhnen and Langeland.....	60.50	205,826

The army of the Danish monarchy consists, according to law, on the peace footing, of 23 battalions of infantry, comprising 16,630 men; 25 squadrons of cavalry, with 2,895 men; and two regiments of artillery, with 2,560 men, and 97 pieces of ordnance. This total of 22,000 men, which on the war footing is to be doubled, has been seldom reached of late years. To diminish the budget the standing army has been kept down to about 12,000 men; but during the Schleswig-Holstein war of 1848-'50 there were in the field 49,300 infantry, 10,600 cavalry, and 9,000 artillery with 144 guns. The army is formed by conscription, to which every man in good health, who has reached his 22d year, is liable. The legal time of service is eight years, but *de facto* the recruits are not kept longer than about ten months under arms, and afterward sent home on furlough and called out for annual exercise. At the end of

the first period of service the men are inscribed on the "first call" of the army of reserve, and at the end of another eight years on the "second call;" the military liability ceases with the 45th year.

The navy of Denmark consisted, in September, 1862, of 19 sailing vessels with 704 guns, and 28 steamers with 340 guns. Twenty of the steamers were screws, one a ship of the line with 64 30-pounders, two frigates with 42, and one with 44; four were armor-coated schooners each with eight 60-pounders. There were also 50 paddlewheel steam gunboats, with about 100 guns, but some of them are said not to be sea-worthy; and the same remark applies to the eight larger paddlewheel steamers included in the list of 28 steam vessels. There was a vote, in 1862, of £194,000 for converting some of the sailing vessels into steamers. The navy was manned, in September, 1862, by very nearly 2,000 men, officered by a vice-admiral, a rear-admiral, 26 captains, 23 commanders, and 83 first-lieutenants.

The finances of the kingdom are in a good condition. The receipts amount to 26,507,279 rix dollars; the expenditures to 26,221,587. Besides the Danish Government has received 2,565,547 rix dollars as indemnity stipulated for the abolition of the Sound Dues. This sum has been applied toward the liquidation of the public debt. There remained in the public Treasury, according to the latest accounts, 4,286,312 rix dollars.

The Royal Family of Denmark was greatly favored during the year 1863. The oldest daughter of the present king, Princess Alexandra, was married to the Prince of Wales; another daughter, Princess Maria Sophia Frederica Dagmar, was betrothed to the heir presumptive to the throne of Russia; and the second son of the king was elected King of the Greeks, under the name of George I. (*See GREECE.*)

The Kingdom of Denmark attracted, throughout the year 1863, great attention in the political world, in consequence of its complications with the German Confederacy. These complications are of long standing, and arise out of the peculiar position of the duchies of Schleswig, Holstein, and Lauenburg. The two latter are members of the German Confederacy, and as such subject to Federal legislation; and Schleswig is closely connected with Holstein by international treaties. The Diets of both duchies have long maintained that the Danish Government endeavored to encroach upon their rights, and to bring them into closer relations with Denmark Proper than she was allowed to do, according to their laws. The German Confederacy supported the complaints of Holstein, and protested particularly against the new Danish Constitution of March 30th, 1863, by which Schleswig was incorporated with Denmark. These complications reached the crisis, when King Frederic VII. of Denmark died on Nov. 15th, 1863. Schleswig and

Holstein have always had a different law of succession from Denmark Proper. According to the laws of these two duchies, the Prince of Augustenburg was entitled to succeed the late king, as Duke of Schleswig and Holstein, while another relation was entitled to succeed in Denmark Proper. But a treaty concluded between the great Powers of Europe, in London, in 1851, set aside the laws of succession both in Denmark Proper and in the Duchies, and declared the Duke Christian of Schleswig-Holstein-Sonderburg-Glücksburg, to be the heir to the entire Danish monarchy. As this treaty had received neither the consent of the Diets of the Duchies, nor of the German Confederacy, Prince Frederic of Augustenburg insisted on his right of succession, and his claim was supported by the Diets of the two Duchies and a majority of the German States. As Denmark refused to recognize this claim, the complication assumed a belligerent character, and the year 1863 closed with the prospect of a war upon which all Europe looked with profound anxiety. (*See SCHLESWIG-HOLSTEIN.*)

It was expected that, in case of a war, the Danes would find a powerful line of defence in the celebrated Dannewerke. These positions were of great importance in the war of 1848, and bid fair to become still more important in 1864. The following description of the Dannewerke will, therefore, be a help for better understanding the German Danish complication:

"Originally constructed by the Semiramis of the North, Queen Margaret, and, as some say, even earlier, the Dannewerke extended from Hellingstadt to the Selker Noer of Bustorf, and consisted of a simple rampart sweeping inward with a moat in front in a sharp angle of the Thvraburg, a hill which has long disappeared in the neighborhood of the village of Hussbye. The object of this fortification was to protect the town of Schleswig, which is situated at the head of the Schlei, against an attack from the southward, and at that time the Schlei, a perfectly impassable swamp, formed a part of the fortification. This fortification was extended by including the whole bay, more than six German miles, while the rampart had only been of a length of two German miles. The weak point of this position was on the west side, where, toward the open country, it was unfortified, and could, therefore, easily be assaulted in the rear.

"In this direction the only defence was a broad swift stream with a swampy bed, the Treene, which, however, offered but a trifling obstacle to a determined enemy. In 1848, the so-called rampart consisted only of a continuous hilly elevation of the ground, with a depression in front denoting where formerly had been the moat, and hence it was that the German troops were able to take it at the first attack. The principal combat took place on the heights surrounding the town of Schleswig, where the village of Bustorf formed a kind of suburb. On that day a trifling skirmish took place at the

only ford over the Schlei, at Misunde, where a few companies of Schleswig-Holsteiners forced a passage across the ford against the volunteers under Aldrosser and Von der Tann, whereby the Danes were compelled to retreat earlier than they otherwise would have done.

"At present the nature of the fortifications is entirely changed. Since 1850 the attention of the Danes has been directed to strengthening the Dannewerke, and they have chiefly endeavored to fortify the weak point on the river Treene, and oppose sufficient obstacles to another attack from the rear.

"To achieve their object they took possession of the town of Fredrickstadt, where the above-named river falls into the Eider. This place they fortified, and, as is well known, the Schleswig-Holsteiners, at the close of 1850, vainly endeavored to take it by assault. At present Frederickstadt, with the *tête du pont* on the Holstein bank of the Eider, forms, on account of its swampy situation, an uncommonly strong point, since the passage over the Eider is completely commanded on this side, and it could only be reduced by a regular and very difficult siege. Even supposing an enemy were to pass the Treene, either above or below Frederickstadt, little would be gained, since the whole land as far as Frederickstadt, two German miles beyond Schleswig, is cut up by canals and water-courses which can all be filled by opening fourteen sluices, arranged for that purpose in the Treene. The few dams which form the means of communication in this extensive system of inundation works are in addition commanded at all fitting points by intrenchments, and larger works, as far as Hellingstadt. At the commencement of the town of Schleswig, on the heights rising from the mainland, a series of powerful batteries, armed with guns of the heaviest caliber, offer a new hindrance to the advancing foe. The Austrians, to whose share, according to the latest accounts, the task of attacking this position is to fall, will find it no easy matter. Still the difficulties which await the Prussians in their advance by the Rendsburg road are still greater. The intrenchments commence at this point, at the village of Wedelspang, and the first line stretches toward the east through the Selker Noer to the Schlei, toward the west in the neighborhood of the Rothen Krug, to which point the batteries extend from the opposite direction of Hellingstadt, and at the junction the defences are crowned with a very powerfully armed and fortified battery. A second line of intrenchments commences behind these, with a strong block-house at Bustorf, comparable to a small fortress, and culminates in the opposite direction at Husbye, which again, being transformed into a kind of large *place d'armes*, is connected with Hellingstadt by a series of smaller intermediate works. This second line entirely commands the first, and Bustorf, in particular, appears impregnable by assault, owing to the

deep and extended Bustorf dyke, situated between that place and the Schlei.

"A third and last line of intrenchments extends from the town of Schleswig over the Erdbeerburg, the Anneten höhe, and the Pulverholz, as far as the Zoological Gardens, and here again it is connected with the works extending from Husbye and the village of Schubyke. Finally, to prevent a passage of the Schlei, and an attack from thence, the ford at Misunde is powerfully fortified, and a very strong *tête du pont* constructed there."

"Intrenchments, furnished with guns of the heaviest caliber, are also raised at every point where any attempt of the sort could possibly be made."

DERBISHIRE, STEWART, "Printer to the Queen's Most Excellent Majesty" in the province of Canada. Mr. Derbyshire was the son of an English gentleman, the late Dr. Derbyshire, of Bath, England. Dr. Derbyshire married a Scotch lady, Miss Allan Masterton, of Edinburgh, the intimate friend of Burns; the "Allan" of the song "Here are we met, three merry boys." Miss M. was distinguished for great personal charms, and more than average mental abilities, and was the subject of those lines addressed by Burns to "Bonnie Ann." Mr. Derbyshire commenced life as an ensign in the British army, which service he soon left and turned to the study of the law, practising with considerable éclat, having been engaged in several cases of much public interest, in the conduct of which he distinguished himself. He defended the cause of the "Dorchester Laborers" prosecuted for "machine" breaking and agrarian outrages, in 1832. The case created great public interest at the time. At an early period of his life, Mr. D. connected himself with the London press, and he was the author of a very useful little work, entitled the "Parliamentary Intelligencer." He exerted himself largely in the movement which effected the Reform Bill; his personal as well as literary services being always at the disposal of his party, and ever rendered with the zeal of conviction and the self-sacrificing devotion of his warm-hearted nature.

During the Spanish Constitutional War, Mr. D. was commissioned by a London journal to proceed to the seat of war as special correspondent at the headquarters of the Constitutional army. Here he not only acquired a reputation as a writer, but was also noted for his personal bravery. He volunteered at the assault of Irun, for which he received a medal, as well as a very handsome letter from Sir De Lacy Evans, the English commander. Mr. D.'s conduct also earned the high approbation of Narvaez, under whose eye he served in the campaigns of Castile, Valladolid, and Segovia, and whose orders he carried in the decisive action which, terminating in the defeat of Gomez, virtually placed the crown of Spain on the head of Isabella the Catholic. The Boston "Courier," some years ago, amongst several

anecdotes of Spanish celebrities, published one in which it attributes the honor of saving the life of his friend, Narvaez, in a mutiny, to Mr. Derbshire, and, it is said, he was the first who foretold the rise of Narvaez, and pointed out the inefficiency of Espartero to the Melbourne ministry, then active champions of the Quadruple Alliance. He came to Canada as an *attaché* to the late Earl of Durham, Lord High Commissioner, previous to the arrival of that nobleman, and took an active part in the suppression of the rebellion of 1839. On one occasion he was the bearer of despatches from the Canadian authorities to the late Lord Clyde, then lieut.-governor of Nova Scotia, and that in mid-winter, when he had to travel by sleigh and horse through a complete wilderness, tarrying neither night nor day, till his mission was accomplished. After the departure of Lord Durham, Mr. D. warmly espoused the cause of Lord Sydenham. He was known as a Canadian journalist of considerable literary reputation and ability. He was the first member returned to the united parliament for "Bytown," now Ottawa city, the capital of Canada, and by his vote condemned the claim of Lord Metcalfe, the governor-general, to make appointments without the knowledge of the cabinet. He was one of the founders of the system of government under which the public affairs of Canada are conducted, known by the name of "Responsible Government," and not even the threat of the administration of the day to deprive him of his office, as queen's printer, could induce him to coöperate in pulling down the edifice he had done so much to rear. He was a most estimable man—the patron of every species of talent, his by no means inconsiderable income was nobly spent. He died at Quebec, March 27th, 1863.

DESPRETZ, CESAR MANSUÈTE, a French savant and author, born at Lessines, in Hainault, May 13th, 1789, died at Paris, March 15th, 1863. He was a member of the Institute of France (section of physical sciences), and professor of physics to the faculty of sciences. He was one of the oldest and most active members of the Philomathic Society, in whose sessions he had taken part since 1820. His election to the Academy of Sciences dates from 1841, having been the successor of Savart. After devoting himself for many years to chemistry, and filling the office of chemical instructor at the Polytechnic School, he turned his attention, after his 40th year, exclusively to physical science, and especially to the phenomena of heat and its effect in changing the forms and conditions of different bodies. These investigations, though of great importance, were not of a character to win popular applause or to give him great notoriety. He succeeded, as he believed, in making artificial diamonds of microscopic size, by subjecting very pure carbon resulting from the calcination of sugar to a succession of discharges from the electro-magnetic battery of induction. His papers in the

Annales de Chimie et de Physique, and in the *Comptes rendus de l'Académie des Sciences* were very numerous. The following are the titles of some of the most important: "Memoirs upon the Cooling of certain Metals with a View to the Determination of their specific Heat, and their Power of Conduction;" "Upon the elastic Force of Vapors;" "Upon the Density of Vapors;" "Upon the Heat disengaged in Combustion;" "Upon the latent Heat of different Vapors;" "Experimental Researches upon the Causes of animal Heat;" "Upon the Displacement and the Oscillations of Zero in the Mercurial Thermometer;" "Upon the Heat absorbed in the Fusion of Bodies;" "Upon the Limits of Perception of sharp and grave Sounds;" "Upon the Compressibility of elastic Fluids," &c., &c. M. Despretz was the author of a "Treatise on Chemistry," 2 vols. 8vo., and a "Treatise on Elementary Physics," 1 vol. 8vo., which passed through a number of editions.

DIPLOMATIC CORRESPONDENCE. The most important subject of diplomatic correspondence during 1863, arose between the United States and Great Britain relative to the construction at British shipyards of vessels intended to make war upon the commerce of the United States. During the previous year the steamers Alabama and Florida had been so built and delivered to Confederate officers, and were subsequently armed, and commenced the destruction of Federal vessels on the ocean. As a general question: Were such actions on the part of Great Britain consistent with neutral rights and obligations? If not, that country then was responsible to the United States Government for the damage committed by these vessels while in the hands of the Confederates.

On the 20th of November, 1862, Mr. Adams, the American minister at London, writes to Earl Russell in reference to the 290 or Alabama, stating the circumstances relative to her construction and departure only in time to escape seizure (*see* ANNUAL CYCLOPÆDIA, 1862), and thus proceeds:

It thus appears that her Majesty's Government had, from the evidence which I have had the honor to submit to your lordship's consideration, and from other inquiry, become so far convinced of the true nature of the enterprise in agitation at Liverpool as to have determined on detaining the vessel. So far as this action went, it seems to have admitted the existence of a case of violation of the law of neutrality in one of her Majesty's ports, of which the Government of the United States had a right to complain. The question will then remain, how far the failure of the proceedings, thus admitted to have been instituted by her Majesty's Government to prevent the departure of this vessel, affects the right of reclamation of the Government of the United States for the grievous damage done to the property of their citizens in permitting the escape of this lawless pirate from its jurisdiction.

And here it may not be without its use to call to your lordship's recollection for a moment the fact that this question, like almost all others connected with the duty of neutrals in time of war on the high seas, has been much agitated in the discussions heretofore held between the authorities of the two countries. During the latter part of the last century it fell to the lot of

her Majesty's Government to make the strongest remonstrances against the fitting out in the ports of the United States of vessels with an intent to prey upon British commerce—not, however, in the barbarous and illegal manner shown to have been practised by No. 290, but subject to the forms of ultimate adjudication equally recognized by all civilized nations. And they went the further length of urging the acknowledgment of the principle of compensation in damages for the consequences of not preventing the departure of such vessels. That principle was formally recognized as valid by both parties in the seventh article of the treaty of the 19th November, 1794; and, accordingly, all cases of damage previously done by capture of British vessels or merchandise by vessels originally fitted out in the ports of the United States were therein agreed to be referred to a commission provided for by that treaty to award the necessary sums for full compensation.

I am well aware that the provisions of that treaty are no longer in force; and that even if they were, they bound only the United States to make good the damage done in the precise contingency then occurring. But I cannot for a moment permit myself to suppose that her Majesty's Government, by the very act of pressing for the recognition of the principle in a treaty, when it applied for its own benefit, did not mean to be understood as equally ready to sustain it, at any and all times, when it might be justly applied to the omission to prevent similar action of British subjects within its own jurisdiction toward the people of the United States.

But I would beg further to call your lordship's attention to the circumstance that there is the strongest reason to believe that the claim for compensation in cases of this kind was not pressed by her Majesty's Government merely in connection with the obtaining a formal recognition of the principle in an express contract. This seems to have been but a later step, and one growing out of a previous advance of a similar demand, based only on general principles of equity, that should prevail at all times between nations. Here again it appears that the Government of the United States, having admitted a failure down to a certain date in taking efficient steps to prevent the outfit in their ports of cruisers against the vessels of Great Britain, with whom they were at peace, recognized the validity of the claim advanced by Mr. Hammond, his Majesty's minister plenipotentiary at Philadelphia, for captures of British vessels subsequently made by those cruisers even on the high seas. This principle will be found acknowledged in its full length in the reply* of Mr. Jefferson, then Secretary of State of the

United States, dated 5th September, 1793, to a letter from Mr. Hammond of the 30th August preceding—a copy of which is unfortunately not in my possession—but which, from the tenor of the answer, I must presume to have itself distinctly presented the admitted ground of the claim.

Armed by the authority of such a precedent, having done all in my power to apprise her Majesty's Government of the illegal enterprise in ample season for effecting its prevention, and being now enabled to show the injurious consequences to innocent parties relying upon the security of their commerce from any danger through British sources ensuing from the omission of her Majesty's Government, however little designed, to apply the proper prevention in due season, I have the honor to inform your lordship of the directions which I have received from my Government to solicit redress for the national and private injuries already thus sustained, as well as a more effective prevention of any repetition of such lawless and injurious proceedings in her Majesty's ports hereafter.

CHARLES FRANCIS ADAMS.

Right Honorable EARL RUSSELL, &c., &c.

On the 19th of December Earl Russell replied, stating summarily the contents of Mr. Adams' letter, and proceeding as follows:

Earl Russell to Mr. Adams.

You finally state that you have been instructed to solicit redress for the national and private injuries sustained by the proceedings of this vessel as well as a more effective prevention of any repetition of them in British ports hereafter.

Before I proceed to examine the justice of these demands, it will be convenient that I should advert to the circumstances to which you call my attention as having occurred soon after the breaking out of the French revolutionary war. You observe that on that occasion remonstrances were addressed by the British Government to that of the United States respecting the fitting out of privateers in United States ports with an intent to prey upon British commerce, and that the demands of the British Government were admitted by the United States, and were formally recognized in the seventh article of the treaty between the two countries of the 19th of November, 1794.

vessels taken under like circumstances and brought in after the 5th of June, and before the date of that letter, yet, where the same forbearance had taken place, it was and is his opinion that compensation would be equally due.

"As to prizes made under the same circumstances and brought in after the date of that letter, the President determined that all the means in our power should be used for their restitution. If these fail, as we should not be bound by our treaties to make compensation to the other powers in the analogous case, he did not mean to give an opinion that it ought to be done to Great Britain. But still, if any cases shall arise subsequent to that date, the circumstances of which shall place them on similar ground with those before it, the President would think compensation equally incumbent on the United States.

"Instructions are given to the governors of the different States to use all the means in their power for restoring prizes of this last description found within their ports. Though they will, of course, take measures to be informed of them, and the General Government has given them the aid of the custom house officers for this purpose, yet you will be sensible of the importance of multiplying the channels of their information, as far as shall depend on yourself or any persons under your direction, in order that the governors may use the means in their power for making restitution. Without knowledge of the capture they cannot restore it. It will always be best to give the notice to them directly, but any information which you should be pleased to send to me also, at any time, shall be forwarded to them as quickly as possible.

"Hence you will perceive, sir, that the President contemplates restitution or compensation in the cases before the 7th of August, and after that date restitution if it can be effected by any means in our power, and that it will be important that you should substantiate the fact that such prizes are in our ports or waters.

"Your list of the privateers illicitly armed in our ports is, I believe, correct."

* The following is the letter referred to:

"Mr. Jefferson to Mr. Hammond.

September 5, 1793.

"SIR,—I am honoured with yours of August 30th. Mine of the 7th of that month assured you that measures were taking for excluding from all further asylum in our ports of vessels armed in them to cruise on nations with which we are at peace, and for the restoration of the prizes the Lovely Lass, Prince William Henry, and the Jane, of Dublin; and that, should the measures of restitution fail in the effect, the President considers it as incumbent on the United States to make compensation for the vessels.

"We are bound by our treaties with three of the belligerent nations by all the means in our power to protect and defend their vessels and effects in our ports or waters, or on the seas near our shores, and to recover and restore the same to the right owners when taken from them. If all the means in our power are used and fail in this effect, we are not bound by our treaties with those nations to make compensation.

"Though we have no similar treaty with Great Britain, it was the opinion of the President that we should use toward that nation the same rule which, under this article, was to govern us with other nations, and even to extend it to the captures made on the high seas and brought into our ports, if done by vessels which had been armed within them.

"Having for particular reasons forborne to use all the means in our power for the restitution of the three vessels mentioned in my letter of August 7th, the President thought it incumbent on the United States to make compensation for them; and though nothing was said in that letter of other

But an examination of the actual occurrences, and of the history of that remarkable period, presents a state of facts materially different from those relating to the Alabama.

Those facts may be shortly stated as follows :

The revolutionary government of France had openly avowed its determination to disregard all the principles of international law which had been acknowledged by civilized States, and that Government proceeded to put in force its determination by claiming to equip, as a matter of right, and by actually equipping privateers in the neutral ports of the United States, by sending those privateers forth from those ports, to prey upon British commerce, by bringing prizes into the neutral ports, and by their going through some scant forms of adjudication.

This was the avowed system upon which the agents of belligerent France claimed to act, and upon which, owing to the temporary superiority of her naval force, they did, for a short period, act in the neutral ports and waters of the United States, notwithstanding the remonstrances of the United States Government.

It was these several facts, namely, the open and deliberate equipment of privateers in American ports by the French, the capture by those privateers of British vessels in United States waters, and the bringing them as prizes into United States ports, which formed collectively the basis of the demands made by the British plenipotentiaries. Those demands had reference not to the accidental evasion of a municipal law of the United States by a particular ship, but to a systematic disregard of international law upon some of the most important points of neutral obligation.

This is apparent from the whole correspondence of the British Government with the Government of the United States, and from the replies of Mr. Jefferson to Mr. Hammond, the British minister. Consequently, neither the complaints of the British Government in 1793, nor the treaty of 1794, have any bearing upon the question now under discussion.

With regard to the claim for compensation now put forward by the United States Government, it is, I regret to say, notorious that the Queen's proclamation of the 13th of May, 1861, enjoining neutrality in the unfortunate civil contest in North America, has, in several instances, been practically set at naught by parties in this country. On the one hand, vast supplies of arms and warlike stores have been purchased in this country, and have been shipped from British ports to New York for the use of the United States Government; on the other hand, munitions of war have found their way from this country to ports in possession of the government of the so-styled Confederate States.

These evasions of the neutrality prescribed by the Queen's proclamation have caused her Majesty's Government much concern, but it is not difficult to account for what has occurred.

Such shipments as I have spoken of may be effected without any breach of municipal law; and commercial enterprise in this country, as elsewhere, is always ready to embark in speculations offering a prospect of success, or in which, at all events, the promise of gain is supposed to be greater than the risk of loss.

British subjects who have engaged in such enterprises have been left by her Majesty's Government to abide by the penalty attaching to their disregard of the Queen's proclamation of neutrality, that penalty being, by international law, the condemnation as prize of war of vessel and cargo if captured by a belligerent cruiser, and duly condemned in a competent prize court.

Her Majesty's Government have nevertheless availed themselves of every fitting opportunity to discourage these enterprises, and I have the honor to refer you, in illustration of the truth of this, to the answer which I caused to be returned on the 6th of July to a memorial from British merchants and ship owners at Liverpool, and of which I furnished you confidentially with a copy in my note of the 4th of August. (See *ANNUAL CYCLOPÆDIA*, 1862, p. 197.)

It is right, however, to observe that the party which has profited by far the most by these unjustifiable practices has been the Government of the United States, because that government having a superiority of force by sea, and having blockaded most of the Confederate ports, has been able, on the one hand, safely to receive all the warlike supplies which it has induced British manufacturers and merchants to send to United States ports in violation of the Queen's proclamation; and, on the other hand, to intercept and capture a great part of the supplies of the same kind which were destined from this country to the Confederate States.

If it be sought to make her Majesty's Government responsible to that of the United States because arms and munitions of war have left this country on account of the Confederate Government, the Confederate Government, as the other belligerent, may very well maintain that it has a just cause of complaint against the British Government because the United States arsenals had been replenished from British sources. Nor would it be possible to deny that, in defiance of the Queen's proclamation, many subjects of her Majesty, owing allegiance to her crown, have enlisted in the armies of the United States. Of this fact you cannot be ignorant. Her Majesty's Government, therefore, have just ground for complaint against both of the belligerent parties, but most especially against the Government of the United States, for having systematically, and in disregard of that comity of nations which it was their duty to observe, induced subjects of her Majesty to violate those orders which, in conformity with her neutral position, she has enjoined all her subjects to obey.

Great Britain cannot be held responsible to either party for these irregular proceedings of British subjects; and an endeavor to make her so would be about as reasonable as if her Majesty's Government were to demand compensation from the United States for the injuries done to the property of British subjects by the Alabama, resting their demand on the ground that the United States claim authority and jurisdiction over the Confederate States, by whom that vessel was commissioned.

So far as relates to the export of arms and munitions of war by subjects of Great Britain, from British ports, for the use of the confederates, it is a sufficient answer to say that the municipal law of this country does not empower her Majesty's Government to prohibit or interfere with such export, except in extraordinary cases, when the executive is armed with special powers; and, with regard to the law of nations, it is clear that the permission to export such articles is not contrary to that law, and that it affords no just ground of complaint to a belligerent. The authorities for this latter position are numerous and unconflicting; but it may suffice to refer to passages on the subject in the works of two American writers of high and admitted authority. The passages are as follows :

First. "It is not the practice of nations to undertake to prohibit their own subjects by previous laws from trafficking in articles contraband of war. Such trade is carried on at the risk of those engaged in it, under the liabilities and penalties prescribed by the law of nations or particular treaties."—(*Wheaton's International Law*, 6th edition, 1855, page 571, by Lawrence.)

Secondly. "It is a general understanding that the powers at war may seize and confiscate all contraband goods, without any complaint on the part of the neutral merchant, and without any imputation of a breach of neutrality in the neutral sovereign himself. It was contended on the part of the French nation, in 1796, that neutral governments were bound to restrain their subjects from selling or exporting articles contraband of war to the belligerent powers. But it was successfully shown on the part of the United States that neutrals may lawfully sell at home to a belligerent purchaser, or carry, themselves, to the belligerent powers contraband articles subject to the right of seizure *in transitu*. This right has since been explicitly declared by the judicial authorities of this country (United

States). The right of the neutral to transport, and of the hostile power to seize, are conflicting rights, and neither party can charge the other with a criminal act."—(*Kent's Commentaries*, vol. i., page 145, 8th edition, 1854.)

In accordance with these principles, the President's message of 31st December, 1855, contains the following passage: "In pursuance of this policy the laws of the United States do not forbid their citizens to sell to either of the belligerent powers articles contraband of war, or take munitions of war or soldiers on board their private ships for transportation; and although, in so doing, the individual citizen exposes his property or person to some of the hazards of war, his acts do not involve any breach of international neutrality, nor of themselves implicate the government."

As regards the sailing of the *Alabama* from Liverpool, I cannot do better than refer you to the circumstances respecting that vessel, with which I have already had the honor to make you acquainted. In my letter of the 28th of July I informed you that it was requisite to consult the law officers of the crown before any active steps could be taken in regard to that vessel. In my letter of the 22d of September I explained that, from the nature of the case, some time was necessarily spent in procuring the requisite evidence; that the report of the law officers was not received until the 29th of July; and that on the same day a telegraphic message reached her Majesty's Government stating that the vessel had that morning sailed. Instructions were then despatched to detain her should she put in either at Queenstown or Nassau, to one or other of which ports it was expected that she would go; but the *Alabama* did not call at either of those places. On the 4th of October I stated to you that much as her Majesty's Government desired to prevent such occurrences, they were unable to go beyond the law, municipal and international; and on the 16th of that month I replied to your observations with reference to the infringement of the Foreign Enlistment Act, by remarking that it was true that the Foreign Enlistment Act, or any other act for the same purpose, might be evaded by subtle contrivances; but that her Majesty's Government could not on that account go beyond the letter of the existing law.

It is needless, however, that I should pursue this branch of the question further, since you admit that you are aware that the *Alabama* sailed not only without the direct authority or indirect permission of her Majesty's Government, but in opposition to the municipal law, and in spite of earnest endeavors made to enforce it.

That this should have happened is a circumstance not calculated to excite much surprise in the United States, for two reasons: first, because the principal municipal law of the United States (passed almost at the same time as that of this country, and, it is believed, after a full understanding between the two States) is, in fact, almost identical with that of Great Britain upon this subject; and, secondly, because its notorious evasion during the late war, waged by Great Britain and her allies against Russia, was the subject of remonstrance on the part of her Majesty's representative at Washington to the United States.

Great Britain was then, as on other occasions, assured that every effort which the law would permit had been made to prevent such practices; that the United States Government could only proceed upon legal evidence, the law as to which is almost, if not entirely, the same as in this country, and that without such evidence no conviction could be procured.

In the case of the *Alabama* it is not denied that strict orders were given for her detention as soon as it appeared to the legal advisers of the crown that the evidence might be sufficient to warrant them in advising such a course, and that the *Alabama* contrived to evade the execution of those orders.

Her Majesty's Government cannot, therefore, admit that they are under any obligation whatever to make compensation to United States citizens on account of the proceedings of that vessel.

As regards your demand for a more effective prevention for the future of the fitting out of such vessels in British ports, I have the honor to inform you that her Majesty's Government, after consultation with the law officers of the crown, are of opinion that certain amendments might be introduced into the Foreign Enlistment Act, which, if sanctioned by Parliament, would have the effect of giving greater power to the executive to prevent the construction in British ports of ships destined for the use of belligerents. But her Majesty's Government consider that, before submitting any proposals of that sort to Parliament, it would be desirable that they should previously communicate with the Government of the United States, and ascertain whether that Government is willing to make similar alterations in its own Foreign Enlistment Act; and that the amendments, like the original statute, should, as it were, proceed *pari passu* in both countries.

To this note Mr. Adams replied on the 30th of December, 1862, stating that his duty had been performed by a transmission of the correspondence to Washington; and saying:

But your lordship has done me the honor to touch upon several lateral topics incidentally connected with the reasoning contained in my note, in a manner which seems to require from me a somewhat extended explanation.

The first of these to which my attention has been particularly directed relates to the fact which your lordship appears readily to admit, that her Majesty's proclamation of the 13th of May, 1861, enjoining neutrality in the unfortunate civil contest in North America, has been practically set at naught in this kingdom. Much as it may impair the confidence heretofore so generally and justly entertained in the ability of her Majesty's Government to enforce her authority within her own dominions, I am not aware that in the representation I had the honor to make upon this particular occasion, any reasoning of mine was made to rest upon it. The question, as connected with the case of the 290 was presented by the eminent counsel on whose opinion I relied, mainly on the ground that the building and equipment of that vessel was a gross violation of a municipal law of this kingdom. It was expressly stated by Mr. Collier that "it appeared difficult to make out a stronger case of infringement of the Foreign Enlistment Act, which, if not enforced on this occasion, is little better than a dead letter." That this position was a correct one is fully confirmed by the report subsequently made by her Majesty's law officer, and by the later efforts of her Majesty's Government to act under the law. It is not, then, the nullity of her Majesty's proclamation that is now in question; it is rather the admitted fact of a violation of a statute of this kingdom intended to prevent ill-disposed persons from involving it in difficulty by committing wanton and injurious assaults upon foreign nations with which it is at peace, of which her Majesty's ministers are invited by a party injured to take cognizance; of which they do take cognizance so far as to prepare measures of prevention, but which, by reason of circumstances wholly within their own control, they do not prevent in season to save the justly complaining party from serious injury. On the substantial points of the case little room seems left open for discussion. The omission to act in season is not denied. The injury committed on an innocent party is beyond dispute. If, in these particulars, I shall be found to be correct, then I especially submit it to your lordship whether it do not legitimately follow that such a party has a right to complain and ask redress. And, in this sense, it matters little how that omission may have occurred, whether by intentional neglect or accidental delays, having no reference to the merits of the question; the injury done to the innocent party giving a timely notice remains the same, and they who permitted it remain equally responsible.

It is in this view that the precedent which I had the honor to cite from the earlier history of the United

States appeared to me to have much more pertinence than your lordship is inclined to attach to it. I still think that it has not attracted so much of your attention as it deserves. Your lordship will pardon me for suggesting that it was not because "the revolutionary government of France openly avowed its determination to disregard all principles of international law which had been acknowledged by civilized States," or because of a "supposed temporary superiority of her naval force," it "did actually equip privateers in the neutral ports of the United States, and send them forth to prey upon British commerce," &c., that the Government of the United States were induced to listen to the demands of the British Government for redress. The claim that was actually made by France rested upon its interpretation of a solemn treaty, offensive and defensive, between France and the United States, which, not without show of reason, claimed for the former the right to fit out cruisers against its enemies in the ports of the United States. Although very properly denying this to be the correct version, the Government of the United States felt unwilling to act on a policy of oppression until due notice given of its determination to abide by an opposite construction. In the interval certain captures of British vessels took place which the Government, because of its failure for the reasons assigned, to prevent them, considered itself bound to make good. Here are the very words of Mr. Jefferson in his letter to Mr. Hammond:

"Having, for particular reasons, forbore to use all the means in our power for the restitution of the three vessels mentioned in my letter of August 7th, the President thought it incumbent on the United States to make compensation for them; and though nothing was said in that letter of other vessels taken under like circumstances and brought in after the 5th of June, and before the date of that letter, yet, where the same forbearance had taken place, it was and is his opinion that compensation would be equally due." From these words the deduction appears to be inevitable that the principle of compensation in the case derived its only force from the omission by the United States to prevent a wrong done to the commerce of a nation with which they are at peace. So, likewise, may it be reasonably urged in the present case, that the omission of her Majesty's Government, upon full and reasonable notice, to carry into effect the provisions of its own law designed to prevent its subjects from inflicting injuries upon the commerce of nations with which it is at peace, renders it justly liable to make compensation to them for the damage that may ensue.

That the British Government of that day did consider itself equitably entitled to full indemnity, not simply for the hostile acts of Frenchmen in American ports, but for the loss and damage suffered on the high seas by reason of assistance rendered to them by citizens of the United States, will clearly appear by reference to the fourth article of the project of a treaty proposed by Lord Grenville to Mr. Jay, on the 30th of August, 1794. The words are these:

"And it is further agreed, that if it shall appear that, in the course of the war, loss and damage have been sustained by his Majesty's subjects, by reason of the capture of their vessels and merchandise, such capture having been made either within the limits of the jurisdiction of the said States, or by vessels armed in the ports of the said States, or by vessels commanded or owned by the citizens of the said States, the United States will make full satisfaction for such loss or damage, the same being to be ascertained by commissioners in the manner already mentioned in this article."

If, by the preceding representation; I have succeeded in making myself clearly understood by your lordship, then will it, I flatter myself, be made to appear that in both these cases, that in 1794 as well as that in 1862, the claim made rests on one and the same basis, to wit, the reparation by a neutral nation of a wrong done to another nation with which it is at peace, by reason of a neglect, to prevent the cause of it originating among its own citizens in its own ports.

The high character of Lord Grenville is a sufficient guarantee to all posterity that he never could have presented a proposition like that already quoted, except under a full conviction that it was founded on the best recognized principles of international law. Indeed, it is most apparent, in the face of the preamble, that even the statute law of both nations on this subject is but an attempt to give extraordinary efficacy to the performance of mutual obligations between States which rest on a higher and more durable basis of justice and of right. It was on this ground, and on this alone, that Lord Grenville obtained the concessions then made of compensation for damage done to her commerce on the high seas by belligerent cruisers fitted out in the ports of the United States. I shall never permit myself to believe that her Majesty's Government will be the more disposed to question the validity of the principle thus formally laid down, merely from the fact that in some cases it may happen to operate against itself.

This consideration naturally brings me back to the examination of that portion of your lordship's note which relates to the alleged violations in Great Britain of her Majesty's proclamation by the respective parties engaged in this war. Although this subject be not absolutely connected with that on which I made my representation, I cheerfully seize the opportunity thus furnished me to attempt, in some degree, to rectify your lordship's impressions of the action of the Government of the United States even on that question. Your lordship does me the honor to observe that I cannot be ignorant of the fact, which it is impossible to deny, "that, in defiance of the Queen's proclamation, many subjects of her Majesty owing allegiance to her crown have enlisted in the armies of the United States." "Her Majesty's Government, therefore, have just ground for complaint against both the belligerent parties, but most especially against the Government of the United States, for having, systematically and in disregard of that comity of nations which it was their duty to observe, induced subjects of her Majesty to violate those orders which, in conformity with her neutral position, she has enjoined all her subjects to obey."

As these words, taken in their connection, might seem to imply a serious charge against myself as well as the Government of the United States, I must pray your lordship's pardon if I desire to know whether there be any particulars in my own conduct in which your lordship has found the evidence of such a statement. So far as I have been made acquainted with the course of my own Government, or I remember my own, I must most respectfully take issue with your lordship upon it, and challenge you to the proof. That very many of the subjects of Great Britain voluntarily applied to me for engagements in the service of the United States, is most true. That I ever induced one of them to violate her Majesty's orders, either directly or indirectly, is not true. That numbers of her Majesty's subjects have voluntarily crossed the ocean and taken service under the flag of the United States, I have reason to believe. That the Government of the United States systematically and in disregard of the comity of nations induced them to come over to enlist I have not yet seen a particle of evidence to show, and I must add, praying your lordship's pardon, I am authorized explicitly to deny. In response to a remonstrance, made to me by your lordship, it is but a few days since I took occasion, so far as my action was concerned or the action of any of the officers of the United States in this kingdom, to place the country right before you on that score. After the very explicit retraction made in your lordship's reply to me, dated on the 16th instant, it is not without great surprise that I now perceive what I cannot but regard as a renewal of the imputation.

Your lordship is pleased carefully to join the two parties to this war, as if, in your estimation, equally implicated in the irregular proceedings conducted within this kingdom, and equally implicating the subjects of Great Britain in the violation of her Majesty's proclamation. Hence it is argued that the omission

to hold any one to his responsibility affords no more just ground of complaint to one party than to the other. I cannot but think that your lordship has overlooked a just distinction to be observed in these cases; and in order to show it the more clearly I shall be compelled to ask your lordship to follow me in a brief investigation of the facts.

The only allegation which I find in your lordship's note in connection with the United States is this, that "vast supplies of arms and warlike stores have been purchased in this country, and have been shipped from British ports to New York for the use of the United States Government."

Admitting this statement to be true to its full extent; conceding even the propriety of the application of the term "vast" to any purchases that may have been made for the United States, the whole of it amounts to this, and no more, that arms and warlike stores have been purchased of British subjects by the agents of the Government of the United States. It nowhere appears that the action of the British went further than simply to sell their goods for cash. There has been no attempt whatever to embark in a single undertaking for the assistance of the United States in the war they are carrying on; no ships of any kind have been constructed or equipped by her Majesty's subjects for the purpose of sustaining their cause, either by lawful or unlawful means, nor a shilling of money, so far as I know, expended with the intent to turn the scale in their favor. Whatever transactions may have taken place have been carried on in the ordinary mode of bargain and sale without regard to any other consideration than the mere profits of trade.

If such be then the extent of the agency of the United States on this side of the Atlantic during the present war, and no more, it appears clear, from the positions assumed by your lordship in the very note to which I have the honor to reply, that thus far they have given no reasonable ground for complaint at all. The citations to which your lordship has done me the favor to call my attention, as drawn from American authors of admitted eminence, all contribute to establish the fact that the mere purchase or export by a belligerent from a neutral of arms and munitions of war does not involve any censure on either party. I do not at the present moment entertain a design to question the correctness of that doctrine. As a necessary consequence, I can scarcely perceive the fitness of associating such action as I have shown that of the United States to be in the same category with that of which the Government of the United States has heretofore instructed me to complain. And here I beg to call your lordship's attention to the fact that it is not the mere purchase or exportation of arms and warlike stores by the agents of the insurgents in America of which I have ever complained. There is another and a very important element in the case, to which your lordship does not appear to have given the consideration which, so far as one may be permitted to judge from the concurring testimony of all writers of international law, it certainly deserves. The United States have made an actual blockade of all the ports occupied by the insurgents—a blockade, the validity of which Great Britain does not dispute. They are therefore entitled to consider every neutral who shall attempt to enter one of them or carry anything to the besieged as violating his neutrality, and converting himself into an enemy. Hence it happens that every British subject engaged in the work of aiding the insurgents by introducing contraband of war into blockaded ports not only violates his duty to his sovereign, but commits an exceedingly aggravated and injurious offence to the Government of the United States. To associate such proceedings with the mere purchase and export of arms on behalf of the United States as of equal significance would seem to be most inequitable.

It is a fact that few persons in England will now be bold enough to deny, first, that vessels have been built in British ports, as well as manned by her Majesty's subjects, with the design and intent to carry on war against the United States; secondly, that other ves-

sels, owned by British subjects, have been, and are yet, in the constant practice of departing from British ports laden with contraband of war, and many other commodities, with the intent to break the blockade and to procrastinate the war; thirdly, that such vessels have been, and are, insured by British merchants in the commercial towns of this kingdom, with the understanding that they are despatched for that illegal purpose. It is believed to be beyond denial that British subjects have been, and continue to be, enlisted in this kingdom in the service of the insurgents, with the intent to make war on the United States, or to break the blockade legitimately established, and, to a proportionate extent, to annul its purpose. It is believed that persons high in social position and in fortune contribute their aid, directly and indirectly, in building and equipping ships-of-war, as well as other vessels, and furnishing money, as well as goods, with the hope of sustaining the insurgents in their resistance to the Government. To that end the port of Nassau, a colonial dependency of Great Britain, has been made, and still continues to be, the great entrepot for the storing of supplies, which are conveyed from thence with the greater facility in evading the blockade. In short, so far as the acts of these numerous and influential parties can involve them, the British people may be considered as actually carrying on war against the United States. Already British property, valued at eight millions of pounds sterling, is reported to have been captured by the vessels of the United States for attempts to violate the blockade, and property of far greater value has either been successfully introduced or is now stored at Nassau awaiting favorable opportunities.

If it be necessary to furnish to your lordship a clearer idea of the nature and extent of this warfare, it may perhaps be obtained by reference to the two papers, marked A and B, which I have the honor to append to the present note. The one contains a list of all screw steamers and sailing vessels which have been, or still are, engaged in this illegal commerce, furnished to me from observation by the consul of the United States at Liverpool. The other is a copy of a letter from the consul in London, giving a further list of vessels, together with some particulars as to the mode by which, and the persons by whom, this hostile system is carried on. Neither of these lists can be regarded as complete, but the two are sufficiently so for the present purpose, which is to place beyond contradiction the fact of the extensive and systematic prosecution by British subjects of a policy toward the United States, which is uniformly characterized by writers on international law as that of an enemy.

I am not unaware of the regret expressed in your lordship's note at the existence of this state of things, as well as the readiness with which you have acquiesced in the possible application, by the forces of the United States, of the penalty held over the heads of the offenders in her Majesty's proclamation. But my present object in referring so much at large to these offences is to show the great injustice of your lordship in proceeding to comment upon the action of the respective belligerents, as if there was a semblance of similarity between them. So far as the United States are shown to be involved in censure, it is simply by the purchase and export of arms and munitions of war from a neutral, an act which your lordship expressly points out eminent authority to my attention to prove, implies no censurable act to either party. Whilst, on the other hand, it is American insurgents who find British allies to build in this kingdom, and to equip and send forth war ships to depredate on the commerce of a friendly nation, and it is British subjects who load multitudes of British vessels with contraband of war, as well as all other supplies, with the intent and aim to render null and void, so far as they can, a blockade legitimately made by a friendly nation, as well as to procrastinate and make successful a resistance in a war in which that nation is actually engaged. Surely this is a difference not unworthy of your lordship's deliberate observation.

But your lordship, in accounting for the admitted failure to enforce the enlistment law in Great Britain, has done me the honor to remind me that not long since her Majesty's Government was itself so far made sensible of injuries of the same kind with those of which I now complain either inflicted or threatened against Great Britain in the ports of the United States as to have made them the subject of remonstrance through her Majesty's representative at Washington. With so fresh a sense of these evils before your lordship there will be no further cause of surprise at the earnestness with which I have followed the precedent then set. You do me the honor to recall the fact that the enlistment law of the United States, which preceded in its date of enactment that of Great Britain, is almost identical with it. And you further state that "the notorious evasion of its provisions during the late war waged by Great Britain and her allies against Russia," was the cause of the remonstrance to which I have already alluded. Your lordship further remarks that "Great Britain was then, as on other occasions, assured that every effort which the law would permit had been made to prevent such practices; that the United States Government could only proceed upon legal evidence, the law as to which is almost, if not entirely, the same as in this country, and that without such evidence no conviction could be procured."

In the earlier portion of your lordship's note you did me the favor to cite, as good authority to me, an extract of the message of the President of the United States of the 31st December, 1855, which went to show the extent to which assistance not only had been, but might be, rendered without censure by neutrals to belligerents. Perhaps your lordship will not deny equal weight to the very next passage in that message, even though it should somewhat conflict with your own allegation.

"Whatever concern may have been felt by either of the belligerent powers, lest private armed cruisers or other vessels in the service of one might be fitted out in the ports of this country to depredate on the property of the other, all such fears have proved to be utterly groundless. Our citizens have been withheld from any such act or purpose by good faith and by respect for the law."

I forbear from quoting the text which follows, because it may revive unpleasant recollections in your lordship's as it does in my mind. I will content myself solely with the remark that the very last thing which your lordship would be likely to object to, the facts there stated would be the want of ability of the Government of the United States to proceed with energy and effect in the repression of acts in violation of their enlistment act.

But if evidences of another kind as to its energy under that law be needed, I have only to remind your lordship once more of the fact, that on the 11th of October, 1855, her Majesty's representative at Washington, Mr. Crampton, addressed to the Government of the United States a note, with evidence to show that a vessel, called the *Maury*, was then fitting out at the port of New York armed to depredate on British vessels. On the 12th the Attorney-General sent, by telegraph, to the proper officer at New York to consult with the British consul, and to prosecute, if cause appear. On the 13th the Collector stopped the vessel, then about to sail. On the 16th the District Attorney had prepared and filed a libel of the vessel, and in the meantime ordered a thorough examination of her cargo. On the 19th the Marshal had made a full report of his examination. On the same day the complainant, on whose evidence the minister and the consul had acted, confessed himself satisfied, and requested the libel to be lifted. On the 23d Mr. Barclay, her Majesty's consul at New York, published a note withdrawing every imputation made against the vessel. Thus, it appears that in the brief space of four days the Government's action under the enlistment law had been sufficiently energetic completely to satisfy the requisition of her Majesty's representative.

If any similar action has been had since the first day

that I had the honor to call your lordship's attention to outfits of the same nature made in Great Britain, I can only say that I have not enjoyed a corresponding opportunity to express my satisfaction with the result.

The owners of the *Maury* were never compensated for the trouble and expense to which they were put by this process. But the Chamber of Commerce of New York adopted a series of resolutions, two of which may serve as a sufficient comment on the remark which your lordship has been pleased to let fall touching the "notorious evasion" of the enlistment law in America at the time alluded to:

"Resolved, That no proper amends or apology have been made to A. A. Low & Brothers for the charge brought against them, which, if true, would have rendered them infamous; nor to the merchants of this city and country so falsely and injuriously asserted.

"Resolved, That the merchants of New York, as part of the body of merchants of the United States, will uphold the Government in the full maintenance of the neutrality laws of the country; and we acknowledge and adopt, and always have regarded the acts of the United States for preserving its neutrality as binding in honor and conscience as well as in law; and that we denounce those who violate them as disturbers of the peace of the world, to be held in universal abhorrence."

I pray your lordship to give one moment's attention to the manner in which the conduct imputed to Messrs. Low is stigmatized. I am sorry to confess that I have not seen the like indignation shown in this kingdom against similar charges made against distinguished parties in Liverpool, nor yet can I perceive it so forcibly expressed as I had hoped even in the tone of your lordship's note.

I beg to assure your lordship that it gives me no pleasure to review the recollections of the events of that period. But inasmuch as they had been voluntarily introduced in the note which I had the honor to receive, and they seemed to me necessarily to imply an unmerited charge against the policy of the United States, I felt myself imperatively called upon to show that at least in one instance in which her Majesty's Government made a complaint, there was no failure either in the manner of construing the powers vested in the Government of the United States, or in their promptness of action under their enlistment law.

Mr. Seward, Secretary of State, at Washington, in a letter to Mr. Adams, on January 19th, 1863, in relation to the preceding note of Mr. Adams, on December 30th, said:

You have properly replied to Earl Russell's note, and cleared up the argument of the case by a paper which seems to the President as convincing as it is calm and truthful.

Earl Russell's argument does not satisfy the President that redress ought not to be granted to our citizens for the depredations which have been committed by the "*290*." He trusts that your reply may yet induce a reconsideration of that subject. I therefore leave that branch of the case at rest until there shall have been an opportunity to hear further from you upon that subject.

On the 16th of January, Mr. Adams notified Earl Russell that another vessel was about to depart from London, to pursue a similar course as the *Alabama*.

On the 24th of January, Earl Russell replied to the note of Mr. Adams, of December 30th, as follows:

FOREIGN OFFICE, January 24th, 1863.

SIR: It is impossible for me to leave without notice some of the statements contained in your letter of the 30th ultimo.

These statements contain or imply a grave charge against her Majesty's Government. You speak of the "admitted fact of a violation of a statute of this king-

dom intended to prevent ill-disposed persons from involving it in difficulty by committing wanton and injurious assaults upon foreign nations with which it is at peace, of which her Majesty's ministers are invited to take cognizance, of which they do take cognizance so far as to prepare measures of prevention; but which, by reason of circumstances wholly within their own control, they do not prevent in season to save the justly complaining party from serious injury; in the substantial points of the case little room seems left open for discussion."

On the substantial points of the case, as stated by you, there is, on the contrary, great room open for discussion.

I must ask, first, what are the circumstances within the control of the Government to which you allude? Do you mean that her Majesty's Government, in construing a penal statute or in carrying into effect the provisions of a penal statute, were to hurry at once to a decision, and to seize a ship building and fitting out at Liverpool without being satisfied by evidence that the provisions of the Foreign Enlistment Act had been violated in the case of such vessel? Do you mean that her Majesty's Government were to dispense with proof, and to inflict injury upon the Queen's subjects by seizing a ship upon your mere assertion that the owners of that ship were violating the laws?

If such is your meaning, I must reply that the Government of this country respect the law. They do not seize upon property to the loss and damage of its owners without proof that they are legally entitled to do so.

Perhaps your meaning is, that her Majesty's Government should have proceeded on the opinion of Mr. Collier, without awaiting for any other authority.

But here again I must reply that the usage of this country requires that the Government should consult their own legal advisers, and obtain the opinion of the law officers of the crown before they proceed to enforce a penal statute.

If you mean to contend, therefore, that a nation in a state of profound peace should set aside the formalities of law and act at once upon presumptions and surmises, I entirely differ from you. I may remind you that the evidence sufficient to satisfy a court of law as to the "equipment" or "fitting out" of a vessel for warlike purposes, and of its actual destination, is not attainable without difficulty.

If you mean that her Majesty's Government wilfully delayed or neglected the measures by which the character of the Alabama could have been legally ascertained, I must give a positive and complete denial of the truth of any such assertion. The opinion of the law officers, until the receipt of which her Majesty's Government could not act, was delivered at the foreign office on the 29th of July, but in the morning of that day the Alabama, under pretext of a pleasure excursion, escaped from Liverpool.

With regard to the very different circumstances of 1793 and 1794, those circumstances are recorded in history. It is notorious that Monsieur Genet, the French minister to the United States, fitted out privateers in the ports of the United States; that he boasted in his despatches of the captures of British vessels which those privateers had made, and that he procured a sham condemnation of those captured vessels in neutral ports. It is notorious, also, that he endeavored to make the United States the basis of his operations and of attempts to raise rebellions against England in Canada, and against Spain in Louisiana.

According to your own account the United States purposely delayed to give any redress to the complaints made by the British Government of the captures of British merchant vessels, because they felt unwilling to act on a policy of repression till they had given due notice of the construction they put upon a treaty offensive and defensive with France, which had been quoted in defence of the depredations committed on British commerce.

It is evident that by so acting the United States Government deliberately made themselves parties in the interval to the proceedings carried on in their own ports, and the same Government, with the sense of

justice which distinguished them, made compensation afterwards for the injuries inflicted under cover and protection of their own flag, and promised to exclude French privateers "from all further asylum in" their "ports."

In Mr. Jefferson's letter, quoted by you, he says: "Having for particular reasons forborne to use all the means in our power for the restitution," &c. * * Here is the inquiry stated, and here are the grounds why it was permitted.

But the British Government have given no asylum to belligerent privateers bringing prizes into British ports. They have no particular reasons to allege; they have not forborne to use all the means in their power; they have used all the means they could use consistently with the law of the land, and by no fault of theirs have those means in a single instance proved inefficacious. There was no want of a statute to enforce, nor of a will to enforce it; evidence was wanting and an authority to decide upon that evidence till it was too late. But her Majesty's Government cannot promise the United States to act without evidence, nor to disregard the legal authority of their own law officers.

As to other points, we are nearly agreed so far as the law of nations is concerned. But with respect to the statement in your note that large supplies of various kinds have been sent from this country by private speculators for the use of the Confederates, I have to observe that that statement is only a repetition in detail of a part of the assertion, made in my previous letter of the 19th ultimo, that both parties in the civil war have to the extent of their wants and means induced British subjects to violate the Queen's proclamation of the 13th of May, 1861, which forbids her subjects from affording such supplies to either party.

It is, no doubt, true that a neutral may furnish as a matter of trade supplies of arms and warlike stores impartially to both belligerents in a war, and it was not on the ground that such acts were at variance with the law of nations that the remark was made in the former note. But the Queen having issued a proclamation forbidding her subjects to afford such supplies to either party in the civil war, her Majesty's Government are entitled to complain of both parties for having induced her Majesty's subjects to violate that proclamation, and their complaint applies most to the Government of the United States, because it is by that Government that by far the greatest amount of such supplies have been ordered and procured.

I do not propose to discuss other collateral topics which have been introduced, but, in explanation of my former letter, I must say that I never meant to accuse you of giving any encouragement to the enlistment of British subjects in this country to serve in the civil war unhappily prevailing in the United States.

But it is notorious that large bounties have been offered and given to British subjects residing in the United States to engage in the war on the Federal side, and these British subjects, acting in defiance of the laws of their country and of the Queen's proclamation, have been encouraged by the United States Government so to act.

A recent and striking example of the open avowal of this course of conduct on the part of the United States Government is to be found in the correspondence between Mr. Seward and Mr. Stewart with reference to the crew of the Sunbeam, in which, although it does not appear that any bounties were offered, Mr. Seward has treated an endeavor to induce British sailors to enlist in the belligerent service of the United States as affording no grounds of complaint to her Majesty's Government.

I have the honor to be, with the highest consideration, sir, your most obedient humble servant,

RUSSELL.

CHARLES FRANCIS ADAMS, Esq., &c., &c.

LEGATION OF THE UNITED STATES, LONDON, }
January 26th, 1863. }

MY LORD: I have the honor to acknowledge the reception of your lordship's note of the 24th instaut, in

reply to some portions of mine of the 30th of last month, respecting the case of the outfit from Liverpool of the gunboat No. 290, to depredate on the commerce of the United States. Your lordship is pleased to raise a discussion on the following statement made by me. I quote the paragraph as it stands in your note :

"The admitted fact of a violation of a statute of this kingdom, intended to prevent ill-disposed persons from involving it in difficulty by committing wanton and injurious assaults upon foreign nations with which it is at peace, of which her Majesty's ministers are invited (by a party injured) to take cognizance, of which they do take cognizance, so far as to prepare measures of prevention, but which, by reason of circumstances wholly within their own control, they do not prevent in season to save the justly-complaining party from serious injury. On the substantial point of the case little room seems left open for discussion."

Out of my profound respect for your lordship's representation, I have reviewed the whole of this paragraph with the utmost care. I am compelled now to confess that I can perceive no ambiguity in the meaning sufficient to justify any of the implications which your lordship appears to desire to raise from it. Starting from a point of moral obligation (in my view as strong between nations as it is between individuals), that injuries inflicted on an innocent party (of which, if not prevented, it has a right to complain, provided that it give notice in time seasonable for the application of adequate means of prevention) should be, so far as practicable, repaired or compensated for by the party that does the wrong, or suffers it to be done by persons under its control, I apply the general principle to the case before me. The fact that warning had been given in full season to prevent the departure of No. 290 does not depend upon my statement, inasmuch as it is simply a question of dates, open to the inspection of all men. The fact that her Majesty's Government were convinced of the justice of the representation made, is patent from the determination to which your lordship admits that they ultimately came to detain the vessel. The fact that this decision was so long delayed as to fail in effecting the object intended, whereby great injury has been actually done, and is yet likely to ensue, to the commerce of the United States, is equally a question purely of dates. Inasmuch as these constitute the substance of the paragraph of my note, to which exception is taken, I must confess myself wholly at a loss to perceive upon what ground any doubt can further be raised about it.

But your lordship proceeds to do me the honor to address a series of questions to me as to possible meanings that may be conveyed in my language, which might imply, from the failure to act of her Majesty's Government, motives of some kind or other that I have not distinctly expressed. I must respectfully ask to be excused from entering into any such field of controversy. I desire neither to make charges, nor to raise implications of an unnecessary nature to complicate the difficulties of this painful subject. All that I deem it my duty to know is, that a grievous wrong has been done to an innocent and friendly nation, by what seems to me to have been a most unfortunate delay in effecting a prevention, that later experience conclusively shows ought to have been applied in time. Of the reasons that prevented such an application, inasmuch as none of them could have grown out of the course of the injured party, I have no wish to enter into a discussion. The principle of justice is not merely that right should be done, but that it should be done sufficiently prompt to effect its object. Otherwise it is justice denied. Upon that I am content to rely.

As it is probable that I may receive, at an early moment, further instructions from my Government in respect to the substantial points involved in the present correspondence, I deem it unadvisable further to take up your lordship's time, by enlarging the limits of the discussion of purely incidental questions. I desire to express my obligation to you for the ready and full manner in which your lordship has exonerated me from the suspicion of encouraging the enlistment of

her Majesty's subjects in the service of the United States. At the same time it is not without regret that I perceive the charge still persevered in against the Government of the United States. If I understood your lordship aright, it is now affirmed that because the Government offers large bounties on enlistment in the United States, and because British subjects in the United States, tempted by these bounties, do occasionally enlist, therefore your lordship is justified in having affirmed in your former note that the Government of the United States, systematically and in disregard of the comity of nations, induces them to enlist. As well might I in my turn, in view of the frequent applications made to me to procure the discharge of citizens of the United States who have been tempted in the same manner to enlist in her Majesty's service in this kingdom, assume the existence of a similar policy. Further than the presence of a general offer, I do not perceive that your lordship's reference to the action of Mr. Seward, of which I am not in a situation to speak authoritatively, appears to extend. Further than this, I must still continue to disclaim the belief in the existence of any systematic policy, as well in one case as in the other.

On the 19th of February Mr. Seward writes to Mr. Adams, acknowledging the reception of his correspondence with Earl Russell, and saying: "It seems only necessary, so far as that particular case (the Alabama) is concerned, to repeat what was said, in effect in my instruction, Jan. 19th, that this Government does not think itself bound in justice to relinquish its claim for redress for the injuries which have resulted from the fitting out and despatch of the Alabama in a British port."

On the 9th of March Earl Russell, writing to Mr. Adams relative to a petition from the New York Mutual Insurance Co., addressed to Mr. Seward, and claiming repayment by her Majesty's Government of certain policies of insurance on the ships Brilliant and Manchester which had been destroyed by the Alabama, also added: "I have the honor to state to you that her Majesty's Government entirely disclaim all responsibility for any acts of the Alabama, and they had hoped that they had already made this decision on their part plain to the Government of the United States."

As the Alabama continued in her career of destruction, claims were prepared by the owners of the vessels thus destroyed and forwarded to Mr. Adams. By him they were sent to Earl Russell, with a request that they might be added to the list already before him. On the 14th of September, in reply to such a request, Earl Russell added: "When the United States Government assumes to hold the Government of Great Britain responsible for the captures made by vessels which may be fitted out as vessels-of-war in a foreign port, because such vessels were originally built in a British port, I have to observe that such pretensions are entirely at variance with the principles of international law, and with the decisions of American courts of the highest authority; and I have only, in conclusion, to express my hope that you may not be instructed again to put forward claims which her Majesty's Government cannot admit to be founded on any grounds of law or justice."

This answer of Earl Russell was referred by Mr. Adams to Mr. Seward, who, on the 6th of October, thus replied :

DEPARTMENT OF STATE, WASHINGTON, }
Oct. 6th, 1863. }

SIR : Your despatch of the 18th of September, No. 500, has been received, together with a copy of the correspondence which has been held by you with Earl Russell on the subject of the claims of the owners of the ship *Nora*, which was destroyed by the war steamer *Alabama*. Earl Russell produces what he pronounces satisfactory evidence that that steamer was not fitted out at Liverpool as a ship-of-war. He then says, that when the United States Government assumes to hold the Government of Great Britain responsible for the captures made by vessels which may be fitted out as vessels-of-war in a foreign port, because such vessels were originally built in a British port, he, Earl Russell, has to observe that such pretensions are entirely at variance with the principles of international law, and with the decisions of American courts of the highest authority, and he has only, in conclusion, to express his hope that you may not be instructed again to put forward claims which her Majesty's Government cannot admit to be founded on any grounds of law or justice.

You refer me to these statements of Earl Russell, and ask for instructions upon the questions thus raised.

The United States understand that they are at peace with Great Britain, and that that power is obliged by treaties and international law to refrain and to restrain its subjects from making war against the United States. Her Majesty's Government probably concur in the legal principle thus asserted. The United States understand the facts of the case of the *Alabama* in a different sense from that which is accepted by Earl Russell. They understand that the *Alabama* is a pirate ship-of-war, roving over the seas capturing, burning, sinking, and destroying American vessels, without any lawful authority from the British Government or from any other sovereign power, in violation of the law of nations, and contemptuously defying all judicial tribunals equally of Great Britain and all other States ; the United States understand that she was purposely built for war against the United States by British subjects in a British port, and prepared there to be armed and equipped with a specified armament adapted to her construction for the very piratical career which she is now pursuing ; that her armament and equipment, duly adapted to this ship-of-war and no other, were simultaneously prepared by the same British subjects in a British port, to be placed on board to complete her preparation for that career ; that when she was ready and her armament and equipment were equally ready, she was clandestinely and by connivance sent by her British holders, and the armament and equipment were at the same time clandestinely sent through the same connivance by the British subjects who had prepared them, to a common port outside of British waters, and there the armament and equipment of the *Alabama* as a ship-of-war were completed, and she was sent forth on her work of destruction with a crew chiefly of British subjects, enlisted in and proceeding from a British port, in fraud of the laws of Great Britain and in violation of the peace and sovereignty of the United States. The United States understand that the purpose of the building, armament and equipment and expedition of the vessel, was one single criminal intent, running equally through the building and the equipment and the expedition, and fully completed and executed when the *Alabama* was finally despatched, and that this intent brought the whole transaction of building, armament and equipment within the lawful jurisdiction of Great Britain, where the main features of the crime were executed. The United States understand that they gave sufficient and adequate notice to the British Government, that this wrongful enterprise was begun and was being carried out to its completion ; and that, upon receiving

this notice, her Majesty's Government were bound by treaty obligations and by the law of nations to prevent its execution, and that if the diligence which was due had been exercised by the British Government, the expedition of the *Alabama* would have been prevented, and the wrongful enterprise of British subjects would have been defeated. The United States confess that some effort was made by her Majesty's Government, but it was put forth too late and was too soon abandoned. Upon these principles of law and these assumptions of fact, the United States do insist, and must continue to insist, that the British Government is justly responsible for the damages which the peaceful, law-abiding citizens of the United States sustain by the depredations of the *Alabama*. I cannot, therefore, instruct you to refrain from presenting the claims which you have now in your hands of the character indicated.

In saying this, however, it is not to be understood that the United States intend to act dogmatically or in a litigious spirit. They are seriously and earnestly desirous to maintain not only peace, but even amity with Great Britain. They understand how unavoidably grievances have reciprocally arisen out of the divergence of policies which the two countries have adopted in regard to the present insurrection. This Government thinks it understands, and in some measure appreciates, the difficulties and embarrassments under which her Majesty's Government are laboring, resulting from the pressure of interests and combinations of British subjects calculated to compromise the neutrality which her Majesty has proclaimed, and tending even to involve the two nations in a destructive maritime war. This Government confesses very freely, that it does not regard the present hour as one that is entirely favorable to a calm and candid examination of either the facts or the principles involved in such cases as the *Alabama*. It looks forward to a period when our intestine war shall have ceased, and the interests and passions which it has awakened abroad as well as at home shall have subsided and disappeared. Though indulging a confident belief in the correctness of our positions in regard to the claims in question, and others, we shall be willing at all times hereafter, as well as now, to consider the evidence and the arguments which her Majesty's Government may offer, to show that they are invalid, and if we shall not be convinced, there is no fair and just form of conventional arbitrament or reference to which we shall not be willing to submit them. Entertaining these views, the President thinks it proper for you to inform Earl Russell that you must continue to give him notice of claims of the character referred to when they arise, and that you shall propose to furnish him the evidence upon which they rest as is customary in such cases, in order to guard against ultimate failure of justice. If he shall decline to receive the evidence, you will cause it to be duly registered and preserved, to be presented when a suitable occasion shall hereafter occur for renewing and urging prosecution of the claims.

I am, sir, your obedient servant,

WILLIAM H. SEWARD.

CHARLES FRANCIS ADAMS, Esq., &c., &c., &c.

This despatch was in substance communicated to Earl Russell by Mr. Adams, on the 23d of October, as his instructions relative to the presentation of further claims upon the British Government.

On the 26th of October, Earl Russell thus answered :

FOREIGN OFFICE, October 26th, 1863.

SIR : I have had the honor to receive your letter of the 23d instant. In that letter you inform me that you are instructed to say that the Government of the United States must continue to insist that Great Britain has made itself responsible for the damages which the citizens of the United States sustain by the depredations of the vessel called the *Alabama*. But toward the con-

clusion of your letter you state that the Government of the United States are not disposed to act dogmatically, or in a spirit of litigation; that they desire to maintain amity as well as peace; that they fully comprehend how unavoidably reciprocal grievances must grow up from the divergence of the policy of the two countries in regard to the present insurrection. You add further, that the United States frankly confess themselves unwilling to regard the present hour as the most favorable to a calm and candid examination by either party of the facts or principles involved in cases like the one now in question. With this declaration her Majesty's Government may well be content to await the time when a calm and candid examination of the facts and principles involved in the case of the *Alabama* may, in the opinion of the Government of the United States, usefully be undertaken.

In the meantime I must request you to believe that the principle contended for by her Majesty's Government is not that of commissioning, equipping, and manning vessels in our ports to cruise against either of the belligerent parties—a principle which was so justly and unequivocally condemned by the President of the United States in 1793, as recorded by Mr. Jefferson in his letter to Mr. Hammond of the 5th of May of that year. But the British Government must decline to be responsible for the acts of parties who fit out a seeming merchant ship, send her to a port or to waters far from the jurisdiction of British courts, and there commission, equip, and man her as a vessel of war.

Her Majesty's Government fear that if an admitted principle were thus made elastic to suit a particular case, the trade of ship-building, in which our people excel, and which is to great numbers of them a source of honest livelihood, would be seriously embarrassed and impeded. I may add, that it appears strange that, notwithstanding the large and powerful naval force possessed by the Government of the United States, no efficient measures have been taken by the Government to capture the *Alabama*.

On our part I must declare that to perform the duties of neutrals fairly and impartially, and at the same time to maintain the spirit of British law, and protect the lawful industry of the Queen's subjects, is the object of her Majesty's Government, and they trust that the Government of the United States will recognize their earnest desire to preserve, in the difficult circumstances of the present time, the relations of amity between the two nations.

I have the honor to be, with the highest consideration, sir, your most obedient, humble servant,

RUSSELL.

CHARLES FRANCIS ADAMS, Esq., &c., &c.

This concludes the correspondence during the year on the important subject of claims against the British Government, arising out of the destruction done by the *Alabama*.

While this correspondence was going on, Mr. Adams was informed that other vessels, some of which were ironclads, were in process of construction in British ports, and intended for the use of the Confederate naval service. These facts were represented to Earl Russell, and a correspondence ensued, which resulted in a determination on the part of the British Government to detain all such vessels, until it was satisfactorily shown that they were not intended for hostile purposes against the United States. The first of the vessels thus detained was called the *Alexandra*. This case became a subject of investigation in the English courts, and the following is a report of the proceedings:

Case of the Alexandra.

Mr. Adams, on the 26th of March, called the attention of the foreign office of the British

Government to the allegations that certain vessels in preparation at Liverpool were designed to carry on hostilities against the United States. In his communication of that date to Lord Russell, he transmitted a copy of an extract of a letter from Mr. Dudley, the U. S. consul at Liverpool. This letter of Mr. Dudley under date of March 24th, gives information of the launch, at Liverpool, of an iron screw steamer called the *Phantom*, and the arrival of a steamer called the *Southerner*, with the opinion that they were both intended to be used as privateers. The proper departments of the English Government were requested to make immediate inquiries on the subject, as Earl Russell informed Mr. Adams on March 27th. On the 28th he writes to Mr. Adams that the mayor of Liverpool is instructed to report whether any evidence on oath can be procured showing that the vessels, or either of them, were being equipped, fitted out or armed with intent to commit hostilities against the United States, in order to proceedings being taken under the Foreign Enlistment Act. On the 30th of March the equipment of another steamer called the *Alexandra*, at Liverpool, was brought to the notice of Earl Russell, and an investigation into the circumstances of the equipment led to her seizure in the first part of April, and the determination by the English law officers to proceed in the first instance against the vessel and not against the persons engaged in fitting her out. An information was filed by the Attorney General on behalf of her Majesty against twelve persons (including the builders of the ship), alleging the forfeiture of the vessel *Alexandra*, which had been seized while lying in the Toxteth dock, Liverpool, by desire of the Government, by a custom-house officer named Morgan, under the powers contained in the 7th section of the Foreign Enlistment Act, 59th G. III. chapter 69. The ship in question was built by Messrs. Miller & Sons, and as soon as launched was taken into the Toxteth dock, where the defendants proceeded to fit her with engines and a screw propeller. The defendants having made an affidavit that the ship was their property, they were allowed to enter an appearance and defend their claim. The present proceedings involve whether, under all the circumstances, the step taken by the crown was justifiable, and the defendants amenable to the law under the section above referred to. The information contains 98 counts, and is framed upon the above section of the statute; and charges in different forms that the vessel was equipped, furnished, and fitted out with intent to employ her in the service of the Confederate States to cruise against the United States. To these counts the claimants pleaded that the said ship or vessel, furniture, tackle, and apparel did not, nor did any or either of them, or any part thereof, become nor is the same or any or either of them, or any part thereof, forfeited for the several supposed causes, in the said information mentioned, or for any or either of

them, in manner or form as by said information is charged.

The case came on for trial June 22d, in the Court of Exchequer, sitting at Nisi Prius, at Westminster, before the Lord Chief Baron and a special jury.

The Attorney General, in opening the case, said the present proceeding was so far singular that, although the act of Parliament upon which it was founded had been passed so far back as 1819, and though it was true that various proceedings were commenced from time to time under that act, he was not aware until to-day that any question like this had ever been brought to trial. This information was a proceeding on the part of the Attorney General calling for the forfeiture of a vessel called the *Alexandra*. He should mention that the present case had arisen out of hostilities which were now being carried on between the United States and certain States which were formerly willing members of the Union; he meant the Confederate States. Those being the belligerent portion out of which or with respect to which the present proceedings had arisen, he might mention that, previous to the passing of the Foreign Enlistment Act in this country, the Government of the United States of that day had devised means to the same end; for in 1794, and again in 1818, by acts of Congress, provisions were made similar to those contained in the Foreign Enlistment Act; therefore, in passing our act of 1819 we may be said to have followed the example of the United States. In June, 1861, the Southern States, now familiarly known as the Confederate States, determined to recede or secede from the Union with the Northern States, and a war broke out, which had now unfortunately raged for two years. The war, however, having broken out, it soon became apparent that, although it was on the part of the seceding States a revolt against the government under which they had formerly lived, yet the organization and the power of self-defence and carrying on of military operations, according to the regular rules of war, were such as regarded states not involved in hostilities; although a recognition of the Confederates as an independent power was out of the question, yet it was right they should be admitted by other nations within the circle of lawful belligerents—that is to say, that their forces should not be treated as pirates, nor their flag as a piratical flag. Therefore, as far as the two belligerents were concerned, on the part of this and other governments, they were so far put on a level that each was to be considered as entitled to the right of belligerents—the Southern States as much as the other. On the 13th of May a proclamation was issued. The Attorney General read the proclamation, which stated that Great Britain being at peace with the United States, the subjects of Great Britain were required to preserve a neutrality in the hostilities being carried on by the Northern and Southern States. The

Attorney General went on to say, as to the American war, one was a regular Government, long since recognized by the Government of this country, and still at amity with Great Britain. The character of the other was of a different kind. The consequence was, that the position of the Confederate States as belligerents having been conceded, it followed that all the provisions of the Foreign Enlistment Act went to render assistance given to the Confederate States liable to the same punishment as if it had been given to those they opposed; he meant the Government of the United States. This brought them up to May, 1861. The seizure of the *Alexandra* took place at Liverpool, a commercial resort, before the war, of the traders from all parts of the Union and the South. She was lying at the time at the Toxteth dock, Liverpool. She had been launched from the building yard of Messrs. Miller the month before. At the time of the seizure Miller's men were on board of her. She was a vessel of no great size, being about 120 tons burden. She was strongly built of teak wood, and was in many respects different from vessels employed in the merchant service; and it would be for the jury to say by and by, having regard to the vessel itself and its materials, whether the vessel had been fitted for the merchant service or for warlike purposes. The Attorney General then described from a photograph the position of the ship at the time of her seizure and the appearance she presented. The Attorney General went on to say the vessel had proceeded so far as to leave no reasonable doubt that the destination of the vessel, in whatever quarter of the world she was to be employed, was a warlike destination. The charge against the defendants was that the *Alexandra* was fitted out or equipped, or permitted to be equipped, to harass and be hostile to the Government and citizens of a State with whom her Majesty was at peace. There were many persons intimately mixed up with the seizure and forfeiture besides those who had put in their claim. Miller & Sons were the builders, and were in actual possession of the vessel up to the time of her seizure, although the defendants had claimed her. The claimants were engineers, and supplied the vessel with engines and guns, and other materials that would be required for the completion of the vessel. There was one gentleman who had interfered in the matter, a Captain Bullock, an officer in the naval service of the Confederate States, and the evidence would go to show that he was, for particular purposes, an agent of the Confederate States. The same remark would apply to a Captain Tessier, who was in the service of Frazer & Co., merchants at Liverpool, who were very much mixed up in the interest of the Confederate Government. There was also a Mr. Hamilton, a naval officer in the Confederate States, standing in the same position as Captain Bullock. All these persons had more or less interfered with the building of the *Alexandra*. Assuming

all the facts to be made out—and they (the jury) were to adopt the conclusion of skilled witnesses as to the destination of the vessel for warlike purposes—they would have to ask themselves whether it could be doubted that the Confederate Government had an interest—an immediate interest—in the completion of the vessel. The Attorney General then went into the evidence he proposed to call to prove his case.

The testimony in the case was directed, and tended, to prove,

1st. That the vessel, from the nature of her construction, was not intended for the merchant service, but suitable for a vessel-of-war.

2d. That gun carriages and other warlike equipments were being constructed for her.

3d. That her builders had declared she was being built for the Confederate States.

4th. That the persons who contracted for her and supervised her construction, were in the service of the Confederate States.

After the case had been summed up, the Lord Chief Baron said :

This is an information on the part of the crown for the seizure and confiscation of a vessel that was in the course of preparation, but had not been completed. It is admitted that it was not armed, and the question is, whether the preparation of the vessel in its then condition was a violation of the Foreign Enlistment Act. The information is an exceeding long one, but the main question you will have to decide is this, whether, under the 7th section of the act of Parliament, the vessel as then prepared at the time of seizure was liable to seizure. The statute was passed in 1819, and upon it no question has ever arisen in our courts of justice; but there have been expositions of a similar statute which exists in the United States. I will now read to you the opinions of some American lawyers who have contributed so greatly to make law a science, and, indeed, I may say an agreeable one. His lordship then read a passage from Story and others. These gentlemen are authorities which show that when two belligerents are carrying on a war, a neutral power may supply without any breach of international law, and without a breach of the Foreign Enlistment Act, munitions of war—gunpowder, every description of arms, everything, in fact, that can be used for the destruction of human beings.

Why should ships be an exception? I am of opinion, in point of law, they are not. The Foreign Enlistment Act was an act to prevent the enlistment or engagement of his Majesty's subjects to serve in foreign armies, and to prevent the fitting out and equipping in his Majesty's dominions vessels for warlike purposes without his Majesty's license. The title of an act is not at all time an exact indication or explanation of the act, because it is generally attached after the act is passed. But in adverting to the preamble of the act I find that provision is made against the equipping, fitting out, furnishing, and arming of vessels, because it may be prejudicial to the peace of his Majesty's dominions. The question I shall put to you is, whether you think that vessel was merely in course of building to be delivered in pursuance of a contract that was perfectly lawful, or whether there was any intention in the port of Liverpool, or any other English port, that the vessel should be fitted out, equipped, furnished, and armed for purposes of aggression. Now, surely, if Birmingham, or any other town, may supply any quantity of munitions of war of various kinds for the destruction of life, why object to ships? Why should ships alone be in themselves contraband? I asked the Attorney General if a man could not make a vessel intending to

sell it to either of the belligerent powers that required it, and which would give the largest price for it, would not that be lawful? To my surprise the learned Attorney General declined to give an answer to the question, which I think a grave and pertinent one. But you, gentlemen, I think, are lawyers enough to know that a man may make a vessel and offer it for sale. If a man may build a vessel for the purpose of offering it for sale to either belligerent party, may he not execute an order for it? That appears to me to be a matter of course. The statute is not made to provide means of protection for belligerent powers, otherwise it would have said you shall not sell powder or guns, and you shall not sell arms; and if it had done so, all Birmingham would have been in arms against it. The object of the statute was this: that we should not have our ports in this country made the ground of hostile movements between the vessels of two belligerent powers, which might be fitted out, furnished, and armed in those ports. The Alexandra was clearly nothing more than in the course of building. It appears that, according to "Webster's Dictionary," equipping is furnishing with arms, and furnishing is given in other dictionaries as the same thing as equipping. It appears to me that if true that the Alabama sailed from Liverpool without any arms at all as a mere ship in ballast, and that her armament was put on board at Terceira, which is not in her Majesty's dominions, then the Foreign Enlistment Act was not violated at all. The most important evidence is that given by Capt. Inglesfield, who gave a very moderate statement, and has been spoken of on both sides in the highest terms of approbation, and I think myself his evidence was very fair and candid. After reading some of the evidence, his lordship said if you think that the object was to furnish, fit out, equip and arm that vessel at Liverpool, that is a different matter; but if you think the object really was to build a ship in obedience to an order in compliance with a contract, leaving those who bought it to make what use they thought fit of it, then it appears to me that the Foreign Enlistment Act has not been broken.

The jury immediately returned a verdict for the defendants.

The Attorney General tendered a bill of exceptions to the Lord Chief Baron's ruling.

Mr. Seward, in his despatch of July 11th to Mr. Adams, states the impression produced by the proceedings in the case as follows:

First. You are authorized and expected to assure Earl Russell that this Government is entirely satisfied that her Majesty's Government have conducted the proceedings in that case with perfect good faith and honor, and that they are well disposed to prevent the fitting out of armed vessels in British ports to depredate upon American commerce, and to make war against the United States.

Secondly. This Government is satisfied that the law officers of the crown have performed their duties in regard to the case of the Alexandra with a sincere conviction of the adequacy of the law of Great Britain, and with a sincere desire to give it effect.

Thirdly. The Government of the United States does not descend to inquire whether the jury in the case were or were not impartial. It willingly believes they were so, and it accepts the statement made with so much unanimity by all the reporters of the case, that the judge who presided at the trial made the bench responsible for the verdict by the boldness and directness of his rulings against the prosecution.

Fourthly. Great Britain being a free and constitutional country, and the proceedings in the case of the Alexandra having been thus far conducted by the Government in good faith and according to law, the United States would not be justified in deeming the verdict rendered by the jury a cause of national complaint, provided that the Government prosecutes an appeal to the higher courts until it be determined in the court of last resort whether the law is adequate to the main-

enance of the neutrality which her Majesty has proclaimed, and provided also that in the meantime the Alexandria and other vessels which may be found violating or preparing to violate the law, be prevented, so far as the law may allow, from leaving British ports to prosecute their work of devastation.

The President is not prepared to believe that the judiciary of Great Britain will, with well-considered judgment, render nugatory and void a statute of the realm which, with its counterpart in our own legislation, has hitherto been regarded by both nations as a guarantee of that mutual forbearance which is so essential to the preservation of peace and friendship. Nor shall I incur the hazard of producing irritation on either side of the ocean by criticising the reasoning by which the learned judge who tried the case of the Alexandria justified his conclusions thereon, or by which that portion of the British press which approves the verdict labors to defend it.

If the rulings of the Chief Baron of the Exchequer in the case of the Alexandria shall be affirmed so as to regulate the action of her Majesty's Government, the President will, as he thinks, be left to understand that there is no law in Great Britain which will be effective to preserve mutual relations of forbearance between the subjects of her Majesty and the Government and the people of the United States in the only point where they are exposed to infraction. The fitting out of the Alabama and the Florida, as well as of the Alexandria, will thus receive the sanction of the Government, and the United States will be without any guarantee whatever against the indiscriminate and unlimited employment of capital, industry, and skill, by British subjects, in building, arming, equipping, and sending forth ships-of-war from British ports to make war against the United States.

On the bill of exceptions being tendered to the Lord Chief Baron he declined to sign it, because it imputes to him certain legal declarations which he never made, and objects to him that he did not give instructions which he never were the very ones he did give. As a consequence, a technical barrier was at once raised against further operations, which proved so difficult to remove, that resort was finally had to the extraordinary step of creating a new rule for the purpose of admitting a motion on the part of the Government. Upon a motion made under this new rule, in the Court of Exchequer, on November 5th, before Lord Chief Baron Pollock and Barons Bramwell, Chanwell and Pigott, for a rule to show cause why there should not be a new trial on the ground of misdirection by the learned judge, and also on the ground that the verdict was against the evidence, a rule *nisi* was granted. After argument of the rule, to show cause why a new trial should not be granted, the Court of Exchequer discharged the rule, thus denying a new trial, and an appeal was brought to the Court of Exchequer Chamber. The case took an unexpected turn at the hearing in this court, in the early part of February, 1864.

When the appeal from the Court of Exchequer was taken there was some discussion as to practice, but it was finally understood that the case was put in such shape that, although the Chief Baron would not sign a bill of exceptions, the legal questions involved in his rulings could go before the higher courts.

The critical questions need not be stated here, as they do not relate to the more impor-

tant matters connected with the case, and involve the construction of provisions in the "Common Law Procedure Act" and the "Queen's Remembrancer's Act," upon purely technical points. The judgment of the matter of jurisdiction was given on the 8th of February, in the Court of Exchequer Chamber, and disclosed a singular division of opinion. The Lord Chief Justice of the Queen's Bench and three puisne judges of that court who were present, were of the opinion that there was no jurisdiction; the Lord Chief Justice and two judges of the Common Pleas were of opinion that there was jurisdiction, and the former having the majority by one the appeal was dismissed.

The expedient by which, notwithstanding this denial of jurisdiction in the Court of Exchequer Chamber, the case is finally sent to the House of Lords, is thus explained in the London Times of the 29th of February:

Happily, a loophole was discovered by the court, by means of which this grievous sacrifice of justice to an informality may yet be avoided. Instead of simply admitting the preliminary objection and declining to hear the appeal, the form of judgment is that the appeal be dismissed. There will, therefore, be an entry of a decision on the record, and against this decision, although not founded on the merits of the suit, the counsel for the Crown may appeal to the House of Lords. Thus this ignoble break down in our legal machinery is not past remedy if the House of Lords shall agree with the three Judges of the Common Pleas rather than with the four Judges of the Queen's Bench. It may perhaps strike some of our readers that the expedient devised to extricate our courts from the dilemma is not much less technical than the origin of the dilemma itself. The solution is *in pari materia* with the difficulty, and probably neither would have occurred to an unprofessional mind. Where, however, a great mistake has been made in a very serious matter, we must be content to get out of its consequences as best we may consistently with justice and precedent. If the Alexandria case had been stopped in its present stage, not only would a golden opportunity of reducing an important branch of law to certainty have been irretrievably lost, but a new pretext would have been provided, very unseasonably, for impugning the faith of our Government. (*See GREAT BRITAIN.*)

FRANCE.—The diplomatic relations between the United States and France appear to have been of a very friendly kind during 1863. No further movements were made by the French Government relative to an acknowledgment of the insurrectionary States, and no vessels, during that period, were allowed to leave her ports for the purpose of destroying the commerce of the United States. The intentions of France in Mexico, and the views of the United States Government on that subject, were explained in the correspondence, as will appear by the following extracts:

On the 26th of September Mr. Seward writes to Mr. Dayton as follows:

It is well understood that through a long period, closing in 1860, the manifest strength of this nation was a sufficient protection for itself and for Mexico, against all foreign States. That power was broken down and shattered in 1861 by faction. The first fruit of our civil war was a new, and in effect, though not intentionally so, an unfriendly attitude assumed by

Great Britain, France, and Spain, all virtually, and the two first named powers avowedly, moving in concert. While I cannot confess to a fear on the part of this Government that any one or all of the maritime powers combining with the insurgents could overthrow it, yet it would have been manifestly presumptuous, at any time since this distraction seized the American people, to have provoked such an intervention, or to have spared any allowable means of preventing it. The unceasing efforts of this department in that direction have resulted from this ever-present consideration. If in its communications the majestic efforts of the Government to subdue the insurrection, and to remove the temptation which it offered to foreign powers, have not figured so largely as to impress my correspondents with the conviction that the President relies always mainly on the national power, and not on the forbearance of those who it is apprehended may become its enemies, it is because the duty of drawing forth and directing the armed power of the nation has rested upon distinct departments, while to this one belonged the especial duty of holding watch against foreign insult, intrusion, and intervention. With these general remarks I proceed to explain the President's views in regard to the first of the two questions mentioned, namely, the attitude of France in regard to the civil war in the United States.

We know from many sources, and even from the Emperor's direct statement, that, on the breaking out of the insurrection, he adopted the current opinion of European statesmen that the efforts of this Government to maintain and preserve the Union would be unsuccessful. To this prejudgment we attribute his agreement with Great Britain to act in concert with her upon the questions which might arise out of the insurrection; his concession of a belligerent character to the insurgents; his repeated suggestions of accommodation by this Government with the insurgents; and his conferences on the subject of a recognition. It would be disingenuous to withhold an expression of the national conviction that these proceedings of the Emperor have been very injurious to the United States, by encouraging and thus prolonging the insurrection. On the other hand, no statesman of this country is able to conceive of a reasonable motive, on the part of either France or the Emperor, to do or to wish injury to the United States. Every statesman of the United States cherishes a lively interest in the welfare and greatness of France, and is content that she shall enjoy peacefully and in unbounded prosperity the administration of the Emperor she has chosen. We have not an acre of territory or a port which we think France can wisely covet; nor has she any possession that we could accept if she would resign it into our hands. Nevertheless, when recurring to what the Emperor has already done, we cannot, at any time, feel assured that, under mistaken impressions of our exposure, he might not commit himself still further in the way of encouragement and aid to the insurgents. We know their intrigues in Paris are not to be lightly regarded. While the Emperor has held an unfavorable opinion of our national strength and unity, we, on the contrary, have as constantly indulged entire confidence in both. Not merely the course of events, but that of time, also, runs against the insurgents and reinvigorates the national strength and power. We desire, therefore, that he may have the means of understanding the actual condition of affairs in our country. We wish to avoid anything calculated to irritate France, or to wound the just pride and proper sensibilities of that spirited nation, and thus to free our claim to her forbearance, in our present political emergency, from any cloud of passion or prejudice. Pursuing this course, the President hopes that the prejudgment of the Emperor against the stability of the Union may the sooner give way to convictions which will modify his course, and bring him back again to the traditional friendship which he found existing between this country and his own, when, in obedience to her voice, he assumed the reins of empire. These designs and purposes do not imply either a fear

of French hostility, or any neglect of a prudent posture of national self-reliance.

The subject upon which I propose to remark, in the second place, is the relation of France toward Mexico. The United States hold, in regard to Mexico, the same principles that they hold in regard to all other nations. They have neither a right nor a disposition to intervene by force in the internal affairs of Mexico, whether to establish and maintain a republic or even a domestic government there, or to overthrow an imperial or a foreign one, if Mexico chooses to establish or accept it. The United States have neither the right nor the disposition to intervene by force on either side in the lamentable war which is going on between France and Mexico. On the contrary, they practise in regard to Mexico, in every phase of that war, the non-intervention which they require all foreign powers to observe in regard to the United States. But, notwithstanding this self-restraint, this Government knows full well that the inherent normal opinion of Mexico favors a government there republican in form and domestic in its organization, in preference to any monarchical institutions to be imposed from abroad. This Government knows, also, that this normal opinion of the people of Mexico resulted largely from the influence of popular opinion in this country, and is continually invigorated by it. The President believes, moreover, that this popular opinion of the United States is just in itself, and eminently essential to the progress of civilization on the American continent, which civilization, it believes, can and will, if left free from European resistance, work harmoniously together with advancing refinement on the other continents. This Government believes that foreign resistance, or attempts to control American civilization, must and will fail before the ceaseless and ever-increasing activity of material, moral, and political forces, which peculiarly belong to the American continent. Nor do the United States deny that, in their opinion, their own safety and the cheerful destiny to which they aspire are intimately dependent on the continuance of free republican institutions throughout America. They have submitted these opinions to the Emperor of France, on proper occasions, as worthy of his serious consideration, in determining how he would conduct and close what might prove a successful war in Mexico. Nor is it necessary to practise reserve upon the point, that if France should, upon due consideration, determine to adopt a policy in Mexico adverse to the American opinions and sentiments which I have described, that policy would probably scatter seeds which would be fruitful of jealousies, which might ultimately ripen into collision between France and the United States and other American republics. An illustration of this danger has occurred already. Political rumor, which is always mischievous, one day ascribes to France a purpose to seize the Rio Grande, and wrest Texas from the United States; another day rumor advises us to look carefully to our safety on the Mississippi; another day we are warned of coalitions to be formed, under French patronage, between the regency established in Mexico and the insurgent cabal at Richmond. The President apprehends none of these things. He does not allow himself to be disturbed by suspicions so unjust to France and so unjustifiable in themselves; but he knows, also, that such suspicions will be entertained more or less extensively by this country, and magnified in other countries equally unfriendly to France and to America; and he knows, also, that it is out of such suspicions that the fatal web of national animosity is most frequently woven. He believes that the Emperor of France must experience desires as earnest as our own for the preservation of that friendship between the two nations which is so full of guarantees of their common prosperity and safety. Thinking this, the President would be wanting in fidelity to France, as well as to our own country, if he did not converse with the Emperor with entire sincerity and friendship upon the attitude which France is to assume in regard to Mexico. The statements made to you by M. Drouyn de l'Huys, con-

cerning the Emperor's intentions, are entirely satisfactory, if we are permitted to assume them as having been authorized to be made by the Emperor in view of the present condition of affairs in Mexico. It is true, as I have before remarked, that the Emperor's purposes may hereafter change with changing circumstances. We, ourselves, however, are not unobservant of the progress of events at home and abroad; and in no case are we likely to neglect such provision for our own safety as every sovereign state must always be prepared to fall back upon when nations with which they have lived in friendship cease to respect their moral and treaty obligations. Your own discretion will be your guide as to how far and in what way the public interests will be promoted, by submitting these views to the consideration of M. Drouyn de l'Huys.

I am, sir, your obedient servant,

WILLIAM H. SEWARD.

WILLIAM L. DAYTON, Esq., &c., &c.

On the 9th of October, Mr. Dayton reports his communication of the views expressed in the preceding letter, to the French minister M. Drouyn de l'Huys, as follows:

I brought out your views, however, in the course of a general conversation about Mexican affairs. I asked of M. Drouyn de l'Huys what character of test was to be adopted, with a view to learn the wishes of that country (Mexico) as to its form of Government. He said that the vote of the entire country, and of all its departments, whether the French were or were not in their possession, would be taken, and if upon its registries it should appear that a large majority of the whole population (Spanish and Indian) were favorable to a monarchical form of Government, he supposed that would be sufficient. He thought there would be no difficulty in applying this test, and showing a large numerical majority in favor of the archduke, and that form of Government.

M. Drouyn de l'Huys went on to say, that the dangers of the Government of the archduke would come principally from the United States, and the sooner we showed ourselves satisfied, and manifested a willingness to enter into peaceful relations with that Government, the sooner would France be ready to leave Mexico and the new Government to take care of itself, which France would, in any event, do as soon as it could; but that it would not lead or tempt the archduke into difficulty, and then desert him before his Government was settled. He added, that France could not do that. He said, that the early acknowledgment of that Government by the United States would tend to shorten, or perhaps, he said, to end all the troublesome complications of France in that country; that they would thereupon quit Mexico.

* * * * *

I told him that, without having any authority from my Government to say so, I should scarcely suppose that France, under the circumstances, would expect the United States to make haste to acknowledge a new monarchy in Mexico, but I would report his views to the Government at home; not suggesting, however, that any answer would be given. In the course of conversation, he took occasion again to repeat, voluntarily, their disclaimer of any purpose to interfere with Texas, or to make or to seek any permanent interest or control in Mexico.

On the 23d of October, Mr. Seward writes to Mr. Dayton acknowledging the receipt of his despatch, and saying:

SIR: I have the honor to acknowledge the reception of your despatch of the 9th instant (No. 361), which brings me the views expressed by M. Drouyn de l'Huys concerning the situation in Mexico. Various considerations have induced the President to avoid taking any part in the speculative debates bearing on that situation which have been carried on in the capitals of Europe as well as in those of America. A determination to err on the side of strict neutrality, if we err at all,

in a war which is carried on between two nations, with which the United States are maintaining relations of amity and friendship, was prominent among the considerations to which I have thus referred.

The United States, nevertheless, when invited by France or Mexico, cannot omit to express themselves with perfect frankness upon new incidents, as they occur, in the progress of that war. M. Drouyn de l'Huys now speaks of an election which he expects to be held in Mexico, and to result in the choice of his Imperial Highness the Prince Maximilian of Austria to be Emperor of Mexico. We learn from other sources that the prince has declared his willingness to accept an imperial throne in Mexico on three conditions, namely: first, that he shall be called to it by the universal suffrage of the Mexican nation; secondly, that he shall receive indispensable guarantees for the integrity and independence of the proposed empire; and thirdly, that the head of his family, the Emperor of Austria, shall acquiesce.

Referring to these facts, M. Drouyn de l'Huys intimates that an early acknowledgment of the proposed empire by the United States would be convenient to France, by relieving her, sooner than might be possible under other circumstances, from her troublesome complications in Mexico.

Happily the French Government has not been left uninformed that, in the opinion of the United States, the permanent establishment of a foreign and monarchical Government in Mexico will be found neither easy nor desirable. You will inform M. Drouyn de l'Huys that this opinion remains unchanged. On the other hand, the United States cannot anticipate the action of the people of Mexico, nor have they the least purpose or desire to interfere with their proceedings, or control or interfere with their free choice, or disturb them in the enjoyment of whatever institutions of Government they may, in the exercise of an absolute freedom, establish. It is proper, also, that M. Drouyn de l'Huys should be informed that the United States continue to regard Mexico as the theatre of a war which has not yet ended in the subversion of the Government long existing there, with which the United States remain in the relation of peace and sincere friendship; and that, for this reason, the United States are not now at liberty to consider the question of recognizing a Government which, in the further chances of war, may come into its place. The United States, consistently with their principles, can do no otherwise than leave the destinies of Mexico in the keeping of her own people, and recognize their sovereignty and independence in whatever form they themselves shall choose that this sovereignty and independence shall be manifested. I am, sir, your obedient servant,

WILLIAM H. SEWARD.

WILLIAM L. DAYTON, Esq., &c., &c., &c.

The correspondence with other countries, when important, is noticed in the articles elsewhere on those countries.

DOST MOHAMMED, KHAN, emir of Cabul, born in the country of the Barekzais, about 1785, died under the walls of Herat in May, 1863. The vicissitudes of his career have been rarely equalled except in oriental countries, where the sovereign of to-day may be a wandering refugee to-morrow. The tribe of the Barekzais have been for a long period the largest and most prominent of the Tartar hordes which occupy the western portion of Central Asia, and its chiefs have borne a conspicuous part in the government of that region, and the control of the successive empires which have risen and fallen there within the past three or four centuries. In 1738-'9, Nadir Shah, the most enterprising and energetic of the Persian monarchs in modern times, had conquered Af-

ghanistan, and conferred its government upon one of his viceroys. In 1744 he died, and one of his generals, Ahmed Khan, chief of the tribe of the Abdallehs, seized Afghanistan, and, proclaiming his independence, caused himself to be crowned king or emperor at Kandahar, under the title of Ahmed Shah, *Dour-e-Douran* (pearl of the age), and his tribe thenceforth took the name of Douranis or Douranians. The kingdom of the Afghans, of which he thus took possession, extended from Khorassan to India, and from Beloochistan to Cashmere, and included also Scinde, in the northwest of India. His reign of twenty-nine years was peaceful and without remarkable incidents, and he was succeeded in 1773 by his son Timour Shah, who died in 1793, after a quiet reign of twenty years, leaving several sons, who aspired to the throne. One of the youngest of these, Zeman Shah, having obtained the powerful assistance of Sarferaze Khan, chief of the tribe of the Barekzais, ascended the throne, and for a time succeeded in maintaining his authority, but his brothers, Mahmoud, who had secured the influence of the East India Company in his favor, and Shoudja, both older than himself, conspired against him, and the weak and jealous Zeman Shah, accusing his protector and friend Sarferaze of participating in the conspiracy, put him to death. The eldest son of Sarferaze, Fatteh Khan, to avenge his father, espoused the cause of Mahmoud, and caused him to be proclaimed shah or king of Afghanistan; but Shoudja, the younger brother of Mahmoud, at once commenced intriguing with the East India Company, and in 1809 concluded a treaty with them, against France, by virtue of which he was to be elevated to the throne. Meanwhile, Mahmoud, whose hold upon the kingdom was at first somewhat weak, had, by the energetic efforts of Fatteh Khan, succeeded in deposing Zeman Shah, and in keeping Shoudja in exile, and in 1809 consolidated his power, and with Fatteh Khan, as prime minister, entered upon a vigorous administration, the prime minister restoring order throughout the realm, and keeping foreign powers at a distance. In 1818, he led the Afghan army against a large Persian force, which was marching upon Herat, and repulsed it with heavy loss. This success of Fatteh Khan, however, excited the jealousy of Kamran, the son of the Shah Mahmoud, who, prejudicing the mind of his father against him, caused him to be arrested and his eyes put out. The intelligence of this unjust and inhuman treatment of their beloved chieftain caused the Barekzais to rise at once in rebellion. Mahmoud, causing Fatteh Khan to be brought into his presence, ordered him to cause his tribe to return to their allegiance, but he answered that he was only a poor blind man, and had nothing further to do with the affairs of state. Enraged at this reply, Mahmoud caused him to be hacked to pieces with sabres by his concubines.

Within the next two years the brothers of Fatteh Khan had made themselves masters of

the whole of Afghanistan except Herat, and the territory immediately adjacent, which was still held by the Shah Mahmoud and his son Kamran. Dost Mohammed, the eldest of these brothers, reigned at Cabul; four of his brothers, Sir-dil, Raham-dil, Mur-dil, and Kohan-dil, ruled conjointly at Kandahar, and a still younger brother at Peshawur, under the suzerainty of Runjeet Singh, king of Lahore.

Of these brothers, the only one who inherited the intelligence, energy of character, ardent ambition, and capacity for governing of his father and elder brother, was Dost Mohammed. His brothers made themselves odious to the people at Kandahar, and he looked forward with hope to the time when he might succeed in bringing the whole old Afghan empire under his sway. He found the East India Company, however, ready to interpose formidable obstacles in the way of his success. That company were constantly apprehensive of an invasion of India by the way of Cabul and Kandahar, and believing that Dost Mohammed would become an instrument in the hands of the Russian Government to aid in such an invasion, they were disposed to cripple his power as far as possible. For nineteen years he had succeeded in maintaining his authority at Cabul, and had seen his old enemy Kamran deposed at Herat. The British Government meanwhile had allowed a pension to the pretender Shoudja, and in 1839 sent a large army into Afghanistan to drive out Dost Mohammed and his brother, and place Shoudja upon the throne. They succeeded in their object for the time. Dost Mohammed, finding himself unable to contend with so large a force, fled from Cabul, and, though he fought two pitched battles with the English forces, was defeated, and Shoudja was crowned king of Afghanistan. On the 3d or 4th of November, 1840, Dost Mohammed, with an eye to future success, appeared before the gates of Cabul, presented himself before Sir William McNaughton, the British Resident, declared his name, and surrendered his sword. The Resident, touched with his apparent magnanimity, treated him with great respect, and sent him to India.

Meantime, the Government of Shah Shoudja was becoming daily more unpopular, and not the Barekzais alone, but the other Afghan tribes were rising in insurrection, and in the latter part of 1841 a general outbreak took place, in which the English garrison were compelled to fly for their lives; Shah Shoudja was assassinated, Sir William McNaughton slain by the hand of Akbar Khan, a son of Dost Mohammed, who led the insurrection, and the British troops in the country, attempting to retreat to India, were, many of them, destroyed in the defiles of the Himalayas. The English Government in 1842 revenged their defeat by burning Ghuzna, Cabul, Jellalabad, and other towns of Afghanistan, and left the country in a state of anarchy, having placed a son of Shoudja upon the throne. He proved as unfit to rule as his father, and as his downfall was inevitable, the

English Government found themselves reduced to the necessity of treating with Dost Mohammed for his restoration to authority. He had remained in India quietly biding his time, and in 1843 he left Calcutta, furnished by the Government with money, and, remaining for a time at Lahore, where he met his son Akbar Khan, he prepared for his return to Cabul, which he entered in the ensuing summer. Here he exerted himself successfully to repair the injuries which British interference had brought upon his country, reëstablished commerce, and gave his eldest daughter in marriage to Seid Mohammed, who in 1852 succeeded his father Yat Mohammed as king of Herat. An attack having been made by the Persians upon Seid Mohammed, Dost Mohammed sent a force to aid his son-in-law, and, though unsuccessful, he exerted such influence with his English allies, that the Persian Government was compelled to acknowledge by treaty the independence of Herat. One of his brothers, who ruled jointly at Kandahar, died in 1855, and in his will made Dost Mohammed the guardian of his children, and thus opened the way, in part, for him to become master of Kandahar. The same year he concluded a treaty of close alliance, offensive and defensive, with the East India Company. In the autumn of 1855, a nephew of Kamran, and grandson of Mahmoud, the murderer of Fattah Khan, by treachery introduced himself into Herat, assassinated Seid Mohammed, and seized the throne. Dost Mohammed immediately prepared to march upon Herat to avenge the death of his son-in-law and put to death the usurper; but the Persian Government had meantime sent an army to Herat, which besieged it in the summer of 1856, and captured it on the 26th of October of that year, taking the usurper Mohammed Yussuf Chah-Zudeh prisoner. When Dost Mohammed Khan arrived before the city he found himself unable to accomplish anything directly, and was compelled to return to Cabul. Through his influence with the English Government, however, he procured from the Persians the concession for his nephew Ahmed Khan of the government of Herat. The new sovereign was equal to his uncle in intelligence and ambition, and, allying himself with the Persian Government, he was soon on unfriendly terms with his uncle. In 1862 the governor of Ferah, one of the provinces of the kingdom of Herat, at the instigation of Dost Mohammed, declared himself independent, and Ahmed Khan marched against him. The insurgent governor called upon Dost Mohammed to come to his assistance, and the old khan, proceeding with great rapidity, defeated his nephew at the battle of Heri-Roud, and moved at once upon Herat, which he besieged, and having gained the chief of the Ulemas to his side, soon had a powerful faction in the city in his favor; but Ahmed Khan, ascertaining the facts, hanged the chief of the Ulemas, and some of his fellow conspirators, and soon received assistance from the Persians.

The old khan, however, not discouraged, continued the siege for several months, but in May, 1863, was seized with severe illness, from which he died in a few days.

DUNCAN, PHILIP BURY, Esq., an English scholar and philanthropist, born in South Warnborough in 1772, died at his residence, Westfield Lodge, near Bath. His early education was received at Winchester School, and in 1790 he entered New College, Oxford, where he was associated with the late Archbishop Howley, Bishop Mant, and Sydney Smith, with all of whom he kept up an intimacy and correspondence through life. About the year 1796, he, with his brother, the late John Shute Duncan, was called to the bar of Lincoln's Inn, and, for a few years, attended the Home and Western Circuits. In 1801 his father took up his residence in Bath, and from that time to the date of his death, the subject of this sketch divided his time between Bath and Oxford, and was intimately associated with nearly every local scheme in any way conducive to the welfare of the poor, as well as with all objects of scientific or literary interest. He took an active interest in the affairs of the Bath United Hospital, of which institution he was made president in 1841. With his brother he was one of the earliest promoters of the Bath Royal Literary and Scientific Institution, to whose valuable collection he was a most liberal contributor. But no notice of Mr. Duncan's career would be complete without an allusion to his connection with the University of Oxford, in which a great portion of his useful life was spent. He was the warm advocate and friend of all measures in any way calculated to extend the benefits of university education, or to give a place among the studies to physical science and mathematics, which, until that period, were not recognized in the same degree as ancient literature and philosophy. His experience of men and things was much enlarged by foreign travel and the acquaintance of men of letters on the continent. In 1826 Mr. D. received the appointment of keeper of the Ashmolean Museum, which office had been previously filled with great advantage to the University by his brother. Under the good taste and liberality of these brothers the museum became highly successful, and the valuable collections in the zoological and other departments kept alive in the University the attention to natural science which finally resulted in the erection of the University Museum, at a cost of £60,000, with provision for the proper teaching of the several branches of physiology, zoology, chemistry, experimental philosophy, geology, and mineralogy. The University is indebted to him also for the casts of the best statues of antiquity, wax models in the anatomy school, and models of ancient architecture which are among the chief ornaments of the picture gallery in the Bodleian Library. The poor of Oxford, too, are indebted to his exertions for the foundation of a savings bank,

an anti-mendicity society, and the establishment of public baths and wash-houses, toward the erection of which he contributed, at different times, £2,000. After holding his fellowship at New College for half a century, he resigned his position, thinking that its emoluments were, by this time, due to some more youthful successor, thus adding one more to the long list of acts of unselfish liberality which had characterized his life. He was a man of pure life, simple habits, and noble impulses, and his declining years exhibited a beautiful example of a quiet passage from time to eternity. His published works are "Political and Literary Anecdotes of his own Times," by Dr. William King, Principal of St. Mary's Hall, edited by Mr. Duncan, 1818; "Essays on Various Subjects," "Railway Readings," "Motives of War," "Reliquiæ Romanæ; or, Specimens of the Arts of the Romans found in England and Wales," "Essays on Conversation and on Quackery," 1835, "Literary Conglomerate," 1839.

DUYCKINCK, GEORGE LONG, an American author, born in the city of New York, October 17th, 1822, died there, March 30th, 1863. He was a descendant of an old Knickerbocker family, dating from the early settlement of the island by the Dutch. His father, Evert Duyckinck, was for many years one of the leading book publishers in New York. He retired

from business one year previous to his death, which occurred in 1833, leaving two sons, Evert A. and the subject of our sketch, both of whom inherited his literary taste. George L. Duyckinck was educated at Geneva College, N. Y., and at the university of the city of New York, graduating at the latter institution in 1843. After the completion of his college course, he, in company with William Allen Butler, a classmate, made a tour in Europe in 1848, and on his return became connected with his brother in the editorship of "The Literary World," a journal published weekly, in quarto, and which was continued until 1853, when it closed with its thirteenth volume. Mr. Duyckinck then, still associated with his brother, prepared the "Cyclopædia of American Literature," an able and extensive work requiring great research, the first edition of which was published by Scribner, of New York, in 1856. After visiting Europe a second time, he prepared several biographies, published by the Church Book Society in New York, among which are: "George Herbert," "Bishop Ken," "Latimer," and "Jeremy Taylor." In 1855 he became a corresponding member of the N. E. Historical Genealogical Society. For some years previous to his death, he was threatened with a pulmonary affection, but his energetic nature prevented his yielding to the disease until toward the end.

E

EARDLEY, SIR CULLING E., baronet, born in Hatfield, in 1805, died at his residence in Bedwell-park, Hatfield, May 21st, 1863. He was a son of the late Sir Culling Smith, baronet; was educated at Oriel College, Oxford, where, in 1827, he was placed in the second class in classical honors, but did not graduate, having conscientious scruples as to subscribing to some portions of the oaths then administered in taking the degree of B.A. He succeeded to the baronetcy in 1829, and represented Pontefract in one short Parliament previous to the Reform Bill. In 1846 he was a candidate for the representation of Edinburgh, in opposition to Lord Macaulay, on the appointment of the latter to the office of paymaster-general of the forces. Sir Culling based his claim chiefly upon his decided Protestantism and his opposition to the Maynooth Grant, but he only polled about half as many votes as his adversary. In 1847 he assumed, by royal license, his maternal name of Eardley, his mother having been a daughter of the last Lord Eardley. He was well known in public life for his zealous assertion of Protestant principles, and for the active part which he took in the proceedings of the Evangelical Alliance and other religious associations. His death resulted from revaccination, which, from some constitutional causes, had not the desired effect.

ELGIN, JAMES BRUCE, eighth earl of, and twelfth earl of Kincardine, an English statesman and, at his death, viceroy of India, born in London, July 20th, 1811, died at Dhurumsala, in Cashmere, Nov. 25th, 1863. He was educated at Eton, and from thence went to Christ Church, where he was a fellow-collegian with Lord Dalhousie, Lord Canning, and Mr. Gladstone. He was of the first class in classics, in 1832, and subsequently became a fellow of Merton College, being known then as Lord Bruce. In 1841 he entered Parliament as a member for Southampton, and as a supporter of Sir Robert Peel; and in the same year he succeeded to the earldom, which, being a Scotch peerage, did not interfere with his seat in the Lower House; but this he resigned in 1842, on being appointed to the governor-generalship of Jamaica. When difficulties presented themselves in Canada, Lord Elgin was selected, in 1846, as the best man to manage affairs in that colony. While there he carried out the conciliatory policy of his father-in-law Lord Durham, and by preserving a neutrality between parties, by developing the resources of the country, and by seeking in every possible way to study the wishes of the colonists, he did more than any other man to quell discontent, and to knit the Canadian provinces more closely to the mother country. As a re-

ward of his services he was, in 1849, raised to the peerage, as Baron Elgin of Elgin. From Canada Lord Elgin was transferred to China as special ambassador; and, while on his way to that empire, learning of the Indian mutiny at Calcutta, he at once took the decided step of landing the troops intended for China, that they might take part in the suppression of the rebellion. Arriving at China, though with a weakened force, he succeeded in his aims, saw Canton taken, and negotiated the important treaty of Tientsin with the Celestials, which forms the basis of their present relations with England. In the summer of 1859 he became a member of Lord Palmerston's cabinet, with the duties of postmaster-general. When the outbreak at Peiho occurred in 1860, Lord Elgin was once more despatched to sustain the English authority, and thoroughly fulfilled his mission by entering Peking in state and compelling the submission of the Celestial chiefs. Scarcely had he gained this triumph when he was appointed to succeed Lord Canning as governor-general of India. In this position he was unceasing in his efforts to develop the resources of that wide territory, some fruits of which are already seen in the increasing quantities of cotton now raised in that country. In the autumn of 1863, Lord Elgin started on a tour of inspection of the north of India, with the intention of visiting Cashmere, accompanied by Lady Elgin, the secretaries and other Government officials. On the 13th of November he incurred an unwonted degree of fatigue by ascending, on foot, one of the Himalayan passes, and was almost immediately seized with illness which caused him to take to his bed, at a secluded hamlet. He was fully aware of his state and made every earthly preparation for his departure, dictated the telegrams to be despatched to England, and gave instructions respecting the return of his family, and, finally, the injunctions relative to his burial at Dhurumsala.

EMIGRATION. It is intended to notice under this title only the number of persons who have left the countries of Europe and landed in the United States for the purpose of settlement during the last few years.

During 1863 the arrivals were 182,808. Of this number 156,844 landed in New York; 4,587 in Maine; 9,030 in Massachusetts; 46 in Rhode Island; 115 in New Jersey; 3,088 in Pennsylvania; 1,176 in Maryland; 140 in Florida; 7,400 in California, and 482 in Oregon. Of the number landed in New York, 84,105 reported their destination to be the State of New York; 10,139 to Pennsylvania and New Jersey; 17,516 to New England; 4,428 to the Southern States; 28,179 to Ohio, Indiana, Illinois, Michigan, Wisconsin, Iowa, Minnesota, and California; 8,281 to Kansas, Nebraska, Canada, &c. The arrivals at New York during eleven months of 1863, to Nov. 30th, and also during nearly five years from Jan. 1st, 1859, to Nov. 30th, 1863, were as follows:

	From January to Nov. 30th, 1863.	Totals 4 years and 11 months.
From Ireland.....	86,691	224,674
From Germany.....	32,801	153,849
From England.....	16,893	52,236
From Denmark.....	1,567	4,856
From Switzerland.....	1,053	5,923
From France.....	1,195	6,663
From Wales.....	1,083	4,153
From Scotland.....	1,664	6,957
From Sweden.....	1,359	3,083
From Italy.....	405	2,533
From Holland.....	379	1,367
From Belgium.....	456	949
From West Indies.....	242	1,502
From Spain.....	152	928
Various others.....	574	2,615
	146,519	472,838

The nativity of those who arrived in New York during the entire year 1863, was as follows: from Ireland, 92,157; from Germany, 35,002; from England, 18,757; from other countries, 10,928. The arrivals in New York in 1862, were 76,306; do. in 1861, 65,529; do. in 1860, 105,164.

The following table, compiled from official sources, shows the accelerated advance of immigration during the period intervening between September, 1819, and December, 1860:

In the 10 years ending September 30th, 1829.....	123,502
In the 10 years ending September 30th, 1839.....	538,381
In the 10 years ending September 30th, 1849.....	1,427,337
In the 11½ years ending December 31st, 1860.....	2,968,194

Making a total of arrivals in 41 years of 5,062,414
Adding to this the number returned as arriving previous to 1820..... 234,000

Total.....5,296,414

To appreciate the benefits of future immigration to the United States, an adequate estimate should first be formed of the advantages already derived from the same source. These are no less than the achievements of human labor throughout the United States since the first European made for himself a home on this continent. The American people are either immigrants or the descendants of immigrants, and of a period with which all are sufficiently familiar.

EMMONS, EBENEZER, M. D., an American geologist and author, born in Middlefield, Berkshire county, Massachusetts, in 1798, died at Brunswick, North Carolina, October 1st, 1863. He graduated from Williams College, Mass., in 1818, and having selected the profession of medicine, pursued his course of medical studies at Pittsfield and elsewhere, and received his diploma after the organization of the Berkshire Medical Institute, in 1830. He soon became a successful practitioner, but his tastes led him to cultivate with great assiduity the natural sciences, and in 1833 he was elected professor of natural history in Williams College, the first professorship of that kind, we believe, ever established in this country. In this position he made important contributions to the knowledge of the botany, geology, and mineralogy of New England and the Northern States, and assisted in the natural history survey of

Massachusetts, preparing the "Report on the Quadrupeds" of the State.

When the geological survey of New York was undertaken, Dr. Emmons was appointed one of the "geologists-in-chief," and had also assigned to him the department of agriculture; and his reports constitute some six or eight of the most valuable volumes of the well-known "Natural History of New York" series. It was while engaged in this labor, and subsequently, the interesting incidents hereafter alluded to occurred. Prior to the commencement of the New York geological survey, our knowledge of American geology was exceedingly confused and indefinite, and no clear ideas had been arrived at, as to what were the oldest fossiliferous rocks of the continent, or as to their location, extent, or the nature of the former life evidences contained in them. The survey of Massachusetts and Connecticut had indeed been made, but in neither of these States were the requisite data for making a general classification of the older American rocks to be found. In the broad territory of New York, however, it was seen from the first, that the clue to the enigma was obtainable, and soon after the commencement of the survey, evidence was accumulated, demonstrating that the divisions of the older fossiliferous rocks worked out and established in Great Britain, and on the continent of Europe, could be recognized also in North America, and that the period of their formation was, in part at least, contemporaneous. In conformity with these views, therefore, the New York zoologists adopted the nomenclature of the English classification, and grouped the oldest series of stratified fossiliferous rocks, found in their State, into one system, called the "silurian;" the oldest and lowest member of which, the "Potsdam sandstone," was considered as representing, with its few fossils, the epoch when animal life first dawned on the North American continent. The determination of these data was a matter of very great importance, inasmuch as the position of the oldest and lowest fossiliferous strata is the starting point for the classification of the enormous series of other fossiliferous rocks that are superimposed, and which were consequently formed subsequently. It is also the starting point for reckoning geological time comparatively; and the point from which animal and vegetable life, commencing in few and humble forms, is traced upward, expanding, succeeding, possibly developing and transmuting.

From this opinion, namely, that the silurian system of New York includes the oldest American fossiliferous rocks—an opinion in which all at first acquiesced—Dr. Emmons came gradually to differ, and after continuing his investigations for some years, he at last unhesitatingly announced that beneath the oldest member of the silurian system, there was another series of stratified rocks, of enormous thickness, representing a life period on our continent of much greater antiquity than any before recog-

nized, and an epoch of time, in comparison with which the silurian era seems modern. To this system, from the circumstance that the rocks included in it are extensively developed in Western Massachusetts and Vermont, Dr. Emmons applied the name "Taconic." To it also have been assigned the rocks which constitute the western face of the Green Mountains, extending from Canada to Georgia, the well known Berkshire and Vermont limestones and marbles, and extensive beds of slates and sandstones in the Lake Huron and Lake Superior districts and in Virginia, North Carolina, Tennessee, and Arkansas. The announcement of Dr. Emmons's views was received by geologists and naturalists generally with scepticism, partially, we suppose, through the natural unbelief which almost always attends the promulgation of any startling new truth, and partially because British and continental geologists—the recognized authorities of the time—had not then announced any analogous discovery; and this scepticism, either through jealousy of the brilliancy of the discovery, in case it was substantiated, or ill will at having pet theories rudely knocked over or disturbed, soon ended in persecution. To unscientific readers, persecution may seem rather an exaggerated expression to use as illustrative of the conduct of American scientists toward a colleague, simply on account of a difference of opinion, but no other term will rightfully express their action. For years Dr. Emmons was as good as banished from all scientific society. In public and in private, in print and in speech, he was impliedly or openly alluded to as a mere pretender in science, as a charlatan, and as dishonest. At the Albany meeting of the American Association for the Promotion of Science in 1856, the treatment he received from fellow members was almost brutal; old acquaintances hardly recognized him, and few gave him the right hand of fellowship. A law suit, moreover, grew out of this scientific war, to further which, to the detriment of Dr. Emmons, a learned New England professor left his academic duties and figured conspicuously in a New York petit court. Yet, in spite of all this, Dr. Emmons preserved the most Christian manliness and dignity, and never retorted either in speech or print to the abuse showered upon him except to firmly assert his confidence that the world would ultimately do him justice. This state of things, as we have already intimated, lasted for some ten or fifteen years; and it perhaps should be said that, during all this time, no charge, reflecting on the private character of Dr. Emmons, other than as a scientific observer, was brought against him by the bitterest of his opponents.

But justice, long delayed, came at last. In conducting the geological survey of Canada, instituted subsequent to the New York survey, a Canadian geologist came to the conclusion of Dr. Emmons, that the silurian system did not embrace the oldest and lowest of the American fossiliferous rocks; but, ignoring the former

discovery of that fact, he classified these ante-silurian strata, which are now believed to correspond with the upper and lower groups of Dr. Emmons's Taconic system, as the "Huronian and Laurentian" systems. Following hard upon this, ante-silurian formations of fossiliferous rocks were discovered in Sweden and Bohemia, and distinguished geologists in both these countries, recognizing the correspondence between their primordial formations and their contained fossils, with those described by Dr. Emmons in America, made haste to announce the fact and to award praise and credit to the American geologist for discoveries made, but not believed in, some fifteen years previously. Within a comparatively recent period, also, the Canadian geologists, reviewing their work, have obtained evidence which compels them to admit that their former hypotheses were wrong, and that the opinions of Dr. E. were in all probability wonderfully correct. And indeed so overpowering is the evidence accumulated in favor of the Taconic system, that most of the American scientists have ceased their opposition, and showed themselves ready to award praise and honor where they formerly gave ridicule and contempt. Of the extent to which his reputation and discernment have been vindicated, Dr. Emmons, however, was never probably fully aware. In 1858-'9, he was appointed by the Legislature of North Carolina to conduct the geological survey of that State. Here he rendered further essential service to science by determining the probable geological age of the belt of red sandstones and shales, which, occupying the valley of the Connecticut, stretch along the eastern slope of the United States as far south as North Carolina, and whose period of deposition has always been one of the varying problems of American geology.

The breaking out of the rebellion found Dr. E. still in North Carolina, prosecuting the survey; and here, either through inability to leave, or from a desire to protect certain mining properties, he remained until the time of his death, cut off from all scientific or other communication with his Northern friends and associates. It has been surmised that, on account of his knowledge of the State and its resources, he was detained a prisoner on parole by the Confederate Government. (*See ANNUAL CYCLOPÆDIA, 1861, TACONIC SYSTEM.*)

ENROLMENT AND DRAFT. This process for obtaining men to serve in the national armies, and known in other communities by the term "Conscription," was for the first time adopted in the United States by an act of Congress, approved March 3d, 1863. The leading features of the act were the enrolment; the calling forth by draft; the reception of substitutes; the arrest of deserters. It was provided in the act that the enrolment should begin about the first day of April ensuing, and whenever it was necessary the President was authorized to call for a quota of the men so enrolled.

The plan by which this act was to be carried into effect, was the appointment by the President of a provost-marshal-general, whose office should be at the seat of Government, forming a separate bureau of the War Department. The United States were then divided into districts, of which the District of Columbia constituted one; each territory constituted one or more, and each district for the election of a member of Congress, one. For each district a provost-marshal was appointed, by the President, and made subject to the orders of the provost-marshal-general. With each district provost-marshal there were associated two persons, one of whom was a licensed physician or surgeon. These were also appointed by the President. For the purpose of making the enrolment, each district board was authorized to divide its district into as many sub-districts as might be necessary, and to appoint an enrolling officer for each.

On the 17th of March, by an order of the War Department, Col. James B. Fry, assistant adjutant-general of the United States army, was detailed as provost-marshal-general of the United States, and authorized and required to perform all the duties of provost-marshal-general set forth in the act of Congress, and "all such other duties as may properly pertain to his office." In order to secure the coöperation of State officers and act in harmony with them, officers of the army were detailed to act as provost-marshals-general of States, and directed to take posts at State capitals.

In each district the provost-marshal, examining surgeon and commissioner, constituted the board of enrolment. By the instructions of the War Department, the provost-marshal, as president of the board, was authorized to appoint two deputy provost-marshals, subject to the approval of Col. Fry, with compensation not exceeding \$100 per month. The district was subdivided into towns and wards, and an enrolling officer appointed for each, whose duty was to enrol all persons subject to military duty, noting their residence, age, occupation, and color. The act declared that all able-bodied male citizens of the United States, and all persons of foreign birth who had declared on oath their intention to become citizens, between the ages of twenty and forty-five, should be liable to perform military duty, with some exceptions. These exceptions were stated in the second section of the act, which was as follows:

SEC. 2. *And be it further enacted,* That the following persons be, and they are hereby excepted and exempt from the provisions of this act, and shall not be liable to military duty under the same, to wit: such as are rejected as physically or mentally unfit for the service; also, first, the Vice President of the United States, the judges of the various courts of the United States, the heads of the various Executive Departments of the Government, and the governors of the several States. Second, the only son liable to military duty of a widow dependent upon his labor for support. Third, the only son of aged or infirm parent or parents dependent upon his labor for support. Fourth, where there are

two or more sons of aged or infirm parents subject to draft, the father, or, if he be dead, the mother may elect which son shall be exempt. Fifth, the only brother of children not twelve years old, having neither father nor mother, dependent upon his labor for support. Sixth, the father of motherless children under twelve years of age dependent upon his labor for support. Seventh, where there are a father and sons in the same family and household, and two of them are in the military service of the United States as non-commissioned officers, musicians, or privates, the residue of such family and household, not exceeding two, shall be exempt. And no person but such as herein excepted shall be exempt: *Provided, however,* That no person who has been convicted of any felony shall be enrolled or permitted to serve in said forces.

The enrolling officers were directed to enrol all able-bodied persons within the prescribed ages. They were to judge of age by the best evidence they could obtain. They were also required to make two classes in their returns; the first embracing all between twenty and thirty-five years, and the second, all between thirty-five and forty-five years. The enrolling officer was not expected to exercise his judgment under the exceptions. He was not authorized to omit any one between the ages of eighteen and forty-five. It was the object of the provost-marshal-general, on putting this vast organization in force, to ascertain how many men liable to military duty there were on the 1st of July in the United States, and to provide the means to establish between the Government and each district an account of military service, in which a charge should be made of all that was due, and credit given for all that was or should be paid. The enrolment was commenced about the 25th of May. It proceeded rapidly in all the States except Missouri, Kentucky, West Virginia, Oregon, and California. In these States the delay was caused by a difficulty in selecting the necessary officers. Questions of alienage, physical disability, &c., &c., were left to be decided by the enrolling boards. This caused imperfections in the lists or returns. It was stated by Col. Fry, that the opposition encountered in making the enrolment "could not be said to be serious. Some of the officers were maltreated, and one or two assassinated, but prompt action on the part of the civil authorities, aided when necessary by military patrols, effected the arrest of guilty parties, and checked these outrages." In some of the mining districts of Pennsylvania organized bodies of miners for a time opposed the enrolment. Persons arrested for obstructing the officers were turned over to the civil authorities for trial.

The following was issued as an order relative to the enrolment from the provost-marshal-general:

WAR DEPARTMENT, PROVOST-MARSHAL-GENERAL'S }
OFFICE, WASHINGTON, D. C., June 6th, 1863. }

The following opinion of the Solicitor of the War Department, has been ordered to be published by the Secretary of War:

Opinion. It is made the duty of provost-marshals to obey all lawful orders and regulations of the provost-marshal-general, and such as shall be prescribed by law, concerning the enrolment and calling into ser-

vice of the national forces, act of March 3d, 1863, section 7. The 25th section of the same act provides that if any person shall resist any draft of men enrolled under this act, into the service of the United States, or shall counsel or aid any person to resist any such draft, or shall assault or obstruct any officer in making such draft, or in the performance of any service in relation thereto, or shall counsel any person to assault or obstruct any such officer, or shall counsel any drafted man not to appear at the place of rendezvous, or wilfully persuade him from the performance of military duty as required by law, such persons shall be subject to summary arrest by the provost-marshal and shall be forthwith delivered to the civil authorities, and upon conviction thereof be punished by a fine not exceeding \$500 or by imprisonment not exceeding two years, or by both of said punishments. To do any act which will prevent or impede the enrolment of the national forces, which enrolment is preliminary and essential to the draft, is to prevent and impede the draft itself. The enrolment is a service to be performed by the provost-marshal in relation to the draft. It is not the act of drawing ballots out of a ballot-box itself, but it is in relation to it, and is the first step that must by law be taken preparatory to the draft. It is therefore clearly within the duty of the provost-marshal to subject all persons who obstruct the enrolment, the meeting of the board, or any other proceeding which is preliminary and essential to the draft, to summary arrest according to the provisions of section 25.

There are many ways of obstructing officers in the discharge of their services or duties in making or in relation to the draft, without employing physical force. The neglect or refusal to do an act required by law to be done may itself be such an obstruction as to subject the offender to arrest. Suppose a person be found standing in a passage through which the drafting officers are required to enter into a place designated by law as the place for the draft, and suppose that his standing in that place would prevent access by those officers to the place of the draft, if they request him to move away and he neglects or refuses to do so for the purpose of preventing the draft, the non-performance of the act of removal would be of itself an obstruction of the draft or of an officer in the performance of his duty in relation to it. Standing mute in civil courts is, under certain circumstances, a punishable offence. And so if a person with intent to prevent the draft refuses to give his true name, when lawfully requested so to do, by any officer whose legal duty it is to ascertain and enrol, it is an obstruction of that officer in the performance of one of his duties in relation to the draft. So, also, is the giving of false names with the same illegal intent, and the offender will in either case be subject to summary arrest by the provost-marshal.

WILLIAM WHITING,

Solicitor of the War Department.

JAMES B. FRY, Provost-Marshal-General.

In preparing the accounts with districts, much difficulty existed in equalizing between them the number of troops which had been furnished and those to be furnished. The quotas under which troops had been raised in 1861 and 1862 were based upon population and without reference to equalizing the numbers called for among districts or towns. In raising those volunteers much reliance had been placed upon the enterprise of individuals. Certain localities, by offering bounties and adopting other means to stimulate enlistments, drew many of their own quota from the people of other places. Every new call for troops was also independent of the one which had preceded it. The number of men which each State had furnished at any given date could be as-

certained ; but while volunteering was going on simultaneously in several towns and districts of a State, it was found difficult, if not impossible to equalize the draft, at any one time, among the respective districts or towns of that State. Thus very great complaints arose of inequality among towns and districts for which the act itself furnished no remedy, nor was it in the power of the Government to remove the difficulty. In New York the complaints were most serious. (*See NEW YORK* for correspondence of Gov. Seymour and his objections.)

The enrolment was not completed in all the States. So far as it had been made it showed the number of men between eighteen and forty-five not in the military service, but liable to military duty, in the opinion of the enrolling officers, to be 3,113,305. In making this enrolment, students in colleges or schools, teachers, apprentices, sailors, traders, travelling merchants and the like, were enrolled at their legal residence, their temporary absence from which was considered as not forming a cause for exemption. All persons thus enrolled were, by the provisions of the act, subject for two years after July first succeeding the enrolment, to be called into the military service.

For making the draft, one fifth the number of men enrolled in the first class was adopted as the quota of a district. The main object now was to apportion the number among the States, so that those previously furnished and those to be furnished would make a given part of their available men, and not a given part of their population; and a sufficient percentage was called for to make a given number. In consequence of thus basing the calls for men, those States which contained more females than males were really charged with a greater quota than those in which there was an excess of males. Some of the Western States with quotas nearly the same as some of the Eastern, not only furnished their quotas and a large excess besides, but had a larger proportion of males left than Eastern States which had not entirely filled their quotas and were therefore deficient. This deficiency was not probably from unwillingness to answer the call, but from a want of men, while the excess was attributable, in some degree, to the surplus of men. Thus the States to which the largest credits were to be given really had a larger proportion of men remaining than those to which a deficiency was charged.

From the lists, as prepared by the enrolling officer, one fifth of the first class was to make the quota. The boards were required to apportion this quota among the towns and wards forming sub-districts, and in making the draft of the number of men required, fifty per cent. in addition was ordered to be drawn. Each name of the first class in the sub-district was written upon a separate slip of paper, and placed in a wheel, or circular box, which was then made to revolve, and the name taken out and registered.

This was continued until the number of names required had been drawn. The public proceedings were then closed. By an order of the provost-marshal-general, dated July 17th, it was declared that "men became soldiers in the service of the United States by the fact of their names having been drawn in the draft." Any subsequent notification served upon them was decided to be merely an announcement of the fact, and an order to report for duty. The following opinion of the Solicitor of the War Department, Mr. Whiting, was also published by the provost-marshal-general, for the information of all concerned :

When a person has been drafted, in pursuance of the Enrolment Act of March 3d, 1863, notice of such draft must be served within ten days thereafter, by a written or printed notice, to be served on him personally, or by leaving a copy at his last place of residence, requiring him to appear at a designated rendezvous to report for duty. Any person failing to report for duty after notice left at his last place of residence or served on him personally without furnishing a substitute or paying \$300, is pronounced by law to be a deserter, he may be arrested and held for trial by court-martial and sentenced to death. If a person after being drafted, and before receiving the notice deserts, it may still be served by leaving it at his last place of residence, and if he does not appear in accordance with the notice or furnish the substitute or pay the \$300, he will be in law a deserter, and must be punished accordingly. There is no way or manner in which a person once enrolled can escape his public duties, when drafted, whether present or absent, whether he changes his residence or absconds, the rights of the United States against him are secured, and it is only by performance of his duty to the country that he will escape liability to be treated as a criminal.

A reward of ten dollars was also offered to any person for the apprehension and delivery of any deserter. The guard necessarily employed for the purpose were allowed \$1.50 per day and their expenses.

In addition to the causes of exemption from service stated above, there were others for which an enrolled person would be discharged. By paying \$300 any person enrolled and drafted would be exempt from further liability under that draft; or by furnishing an acceptable substitute to take his place in the draft, or by having such physical disability as would disqualify him for military service. In regard to exemptions of the latter class the following instructions were issued to provost-marshals:

The following diseases and infirmities are among those which disqualify for military service, and for which only drafted men are to be "rejected as physically or mentally unfit for the service," viz. :

1. Manifest imbecility or insanity.
2. Epilepsy. For this disability, the statement of the drafted man is insufficient, and the fact must be established by the duly attested affidavit of a physician of good standing who has attended him in a convulsion.
3. Paralysis, general, or of one limb, or chorea; their existence to be adequately determined.
4. Acute or organic diseases of the brain or spinal cord; of the heart or lungs; of the stomach or intestines; of the liver or spleen; of the kidneys or bladder, sufficient to have impaired the general health, or so well marked as to leave no reasonable doubt of the man's incapacity for military service.
5. Confirmed consumption; cancer; aneurism of the large arteries.

6. Inveterate and extensive disease of the skin, which will necessarily impair his efficiency as a soldier.

7. Decided feebleness of constitution, whether natural or acquired.

8. Scrofula or constitutional syphilis, which has resisted treatment and seriously impaired his general health.

9. Habitual and confirmed intemperance or solitary vice, in degree sufficient to have materially enfeebled the constitution.

10. Chronic rheumatism, unless manifested by positive change of structure, wasting of the affected limb, or puffiness or distortion of the joints, does not exempt. Impaired motion of the joints and contraction of the limbs alleged to arise from rheumatism, and in which the nutrition of the limb is not manifestly impaired, are to be proved by examination while in a state of anæsthesia induced by ether only.

11. Pain, whether simulating headache, neuralgia in any of its forms, rheumatism, lumbago, or affection of the muscles, bones, or joints, is a symptom of disease so easily pretended, that it is not to be admitted as a cause for exemption, unless accompanied with manifest derangement of the general health, wasting of a limb, or other positive signs of disqualifying local disease.

12. Great injuries or diseases of the skull, occasioning impairment of the intellectual faculties, epilepsy, or other manifest nervous or spasmodic symptoms.

13. Total loss of sight; loss of sight of right eye; cataract; loss of crystalline lens of right eye.

14. Other serious diseases of the eye affecting its integrity and use, *e. g.*, chronic ophthalmia, fistula lachrymalis, ptosis (if real), ectropion, entropion, &c. Myopia, unless very decided or depending upon some structural change in the eye, is not a cause for exemption.

15. Loss of nose; deformity of nose so great as seriously to obstruct respiration; ozena, dependent upon caries in progress.

16. Complete deafness. This disability must not be admitted on the mere statement of the drafted man, but must be proved by the existence of positive disease, or by other satisfactory evidence. Purulent otorrhœa.

17. Caries of the superior or inferior maxilla or the nasal or palate bones, if in progress, cleft palate, (bony); extensive loss of substance of the cheeks, or salivary fistula.

18. Dumbness; permanent loss of voice; not to be admitted without clear and satisfactory proof.

19. Total loss of tongue; mutilation or partial loss of tongue, provided the mutilation be extensive enough to interfere with the necessary use of the organ.

20. Hypertrophy or atrophy of the tongue, sufficient in a degree to impair speech or deglutition; obstinate chronic ulceration of the tongue.

21. Stammering, if excessive and confirmed; to be established by satisfactory evidence, under oath.

22. Loss of a sufficient number of teeth to prevent proper mastication of food and tearing the cartridge.

23. Incurable deformities or loss of part of either jaw, hindering biting of the cartridge or proper mastication, or greatly injuring speech; ankylosis of lower jaw.

24. Tumors of the neck, impeding respiration or deglutition; fistula of larynx or trachea; torticollis, if of long standing and well marked.

25. Deformity of the chest sufficient to impede respiration, or to prevent the carrying of arms and military equipments; caries of the ribs.

26. Deficient amplitude and power of expansion of chest. A man five feet three inches (minimum standard height for the regular army) should not measure less than thirty inches in circumference immediately above the nipples, and have an expansive mobility of not less than two inches.

27. Abdomen grossly protuberant; excessive obesity; hernia, either inguinal or femoral.

28. Artificial anus; stricture of the rectum; prolap-

sus ani. Fistula in ano is no positive disqualification, but may be so if extensive or complicated with visceral disease.

29. Old and ulcerated internal hæmorrhoids, if in degree sufficient to impair the man's efficiency. External hæmorrhoids are no cause of exemption.

30. The total loss or nearly total loss of penis; epispadia or hypospasia at the middle or near the root of the penis.

31. Incurable permanent organic stricture of the urethra, in which the urine is passed drop by drop, or which is complicated by disease of the bladder; urinary fistula. Recent or spasmodic stricture of the urethra does not exempt.

32. Incontinence of urine, being a disease frequently feigned and of rare occurrence, is not of itself a cause for exemption. Stone in the bladder, ascertained by the introduction of the metallic catheter, is a positive disqualification.

33. Loss or complete atrophy of both testicles from any cause; permanent retention of one or both testicles within the inguinal canal; but voluntary retraction does not exempt.

34. Confirmed or malignant sarcocele, hydrocele, if complicated with organic disease of the testicle. Varicocele and criscocele are not, in themselves, disqualifying.

35. Excessive anterior or posterior curvature of the spine; caries of the spine.

37. Wounds, fractures, tumors, atrophy of a limb, or chronic diseases of the joints or bones, that would impede marching or prevent continuous muscular exertion.

38. Ankylosis or irreducible dislocation of the shoulder, elbow, wrist, hip, knee, or ankle-joint.

39. Muscular or cutaneous contractions from wounds or burns, in degree sufficient to prevent useful motion of a limb.

40. Total loss of a thumb; loss of ungual phalanx of right thumb.

41. Total loss of two fingers of the same hand.

42. Total loss of index finger of right hand.

43. Loss of the first and second phalanges of the fingers of right hand.

44. Permanent extension or permanent contraction of any finger except the little finger; all the fingers adherent or united.

45. Total loss of either great toe; loss of any three toes on the same foot; all the toes joined together.

46. The great toe crossing the other toes with great prominence of the articulation of the metatarsal bone and first phalanx of the great toe.

47. Overriding, or superposition of all the toes.

48. Permanent retraction of the last phalanx of one of the toes, so that the free border of the nail bears upon the ground; or flexion at a right angle of the first phalanx of a toe upon a second with ankylosis of this articulation.

49. Club feet; splay feet, where the arch is so far effaced that the tuberosity of the scaphoid bone touches the ground, and the line of station runs along the whole internal border of the foot, with great prominence of the inner ankle; but ordinary, large, ill-shaped or flat feet do not exempt.

50. Varicose veins of inferior extremities, if not large and numerous, having clusters of knots, and accompanied with chronic swelling or ulcerations.

51. Chronic ulcers; extensive, deep, and adherent cicatrices of lower extremities.

52. No certificate of a physician or surgeon is to be received in support of any point in the claim of drafted men for exemption from military service, unless the facts and statements therein set forth are affirmed or sworn to before a civil magistrate competent to administer oaths.

53. The exemptions under the first provision of section second of the act for enrolling and calling out the national forces, etc., will generally be sufficiently well known to the board to obviate the necessity of evidence with regard to them. Should, however, the board consider it necessary in any case, the commission or certificate

of office of any person claiming exemption under the provision mentioned may be required to be shown.

54. To establish exemption under the second, third, fourth, fifth, and sixth provisions of section two of the act for enrolling and calling out the national forces, &c., the board shall require the affidavits of the persons seeking to be exempt, and of two respectable men (heads of families) residing in the district, that the man in question is "the only son of aged or infirm parent or parents dependent on his labor for support," or otherwise according to the particular provision of the section under which the exemption is claimed. These affidavits will be made according to the forms hereinafter prescribed, and must in all cases be taken before a civil magistrate duly authorized to administer oaths. These forms of affidavit shall be published by the board of enrolment in the newspapers of the district, for the information of the public, where a draft is ordered.

55. Persons claiming exemption from enrolment must furnish clear proof of their right to such exemption. They will be enrolled where the proof of their exemption is not clear and conclusive.

There were still other causes of exemption arising from the errors of the enrolling officers. Those who were enrolled and were not citizens of the United States nor had declared an intention of becoming such, were entitled to a discharge if their names were drawn. In some districts large numbers were dismissed for this reason. Again, those who were under twenty or over forty-five years of age were entitled to a discharge if their names were drawn. For all these reasons the proportion of those exempted was large, as compared with those who were held unless they could pay \$300 or provide a substitute. The ratio of rejections, however, for mental and physical infirmities in the United States, France, and Great Britain, at the periods stated, was as follows :

	U. S.	FRANCE.		G. BRITAIN.		
	In 1863.	From 1831 to 1843.	In 1859.	From 1842 to 1852.	In 1860.	In 1861.
Ratio rejected per 1,000...	319.1	324.4	317	335	318	451

On the 19th of October the provost-marshal-general made a report of the results in seventy-three districts where the draft had been completed, or was nearly so. Of those who were drawn, including the fifty per cent. additional, over eighty per cent. reported in accordance with the orders of the boards. Of all examined, about thirty per cent. were exempted on account of physical disability; another thirty per cent. were exempted under the provisions of the second section of the act above quoted, or found not liable on account of alienage, unsuitableness of age, non-residence, etc. About forty per cent. of the men examined have been held to service; about one half of these paid the commutation of \$300; about two thirds of the remainder furnished substitutes, and the other third went in person to the field. Thus, if the number drafted is supposed to be 150, then deduct 20 per cent. for those not reported, it becomes 120; then deduct 60 per cent. or 72 for exemptions, it becomes 48 who were held for service; then deduct one half for those who paid

commutation; and it becomes 24—of this number two thirds (16) furnished substitutes, and the other third (8) went to the field. In this proportion, the enrolment of 3,113,305 would have sent into the field 66,043 as conscripts; 132,686 as substitutes—total, 198,129 men.

Several of the Western States were not subjected to the draft on account of an excess of volunteers, and in other Western States the quota was quite small from the same cause. Of the twenty per cent. who did not report, some were unavoidably absent, others deserted. The amount of commutation money received was \$10,518,000. This money was used to procure recruits for old organizations, and as bounties to promote the reenlistment of veteran volunteers then in service. A bounty of \$300 was so generally paid by cities, counties and States, that drafted men could either retain it and go to the field, or purchase a substitute who was not liable to military service. Relative to physical disability the following statement of the provost-marshal-general is of interest :

Since the present rebellion began about two hundred thousand soldiers, after entering the service, have been discharged on surgeons' certificates of disability. It is probable that at least one half of them were unfit for service when received. It may be safely said that forty millions of money were uselessly expended in bringing them into the field, to say nothing of their subsequent expense to the Government.

In Great Britain, under the system of voluntary enlistments, the rejections average over twenty-seven per cent. In France, from 1831 to 1842, the average number of exemptions annually was 94,860; so that, to secure the contingent of 80,000 men, 174,860 conscripts were annually examined. Of the recruits who presented themselves for enlistment in our regular army in 1862, seventy per cent. were rejected for physical infirmities, exclusive of age or stature. Between the 1st of January and the 1st of July last more than one half were rejected. These were men who desired to be accepted. These proportions are of interest in connection with the fact that less than one third of the drafted men who desire not to be accepted have been exempted on account of physical unfitness.

The draft was forcibly resisted in New York, Boston, and Troy. (*See Riots.*)

Many writs of *habeas corpus* were served upon the officers connected with the draft. (*See HABEAS CORPUS.*) The practice adopted in regard to those issued by courts of the United States was to obey the writs and abide the judgment of the court. In the cases of like writs issued by State courts, the practice was to deny the jurisdiction of the State courts and decline to produce the person held. The courts in many cases continued to claim jurisdiction, and regarded the officer making the return as guilty of contempt. The civil courts also assumed jurisdiction in cases of claims for exemption from military duty, both before and after the boards had given final decision on them. The fourteenth section of the act is as follows: "All persons drafted and claiming exemption from military duty on account of disability, or any other cause, shall present their claims to be exempted to the board,

whose decision shall be final." The operations of the officers for making the draft were greatly embarrassed by the action of the courts, and it threatened for a time in several districts to suspend the business of raising troops and of arresting deserters. These difficulties, however, were substantially terminated by the proclamation of the President on September 15th, suspending the privilege of the writ of *habeas corpus* in certain cases. (See *HABEAS CORPUS*.)

Nearly twenty thousand deserters were apprehended by the provost-marshals between the first of May and the first of November. Assuming the number of deserters in October to have been the same as in September, it was found that the number who deserted and absented themselves in September and October was about half as great as the number in May and June.

The first steps taken toward organizing the bureau of the provost-marshal-general showed the necessity for a military force for special service in the bureau. The law prevented calling out and organizing as a reserve corps, or home guard, the men in part or whole of the second class. The organization, therefore, of men as an invalid corps who had been in service and had become unfit for further field duty was resorted to, and was commenced April 17th. General Order 105, dated April 28th, announces the principles upon which the organization would be conducted. The objects to be accomplished by drafting the corps were: 1. To secure the military services for garrison, hospital, and provost duty, of that class of deserting officers and men who, from wounds received in action or disease contracted in service, were unfit for further duty in the field, and who would otherwise be discharged from the service, but yet were able to do light duty, and to bring back for like purposes those who had been previously discharged on similar grounds, and were still unfit for active duty and not liable to draft. 2. To provide honorable and useful occupation and suitable compensation for a class of persons whose claims upon the nation no one could question. (See *ARMY, UNITED STATES*.)

No renewal of the draft was made during 1863. In October a call was issued for volunteers.

The disbursements of the Bureau to November 1st were \$1,190,392. The accounts returned for correction amounted to \$348,623; making a total of \$1,539,015. To this should be added \$402,944, being the pay of the district boards.

Numerous attempts were made to obtain a judicial opinion upon the constitutionality of the Conscription Act. Bills in equity were filed in the Supreme Court of Pennsylvania, substantially the same; one of them was filed by William F. Nichols, charging that his rights have been violated, and his personal liberty is about to be invaded by the defendants, under the pretence of executing a law of the United States. The bill then sets forth the Conscription Act, and the complainant avers that he has received no notice, but he is in daily ex-

pectation of receiving a notice, and being required immediately to report for duty at a designated rendezvous, on pain of being regarded as a deserter from military service, and of punishment by death under the articles of war. He is advised that the act of Congress under which he was enrolled and drafted for military service, without his consent and contrary to his will, is in derogation of the reserved rights of the States, and of the liberties and rights of the citizens thereof, and that the same is unconstitutional and void, there being delegated by the States and the people thereof to the Federal Government no power to enact such a law. * * *

The bill further charges that the proceedings under the draft are against common justice in this, that the draft is being enforced only in certain of the States not in rebellion and in insurrection, and certain other States and districts and parts of States are not being drafted for, and the plaintiff charges that, by reason thereof, the draft is unlawful.

The bill concludes with a prayer for a writ of injunction against the defendants to restrain them from further proceedings with or under said enrolment, requisition, or draft of citizens of the commonwealth, and of all persons of foreign birth who may have declared their intentions to become citizens, in pursuance of the laws, to perform compulsory military duty in the service of the United States, and from all other proceedings which violate the rights and invade the personal liberty of such persons, under pretence of executing the said law of the United States, and particularly from all proceedings under such pretence against the person of this plaintiff.

The motion for injunction was argued before a full bench on the part of the complainants, the defendants not appearing by counsel.

The decision of the court was, that the law was unconstitutional, Chief-Justice Lowrie and Justices Woodward and Thompson all concurring in this opinion; while Justices Strong and Read dissented. In delivering the opinion of the court, Lowrie, C. J., says:

These are three bills in equity wherein the plaintiffs claim relief against the defendants who, acting under the act of Congress of the 2d of March last, well known as the Conscription Act, claim to coerce the plaintiffs to enter the army of the United States as drafted soldiers. The claim of the plaintiffs is founded on the objection that that act is unconstitutional.

The Constitution, adopting our historical experience, recognizes two sorts of military land forces—the militia and the army, sometimes called the regular, and sometimes the standing army, and delegates to Congress the power to "raise and support armies" and "to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions." But though this act of Congress is intended to provide means for suppressing the rebellion, yet it is apparent that it is not founded on the power of "calling forth the militia," for those who are drafted under it have not been armed, organized, and disciplined under the militia law, and are not called forth as militia under State officers, as the Constitution requires. (Art. 1, 8, 16.)

It is, therefore, only upon the power to raise armies that this act can be founded, and, as this power is undisputed, the question is made to turn on the ancillary power to pass "all laws which shall be necessary and proper" for that purpose. (Art. 1, 8, 18.) It is, therefore, a question of the *mode* of exercising the power of raising armies. Is it admissible to call forced recruiting a "necessary and proper" mode of exercising this power?

The fact of rebellion would not seem to make it so, because the inadequacy or insufficiency of the permanent and active forces of the Government for such a case is expressly provided for by the power to call forth the usually dormant force, the militia; and that, therefore, is the only remedy allowed, at least until it has been fully tried and failed, according to the maxims, *expressio unius est exclusio alterius*, and *expressum facit cessare tacitum*. No other mode can be necessary and proper so long as a provided mode remains untried; and the force of these maxims is increased by the express provision of the Constitution, that powers not granted are reserved, and none shall be implied from the enumeration of those which are reserved. (*Amendments*, 9, 10.) A granted remedy for a given case would therefore seem to exclude all ungranted ones. Or, to say the least, the militia not having been called forth, it does not and can not appear that another mode is necessary for suppressing the rebellion.

And it seems very obvious that a departure from the constitutional mode cannot be considered necessary because of any defect in the organization of the militia, for Congress has always had authority to correct this, and it cannot possibly found new powers in its own neglect of duty. Though therefore this act was passed to provide means for suppressing the rebellion, yet the authority to pass it does not depend on the fact of rebellion. That fact authorizes forced levies of the militia under their own State officers, but not for the regular army.

But it is not important that Congress may have assigned an insufficient reason for the law. If it may pass such a law for *any* reason, we must sustain it for that reason. The question then is—may Congress, independent of the fact of rebellion or invasion, make forced levies in order to recruit the regular army?

If it may, it may do so even when no war exists or threatens, and make this the regular mode of recruiting. It may disregard all considerations of age, occupation, profession, and official station; it may take our governors, legislators, heads of State departments, judges, sheriffs, and all inferior officers, and all our clergy and public teachers, and leave the State entirely disorganized; it may admit no binding rule of equality or proportion for the protection of individuals, States, and sections. In all other matters of allowed forced contribution to the Union, duties, imposts, excises, and direct taxes, and organizing and training of the militia, the rule of uniformity, equality, or proportion, is fixed in the Constitution. It could not be so in calling out the militia, because the emergency of rebellion or invasion does not always allow of this.

But for the recruiting of the army no such reason exists, and yet, contrary to the rule of other cases, if it may be recruited by force, we find no regulation or limitation of the exercise of the power, so as to prevent it from being arbitrary and partial, and hence we infer that such a mode of raising armies was not thought of and was not granted. If any such mode had been in the intention of the fathers of the Constitution, they would certainly have subjected it to some rule of equality or proportion, and to some restriction in favor of State rights, as they have done in other cases of compulsory contributions to Federal necessities. We are forbidden by the Constitution from inferring the grant of this power from its not being enumerated as reserved; and the rule that what is not granted is reserved operates in the same way, and is equivalent to the largest bill of rights.

Besides this, the Constitution does authorize forced levies of the militia force of the States in its original form, in cases of rebellion and invasion, and on the

principle that a remedy expressly provided for a given case excludes all implied ones, it is fair to infer that it does not authorize forced levies in any other case or mode. The mode of increasing the military force for the suppression of rebellion being given in the Constitution, every other mode would seem to be excluded. But even if it be admitted that the regular army may be recruited by forced levies, it does not seem to me that the constitutionality of this act is decided. The question would then take the narrower form. Is this mode of coercion constitutional?

It seems to me that it is so essentially incompatible with the provisions of the Constitution relative to the militia that it cannot be. On this subject, as on all others, all powers not delegated are reserved.

Now, the militia was a State institution before the adoption of the Federal Constitution, and it must continue so, except so far as that Constitution changes it, that is, by subjecting it, under State officers, to organization and training, according to one uniform Federal law, and to be called forth to suppress insurrection and repel invasion, when the aid of the Federal Government is needed, and it needs this force. For this purpose it is a Federal force; for all others it is a State force, and it is called in the Constitution "the militia of the several States." (2, 2, 1.) It is, therefore, the standing force of the States, as well as, in certain specified respects, the standing force of the Union. And the right of the States to have it is not only not granted away, but it is expressly reserved, and its whole history shows its purpose to be to secure domestic tranquillity, suppress insurrections, and repel invasions. Neither the States nor the Union have any other militia than this.

Now, it seems to me plain that the Federal Government has no express, and can have no implied, power to institute any national force that is inconsistent with this. This force shall continue, says the Constitution, and the Federal Government shall make laws to organize and train it as it thinks best, and shall have the use of it when needed; this seems reasonable and sufficient. Is the force provided for by this act inconsistent with it? It seems to me it is. By it all men between the ages of twenty and forty-five are "declared to constitute the national forces," and made liable to military duty, and this is so nearly the class which is usually understood to constitute the military force of the States that we may say that this act covers the whole ground of the militia and exhausts it entirely. It is in fact, in all its features, a militia for national instead of State purposes, though claiming justification only under the power to raise armies, and accidentally under the fact of the rebellion. If this act is law it is supreme law, and the States can have no militia out of the class usually called to militia duty; for the whole class is appropriated as a national force under this law; and no State can make any law that is inconsistent with it. The State militia is wiped out if this act is valid, except so far as it may be permitted by the Federal Government. And it seems to me that this act is unconstitutional, because it plainly violates the State systems in this, that it incorporates into this new national force every State civil officer, except the Governor, and this exception might have been omitted, and every officer of all our social institutions, clergymen, professors, teachers, and superintendents of hospitals, etc., and degrades all our State generals, colonels, majors, etc., into common soldiers, and thus subjects all the social, civil, and military organizations of the States to the Federal power to raise armies, potentially wipes them out altogether, and leaves the States as defenceless as an ancient city with its walls broken down. Nothing is left that has any constitutional right to stand before the will of the Federal Government.

This act seems to me to be further unconstitutional in that it provides for a thorough confusion between the army and the militia, by allowing that the regular soldiers obtained by draft may be assigned by the President to any corps, regiment, or branch of service he pleases; whereas, the Constitution keeps the two

forces distinct. Under this law, the President may even send them to the navy.

I am in favor of granting the injunction in favor of each of the defendants for his own protection, but not for the staying of all proceedings under the act.

The dissenting opinion was delivered by Justice Strong:

The complainants rest wholly upon the assertion that the act of Congress is unconstitutional, and, therefore, void. It is denied that there is any power in the Federal Government to compel the military service of a citizen by direct action upon him, and it is insisted that Congress can constitutionally raise armies in no other way than by voluntary enlistments.

The necessity of vesting in the Federal Government power to raise, support, and employ a military force was plain to the framers of the Constitution, as well as to the people of the States by whom it was ratified. This is manifested by many provisions of that instrument, as well as by its general purpose, declared to be for the "common defence." Indeed such a power is necessary to preserve the existence of any independent government, and none has ever existed without it. It was, therefore, expressly ordained in the eighth article, that the Congress of the United States should have power to "provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions." It was also ordained that they should have power to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress. Nor is this all. It is obvious that if the grant of power to have a military force had stopped here, it would not have answered all the purposes for which the Government was formed. It was intended to frame a Government that should make a new member in the family of nations. To this end, within a limited sphere, every attribute of sovereignty was given. This unrestricted power of making treaties involved the possibility of offensive and defensive alliances. Under such treaties the new Government might be required to send armies beyond the limits of its territorial jurisdiction. And, in fact, at the time when the Constitution was formed, a treaty of alliance, offensive and defensive, was in existence between the old Confederacy and the Government of France. Yet more. Apart from the obligations assumed by treaty, it was well known that there are many cases where the rights of a nation and its citizens cannot be protected or vindicated within its own boundaries. But the power conferred upon Congress over the militia is insufficient to enable the fulfilment of the demands of such treaties, or to protect the rights of the Government or its citizens in those cases in which protection must be sought beyond the territorial limits of the country. The power to call the militia into the service of the Federal Government is limited by express terms. It reaches only three cases. The call may be made "to execute the laws of the Union, to suppress insurrections, and to repel invasions," and for no other uses. By the same section of the eighth article of the Constitution, it was ordained, in words of the largest meaning, that Congress should have power to "raise and support armies," a power not to be confounded with that given over the militia of the country. Unlike that it was unrestricted, unless it be considered a restriction that appropriations of money to the use of raising and supporting armies were forbidden for a longer term than two years. In one sense this was a practical restriction. If there be any restriction upon the mode of exercising the power, it must be found elsewhere than in the clause of the Constitution that conferred it. And, if a restricted mode of exercise was intended, it is remarkable that it was not expressed. Of course there can be no presumption in favor of the existence of a power sought to be exercised by Congress. It must be found in the Constitution. But this principle is

misapplied when it is used, as is sometimes the case, to restrict the right to exercise a power expressly given.

The powers of the Federal Government are limited in number, not in their nature. A power vested in Congress is as ample as it would be if possessed by any other legislature, none the less because held by the Federal Government. It is not enlarged or diminished by the character of its possessor. Congress has power to borrow money. Is it any less than the power of a State to borrow money? Because the Federal Government has not all the powers which a State Government has, will it be contended that it cannot borrow money, or regulate commerce, or fix a standard of weights and measures, in the same way, by the same means, and to the same extent, as any State might have done, had no Federal Constitution ever been formed? If not, and surely this will not be contended, why is not the Federal power to raise armies as large, and as unfettered in the mode in which it may be exercised, as was the power to raise armies possessed by the States before 1787, and possessed by them now in time of war? If they were not restricted to voluntary enlistments in procuring a military force, upon what principle can Congress be?

It is not difficult to ascertain what must have been intended by the founders of the Government when they conferred upon Congress the power to "raise armies." At the time when the Constitution was formed, and when it was submitted to the people for adoption, the mode of raising armies by coercion, by enrolment, classification, and draft, as well as by voluntary enlistment, was well known, practised in other countries, and familiar to the people of the different States. Yet in full view of such enactments, they conferred upon Congress an unqualified power to raise armies. And, still more than this, coercion into military service by classification and draft from the able-bodied men of the country was to them a well-known mode of raising armies in the different States which confederated to carry on the Revolutionary war.

It is an historical fact that during the later stages of the war, the armies of the country were raised, not alone by voluntary enlistment, but also by coercion, and that the liberties and independence sought to be secured by the Constitution, were gained by soldiers made such, not by their own voluntary choice, but by compulsory draft.

Thus it is manifest that when the members of the Convention proposed to confer upon Congress the power to raise armies, in unqualified terms, and when the people of the United States adopted the Constitution, they had in full view compulsory drafts from the population of the country, as a known and authorized mode of raising them. The memory of the Revolution was then recent. It was universally known that it had been found impossible to raise sufficient armies by voluntary enlistment, and that compulsory draft had been resorted to. If, then, in construing the Constitution, we are to seek for and be guided by the intentions of its authors, there is no room for doubt. Had any limitation upon the mode of raising armies been intended, it must have been expressed. It could not have been left to be gathered from doubtful conjecture. It is incredible that when the power was given in words of the largest signification, it was meant to restrict its exercise to a solitary mode—that of voluntary enlistment—when it was known that enlistments had been tried and found ineffective, and that coercion had been found necessary.

I agree that Congress is not at liberty to employ means for the execution of any powers delegated to it, that are prohibited by the spirit of the Constitution, or that are inconsistent with the reserved rights of the States, or the inalienable rights of a citizen. The means used must be lawful means. But I have not been shown, and I am unable to perceive that compelling military service in the armies of the United States, not by arbitrary conscription, but, as this act of Congress directs, by enrolment of all the able-bodied male citizens of the United States, and persons of foreign birth, who have declared their inten-

tion to become citizens, between the ages of twenty and forty-five (with some few exceptions), and by draft by lot from those enrolled, infringes upon any reserved rights of the States, or interferes with any constitutional right of a private citizen.

The argument most pressed, in support of the alleged unconstitutionality of the act of Congress is that it interferes with the reserved rights of the States over their own militia. It is said the draft takes a portion of those who owe militia service to the States, and thus diminishes the power of the States to protect themselves. The States, it is claimed, retain the principal power over the militia, and therefore the power given to Congress to raise armies must be so construed as not to destroy or impair the power of the States.

I have stated the argument quite as strongly as it was presented. It is more plausible than sound. It assumes the very matter which is the question in debate. It ignores the fact that Congress has also power over those who constitute the militia. The militia of the States is also that of the General Government. It is the whole able-bodied population capable of bearing arms, whether organized or not. Over it certain powers are given to Congress, and others are reserved to the States. Besides the power of calling it forth, for certain defined uses, Congress may provide for its organization, arming, and discipline, as well as for governing such portion as may be employed in its service. It is the material, and the only material contemplated by the Constitution, out of which the armies of the Federal Government are to be raised. Whether gathered by coercion or enlistment, they are equally taken out of those who form a part of the militia of the States. Taking a given number by draft no more conflicts with the reserved power of the States, than does taking the same number of men in pursuance of their own contract. No citizen can deprive a State of her rights without her consent. None could, therefore, voluntarily enlist, if taking a militiaman into the military service in the army of the United States is in conflict with any State rights over the militia. Those rights, whatever they may be, it is obvious, cannot be affected by the mode of taking.

I have said enough to show that the complainants are not entitled to the injunctions for which they ask, and I think they should be denied.

Judge Hall, of the Northern District of New York, in the matter of David J. Crichton, thus considered the constitutionality of the act:

The fourth point of the relator's counsel—that which insists that the act of Congress, under which the proceedings against the relator are sought to be justified, is unconstitutional, was not argued by the counsel for either party; nor has it received, since the argument, the serious attention which should be given to a question of such magnitude in a case where any court or judge is required to declare an act of Congress to be unconstitutional. If I had not before expressed an opinion upon that question, while acting in a judicial capacity, I should now decline to do so; for such questions ought not to be determined, when there has been an opportunity for argument, without the fullest possible argument and the most serious consideration. Nevertheless, as the point was raised by the counsel for the relator, and the counsel for the Government desired an expression of opinion upon that question, there is certainly no impropriety in my reiterating the opinions that I have heretofore expressed to the grand juries of this district, in respect to persons accused of offences against the provisions of that act.

Such grand juries have been instructed that the Constitution of the United States expressly grants to Congress the power "to raise and support armies;" that the manner in which such power is to be exercised is not prescribed by the Constitution; that, therefore, the mode or manner in which such armies are to be raised, is confided to the discretion and prudence of the National Legislature; and that the main provisions of the Enrolment or Conscription Act of 1863, and such of its provisions as authorized indict-

ments by a grand jury, were constitutional and binding. My present opinion is, that Congress may constitutionally provide for raising armies by an enrolment and conscription, under the direct action of the General Government, instead of relying upon drafts from the militia of the different States; and although there are some constitutional restrictions upon that power, there are none that bear upon the questions presented in this case—unless, indeed, there is some foundation for the claim that the relator is, in fact, held as a deserter, in order that he may be tried before a court martial for the purely military offence of desertion. On that point my views will be presented in a subsequent portion of this opinion.

There may be some minor provisions of the act, the constitutionality of which may hereafter be drawn in question, but I feel no difficulty in saying that I do not perceive any reason for holding that the relator in this case is entitled to his discharge upon the ground that the provisions of the enrolment act, under which it is insisted that he can be legally detained, are unconstitutional.

This was an application by Crichton for discharge from arrest by the enrolment board. He had been drafted, examined, and exempted on the ground of disability. The board subsequently reconsidered the action, and declared him subject to the terms of the act, it being alleged that the exemption was procured by a fraud practised on the board. Crichton refused to submit to reëxamination, and was put under arrest. Judge Hall decided that the enrolment board, having rendered their decision in the case, had no right to review that decision.

The statute declares in express terms that the decision of the enrolling board shall be final upon the question of exemption, and it can hardly be presumed that Congress, while declaring the decision of the enrolling board to be final, intended that it should be final only against the party claiming exemption, and not final against the Government. Nor can it be presumed that, while declaring such decision final, they intended that the enrolling board, after having decided against the conscript, should have the power, at any time during the term of the draft, to reverse their own decision, and thus require his discharge from military service. In short, the language of the statute shows that Congress intended the decision of the board, when made and promulgated, should be final and conclusive upon the question of the exemption of any person, subject to the jurisdiction of the board, who might be drafted; whether such decision was in favor of or against the exemption claimed.

The powers and duties of the commissioners in respect to the draft and the exemption of the persons drafted, are purely statutory. They are in part ministerial, and in part quasi-judicial; but whether ministerial or quasi-judicial, they are conferred by the statute alone; and they are subject to the well-established rules of construction and decision which define and limit the powers of all boards and officers having a special and limited jurisdiction, and exercising statutory powers of a similar character.

These powers are in some respects like those conferred in this State upon canal appraisers; upon jurors summoned to determine the amount of damages to be allowed for laying out a public highway, or for land taken for a public street or railroad, or any other public purpose; upon commissioners of estimate and assessment authorized to estimate the damages and assess the benefits of laying out and opening the streets; upon special commissioners to lay out public highways through different towns, or to locate public buildings, or perform any quasi-judicial duty in respect thereto; or upon justices of the peace and county judges in special cases; and it is believed that no court of superior jurisdiction and acknowledged authority has ever sanctioned the doctrine that any such officers, juries, or

commissioners have the power, independent of an express provision of the statute conferring such authority, to revise and alter their determinations, after they have once made, completed and delivered their decision upon the particular questions submitted to their determination.

If these boards are quasi-judicial tribunals, and are to be likened to the ordinary judicial tribunals, they are to be likened to courts of inferior and limited jurisdiction, created by statute, with certain specified powers; and it is a well-settled doctrine, as will be seen hereafter, that no such inferior court has the right to grant a new trial upon the merits, or to revise or vacate its own decisions, unless such power is specially conferred by statute. It is also well settled that when a special tribunal is created by statute, with specified powers and a limited jurisdiction, for the decision of particular questions of law or fact, or both, that whenever the power given is once executed, in respect to a particular case before it, the power of the tribunal is exhausted and its jurisdiction at an end, so far as such case is concerned; that the persons thus invested with power are then *functi officio*, so far as relates to that particular case, and that their powers and jurisdiction cannot be resumed.

But it is said that the duty performed by the Board of Enrolment in this case was purely a ministerial duty, and that their decision may be revised and corrected in this proceeding. It is undoubtedly true, that most of the duties of the officers in the enrolment and draft authorized by the act of Congress under consideration are ministerial, such as the enrolment—the preparation of ballots—the drawing—the giving of notices, &c.; but the duties of the board in deciding upon claims of exemption are quasi-judicial, and not ministerial. If the board should enrol and draft an alien, who had not declared his intention to become a citizen—a citizen under twenty, or one over forty-five years of age, or perhaps enrol a citizen over thirty-five having a family, in the first class instead of the second, the error might be corrected and the party discharged on *habeas corpus*, because, as to those parties, their proceedings would be void, for want of jurisdiction of the person and of the subject matter. But in deciding upon the question of the exemption of a person, otherwise liable, on the ground of physical or mental unfitness for the military service, their acts are most clearly quasi-judicial. The decision of the board, upon this question of fact, declaring the exemption of the person drafted, is, therefore, not one which can be reviewed on *mandamus*, *certiorari*, or *habeas corpus*. A *mandamus* to such a tribunal is never granted for the purpose of determining how they shall decide such a question, or to compel them to reverse their decision thereon; and on a common law *certiorari* to bring their proceedings before the Supreme Court for review, that court can only reverse their proceedings for want of jurisdiction or for error in law appearing on their face.

But if it should be conceded that the duties of the enrolling board, in determining claims to exemption on the ground of physical unfitness for the service are ministerial, that concession would not, in my judgment, afford any ground for holding that the relator should be remanded. The decision of the enrolling board certainly discharged him from the draft; he was rejected as physically unfit for the service, and the second section of the act as before recited, declares all such to be “excepted and exempt from the provisions of this act, and shall not be liable to military duty under the same.” By this decision and direction the board therefore lost jurisdiction of the person of the relator, and, by the very terms of the act, he is no longer liable to do military duty under the draft, any more than a person over the age of forty-five years.

It was said by the counsel for the Government that the Board of Enrolment were only to “relieve” the relator from the draft on a proper showing; and that he was bound to prove that on a “proper showing” they did relieve him from the draft. This proposition, in reference to the decision of a tribunal which the act

of Congress creating it has declared shall be final, cannot be maintained. It is substantially saying that when they decide correctly (in the opinion of any other tribunal, before which the question may be raised) their decisions are to be binding and final, but when they decide otherwise their decisions are of no effect. The position is clearly untenable, as the duties of the enrolling board in deciding the question of exemption are, as has been before stated, quasi-judicial, and not ministerial. The cases relating to the acts of boards of county canvassers, which were cited in support of this position, are not pertinent.

But it is urged by the counsel for the Government that the decision of the Board of Enrolment, be it judicial or ministerial, may be impeached for fraud; and he puts this case by way of argument: “Suppose a surgeon, while drunk, should sign a certificate of disability, or should be bribed to do it; or a certificate should be written over signatures given for another purpose, or be obtained by duress; might not the provost-marshal contest it, not only in a case like this, but in various cases?” In the cases thus supposed, no injury would be likely to result to the Government in consequence of the doctrines which are held applicable to the present case. It is the decision of the enrolling board, not a certificate of a drunken or bribed surgeon, which works the exemption; and it would require at least two intoxicated, corrupt, or very stupid members of the board to lead to the improper discharge of persons drafted in the mode suggested. A certificate of exemption written, without authority, over signatures subscribed for another purpose, would be of no validity when it was shown that no such decision had been made by the board; for (as was urged by the counsel of the Government) it is the decision of the board which exempts, and the certificate having the signatures of the board is not conclusive evidence of their decision. If such a certificate were obtained by duress, or improperly written over signatures made for another purpose, it would have no effect, for it would not be founded upon a decision of the board.

But it is insisted that the decision of the enrolling board, if obtained by fraud, can be set aside by the board, or disregarded by the provost-marshal; who, it is alleged, is no party, in his character of provost-marshal, to such proceeding. It is also insisted that it may be disregarded by the Government, and several cases have been cited to show that the decisions and judgments of all courts and special tribunals may be impeached, collaterally, on the ground of fraud.

It cannot be necessary to enter into a critical examination of the cases and authorities cited on this point. The general rule, undoubtedly, is, that parties to the suit or proceedings in which such judgment or decision is made, cannot impeach such judgment or decision collaterally, but must seek their remedy by writ of error, appeal, or other authorized proceeding for the direct setting aside or reversal of such judgment or decision; or, in certain cases, by a suit in equity, for the express purpose of setting it aside. And all persons represented by the parties to such proceedings, or who claim under them, or in privity with them, or who have succeeded to their rights, are regarded as privies and are equally concluded by such proceedings. But other persons, strangers to such proceedings, may impeach such proceedings and decisions collaterally, on the ground of fraud, whenever they are set up to deprive them of their legal rights. (1 Greenleaf's Evidence, sec. 522, 523.)

It was urged on the argument that this is not the proper tribunal to afford redress to the relator, and that the case is properly, if not exclusively, cognizable by a court martial. If the conclusions already reached are correct, it is unnecessary to waste time in the discussion of this point. If the relator is illegally restrained of his liberty, he is entitled to be discharged on *habeas corpus*, and to discuss the sacred character of that right would but lead to a repetition of the words of the most distinguished jurists and statesmen, friends of civil liberty and champions of constitutional rights, from the year 1215, when the barons of Eng-

land and their retainers, "a numerous host, were encamped upon the grassy plain of Runnemede," to enforce their demand that King John should sign, seal, and swear to observe the provisions of Magna Charta, the great charter of English liberties; and the only possible ground upon which I could justify a refusal to exercise the judicial authority of the United States in this case, would be, that the relator was within the jurisdiction and in the custody of the military authorities, and charged with the purely military crime of desertion. Unless he is within their jurisdiction I have no right to remand him to their custody, and that he is not, I have already substantially decided. Besides, the return does not allege that the relator is a deserter, or is held as such, and the facts stated in the return give no countenance to the argument that he is a deserter, or is held for trial for the offence of desertion. It shows in the most direct and unmistakable language that he is held only as a drafted man, and in my judgment he is entirely beyond the jurisdiction of the military authorities.

This opinion has already attained to a length much beyond my anticipations, and, pressed as I am with other duties, I shall not further discuss the questions argued in this case. Some of them, doubtless, have been overlooked, and no one can be more sensible than I am that the discussion of those which have been noticed is imperfect and incomplete. With the frequent interruptions, of more or less length, which have been unavoidable, I could not (without a delay of decision much greater than the counsel were led to anticipate at the time the case was argued) give to the authorities cited such careful and deliberate examination and consideration as were desirable, or devote to the preparation of my opinion the time, care, and deliberation which I wished to bestow upon it. Written in haste, for the information of the parties, and the present justification of my decision, it must now stand as it is; but I indulge the hope that at some future time I may be able to revise, amend, and condense it. Having reached the conclusion that the relator must be discharged, I shall add a few words in reference to a decision which has been published since the hearing in this case.

The decision referred to, that of Judge Cadwallader, of the eastern district of Pennsylvania, in the case of Antrim, is not in conflict with my decision in this case. Judge Cadwallader, in reference to the decision of the enrolling board, says: "Cognizance of the application for exemption, if taken, must be judicial, however special the jurisdiction or summary the proceeding. The point in question is, whether the decision is or is not conclusive elsewhere as to the right of exemption. This depends upon the effect of the word final. It certainly imports that the decision of the board shall not undergo executive or other revision. The decision is, relatively to military jurisdiction, conclusive as well as final. Therefore, a decision in favor of a claim of exemption is necessarily conclusive as to the right of exemption."

It is true that Judge Cadwallader also expresses the opinion that, under the Constitution, Congress has not the power, as against the citizen, to make the decision of the enrolling board conclusive, so as to preclude the citizen from appealing to the judicial department of the Government; but it is believed that no one questions the power of Congress to make such a decision final and conclusive upon their own officers and agents.

Whether, on mature consideration of Judge Cadwallader's opinion, and a full and deliberate examination of the question, I should be able to concur in the opinion that the decision of the enrolling board, refusing exemption in cases within their jurisdiction, is not conclusive upon the citizen as well as the Government, is a question I do not design to anticipate, and it will be a matter of personal congratulation if no examination of the question shall be required.

(See NEW YORK, for correspondence between President Lincoln and Governor Seymour relative to the Conscription.)

ETHNOLOGY AND ANTHROPOLOGY.

In the scientific investigations, not less than in the general thought, of our times, a large place has come very recently to be occupied by certain questions relating to Man and to Mankind. Among these questions—many of them closely dependent one upon the other—are: 1, that of the origin of man; 2, that of the possible affinity of man with lower orders of creatures; 3, that of the antiquity of man; 4, that of the unity or plurality of human species; 5, that of the degree of possible variability of man, in long periods of time, under climatic or other influences; 6, that of the number of the races of men, the distinguishing characters of such races, their history and distribution, and their probable future career; 7, the question whether man is, or is not, in fact, cosmopolite—that is, whether races are to any extent restricted in their habitat; and 8, that of the effect of intermixture of races. It should be borne in mind, that, in connection with the study of mankind, the terms "species" and "race" are properly employed in very different senses; while the former is to be understood in the exact signification given to it by the zoologist and the botanist, the latter merely implies a collection of individuals exhibiting throughout certain common characters, and which point to their origin at some period from a common stock or under similar conditions. Hence, we may admit many races of men without admitting more than a single species.

Now, among the kinds of evidences that present themselves, and that are sought for, in relation to the questions above proposed, are those afforded by—1, the nature, order, and physical characters of the strata of the earth's crust—the *geological* evidences proper; 2, the kinds of fossils, and their distribution in different regions and strata—the *palæontological*; 3, the monuments, implements, and other remains of the works of man himself—the *archæological*; 4, the phenomena of languages, their growth, affinities, and changes—the *linguistic*; 5, records of changes and events, such as in the main are due to human agency—the *historical*; 6, evidences which in their character are *chemical*, *anatomical*, or *physiological*; and 7, those afforded by the direct study of existing nations and races of men—in other words, the *natural-historical*. Thus, as man is truly the microcosm—the epitome of nature, we find without surprise that the study of man, once fairly entered upon, is calling for the reflection and concentration upon himself of the rays of nearly, if not quite, all the sciences he has hitherto developed.

There is evidently not as yet a science, in the proper sense of the word, either of man considered in his whole nature, or of the races of mankind. But there is going forward in connection with both these subjects an active accumulation of facts and of generalizations; and viewing them therefore as prospective sciences, the former study has received the title of Anthropology (science of man), and the latter that

of Ethnology (science of nations, or of races). The one comprehensive field of research, in truth, is that of Anthropology; and within this Ethnology is embraced as a special department. Accordingly, reserving the former term as the appellation of the comprehensive science of the subject, M. Broca and others recognize under this, for the present, at least two important subdivisions, which they distinguish as Ethnology and General Anthropology. The mere description of races of men, in reference to characteristics of person, customs, arts, and civilization, constitutes Ethnography.

Among the works and periodicals published in relation to these subjects, and within or just previously to the year 1863, there are a few which should here be named, first, because they serve well as exponents of the direction of recent discovery and of current thought in regard to the subjects at issue; and secondly, because their pages afford, in large degree, a *resumé* of the facts and deductions already accumulated in relation to them, up to—in most of the instances—about the close of the year 1862. We select, with a view to such purposes, the following:

a. THE GEOLOGICAL EVIDENCES OF THE ANTIQUITY OF MAN; with Remarks on Theories of the Origin of Species by Variation. By Sir Charles Lyell, F. R. S., &c. London: 1863. (Reprinted in Philadelphia, by G. W. Childs: 1863.)

b. INTRODUCTION TO ANTHROPOLOGY. By Dr. Theodor Waitz. Vol. I. Translated by J. F. Collingwood, from the First Volume of "Anthropologie der Naturvölker." London: 1863.

c. THE RACES OF THE OLD WORLD: A Manual of Ethnology. By Charles L. Brace. New York—Charles Scribner: 1863.

d. EVIDENCE AS TO MAN'S PLACE IN NATURE. By Thomas H. Huxley, F. R. S. London: 1863. (Reprinted in New York, by D. Appleton & Co.: 1863.)

e. PREHISTORIC MAN: Researches into the Origin of Civilization in the Old and the New World. By Daniel Wilson, LL.D. Cambridge and London: 1862.

f. DESCRIPTION ETHNOGRAPHIQUE DES PEUPLES DE LA RUSSIE. Par T. de Pauly. St. Petersburg: 1862.

g. LECTURES ON THE SCIENCE OF LANGUAGE. By Max Müller, M. A. London: 1861. (Reprinted in New York, by Charles Scribner: 1863.)

h. A HISTORY OF THE INTELLECTUAL DEVELOPMENT OF EUROPE. By John W. Draper, M.D., LL.D. New York—Harper & Bros.: 1863.

i. THE ANTHROPOLOGICAL REVIEW. Quarterly. London. (First number—May, 1863.)

"No subject," says Sir Charles Lyell (a), "has lately excited more curiosity and general interest among geologists and the public, than the question of the Antiquity of the Human Race, whether or no we have sufficient evidence in caves, or in the superficial deposits commonly called 'drift' or 'diluvium,' to prove the former coexistence of man with certain extinct mammalia. For the last half century, the occasional occurrence, in various parts of Europe, of the bones of man or the works of his hands, in cave breccias and stalactites, associated with the remains of the extinct hyæna, bear, elephant, or rhinoceros, has given rise to a suspicion that the date of man must be carried further back than we had heretofore imagined. On the other hand, extreme reluctance was naturally felt, on the part of scientific reasoners, to admit the validity of such evidence, seeing that so many caves have been inhabited by a succession of tenants, and have been selected by man as a place not only of domicile, but of sepulture, while some caves have also served as the

channels through which the waters of occasional land-floods or engulfed rivers have flowed, so that the remains of living beings which have peopled the districts at more than one era may have subsequently been mingled in such caverns and so confounded together in one and the same deposit. But the facts brought to light in 1858, during the systematic investigation of the Brixham cave, near Torquay in Devonshire, * * * excited anew the curiosity of the * public, and prepared the way for a general admission that skepticism in regard to the bearing of cave evidence in favor of the antiquity of man had previously been pushed to an extreme.

The following table of the Fossiliferous Strata of the earth's crust, still further abridged from Lyell, and representing the succession of strata from the surface of the earth downward to the non-fossiliferous or azoic rocks, will aid the reader in understanding the bearing of certain geological and palæontological facts upon the question of the antiquity of man:

1. Recent (alluvium)...	} POST-TERTIARY, OR QUATERNARY.		
2. Post-Pliocene strata.			
3. Newer Pliocene "	} Pliocene.		} TERTIARY, OF CAINOZOIC.
4. Older "			
5. (Two grps of strata)			
6. (Three "	} Miocene.		
7. (Seven "			
8. (Eight "	} Eocene.		
9. (Three "			
10. (One group of "	} Cretaceous.		} SECONDARY, OF MESOZOIC.
11. (Two groups of "			
12. (" " "	} Jurassic.		
13. (" " "			
14. (" " "	} Triassic.		
	} Permian.		
	} Carboniferous.		} PRIMARY, OF PALEOZOIC.
	} Devonian.		
	} Silurian.		
	} Cambrian.		

Now, while animal life has been traced downward through the entire series of strata represented in the preceding table, the remains of man and of the quadrumana had never until very lately been with certainty shown to exist lower down than the most recent formations of the quaternary period, and such as could clearly be brought within the usual chronological reckoning. Indeed, it was asserted by Cuvier, and by many it is still maintained, that true fossils of man and of the ape-tribes have no existence. The discoveries of the last few years, however, appear in the judgment of many other inquirers already to have reversed Cuvier's verdict. Still, Lyell, writing about the close of 1862, and including all the well authenticated discoveries of human remains and works up to that time, shows the comparatively recent period to which these evidences of man were at the time confined, when he remarks, "The only formations with which we shall be concerned in the present volume are those of the most modern date, or the Post-tertiary."

Among the subjects of which Sir Charles Lyell treats, are those of the implements found in the Danish peat; the Danish shell-mounds, or "kjökkenmöddings" (kitchen-middens, or refuse-heaps); the ancient Swiss lake-dwellings, on piles, or "lacustrine habitations" (see "New American Cyclopædia," vol. xvi); the Irish lake-dwellings, or "crannoges"; the pottery and burnt bricks taken from great depths in the Delta of the Nile; the relics and remains found in mounds of the valley of the Ohio, of the delta of the Mississippi, &c.; the human and other bones, and implements—consisting largely of

worked flints—found in the cavern of Bize, in France; the contents of the Belgian caves, including the Engis skull; the Neanderthal cave and skull; then, the Post-pliocene alluvium and cave deposits, with flint implements, proceeding from the earlier discoveries of M. Boucher de Perthes, at Abbeville, in the valley of the Somme, and of Dr. Rigollot, near Amiens, and also the exploration of the Brixham cave, down to the latest discoveries, made especially in the former region, up to the time of publication; works of art elsewhere met with in Post-pliocene alluvium of France and Great Britain; the marked bones found by M. Lartet in the Aurignac cave; then, certain supposed fossil men, as that of Denise, of Natchez, &c.; then, the relations of the Glacial Period, and of glacial action to the Human Period, and to the date of the earliest traces of man and other animals; the supposed ages of stone and bronze; and, finally, certain subjects connected with Mr. Darwin's theory of the origin of species by variation and through natural selection, and the possible relation of man to the lower orders of being. A few of the instances of discovery of human remains, &c., just referred to, have—as occurring at recent dates—received mention in this CYCLOPEDIA, 1861, under the title ANTIQUITY OF THE HUMAN RACE; and 1862, in connection with GEOGRAPHY, &c.

Although Sir Charles Lyell expresses his conclusions in respect to the antiquity of the human race with great caution, yet the terms in which he has couched them, not less than the facts on which they are based, appear to open the way for a large extension of the lapse of time since the advent of man on the earth, beyond that admitted in the usual or historical view. Thus, Lyell admits that "Man was contemporary in Europe with two species of elephant, *Elephas primigenius* [mammoth], and *E. antiquus*, two, also, of rhinoceros, *Rhinoceros tichorhinus* and *R. hemitachius*, at least one species of hippopotamus, the cave-bear, cave-lion, and cave-hyæna, various bovine, equine, and cervine animals now extinct, and many smaller carnivora, rodentia, and insectivora. While these were slowly passing away, the musk buffalo, reindeer, and other arctic species, which have survived to our times, were retreating northward, from the valleys of the Thames and Seine, to their present more arctic haunts." And he adds that "The vast distance of time which separated the origin of the higher and lower level gravels of the valley of the Somme, both of them rich in flint implements of similar shape, * * * leads to the conclusion that the state of the arts in those early times remained stationary for almost indefinite periods;" and then proceeds to parallel this with the fact that "The rate of progress in the arts and sciences proceeds in a geometrical ratio as knowledge increases," the earlier advance being by so much the more slow, "so that the progress of a thousand years

at a remote period, may correspond to that of a century in modern times, and in ages still more remote Man would more and more resemble the brutes in that attribute which causes one generation exactly to imitate in all its ways the generation which preceded it."

The author regards Mr. Darwin's theory of the origin of species by natural selection as not inconsistent with the admitted truths of science; and, in harmony with such view, inclines to the doctrine of the unity of the human race.

We now proceed to glean, from the statements of discoveries made and the published speculations of, chiefly, the past year, the portions which appear to possess the greatest importance, and which will serve to show what further light is being thrown upon the questions already presented.

Instances of Human Remains.—A paper was read before the British Association, 1863, Section (E) of Geography and Ethnology, descriptive of a human cranium found near Amiens, in 1861; but which, while it closely resembled the Engis skull, was regarded as presenting no decided test in respect to the question of the antiquity of the race. Mr. G. E. Roberts and Prof. Geo. Busk contributed a paper upon the opening of a cist of the Stone Age at Bennet Hill, on the coast of Elgin. This cist was one of three situated near together and also near to three considerable shell-mounds, or refuse-heaps. Of the other two cists, one had been cut away by the course of a railway, and in the second few bones were found. Of the skeleton found in the least disturbed cist, the cranium was—measured antero-posteriorly—quite short; *i. e.*, of the conformation termed by Retzius the *brachycephalic*. The ratio of the antero-posterior to the transverse measurement, was 1 : .823. In April, Rev. H. F. Rivers presented to the Anthropological Society of London some human remains found at Luton, near Chatham; Prof. Owen remarking at the time that the bones appeared to have been discovered at a depth of six feet within brick earth. May 26th, Professor Busk read a paper in relation to these remains, which greatly diminished the interest attaching to them, by declaring that on closer inspection it was found that the bones were not regularly overlaid by the deposit of brick earth, but were in a soil that appeared as if it had been filled into a pit, and apparently consisted of the rain-wash from a neighboring hill side. There were two skeletons; the crania much alike, long-headed, or *dolichocephalic*, *orthognathic*, but *phænozygous* [the zygomatic arches showing beyond the cranium, as viewed from above]. Thus, their form would not indicate that they belonged to either of the most ancient types of crania found in Great Britain, *viz.*: the *cymbecephalic*, supposed by Dr. Wilson to be the most ancient; or the *brachycephalic*, supposed by the authors of the "Crania Britannica" to be the true ancient British form. The crania both presented injuries such as would intimate that their pos-

sessors had been killed by cuts of a sharp weapon upon the head.

Chemical Changes in long-buried Bones.—The author last named concluded his paper with an account of the results of chemical analysis performed upon portions of these and of other bones of considerable antiquity; and he is led to assert the following as among the chemical characteristics of such bones: 1. Long-buried bones, whatever the soil or situation, almost always contain a notable amount of *iron*. 2. The amount of organic matter is invariably much diminished. 3. The proportion of carbonates in them is usually much augmented. 4. A still longer abode in the ground, whatever the soil, is attended with the acquisition of a marked quantity of *fluorine*.

Retzius' Classification of Crania, improved by Broca's Definite Measurements.—Prof. Retzius, many years since, found that the most ancient human crania discovered in Denmark and other parts of Europe, could be mainly assigned to two distinct types of conformation. To one of these, characterized by a rounded form, *i. e.*, by the relative shortness of the antero-posterior dimension as compared with the transverse, and having the parietal tubers prominent, and the occiput broad and flattened, he applied the name *brachycephalic* (short-headed); and to the other, which would appear in time to have succeeded the former, and which is characterized by relative length of the antero-posterior dimension, tending to the more modern oval form, and having a prominent and narrow occiput, he gave the name of *dolichocephalic* (long-headed).

It should be remarked that Prof. Nillson has claimed to establish a third type of cranium, having the antero-posterior dimension still longer than in the second, while at the same time marked with greater prominence at the sides. This he regards as having belonged to a Celtic race, who in his opinion introduced the use of bronze. To another variety of conformation, first observed in certain of the most ancient skulls found in Scotland, of which the most marked characteristics are the narrowness and length of the top of the head, the forehead being narrow and retreating, and the occiput narrow and extremely prolonged backward, Dr. Wilson has given the name of *kumbecephalic* (boat-headed), also written *cymbecephalic*.

At a meeting of the London Anthropol. Society, November 3d, 1863, during a renewal of the discussion upon the cranium from the Bennet Hill cist, already mentioned, Mr. C. C. Blake called attention to the uncertainty which still attended Retzius' distinctions of ancient skulls, and then proceeded to state M. Broca's improvement upon that classification, by basing the distinctions upon exact numerical comparisons, and introducing a third or middle class. The term "index," as here used, denotes the ratio of the breadth of a given cranium to its length. Thus, Broca, in arranging certain

skulls obtained from a cemetery at La Cité, had adopted the following division:

- | | | |
|--------------------|---|--|
| 1. DOLICHOCEPHALI, | { | A. Pure Dolichocephali: the index less than .75. |
| | | B. Sub-dolichocephali: the index from .75 to .776. |
| 2. MESATICEPHALI, | { | (<i>mesatios</i> , average): the index from .777 to .799. |
| | | |
| 3. BRACHYCEPHALI, | { | A. Sub-brachycephali: the index from .80 to .849. |
| | | B. Pure Brachycephali: the index .85, and upward. |

Antiquities of Northumberland.—Mr. George Tate gave, before the British Association, 1863, an account of the explorations made, during the two preceding years, into the ancient British remains found among the Cheviots, in the valley of the Breamish, and on Yevering Bell and its neighborhood. These are in the wild hilly districts of the northern part of Northumberland, and they consist of fortified towns; strong, small fortlets on the slopes of the hills, and in the high valleys; hut-circles, and barrows, or sepulchres. A fortified town site near Linhope, the most remarkable of its kind, covers twenty acres. Here are found remains of the environing walls, and within these many hut-circles, some of these being flagged with flat stones of porphyry. Some of the hearth-stones, which usually appear in the centre of the circles, still retain marks of fire. Strong forts crown many of the higher hills. The so-called fortlets have a diameter of from thirty to one hundred and fifty feet.

All the appearances indicate a period when the hilly country was held by separate tribes and clans, and which were often at war with each other. In various portions of the ruins and barrows are found, pottery; glass ornaments (supposed to have been brought from Phœnicia); bronze and flint weapons; and occasionally rude querns for grinding grain. In one barrow, along with flint implements and potsherds, some lumps of iron slag were found; and similar heaps have long been met with elsewhere through this part of the country, at a distance from modern habitations. The author suggests the probability that iron—with the few who could afford it—was in use earlier than has been supposed in the theory of successive stone, bronze, and iron ages; and that the rarity of iron implements is in part at least to be accounted for by the circumstance of their having perished by rust. The skulls found in the remains here described were all brachycephalic; and this is believed by the author to have been the true type of the Northumbrian Celts.

Ancient Shell-Mounds of Scotland.—The Rev. George Gordon having mentioned, in the "Natural History Review," for April, 1863, the finding, on the shores of Moray Frith, of several shell-mounds somewhat resembling the Danish "kjökkenmöddings," Mr. John Lubbock subsequently visited that region in company with the former—the account of their explorations appearing in the same journal for July following.

Mr. Gordon had discovered little more than the fact of certain refuse heaps consisting mainly of shells, and further that in these the shells of the periwinkle and oyster, and next those of the muscle and cockle, appeared to predominate. The two observers in their later visit found in the Loch of the Clans, about five miles from Nairn, a small "crannoge" of stones bound together with beams of wood; and close to this they picked up a bone awl.

They then visited the shell-mounds at Ben-net Hill, near Burghead, on the coast of Elgin; afterward proceeding in the direction of Findhorn, and about the old margins of Loch Spynie. The shells were often to a good degree of different species in the different mounds, the periwinkle, oyster, and muscle being generally most abundant; while in some of the heaps appeared also numerous fragments of bones of the ox, sheep, and pig. No pottery or stone implements were found in any of them, though in and near some of them were picked up one or more fragments of flint. From one mound, near Burghead, they obtained two positive implements of bone, awl-shaped, and a third splinter of doubtful character. At another, between Burghead and Findhorn, they found a fragment of a bronze ring. In some of the mounds marks of fire were abundant, even where there appeared not a single bone or sherd. The absence of pottery and implements, so common in Danish "middens," and in the Swiss Lakes, is not a little puzzling. True, flint is absent from the north of Scotland, but not less is it so from Switzerland. It is conjectured, however, that the Scotch mounds may yet be found to belong to the metallic period.

In fact, in a shell-mound on the "Brigzes" Farm, near the old Loch Spynie, a bronze pin had been found by a laborer; and a Dr. Taylor had discovered two small pieces of pottery, colored red on one side and black on the other. The bronze pin was four and a half inches in length, and rather thick in proportion; the head was small and rounded, but flattened on the sides, each of which was marked by two diagonal grooves crossing each other at about a right angle. Below the head was a second enlargement, of less size; and below this again, four equidistant rows of five small notches each—one row on each side of the pin. This pin is said to resemble those found in the Irish crannoges, and in street-cuttings in Dublin, and which are believed to be of an age of about 1,000 years; *i. e.*, of the date of A.D. 800-900.

Lacustrine Habitations in Wigtonshire, Scotland.—An account of explorations of these was presented before the British Association, by Lord Lovaine.

Dowalton Loch, in which the habitations are found, was an irregular sheet of water, about two miles long by a half mile broad, situated in Wigtonshire, on the western coast of Scotland, and at the end of a narrow valley

five miles in extent, occupied by a moss, whose waters flow in part into the loch and in part into the sea. Sir William Maxwell, of Monreith, had, at his own expense, nearly drained the bed of the loch; and this had, when visited (August, 1863), the appearance of an immense sheet of mud, surrounded by a succession of beaches at different elevations. It contained a few small islets.

One of these, being reached over forty yards of the mud, was found to be elevated above the latter about five and a half feet. On each side of it were patches of stone, not touching it; and on its northern side, surrounded by piles driven into the mass, lay a canoe twenty-four feet long. Stones were scattered over the surface of the islet, and teeth, apparently of swine and oxen, were found. A trench being cut around the islet, ashes were turned up, in which were teeth and burnt bones. There were found, also, a piece of a fine yellow earthenware armlet; a large broken earthenware bead, striped blue and white; and a small metal ornament, apparently gilt. Two other pieces of a similar armlet were found on the surface.

On cutting down into the structure, it proved to be wholly artificial, resting on the soft bottom of the loch, and composed of layers of brushwood, branches and stems of trees, mingled with large stones, while at bottom of all, in this and the other islets examined, was a bed of fern about a foot thick. The mass was joined together by poles and stakes of oak and willow, some driven two and a half feet into the bottom. The islet was surrounded also by great numbers of these, and by masses of stone. In some of the islets the stakes were found roughly hewn, and even mortised; and in a few holes had been bored. The leaves and nuts brought up from the lower layers were still in appearance fresh and perfectly distinct. Great quantities of teeth and bones were found upon and within the structures; but no tool or weapon of any sort came to light. The first islet examined was thirty-eight yards in circumference: the largest was thirty-six yards across, and about one hundred yards round. Upon this also a canoe was found, eighteen and a half feet long, and in an extremely decayed state.

The structures would appear to have been raised by successive stages, as the waters of the loch had increased. The quantities of bones and teeth, and of the stakes formed, conveyed to, and used in and about the structures, would alike indicate a considerable population. Upon the rocky eminences which rose at certain points in the loch, no structures had been raised; probably they were founded upon the mud as being thus least accessible.

Prof. Wilson remarked that Mr. Joseph Robinson, of Edinburgh, had collected information showing that a large number of lacustrine habitations existed in that part of Great Britain. He thought the implements of bronze and metal generally belonged to a period much

earlier than antiquarians had yet assigned to them.

Sir Charles Lyell expressed himself as sure that changes of level must have taken place in the lake. The author of the paper had suggested that these changes were brought about by the growth of peat, obstructing gradually the ancient outlet. Why, now, was it not possible to determine a proximate date for these habitations—hence the general rate of growth of peat; and thus to obtain a rule applicable in other cases? If the bronze period must be carried farther back than antiquarians generally had supposed, how very ancient must then be that of stone? And yet, both epochs belonged to a period in which there was not found one of those extinct animals of which geologists had discovered so many unequivocal remains.

Geological Position and Era of the Remains thus far Described.—Few, if any, of the human remains and works described in the sections just preceding, can be considered as going back in geological time beyond the period within which has occurred the latest of the alluvial formations—that known as the “recent,” or most modern of the Quaternary deposits. And in respect to human eras, none of these remains date back, certainly, beyond the “stone” age; while it is, in fact, questionable whether the oldest of them go beyond that of “bronze.” None of them reach the time of any of the species of animals which have been extinct throughout the historic period; for even though the Urus, or wild bull (*Bos primigenius*), which existed in the stone and bronze ages, including that of the Swiss lake-dwellings, has now been long extinct, yet this animal was seen by Julius Cæsar, and survived after his time.

Now the reader should bear in mind that, not to speak of other instances, the now well-known cases of the human and other bones, and implements of the Belgian caverns, the discoveries made in the Brixham cave, and the yet more familiar discoveries by M. Boucher de Perthes and others, of the sort known up to the close of 1862, in the alluvium of the Somme valley, especially at Abbeville and St. Acheul, as also those of the cave of Aurignac, appear to have (before 1863) traced man back far into the Post-pliocene deposits belonging to the period of the drift; hence, into the earlier formations of the Post-tertiary period. None of these latter discoveries, however, had appeared to carry man beyond this limit, into the Tertiary strata. And M. Broca, at a meeting of the Anthropol. Society of Paris some time since, recognizing this limit, stated in substance that, thus far “the antiquity of Man is reduced to the commencement of the Quaternary period. Positive facts, irrefutable evidence”—he declared—“show that man existed at the time of the diluvium. But this is the first known date in his history; though it is still not impossible that we may find traces of

his earlier existence.” In most, or all, of the instances last named above, moreover, the flint implements are found associated with the bones of animals extinct from before the historical period; and in respect to human eras, these works and results due to the agency of man take us back far anterior to the date of the stone age, if this were to be determined by such relics only as those of the Danish “mid-dens” and the Swiss lake-dwellings; or, more strictly speaking, they appear to conduct us back through three successive ages of one vast stone period—beyond the most recent *polished* or sharpened stone implements, as those of the Danish mounds, to the hatchets rudely *chipped* (worked), but unground, of the Somme valley, and in some of the instances to those consisting of mere fragments or *flakes* of flint—implements in regard to which such ideas as that of *fashioning*, much less that of *grinding* were not yet to be conceived of for hundreds, perhaps thousands, of years.

Meanwhile, however, it could not fail to be remarked as singular, and the fact is so recognized in terms by Lyell and his reviewers, as well as by others, that while, in the many parts of the south and west of Europe yielding these, at least thousands of genuine flint implements have been discovered, and while, more recently, portions of the skeletons of many extinct animals have been found which show evidences of having been cut and marked by implements used by man, still not a single human skeleton of unquestionably fossil character, not indeed so much as a human tooth, had been discovered in connection with, or as undoubtedly referable to the same age as, these older or post-pliocene remains!

Now, as to the specific question, why fossil human remains have not been found along with the implements and marked bones of the post-pliocene, many answers, more or less satisfactory, had been given. Some had urged that the fact was but an illustration of the extreme imperfection of the geological records; and these have cited as parallel the facts that the bones of the musk buffalo were not until recently found as fossils, and have remarked that the entire assemblage of the fossil quadrupeds of the Picardy alluvium must still be but a small part of the whole number of species with which these were contemporaneous. Others have urged the fact of the extremely small proportion which the districts yet explored bear to the entire extent of the alluvium in which fossils may exist, upon the Eastern, or upon both of the continents. Even Mr. Crawford, who appears to covet the attitude of antagonist upon all the later anthropological theories of the time, after stating (in the outset of his paper before the Brit. Assoc. upon the Aryan theory and the races of mankind,) his conviction that the evidences of late years adduced satisfactorily establish for man on the earth an antiquity far beyond the usual estimate, making him the contemporary of animals

such as lions, hyænas, elephants, rhinoceroses, &c., extinct far beyond the reach of human records, then goes on to account for the scarcity of remains of man himself in connection with his works, by the following considerations: In the savage state, man would be few in number in comparison with the wild animals; and when he first appeared, unarmed, without language, and before he had even yet acquired the art of kindling a fire, the disparity would be still greater. In that condition he would have to contend for life and food with savage beasts, with *nothing to depend on but a superior brain and the capacity of wielding a club*. In such circumstances the wonder is, not that man should be few, but that he should continue to exist at all.

Having thus found, as precisely as possible, the limits—downward into the fossiliferous strata, and (the Neanderthal skull only being regarded as yet not decided on) backward in the ages of time—to which man appears with some degree of certainty to have been traced, up to the close of the year 1862, we are now prepared better to appreciate the bearings and significance of two discoveries which have marked the year 1863, namely, the finding of what is (by many) believed to be a fossil human jaw in the Post-pliocene alluvium of the Somme valley, and the finding at St. Prest, by M. Desnoyers, of marked fossil bones of animals within what he regards as unquestionably upper tertiary, or Pliocene, strata. Before describing these, certain speculations assigning an extreme antiquity to the exceptional skull above named, will be given.

The Neanderthal Man.—Prof. Wm. King read before the Brit. Assoc. a paper upon this subject. He gave reasons for believing that this skull belonged to one of a race existing in the glacial or Clydian period. Why should there not have been, in the past, distinct low species of man, little above the anthropoid apes? Why not a pliocene or Clydian species, which could erect a protecting shed, fashion a stone implement, and store up food, and yet be devoid of speech, and of religious feeling. He considered the Neanderthal skull eminently simial in its great characters; and it was probable that the thoughts and desires that dwelt in it never soared above those of the brute. The Andaman islander has but the dimmest consciousness of the existence of a Creator, and of any moral feeling. Still he has enough [Dr. Mouatt declares that he has no religious ideas or feelings whatever: if this be true, he at least has sufficient *capacity* for such notion and feeling] to necessitate our classing him with *Homo sapiens*. We could go no lower than the Andamaner, without coming to brute benightedness. He believed the Neanderthal man to have been, accordingly, a being specifically distinct; and he would propose for him the designation of *Homo Neanderthalensis*.

The Moulin-Quignon, or Abbeville Jaw.—A notice of the discovery of human remains in a

gravel-bed at Moulin-Quignon, near Abbeville, in the north of France, and by workmen engaged in quarrying at the place, first appeared in "*l'Abbevillois*," of April 9th, 1863. Near the end of March, a quarryman, named Halatre, brought from this quarry to M. Boucher de Perthes a shaped flint and a fragment of bone, both stated to have been found in the gravel. Upon clearing away the sand in which the latter was partly imbedded, it proved to be a human molar, somewhat damaged. M. Boucher at once proceeded to Moulin-Quignon with Halatre, verified the spot from which the tooth had been taken, ascertained that that part of the gravel deposit was free from infiltration or intrusion, and desired the search continued. He charged the workmen not to disturb anything they might come upon during his absence, but if any remains came to light, to let him know of the fact. On the 28th of March, a workman named Vasseur came to tell him that something resembling a bone was to be seen in the bed of gravel.

M. Boucher went to the place, and there found, enveloped in its matrix, and still in part imbedded in the gravel, a bone, nearly an inch in length of which, however, was already exposed. The bone was carefully extracted whole, by working round it with a pickaxe; and it proved to be a portion of a human jaw, very much discolored, but not injured by rolling. A few inches off from it was a flint hatchet (*hache*), also imbedded in the gravel, whence M. O. Dimpré by aid of the pickaxe removed it. All the spectators were struck with the perfect identity of the *platina* or colored crust which covered not only the jaw and the flint axe, but also the rolled pebbles of the bed; the color of this was a brown approaching to bluish black. The portion of the deposit from which the jaw and accompanying flint were taken, was a horizontal stratum or seam of no great depth, interposed between the chalk below and the ordinary gravel above, consisting of a black manganese-ferruginous matter. This deposit belongs to what Mr. Prestwich calls the "high-level" series, being regarded as the oldest of the Somme valley beds. The jaw and *hache* were found at a depth of five yards below the surface.

A few days after the discovery of the jaw, Messrs. Prestwich, Evans, and Tylor visited M. Boucher. The two latter especially observed circumstances which led them to fear that a deception had been practised by the quarrymen. Mr. Evans thought that the axes, purporting to be from the black band, had been artificially stained with the iron deposit. M. Boucher still maintained a different view of the case. He had extracted the jaw from the substance of the bed itself, and declared that M. Dimpré had taken out the *hache* in the same way, both in presence of a number of spectators; and they felt sure the gravel had not been disturbed. He considered the two workmen concerned to be persons of irreproachable character. Yet it was a fact that M. Boucher had for years offered large

rewards for the discovery of fossil remains in the quaternary deposits; and equally so, that the quarrymen had repeatedly brought to him bones which proved not to be genuine. There are, indeed, bone-bearing beds not far from Abbeville. The quarrymen of Amiens and Abbeville had begun to make sham "drift implements" as soon as it paid them to do so, and of such they had sold thousands. They had acquired such skill as even to deceive in regard to the coating or *platina*, and the discoloration of the surface; and Mr. Christy had bought a large quantity of the spurious *haches*, by insisting that he knew them to be such, for from one to two pence apiece.

An article by Mr. Falconer on the subject of the supposed fossil bone appeared in the London "Times," of April 25th. An animated discussion had soon sprung up, touching the questions as to whether or not the jaw was authentic, and a true fossil; and at length upon the proposition (May 2d) of M. Lartet, a scientific reunion or conference with a view to settling these questions was determined on. Of this, the French members were MM. Quatrefages, Lartet, Delesse, Desnoyers, and Milne-Edwards, the last-named of whom acted as President; while M. l'Abbé Bourgeois and M. Gaudry also took part. The English deputies were Messrs. Falconer and Busk, and Prof. W. B. Carpenter; and after the first sitting also Mr. Prestwich. The members, with this single exception, having reached Paris on the 9th of May, the sittings were commenced at once, and were continued there during three days.

The jaw was sawn across, and washed; the section being made to include a portion of one of the fangs of the solitary tooth remaining in it. The matrix or black coating readily washed off by means of a sponge; there was no appearance of *dendrites* upon the surface or within the mass of the bone; nor was there any infiltration through it of mineral matter. The substance of the bone was dry and friable, but tolerably firm under the saw; the section was fresh-looking, and it emitted distinctly the odor of sawn bone. The surface after washing had a clear, mottled appearance, and was but slightly eroded. The section of the fang of the molar yielded all the characters of freshness which had been previously observed in the "detached molar." It was further noted that the black coating material had not penetrated deeply into the dental canal; and that the latter was lined with a layer of fine gray sand, which appeared to indicate a previous lodgment of the bone in a non-ferruginous sandy bed. Mr. Busk thought the bone like many cemetery bones, but quite unlike fossil bones of the Somme, from Menche-court, &c., all of which that had been found were covered and pervaded with *dendrites*. Besides, it was found on trial that the material of the *gangue* or matrix, applied soft to any solid, would adhere with great tenacity; so

that that upon the bone might be artificial. Most, if not all, of the English members of the Commission maintained that the flint *haches* said to be yielded by the black band were unauthentic; and finally, the confidence of some of the French members of the Commission in the fossil character of the jaw began to be shaken.

At this juncture (May 12th), upon the suggestion of the President, the Commission adjourned to Abbeville. There, after taking precautions to avoid any deception, they made new excavations into the cliff of the gravel-pit of Moulin-Quignon, and in a bed apparently identical with that from which the jaw had been extracted, at a depth of four metres below the surface, there were disengaged under the very eyes of the members many hatchets of flint which were every way similar to those the authenticity of which had just been questioned by the English *savans*. Besides this, direct testimony to the actual occurrence of the jaw in the "black band" was brought forward to the satisfaction of the Commission.

Finally, while all the members agreed in regarding the jaw as authentic, there was not the same unanimity in respect to its age. The dissenting members handed in the following notes:

ABBEVILLE, May 13th, 1863.

I am of opinion that the finding of the human jaw at Moulin-Quignon is authentic, but that the characters which it presents, taken in connection with the conditions under which it lay, are not consistent with the said jaw being of any great antiquity.

H. FALCONER.

ABBEVILLE, May 13th, 1863.

Mr. Busk desires to add, that although he is of opinion, judging from the *external* condition of the jaw, and from other considerations of a more circumstantial nature, that there is no longer reason to doubt that the jaw was found in the situation and under the conditions reported by M. Boucher de Perthes; nevertheless, it appears to him that the internal condition of the bone is wholly irreconcilable with an antiquity equal to that assigned to the deposits in which it was found.

It will be seen that there are still some points to be cleared up in relation to the position and character of the supposed fossil jaw, and that the question of its antiquity remains open to discussion. When communications detailing the proceedings and results of the conference upon it were, a few days later, laid before the Academy of Sciences, by MM. Milne Edwards and de Quatrefages, M. Elie de Beaumont objected to the views arrived at, stating that in his opinion the gravel deposit of Moulin-Quignon did not belong to the post-tertiary or diluvian age at all, and that he would class it with "deposits laid down upon hill-sides," consequently as more recent than the diluvium, and in fact belonging to the actual or modern period; and he added moreover a statement of his disbelief in the asserted existence of man as a contemporary of the extinct elephants, rhinoceroses, &c., of the post-tertiary period.

M. Milne Edwards, however without wish-

ing to discuss with M. de Beaumont the stratigraphical question, which he considered not in his province, persisted in regarding it as very probable that the jaw from Moulin-Quignon is contemporaneous with the other bones, fossil, obtained from the same quarry. And M. J. Nicklès, in his note on the subject to the "American Journal of Science," speaking of course for Western Europe, declares that, though the point is still in discussion, the opinion just stated is shared by geologists and palæontologists in general.

Certain other speculations in reference to the age of the deposits of the Somme valley, will now be briefly indicated.

Successive Eras of Deposit.—M. Delanoue stated before the Anthropological Society of Paris, his belief that he had shown by the geological constitution of the bed of the Somme valley, that after the first diluvial epoch—which (up to this point) would appear to give us the first date of humanity—the geological conditions determining the superincumbent deposits had changed not less than four times; and the duration implied in these four successive periods he regarded as truly incalculable.

Supposition of Recent Date of the Somme Deposits.—Prof. Phillips, before the British Association, 1863, urged that the existence of the flint implements in the same deposits with bones of extinct animals in the valley of the Somme, might be accounted for upon the supposition that a river there had changed its position; so that the implements found near the bottom of the deposits might formerly have existed near the top. But a more probable hypothesis, in his view, was that there had been an elevation affecting the valley of the Somme. The geography of France, with rivers running in parallel lines across the chalk, he thought favored such a result.

Alluvial Accumulation in the Valleys of the Somme and Ouse.—At the time of the discussion before the British Association, upon a human cranium from Amiens, and which resembled the Engis skull, Mr. R. A. Godwin-Austen remarked that in his opinion the discoveries of Amiens had no bearing on the question of the antiquity of man, because he believed that the whole locality had been a burying place for an enormous period of time. He had visited the locality from which the famous jaw was taken; and he believed that the deposit there was nothing but an accumulation of drift from the chalk hills which overhung that particular spot.

The same author on a later occasion read before the Association a paper having the title of the heading above. The object of this paper was to show that the two river-valleys named belonged to areas over which the geological changes had been so different, that no comparisons of them could properly be made. He argued that the materials of the gravel-beds of the Ouse had, like those of all the rivers of the east of England, been derived from the "boulder formation;" and that the state

of the animal remains on the Ouse indicated that they belonged to the fauna of the period antecedent to the boulder clay; and consequently, that, should flint implements be met with in the Bedford gravel beds (those of the Ouse), the fact would not prove that the *Elephas primigenius* and the associated species were contemporary with man.

After the reading of the above papers, Mr. Lyell said that he had expected to hear a greater divergence from his own conclusions, from Messrs. Phillips and Austen, than had appeared. An elevation of the region of the Somme valley would of course make the time since the deposit of the gravel beds there, shorter; but could the fact of such an elevation be shown? As to Mr. Austen's conclusion of an older gravel in the region of the Ouse, he must show that such older formation was really under the drift of the country. But such was not the case; and the hypothesis appeared to him a violent one to get rid of a violent conclusion.

Supposed Evidences of Man in Pliocene Strata.—Mr. C. C. Blake read before the London Anthropol. Society, July 7th, 1863, a paper devoted chiefly to an account and discussion of the discoveries then recently made by M. Desnoyers, at St. Prest, France, and a statement of which the latter had just communicated to the French Academy. The new evidences of extreme antiquity of the human race, chiefly such as afforded by the rejected *débris* of human food, would appear to indicate the existence of man at a far more distant point of geological time than any previously made out—in fact, at a time preceding the great first glacial period.

The author of the paper desired, as a preparation for the understanding of the subject, to define, generally, the horizons or zones of geological distribution of a few of the extinct pachyderms. There are three principal species of European fossil elephant known: the *Elephas primigenius* (mammoth); *E. antiquus*, and *E. meridionalis*. The *E. primigenius* had been discovered in post-pliocene gravels in northern Europe, and in the cave deposits. It had survived through the period of the glacial drift. The oldest known examples are those from the forest-bed of Norfolk. The *E. antiquus* had been found in the pliocene gravel of the Thames valley; in the caves of Kirkdale and Kent's Hole; in the Norfolk forest-beds, and St. Acheul gravels. The *E. meridionalis* had been found in the Norfolk forest-beds; in the Norwich crag; in the deposits of the Val d'Arno; and at St. Prest, near Chartres.

Several species of rhinoceros, also, are characteristic of the later tertiary beds. Former palæontologists distinguished two—the *R. tichorhinus* and the *R. leptorhinus*. But Mr. Falconer's researches have led him to divide the latter into three species: 1, the *Rhin-megarhinus*, found in gravels at Gray's Thurrock, and other localities; 2, the *R. hemitæchus*, accompanying

the *E. antiquus* in most of the oldest British bone-caves, as at Kirkdale, Cefn, and elsewhere; 3, the *R. Etruscus*, the characteristic species of the Val d'Arno deposits, and of the forest-bed and superimposed blue clays of the Norfolk coast, but nowhere as yet found in the ossiferous caves of Britain. The *R. tichorhinus* is a species characteristic of the drift, and is throughout associated with the mammoth.

Now, M. Laugel, in the bulletin of the Paris Geological Society, has minutely described the beds of St. Prest, near Chartres, as forming a characteristically *pliocene* stratum. This view the fossils—*E. meridionalis*, *R. leptorhinus*, &c.—appear to prove correct. Lartet and Falconer also agree in interpreting the stratum there, containing these remains, as *pliocene*.

In a geological point of view, the beds closely resemble those of the Val d'Arno. They are composed of sands of various colors, ferruginous or white, pure or mixed with clay, with flint pebbles from the chalk, and some boulders of tertiary sandstone. The layers are in alternate masses, irregularly repeated and variously inclined; total thickness, 39 to 50 feet. These are covered by a deposit of loëss, and by the more recent drift deposit (*terrain de transport*). They overlie chalk, and are separated from it by a bed of large flints.

In the beds thus described, M. Desnoyers in his memoir states, the workmen found fossil remains, especially of the rhinoceros. These bones show striæ of various forms, depth, and length, which could not be the result of breakage or of drying, which cut the bone transversely to its axis, and even passed above its ridges, following the line of its contour. "These striæ, or traces of incisions, very clean cuts, some of them very fine and very smooth, the others much larger and more obtuse, as if they had been produced by flat or notched plates of flint, were accompanied by small, elliptical cuts or scratches, sharply characterized, as if they had been produced by the contact of an acute instrument." The cuts were partly covered with ferruginous *dendrites* and with sand, and their edges were slightly bouldered. M. Desnoyers considered these incisions as perfectly analogous to those which have been frequently recognized on the bones of the fossil cave mammalia in the drift (post-tertiary) deposits, in the peat-beds, and even in far more recent deposits, as in case of the Gaulish, Gallo-Roman, and Germanic tombs.

M. Desnoyers next proceeded to investigate the collections of bones from the St. Prest beds, many of them in private hands, which have been excavated since 1849. Of more than 100 specimens which he was enabled to meet with, all presented the same characters. Assisted by M. Lartet, he verified the cuts on bones of the following species of extinct animals: namely, *E. meridionalis*; *R. leptorhinus*; *Hippopotamus major*; *Cervus*, many species; *Megaceros Carnutorum*; *Bos*, a large species; *Bos*, a small

species. On the skull of an *E. meridionalis* in the Paris Museum of Natural History, were discovered traces of arrows which glanced from the bone—"the impression of the acute triangular cavity left by the point of the arrow, and the serrated marks left by its edge, are even visible." These marks are very different from those from the teeth of carnivora, and also from marks of floating ice. The skulls of the large deer all appear to have been broken near the base of the antlers by a violent blow on the frontal bone, as in some of the ruminant skulls from the Danish deposits, described by Steenstrup. Other traces of knife-action were visible on the skulls and antlers of deer. More rarely, in the same bed, bones of ruminants are found split open parallel with their axis, as if to allow of extracting the marrow. Such examples are common also in the sepulchres of the stone, bronze, and later times. Some of the bones presented also certain other fine striæ, which the authors already named do not refer to the agency of man.

M. Desnoyers summed up in his paper the facts and inferences in seven conclusions: 1. The fossil bones of *E. meridionalis* and certain other species, considered as characteristic of the *upper tertiary* or *pliocene* beds, and discovered in an undisturbed deposit of this bed, bear marks—as above described. 2. These markings are perfectly analogous to those upon the bones of more recent species, in caverns of the drift, and later. 3. The same origin may be affirmed of markings on the more ancient and the more recent bones; at present, he can attribute them only to the action of man. 4. Other finer marks have been due to the action of pebbles, &c. 5. The section of St. Prest, unanimously recognized as anterior to all the quaternary deposits which contain *E. primigenius*, presents numerous bones of *E. meridionalis*, &c., showing the two species of marking. "6. From these facts, it appears possible to conclude, with a great appearance of probability, until some more satisfactory explanation may clear up this double phenomenon, that man has lived on the French soil before the great first glacial period, and at the same time as the *E. meridionalis*, and the other *pliocene* species, characteristic of the Val d'Arno in Tuscany; that he has been in conflict with these great animals anterior to the *E. primigenius* and other mammalia of which the remains have been found mixed with vestiges or indications of man in the drift or quaternary deposits of the large valleys, and of caverns. 7. Finally, the bed at St. Prest is at present, in Europe, the most ancient example of the co-existence of man and extinct mammalia in geological time."

Mr. Blake, in concluding, thought that M. Desnoyers had made out a fair *prima facie* case in favor of the existence of man in the St. Prest beds. And thus early he would appear, therefore, to have justified that anticipation of Lyell, in which the latter states his belief that

"we need not despair of one day meeting with the signs of man's existence in the [Norfolk] forest-bed, or in the overlying strata [the "fluvio-marine"]. Yet, Lyell himself, speaking of the possible discovery of traces of man in the *Norfolk forest-bed*, had said that such a fact "would carry back the antiquity of man to a distance of time probably more than twice as great as that which separates our era from that of the most ancient of the tool-bearing gravels yet discovered in Picardy, or elsewhere. But even then," such is Lyell's conclusion, "the reader will perceive that the age of man, though preglacial, would be so modern in the great geological calendar (see table of fossiliferous strata, preceding), that he would scarcely date so far back as the commencement of the post-pliocene period."

At the conclusion of the paper, Mr. Charlesworth and others remarked that the facts on which M. Desnoyers proceeded appeared meagre; and they suggested caution in regard to going beyond what was already admitted. Mr. Christy thought that if we could carry the evidence back to the fossil *aurochs* (bison), there would seem to be no reason why it might not be carried back also to the *Elephas meridionalis*.

The Question of the Variability of Man.—On this subject, Mr. Crawford remarks that, although Lyell adopts the theory of the unity of the human race, as best according with the hypothesis of transmutation of species, yet neither he nor any one else has ventured to point out the primordial stock from which the many existing varieties proceed. He declared the Ethiopian of Egyptian paintings 4,000 years old to be exactly the Ethiopian of the present day; and that the skeleton of an Egyptian mummy of that date does not differ from that of a modern Copt. The people of a Persian colony, first settled in Western India 1,000 years ago, and refraining from intermixture with the natives, are not now distinguishable from their countrymen at home. The human skeletons of the Belgian caverns, of times coeval with the mammoth and other extinct mammalia, do not depart in a marked way, either in skull or limb, from the modern standard of certain living races. Again, the human skeletons of the Swiss lake-dwellings, computed by some to be 12,000 years old, differ in no respect from those of the present inhabitants of Switzerland. The author proceeds to argue, as he regards the case, the impossibility of distant migrations in early times, thus forbidding that change of conditions which would, upon the single-stock theory, be necessary to the numerous and marked human varieties actually existing. And he then adds that if, in a given location, in 4,000 years, or—supposing this the age of the Belgian race contemporary with the mammoth—in 100,000 years, the change is zero, then, if we multiply such periods by any number whatever, it must still be zero.

On this subject of variability of man, M.

Broca says: The periods [of man on the earth] are no longer counted by hundreds or thousands, but by myriads of years; and we know that our 5,000 years of history are but a short episode in the life of humanity. The types which we are enabled to study *appear* to us permanent: can we say that they are so? Multiply the 4,000 years, during which the ethnic types of the Egyptian monuments *appear* to have undergone no discernible change, by 10, and what then?

Speaking in relation to the variability of man before the British Association, Prof. Wilson said that we have now an illustrative instance showing the development of a new variety of men. The Pilgrim Fathers took to America all the characteristics of Englishmen: about 200 years had passed, and what with the influence of climate, food, and perhaps admixture of Indian blood (?), the American race had grown out of the old stock. Those who challenged Lyell's doctrine of derivation from a single primitive stock, should bear this fact in mind. If 200 years had been sufficient to develop the New Englander, what changes might not thousands upon thousands of years, under similarly altered conditions, effect?

Intelligence of the Primitive Races.—A writer in the "Anthrop. Review," remarks on this subject that mere rudeness of workmanship in the implements left us by the supposed ante-historical peoples does not *necessarily* lead to the conclusion that they were physically or morally inferior to succeeding races. It is doubtful, in case a number of the intelligent people of the present time were cast away on a desert island, without means of procuring a supply of metals, whether they could by percussion and friction manufacture objects better adapted to their purposes than the rude implements of the ante-historical races.

As, then, we cannot form a judgment from the works alone of the primitive peoples, we must search for other indications of their mental capacities. Now, it is generally admitted that mental superiority is in proportion to the development and complexity of structure of the brain; and the capacity for improvement is in a like ratio. Moreover, the interior of the skull gives a fair index of the size and conformation of the brain. Hence, thus far at least [though on this point Prof. Waitz in his recent work demurs], leading anthropologists have adopted the particular shape of the cranium as the great mark of distinction between races. Then, from the observations of their general smallness of skull, large development of the jaws, and other abnormalities of cranial conformation, the inference would appear not to be premature that the original races *were* inferior to the succeeding immigrants [said, doubtless, in reference to the countries of Western Europe]; and that the primitive race is now extinct in Europe, having shared the fate of the gigantic animals with which it was contemporaneous.

Distinctions holding between Man and the Anthropoid Apes.—The assumed anatomical distinctions so long insisted on by Prof. Owen as observable on a comparison of the brains of man and of the ape-tribes—namely, the asserted presence in the former, but not in the latter, of a “posterior lobe covering the cerebellum,” a “posterior cornu of the lateral ventricle,” and in that cornu a “hippocampus minor”—having been, by Prof. Huxley and others, shown to be entirely mistaken and untenable, anthropologists have been led to note whether other distinctions, and perhaps even more radical ones, may not be found in the anatomical or other characters of the two classes of beings.

Prof. Rolleston some time since cited M. Gratiolet as having arrived at four radical cerebral distinctions, two quantitative, and two morphological. These are: 1, In absolute weight of the two classes of brains; 2, In the great *height* peculiar to the human brain; 3, In relative multifidity of the frontal lobes, “popularly, and as this analogy shows, correctly, taken as a fair exponent of man’s intelligence;” 4, In the absence of the external perpendicular fissure.

M. Gratiolet has recently been able to detect in certain embryological and pathological characteristics of the brain, a yet more decisive distinction. He first remarks that, man is *man* by virtue of his intelligence; and that he is intelligent by his brain; it is by his brain, therefore, that he should differ from the apes. Now, there is noticeable, first, a great difference in mass of brain in the two orders of beings; and secondly, an unequal richness (in adults) in secondary convolutions. But the more decisive distinction just referred to is this: that in the two the order in which the convolutions are developed is absolutely different. Those convolutions which in the brain of the human embryo appear first, are in that of the ape formed last. The consequence is, that when arrest of development takes place in the brain of a child, the organ does not therefore approximate, but actually differs more and more from, the brain of the apes. This arrest of development—constituting microcephaly—is always attended with more or less complete idiocy.

Now, the brain of *microcephali* is poor in convolutions; and these, not being closely pressed together, leave isolated their impressions upon the internal surface of the bones of the cranium. Led by this discovery, M. Gratiolet sought for analogous facts in the crania of the inferior [human] races; and he had succeeded in finding the same mark of low development in a Totonaque skull, and since then in some negro skulls.

The attempt to found a distinction between man and the lower orders of beings upon the possession by the former alone of the religious feeling and of the idea of a Supreme Being, appears scarcely to be sustained; and that

from the apparent fact of absence of such feeling and idea among certain of the least intelligent varieties of mankind. Thus, as already mentioned, Dr. Mouatt denies that the Andamaners have any notions of religion; and a like fact has been declared of the Veddahs of Ceylon. African travellers agree that many of the tribes, both eastern and western, have no knowledge of a God, or hope of a future state. Mr. Bates, who was for many years acquainted with the Indian tribes of portions of this continent, declares that those of the Upper Amazon have no idea of a Supreme Being, and no word to express such idea. [It is not denied, however, that even the lowest men have a capacity of comprehending something of a Supreme Being, and of the feeling of worship toward Him, when knowledge upon these subjects is communicated to them; nor is it claimed that any brute whatever has such capacity, or can be imbued with such idea and feeling. Thus, in the presence or absence of the *capacity* for worship and adoration there appears still to exist a real distinction.] Another writer remarks that among North American tribes, the Algonquins had no word expressing “to love”—a fact which, in his opinion, perhaps more than any other, would serve to show the depth of degradation to which man may descend.

Mr. Crawford, in a paper from which quotations have already been made, replies also to Mr. Huxley’s views as to the affinity of man and the ape tribes. He asks what is the gain of showing man’s and the ape’s brains alike, when their working is so different?—less, in his opinion, a matter of degree than of absolute quality. He regards the dog and the elephant, with very different brains, as being quite as sagacious as the most anthropoid ape, if not more so. Again, the brains of the wolf and the dog he declares alike, but not their sense; and so, in like manner, of the sheep and goat. The dentition and digestive organs of man and the apes are singularly alike; yet man is omnivorous; the monkey, by choice, frugivorous. True, monkeys are not, in the proper sense of the word, *quadrumanous*; their feet are true feet, though prehensile; while their hands are also true hands, and in them, more nearly than in the brain, they approach man. But, with their seemingly dextrous hands, they can neither fashion nor use implement or weapon; their brain, anatomically like, but physiologically unlike, forbids. [Mr. Huxley has very recently stated that none of the apes can make up the hand into a proper “fist,” so that when they mean mischief they must use their teeth; consequently, he would add *pugilism* to the list of exclusively “human characteristics.” Among such characteristics, that of perfect *syndactyly*, the physiological ones of true *laughter* and *crying*, and the psychological one of the impulse and capacity of *bargaining*, had been previously noted.]

Mr. Crawford proceeds to state other dis-

tinctions, as found in the circumstances of fertile intermixture of races in man, but not among the monkey tribes; in the existence of man in all climates, while the monkeys are chiefly confined to the tropics; in the fact that the latter only, not the former, is provided with a natural covering of hair; in the fact that the former only provides himself with clothing and a dwelling; in the fact that man alone stores up knowledge for his own use and that of all generations; and in the fact that no race of men has ever been found which had not the capacity of framing a language, while the monkeys are, in this respect, hardly on a level with the parrot and the magpie. Moreover, he thinks that the anthropoid apes most like man in structure, are least like him in intelligence; the gorilla, at the head of the list, being only known as ferocious and untamable; while the orang-outang, in form nearest man, is described as a slow, sluggish, dull, and melancholy animal. Again there are in the New World monkeys with four supernumerary teeth; and on the same continent, there are no anthropoid apes at all. Finally, the author concludes, the monkey tribes have an outward or structural resemblance to man, beyond that of all other animals; but why this is so he considers a mystery beyond our understanding.

Mr. W. Winwood Reade, in a paper before the Anthropol. Society, June 22d, 1863, speaking of the anthropoid apes of Africa, said: The habits of the gorilla do not differ from those of the chimpanzee; though the natives regard the latter as the more intelligent. He would mention a fact not previously made public, namely, that both these apes build nests as lying-in hospitals for their females. These are simply rude layers of sticks and branches.

Finally, it may be regarded as generally admitted, and even among those who adopt the theory of development in accordance with which man might appear to have had his origin from lower orders of creatures, that there are, and especially in the mental constitution of man, unquestionable and great distinctions between him and the most highly developed of those lower creatures. These most radical distinctions are to be found in his intellectual powers, and in his æsthetical, social, moral, and religious natures. And to say that man has, at some indefinite period of past time, emerged even from the level of the higher apes, would not still be to deny that now the actual distinctions between the two classes of beings are practically immeasurable and impassable.

St. Hilaire's Classification of Mankind.—M. Geoffroy St. Hilaire considers that the primary division of mankind, established upon distinctive characters of the first class, constitutes *types*, not *races*; and further, that the determination of these types should be founded essentially upon the conformation of the head.

He admits four types:

1. The Caucasian—characterized by pre-

dominance of the superior parts of the head: *i. e.*, by the region of the brain.

2. The Mongolian—characterized by predominance of the middle part of the head, with breadth of the superior part of the face.

3. The Ethiopian, marked by predominance of the inferior parts of the face, the region of the jaws.

4. The Hottentot—marked by predominance of the whole region of the face.

The two elements serving to determine the relative development of the facial regions, are: 1, breadth of the region measured by prominence of the cheek bones; 2, antero-posterior extension, measured by obliquity of the face, or by its forward projection beyond the region of the brain. The now classical terms, *orthognathic* (vertical-jawed) and *prognathic* or *prognathous* (protruding-jawed), express the varieties of the latter character. To express the former—breadth of the superior part of the face—he would coin the term *eurygnathic* (wide-jawed). With these terms we are enabled in few words to characterize the above four types of mankind. Thus, generally, the Caucasian type is orthognathic; the Mongolian, eurygnathic; the Ethiopian, prognathous; the Hottentot, at once eurygnathic and prognathous. These types are subdivided into races distinguished between themselves by characters sufficiently marked. His scheme admits at present twelve races as well established; but he supposes that others will yet be added.

St. Hilaire has been the first to embody in a system the distinction between the hyperborean peoples of the eastern and those of the western continent. It had been supposed that all the peoples situated near the polar ocean, from Lapland round to Greenland, formed—as living in the same conditions of light and heat, and amid closely similar floræ and faunæ—a single race, in characters allied to the Mongolian. But Prince Napoleon brought back from his expedition to the northern seas a series of crania which had served to overthrow that opinion. M. Henry Guérault, a surgeon on that expedition, first observed the considerable differences between the cranium of a Laplander and that of an Esquimaux. Both these peoples approach the Mongolian type; but the first does so by the globular form of the cranium, the second, by the form of cranium known as the pyramidal: these characters being such as, in the Mongolians, are combined. Thus, there are at least two northern polar races; and St. Hilaire, restricting the term “hyperborean” to the type proper to the polar regions of Europe, applies to that of the same regions in North America the designation of “paraborean.”

Gratiolet's Classification of Mankind.—Dr. James Hunt read a paper on this subject before the Brit. Assoc., 1863. He first glanced at previous classifications, from those of Ephorus and Buffon to that of St. Hilaire. He was convinced that in any attempts at such classifica-

tion we must rely on anatomical and physiological characters, not on language. He laid great stress on the forms of cranium, and approved Gratiolet's ternary classification, into: 1, the *Frontal* (European) race; 2, the *Parietal* (Mongolian); 3, the *Occipital* (Negro). These cranial distinctions coincide with the differences of mental and moral character, which Dr. Hunt believed to be solely dependent on man's physical structure. Other secondary physical characters could be made available; as those of color, stature, hair and beard, longevity, diseases, temperaments, odor, entozoa, &c. If we were guided solely by language, we should class the negroes of the West India islands as Europeans; their physical characters alone mark them negroes. We can change the language of a race, but scarcely its religion, or its innate ideas of art. Not yet being able to say how the varieties of mankind have originated, we must for the present class them according to the physical and physiological distinctions now existing between them.

Is Race determinable by Language?—Mr. John Crawford read a paper before the British Association on "The Celtic Languages in reference to the Question of Race." He was answered in another paper on the same subject and of greater length, by Mr. R. S. Charnock, in which the latter said:

Race can never to a certainty be determined by language. People of the same race may speak two different languages; while, on the other hand, people of different races may come to speak the same language, or languages which are derivatives from the same source. An example of the latter kind is found in the case of the Italian and French nations, which, though of different races, speak languages having a common origin—in the Latin tongue.

Anthropological Bearings of Language.—Mr. Charnock's paper had previously been read before the London Anthropol. Society; and on that occasion the President, Dr. James Hunt, remarked that, although some were inclined to consider that the field of anthropology did not include the science of language, he could not himself agree in this opinion; but he thought that, through observations upon languages, valuable results might be reached.

Mr. Bendyshe thought the only tenable theory of the origin of human languages was that which Max Müller had designated the "*bow-wow*" theory. The onomatopœia would, in course of the development of a language, become less apparent; yet it could in earlier ages have formed the whole of the language. Picture-writing points to this theory. He thought, further, that in the comparison of languages, hitherto, it had not been sufficiently remembered, when we hear of such a word as *serpens*, being like *sarpa*, and *erpō*, and so in other similar cases, that we are hearing these words as they are uttered by the same mouth, and by one accustomed to a particular style of pronunciation.

Mr. Owen Pike alluded to Max Müller's theory that the root-words, to which he conceives all languages to be reducible, express general ideas. He doubted if this view is proved. Müller says also that *general* ideas are peculiar to man. But if the speaker said "cat" to his dog, the latter looked, not after any particular cat, but after cats in general. He concluded that animals have general ideas, and that Müller had confounded *general* with *abstract* ideas. Müller also concluded that because the Aryan roots express general (abstract) ideas, the words composing the original language of mankind represented such ideas. But it is not pretended that the Aryan is the original language; and no one has traced the connections of the immense number of languages not included in the Aryan family. He thought it singular that the theory of the "unity of language" should be so much more popular than that of the "unity of origin of species." But Lyell had shown the remarkable resemblance between the theory of natural selection as applied to organic species, and the history of the origin of dialects and languages.

Schleicher on "Natural Selection" in Language.—M. Aug. Schleicher has recently published, at Weimar, a pamphlet entitled "The Darwinian Theory and Philology." In this he contends that, as Lyell had intimated, there is a close analogy between the genesis of species among organized beings and in language. The philologist, like the naturalist, is often puzzled by the phenomenon of languages possessing well-marked and apparently ineffaceable points of difference, yet at the same time presenting tokens of a unity of origin. It must be supposed that the accidental divergences in speech were at the first well-nigh innumerable. But the very conditions of the existence of words, would tolerate for each meaning only a few. Those best suited to the taste of the users, or to convenience of use, would alone persist—would in the end triumph over their weaker rivals. Thus, from countless varieties in the outset, the tongues from which the Indo-Germanic, the Turanian, and the Semitic have descended, being better fitted than their competitors for the purposes of human society, drove out the others; and these groups now remain as if originally of separate creation. And it is certainly a singular coincidence, that the same ingenious theory should solve mysteries in sciences whose subject-matter is so widely different.

A reviewer of M. Schleicher's pamphlet mentions, as an instance of the triumph of one tongue over others in the "struggle for life," the fact that the Anglo-Saxon is in England gradually rooting out the Celtic, as it has done the Norman French. The same principle is illustrated on a greatly increased scale in the United States, where the same victorious tongue rapidly and surely supplants all the other imported languages and dialects of European countries.

Crawfurd on the Aryan Theory in Language.

—The author, in a paper from which we have already quoted under other heads, said on this subject: The Aryan, or Indo-European theory, had its origin and its chief support in Germany. It is to the effect that, in the most elevated table-land of Central Asia there existed, in times far beyond the reach of history or tradition, a country to which (on very slender grounds) the name of Aryana had been given: the people of this country and their language had been called Aryan. This nation, a nomadic one, for some unknown cause betook itself to distant migrations; one section of it proceeding south-westwardly, to people Hindustan, and another north-westwardly, to people western Asia and Europe, as far as Spain and Britain. Müller considered that before that time the soil of Europe had been trodden neither by Celts, Germans, Slavonians, Romans, nor Greeks. Crawfurd concluded that, according to the theory, the human skeletons found in the caverns near Liege must have belonged to these nomads from Central Asia, or to their descendants; so that the era of the imagined migration carried us back to the time when man was a contemporary of the extinct mammoth, cave-lion, and rhinoceros.

The entire fabric of the Aryan theory was founded on the detection of a small number of words, in mutilated form, as being common to most, though not to all, of the languages of Western Asia and Europe—a discovery remarkable enough, but clearly pointing only to an antiquity in the history of man far beyond the reach of history or tradition (!). The Aryan he regarded as a language of the imagination; and of the existence of which no sufficient proof ever had been, or could be, given. The anticipation implied in the theory is that of ultimately reducing all the languages of the earth to a very few primitive ones. The theory itself proceeds on the principle that all languages are traceable to *monosyllabic roots*: the copious Sanskrit is said to be actually traced to about 1900 such roots. But the languages which Mr. Crawfurd had examined are not so resolvable: they have a majority of dissyllables and trisyllables which are irreducible, and appear to have no recondite sense. In any case, he could not see how the Aryan theory illustrates or bears on that of transmutation of species by natural selection. Of the latter process, the progress must be so slow as almost to escape notice. But of changes in language, the causes are in unceasing and active operation, and the evidences are patent and abundant. Among the causes are social progress, the intermixture of languages through conquest, and the effects of commercial intercourse, and of religious conversions. The author regarded the Aryan theory as a monstrous fiction. Changes in language he considered the exclusive work of man; those in species, by natural selection, if they exist at all, the spontaneous work of nature, unaided by man.

Commixture of Races.—Mr. Crawfurd, in another paper, considers this subject in its relations to the progress of civilization. He argues that, when the qualities of different races of men are equal, no detriment results from their union. Thus, he regards the French and English, both mongrel nations, as equal to the purer breeds of Germany and Scandinavia. But when intermixing races are quite unequal,—in physical, or in mental development,—the deterioration of the higher race is the result. In cases of extreme disparity, however, there is *antipathy*; and consequently, in such cases, no intermixture occurs.

In his lectures very recently delivered before the Royal Institution, London, on the "Classification of the Mammalia," &c., Prof. Thos. H. Huxley has taken occasion to consider the anatomical and ethnological characters of the Negro, and incidentally, his relation to the white race. From the anatomical survey, he concluded that the negro was not in any such sense inferior to the normal man, as that he could be regarded as nearer to the brutes than races generally, or as a "connecting link" between man and the brutes; and he condemned the extreme views which had been for some time argued to this latter effect, and especially very lately by Dr. James Hunt, of London. Yet, at the same time, he showed that between the white races and the negro there are actual physiological differences; and that they are such as, by the light of experience and analogy, are to be interpreted as inferiorities. He alluded to three theories respecting the social position of the negro, as held by those who take the more favorable view of his capacities: first, that the negro is the equal of the white man; secondly, that he is better than, or at least the necessary complement to, the white man, so that an intermixture of the two races is desirable even to the latter; and thirdly, that he is improvable into something like equal capacities and standing with the latter. Admitting at least a probable germ of truth in the third of these opinions, Prof. Huxley remarks on the previous ones,—“The two former propositions are so hopelessly absurd as to be unworthy of serious discussion.” In a review of this lecture, in the "Reader," London, March 5th, 1864, the writer, after giving some account of the doctrine of "Miscegenation," which he states has been lately broached in this country, adds: "He [Huxley] appears to hold that general intermarriage of the white and black races would, on the part of the whites, be a culpable consent to a deterioration of the species."

Is Man Cosmopolite?—We are not at this moment able to state who it was that first discussed this question, or that first gave publicity to the doctrine that man is not cosmopolite—in other words, that given races cannot migrate at random to whatever parts of the globe inclination may lead them to; but that, in certain cases, deterioration must be the result. The

late Dr. Robert Knox, of England, however, was a prominent advocate of this theory, in which it is contended that Asia is for Asiatics, Africa for Africans, Europe for Europeans; and, as the corollary is drawn by some writers, America for Americans—meaning by this term the aboriginal or red men.

M. Bondin, in a paper entitled "Non-cosmopolitism of the Races of Mankind," read some time since before the Paris Anthropol. Society, declares that in case of most races—the yellow and a few others being excepted—acclimatization is for each circumscribed. He says it is well ascertained that the European races cannot, without continual reinforcement from the mother countries, maintain themselves in tropical Africa and Asia. MM. Rameau and Quatrefages, in remarking upon this paper, questioned whether the European races preserve their type in America. The observations of the latter would tend to the conclusion that, in some parts of North America, both the European and the African races showed in their physiognomy an approach to the aboriginal type of the country. This opinion Prof. W. B. Carpenter had also expressed, some years since.

M. Martin de Moussy, however, regarding these conclusions as doubtful, opposed to them the instance of a German colony, founded in Paraguay in 1535, by soldiers of Charles V.; this people, although they have since that time received no addition of the German element, being declared to be, to this day, perfectly like the Germans of Europe.

Bollaert on the Populations of the New World.—Mr. W. Bollaert read a paper on this subject before the London Anthropol. Society, May 12th, 1863. He leaned to the polygenist theory; and set down the primitive species of men, distinguishable by color, as the White, Brown, Red, Black, &c. He then considered the several ethnic realms of North and South America, and gave the present numbers and characteristics—in some cases the past also—of the populations of the different countries. Speaking of Mexico, he remarks: "In 1858, the Republic of Mexico had been in existence 38 years, and had had fifty-six violent changes of government." In respect to the negroes in the United States, he declares that, while their number is at present about 4,000,000, during the past three centuries not less than 14,000,000 had been imported from Africa into the country. He thinks the mixture of the white, red, and black species unfortunate—resulting in varieties which are not the best specimens of humanity, if we examine them physiologically, psychologically, or in their political history. The following are the author's conclusions:

1. That, when first discovered in 1492, America had an aboriginal population of probably over 100,000,000: at present that population numbers only about 12,750,000.

2. That in the late Spanish-American colonies, and the present Republics [succeeding

them], the whites have not increased in any way approaching the increase of the whites in North America—a fact which he attributes in great measure to difference of climate.

3. That the fusion, or rather, *confusion* of the White, Indian, and Negro elements, particularly shown in the Spanish portion of the continent, is unfavorable to a strong, healthy, and prolific progeny; while it results in numberless varieties of mulattoes and zamboes.

4. That there has been for the last 30 years a continual cry from the South American Republics for European immigration; but that, to such immigration there have been two drawbacks—the generally-continued state of anarchy, and the climate.

5. That the mixed breeds or varieties are not so prolific as pure species.

6. That in many of the (S. A.) Republics, children of European parents are reared with more or less difficulty.

7. That the long wars of independence thinned the male population, and, since their termination, many of the Republics have had long periods of sanguinary civil war; a fact which is to be attributed in great measure to the circumstance of the mixed populations of Whites, Indians, and Negroes.

In the discussion which followed the reading of this paper, Drs. Berthold Seeman and James Hunt confirmed the opinion already named as having been advanced by MM. Rameau and Quatrefages, and by Dr. Carpenter, in respect to the occurrence of a gradual change of type in the European peoples settled in America. The former questioned whether the present population of the United States would not die out, if it were not constantly recruited from Europe. He thought the American people inclining to be moody, but when excited, very vehement; and he stated that among them, in a physical point of view, leanness is prevalent, the calves of the legs not being well developed; and that the hair inclines to grow long and straight, and is only in very rare instances curly. Yet he admitted that in some parts of the United States, as in Kentucky, very fine specimens of men are found.

The President, Dr. Hunt, said that a great change of opinion appeared to be taking place with regard to the acclimatization of man. The same influence unfavorable to the rearing of European children, obtains in India and in Australia, as in South America. These and other facts tend rather to the conviction that man has not that power which has so often been ascribed to him, of living and producing prolific offspring in all the climates of the world.

The North American Climate, and its Effects.—M. E. Desor remarks that the German or Swiss emigrant, upon first landing in New York, thinks the climate much the same as that of his own country. But if he resides there for a time, he soon finds it necessary to change his habits and mode of life. It is about 240 years since the first colonization of

New England, which was made by Englishmen, having all the characteristics of the Anglo-Saxon race. But now, the purely English breed is no longer seen. An Americo-European type has been developed; and this is most marked in the Eastern States, where the race is the least mixed. Hence, it cannot be considered the effect of intermixture; and consequently, again, it must be produced by external influences.

The new type is strongly marked by certain physical characters. Referring the change of type chiefly to the influences of climate, these appear [to explain more definitely M. Desor's statements] to take effect primarily, or in most marked degree, upon the *assimilative* and *nutritive* functions of the body, and upon the *glandular* or *secretory* system; and they are evidenced chiefly in the loss of adipose tissue and shrinking of the muscles, with a general tendency to attenuation of form, to pallor of the surface, and often delicacy of appearance; these conditions being frequently accompanied with marked excitability, and lack of the power of endurance. An absence of corpulence is almost the invariable rule, the exceptions being, more frequently than otherwise, in case of foreigners. The tendency to delicacy of form and lack of endurance, especially in women, is beginning to be deplored by the American people themselves.

The writer thinks that very few Europeans grow fat in the United States; but that Americans residing for a considerable time in Europe grow more hearty and portly, and that the same result is apt to occur to those who return to Europe after a long stay in America. He says that the hair—which, when kept properly moist by the oily secretion of the scalp, inclines to curl—tends in America to dryness, and to grow stiff and lank; and he appears to assert that in American cities hair-dressers are more numerous than in others, as also that the hair of Europeans coming to the country requires more softening with pomade, &c., than it had been wont to do.

As to personal characteristics, the same writer asserts that the people of this country display a general, feverish activity; that every one is in a hurry; and that, as a rule, people do not walk, but run. This activity appears instinctive; it is the result of habit, or of an innate restlessness. He repeats the charge, so often made against us, of fast eating; and he thinks that, in this country, the use of spirituous liquors [and what is to be said of tobacco?] proves more hurtful than in the countries of Europe.

Possible Causes of the Peculiar Action of the North American Climate.—It is not difficult to understand that, of the statements which have been made by European writers on the subject of the climate of North America, and the influences supposed to be attributable to it, some are over-colored; nor, to believe that some of them are even drawn from imagination, or

find their secret source in the jealousies of nations and races; and without doubt, to some extent, also, in the much more practical motive of a desire to discourage the emigration to this country, continually and actively going on from the countries of Western and Central Europe, of those who constitute an important portion of the capable and productive members of their own industrial classes. But admitting thus much, there is still left in the statements referred to a residuum of unquestionable fact, and which, moreover, is of such character as to render it of the deepest interest to the people of this country. It cannot, the writer is of opinion, be denied that in the population of the United States, in course of two, or at most three generations, the Teuton ceases to be Teutonic, the Englishman to be English, the Celt to be Celtic, and so on; nor, that all these blend or lose themselves in a new race, which has physiological, physiological, and to some extent mental characteristics peculiar to itself; nor, yet again, that these characteristics are in so marked a degree individual and uniform, as to forbid the supposition that they may be the merely incidental result of *combination* of the traits of two or more parent stocks.

It by no means follows that, as some have argued, the new type here developing is but a stage in a physical decay or decline; indeed, it would be easy to cite many facts that go to prove the contrary. In the statement of the physiological and personal characteristics pointed out in the preceding section as marking that type, there is, however, a degree of truth. In the opinion of the compiler of this article, the very nature of the effects which have already been remarked points to the cause or causes by which they are produced, indicating in fact that those causes are *climatic*, or *atmospheric*; and he desires briefly to intimate in this place—and without going into details of argument—what, it has appeared to him, are some of those causes, if they be not indeed the precise ones to which the peculiarities of climatic influence here are to be attributed.

It will be borne in mind that, thus far, the climate of our country may be said to have been by immigrant European races fairly tested only in the Atlantic, the Gulf, and the interior regions, and not as yet in those bordering on the Pacific. Now, the effect of unequal solar heat in different latitudes and of the earth's rotation, combined, it is well known, is to keep up certain great circulations both in the oceans and the atmosphere. The resulting warm ocean currents move at once to the poles and eastwardly, and hence flow to the westward shores of the continents, rendering the climate of these, for any given latitude, warmer than that of the eastern shores, against which on the contrary the returning cold currents tend to move; while another consequence is, that in temperate latitudes generally, the air of the western is also more humid than is that of the

eastern shores. In a word, the climate of western coast regions is, as the rule, the more mild, bland, and genial; while that of eastern coast and interior regions is generally cooler, drier, more bracing or exciting. This dryness and exciting quality of the air of our country is familiar to close observers, as characterizing, more or less, and with few exceptions, all portions of it, at least to the eastward of the ranges of the Rocky Mountains. But the exciting quality can also be noted to be especially intense at certain times, and again less at others. Now, it is well known that dry air is more readily electrified by its own disturbance than is moist, and also that, becoming electrified from this cause or by evaporation or chemical changes at the surface of the earth, it less readily parts with its electric charge, or returns to a condition of equilibrium, than does moist air. Further than this, Mr. Barder has lately stated that, as the result of his observations, "wind which has recently come over the sea is almost invariably heavily charged with *ozone*; while land breezes bring with them little of this agent." And in the great aerial circulation, it will be noted, the trade-winds of the temperate latitudes flowing toward the equator also move westwardly, or, upon eastern shores, from the oceans over the land; those of western coast-regions, the reverse.

Here we appear to have found at least four atmospheric or climatic causes, all of which would tend to produce just the sort of effects which have been referred to above, namely: in some portions of the Atlantic and interior regions of our country, a comparatively *low temperature*; in almost all parts a comparatively *dry atmosphere*; in the same parts, increased liability to *electrical excitation*; in the regions bordering the Atlantic, a comparatively highly *ozone condition*. For, as to the last-named of these causes, although the nature of ozone is still in dispute (*see* CHEMISTRY), yet it cannot be denied that there is some chemical agent or condition of the air which possesses the powers that have been attributed to ozone, and the tendency of this agent is to favor oxidation; hence, physiologically, to spur on or excite vital actions. In fact, it becomes an interesting question whether the very electrization of a dry atmosphere may not, at the same time, generate this agent; and hence, whether an unusual charge of ozone may not often characterize the air of our country in regions which, like those of Kansas and Minnesota, are far removed from the seaboard. Upon all such questions, however, there is great need still of more extensive and more careful experiments than have yet been performed.

But, granting that there were in our atmosphere such causes of physiological and mental excitation as have now been suggested, could it not be supposed that observation and study should yet reveal to us some measures by which any possibly unfavorable influences of the climate might be neutralized, or the prepon-

derance assured to those of its influences which are favorable in their tendency? Might not, in such case, very much be accomplished toward the end now indicated, by calling into requisition the habitual exercise of an intelligent forethought in regard to the atmospheric conditions we are subject to; by a suitable regulation of the habits of life; by resorting as much as may be to an unexciting, but succulent, and also nutritious and supporting dietary; by calling in the moral power of self-control, to the government of impulses and desires; and finally, by that more general and systematic cultivation of the solid mental powers, which, under the exigencies imposed by the earlier periods in the occupation of the vast and unreclaimed territory of our continent, has up to this time scarcely been practicable?

EUROPE. The following table exhibits the list of States into which Europe was divided at the close of the year 1863, together with their population, according to the last official census:

STATES.	Population.	Census of
Portugal.....	4,935,330	1863
Spain.....	16,560,813	1861
France.....	37,472,732	1861
Austria (including Venetia).....	35,018,938	1857
Prussia.....	18,491,220	1861
The Minor German States* (exclusive of the German provinces of Austria, Prussia, Holland, and Denmark)....	17,055,632	1861
Italy.....	21,776,953	1862
States of the Church.....	700,000	
Switzerland.....	2,510,494	1860
Holland.....	3,618,459	1862
Belgium.....	4,782,255	1861
Great Britain (including Gibraltar, Malta, and Heligoland).....	29,466,053	1861
Denmark:—		
1. Denmark Proper, the Faroes, and Iceland.....	1,673,805	1860
2. Schleswig-Holstein, and Lauenburg†.....	1,004,473	1860
Sweden.....	3,859,728	1860
Norway.....	1,490,047	1855
Russia (European possessions).....	59,330,752	1853
Turkey.....	15,730,000	1844
Greece (including the Ionian Islands).....	1,325,479	1861

The territorial division of Europe was changed in 1863 by the annexation of the Ionian Islands, which had hitherto been under the protectorate of England, to the kingdom of Greece. (*See* GREECE.) A dispute between France and Switzerland, concerning the frontier, was amicably settled by a treaty. (*See* FRANCE.)

At the beginning of the year, the European nations were deeply agitated by the outbreak of an insurrection in Poland, which spread not only over all the provinces of the kingdom of Poland, but even over the western provinces of Russia. As the governments and nations of Europe generally sympathized with the Poles, it was for some time expected that all Europe would be drawn into this war. This expectation was not realized, but the insurrection con-

* The population of the entire German Confederacy, including the German provinces of Austria, Prussia, Holland, and Denmark, amounted in 1861 to 45,013,034.

† The succession of King Christian IX. of Denmark in the duchies of Schleswig-Holstein, and Lauenburg is disputed by the Prince Frederic of Augustenburg. *See* SCHLESWIG-HOLSTEIN.

tinued throughout the year. (*See POLAND.*) In August 17th a Congress of the Princes and Representatives of the free towns of Germany met at Frankfort, upon the invitation of the Emperor of Austria, to consider a plan for the reformation of the Federal Constitution of Germany. The Austrian project was adopted by all but six votes; but the refusal of the Prussian Government to take part in the Congress, or to adhere to the Austrian project prevented, up to the end of the year, the introduction of any reforms. (*See GERMANY.*) In November, one of the standing European complications, that of Schleswig-Holstein, suddenly assumed a warlike aspect, in consequence of the disputed succession in those two duchies, after the death of King Frederic VII. of Denmark. The majority of the minor German governments and the German people generally sustained the claims of the Prince of Augustenburg to the succession. Austria and Prussia were willing to acknowledge the claims of King Christian IX. of Denmark, but agreed with the other German States in the opinion, that the Danish Government had in several essential points violated the existing international treaties and the rights of the two duchies. Though differing on the succession question, the two Great German Powers, and the Federal Diet were in favor of a warlike demonstration against Denmark. The Federal Diet of Frankfort, in December, declared in favor of "Federal execution" (execution of the Federal laws) in the duchy of Holstein, and the new year opened with the certain prospect of war. (*See SCHLESWIG-HOLSTEIN.*)

For many years the progress of liberal and democratic tendencies has been steady and uninterrupted throughout Europe, and nearly every government finds it necessary to inaugurate or sanction some liberal reforms, and to make some concessions to the popular spirit. In September, the diet of the Grand Duchy of Finland was opened by the Emperor Alexander of Russia with a speech, in which he avowed a belief in the efficacy of a constitutional form of government, and which was therefore regarded as the inauguration of a constitutional era. (*See RUSSIA.*) At the reelection of the Corps Legislatif in France, the opposition parties gained considerably, electing together 34 members, against 5 in 1857. (*See FRANCE.*) In Prussia, at the reelection of the Second Chambers, the Party of Progress gained a signal triumph. (*See PRUSSIA.*) In Spain, at the reelection of the Cortes, the majority of the representative party resolved to take no part in the election. (*See SPAIN.*) In Austria, the Government had the satisfaction to see the diet of Transylvania elect, for the first time, deputies to the council of the empire, and to see the Croats disposed to follow this example. (*See AUSTRIA.*) The crown of Greece, vacant by the expulsion of King Otho, was, after long negotiation, definitely accepted, on April 22d, by Prince Christian of Denmark (now King Christian IX.) for his son William, who as-

cended the throne under the name of King George I.

The countries of Europe greatly differ as to density of population. While in England and Wales there were 352 inhabitants living in one English square mile, in Russia there are only 10; in Norway, 12; in Sweden, 22; in Greece, 56; in Spain, 89; in Poland, 91; in Moldavia, 100; in Portugal, 104; in Denmark, 119; in Switzerland, 161; in Prussia, 165; in France, 176; in Brunswick, 194; in Holland, 280; in Wurtemberg, 373; in Belgium, 393. However, if we take the population of England alone, leaving out the Principality of Wales, the density is one of 377 individuals to the square mile, and in this case Belgium is the only country in Europe more thickly crowded with inhabitants than England. In England, for the last few years, the proportion of marriages to the population has been one in 123, which is a higher rate than that of most European countries. In Norway the proportion is one in 124; in Hanover, one in 128; in Holland and Denmark, one in 129; in Sweden, one in 135; in Spain, one in 141; in Bavaria, one in 160; and in Greece, only one in 174. Proportionately more marriages than in England and Wales are made in France and Belgium; in both countries the rate is one in 122; in Austria, where it is one in 117; in Russia, where it is one in 111; and in Prussia, where it is one in 106. Rather more fixed is the proportion of births to population. It is one in 28 in England and Wales; one in 29 in Spain and Bavaria; one in 30 in Belgium, Holland, and Norway; one in 32 in Sweden; one in 33 in Hanover, the Hanse Towns, and Denmark; one in 34 in Greece; and one in 38 in France. Consequently the natural increase of population is lower in France, in spite of the high marriage rate, than in any other European State. More fertile than England are only Wurtemberg, where the proportion of births to population is one in 26; Russia, where it is one in 25; Austria, Saxony, and Prussia, where it is one in 24; and Poland, where the proportion is one in 23.

A French statistician, Mr. Blook, in a recent article of the *Revue des deux Mondes*, publishes the following estimates of the population of the principal States of Europe a century hence, if the present rate of increase should continue:

<i>At present.</i>		<i>A century hence.</i>	
	Millions.		Millions.
Russia.....	66	Russia.....	135
France.....	37	Great Britain.....	53
Austria.....	35	Austria.....	55
Great Britain.....	29	Prussia.....	47
Italy without Rome and Venice.....	22	France.....	46
Prussia.....	18	Italy.....	44
Germany.....	18	Germany.....	36
Spain.....	16	Spain.....	32

EUROPEAN CONGRESS. The speech with which the Emperor of France opened on November 5th the French Chambers, was looked upon by the European papers of all parties as

one of the memorable events in the recent history of Europe. The Emperor made to his fellow sovereigns of Europe the startling announcement, that in his opinion the entire European state system was resting on a decayed foundation, and that unless a new and more durable edifice be erected, the whole fabric must become a heap of ruins. He therefore proposed the assembling of a Congress which was to undertake the arduous task of solving all the great European complications, and, in particular, the redress of the grievances of the oppressed nationalities. The Emperor expressed himself as follows :

Russia has already declared that conferences in which all the other questions now agitating Europe should be debated, would in no wise wound her dignity. Let us note and act upon that declaration. Let it serve us to extinguish, once for all, the fermentings of discord, which are ready to burst out on all sides, and out of the very maladies of Europe, agitated everywhere by the elements of dissolution, let a new era of order and of peace be born. Has not the moment come for reconstructing on new bases the edifice shaken by time and destroyed bit by bit by revolutions? Is it not urgent to recognize, by our conventions, that which the peace of the world demands? The treaties of 1815 have ceased to exist. The force of things has overthrown them, or tends to overthrow them. Almost everywhere they have been violated; in Greece, in Belgium, in France, in Italy, and Germany on the Danube is endeavoring to change them. England has generously modified them by the cession of the Ionian Islands, and Russia tramples them under foot in Warsaw. In the midst of these excessive violations of the fundamental European pact, ardent passions have been excited, and in the South, as in the North, powerful interests demand a solution. What, then, more legitimate or more sensible than to invite the powers of Europe to a congress, in which self-interest (*amour propre*) and resistance would disappear before a supreme arbitration. What more conformable to the ideas of the epoch, to the will of the greater number, than to speak to the conscience and reason of the statesmen of every country and say to them,—Have not the prejudices and rancor which divide us lasted long enough? Shall the jealous rivalry of the great Powers unceasingly impede the progress of civilization? Are we still to maintain mutual distrust by exaggerated armaments? Must our most precious resources be indefinitely exhausted in a vain display of force? Must we eternally maintain a condition of things which is neither peace with its security nor war with its chances of success? Let us no longer attach a fictitious importance to the subversive spirit of extreme parties by opposing ourselves on narrow calculations to the legitimate aspirations of peoples. Let us have the courage to substitute for a sickly and precarious condition of things a situation solid and regular, even should it cost us sacrifices. Let us assemble without preconceived systems, without exclusive ambition, animated alone by the thought of establishing an order of things founded for the future on the well-understood interests of sovereigns and peoples. This appeal, I am happy to believe, will be listened to by all. A refusal would suggest the existence of secret projects which shun the light. But even should the proposal be not unanimously agreed to, it would produce the immense advantage of having pointed out to Europe where the danger lies, and where the safety. Two paths are open—the one conducts to progress by conciliation and peace; the other, sooner or later, leads fatally to war, from obstinacy in maintaining a course which is sinking beneath the feet.

The great significance of this language lies in the fact that the demands thus made upon

the college of European princes are the same which the progressive and revolutionary party of Europe have been for a long time making, and which the princes have hitherto rejected as an abominable political heresy. The democrats of Europe generally demand that the entire map of Europe be reconstructed on the basis of the principles of popular sovereignty, and of the right of every live nationality to an independent existence. The princes, on the contrary, refused to make any concessions to these claims, and, in opposition, confined themselves to plead the rights conferred upon them by the treaty of 1815. The speech of Louis Napoleon is the first announcement on the part of one of the great powers of Europe, that the demands of the progressive party of Europe can no longer be successfully resisted. The proposed Congress had not been convoked at the close of the year 1863, but had led to an interesting diplomatic correspondence, which is of lasting importance in the history of our times, as it reveals the views of the several European governments on one of the greatest problems of the age—the reconstruction of the map of Europe.

The proposition of the Emperor for a congress was at once followed, on his part, by an autograph letter addressed to the leading sovereigns (altogether fifteen in number), urging the same views and showing, in the spirit of the speech, that only by such means can war be prevented, and the general stability of society firmly and satisfactorily established. The following is a specimen of these letters :

Most High and Most Illustrious Sovereigns, Princes and Free Towns which constitute the High German Confederation:

In presence of the events which every day arise and become urgent, I deem it indispensable to express myself without reserve to the sovereigns to whom the destiny of nations is confided.

Whenever severe shocks have shaken the bases and displaced the limits of States solemn transactions have taken place to arrange the new elements, and to consecrate by revision the accomplished transformations. Such was the object of the treaty of Westphalia in the seventeenth century, and of the negotiations at Vienna in 1815. It is on this latter foundation that now reposes the political edifice of Europe; and yet, as you are aware, it is crumbling away on all sides.

If the situation of the different countries be attentively considered, it is impossible not to admit that the treaties of Vienna upon almost all points are destroyed, modified, misunderstood, or menaced; hence, duties without rule, rights without title, and pretensions without restraint. The danger is so much the more formidable because the improvements brought about by civilization, which has bound nations together by the identity of material interests, would render war more destructive.

This is a subject for serious reflection; let us not wait before deciding on our course for sudden and irresistible events to disturb our judgment and carry us away despite ourselves in opposite directions.

I therefore propose to you to regulate the present and secure the future in a Congress.

Called to the throne by Providence and the will of the French people, but trained in the school of adversity, I am perhaps bound less than any other to ignore the rights of the sovereigns and the legitimate aspirations of nations.

Therefore I am ready, without any preconceived system, to bring to an International Council the spirit of moderation and justice, the usual portion of those who have endured so many various trials.

If I take the initiative in such an overture, I do not yield to an impulse of vanity; but as I am the sovereign to whom ambitious projects are most attributed, I have it at heart to prove by this frank and loyal step that my sole object is to arrive without a shock at the pacification of Europe. If this proposition be favorably received, I pray you to accept Paris as the place of meeting.

In case the princes, allies and friends of France, should think proper to heighten by their presence the authority of the deliberations, I shall be proud to offer them my cordial hospitality. Europe would see, perhaps, some advantage in the capital from which the pacification of Europe. If this proposition be favorably received, I pray you to accept Paris as the place of meeting.

I take advantage of this opportunity to renew to you the assurance of my sincere attachment and of the lively interest which I take in the prosperity of the States of the Confederation. Whereupon, most high and illustrious Sovereign Princes and Free States which constitute the most exalted German Confederation, I pray God to have you in His holy keeping.

Written at Paris on the 4th of November, in the year of grace 1863.

NAPOLÉON.

Countersigned, DROUYN DE L'HUYS.

The reception of the proposal of the Emperor in England was generally unfavorable. England could not expect any territorial aggrandizement from the Congress, but only the loss of her European dependencies, and, in particular, Gibraltar. The press almost unanimously discouraged the participation in a Congress. The formal acknowledgment of the imperial proposal was returned on November 11th by the Secretary of State for Foreign Affairs, and it was succeeded on the following day by another despatch addressed to Lord Cowley, the British minister at Paris. In this despatch Earl Russell states that in the view of the British Government the main provisions of the treaty of Vienna are in full force. As to those changes which have been made in Europe in disregard of the treaty of Vienna, and for which the sanction of the great powers has not been obtained, was it proposed by France to obtain that recognition? Again, other portions of the treaty of Vienna are menaced, and upon these the most important questions arise. The French Government was asked to state the nature of the proposals to be made on this subject by the Emperor, in what direction they would tend, and whether, if agreed to by a majority of the powers, they were to be enforced by arms. The practice of the Holy Alliance at the Congress of Vienna was recalled to mind, and the French Government was asked whether that example was to be followed at the present Congress in case of disagreement. "Upon all these points," Earl Russell wrote, "Her Majesty's Government must obtain satisfactory explanations before they can come to any decision upon the proposal made by the Emperor." At the same time it was observed that whatever doubts the Queen's Government entertained referred only

to the best means of attaining objects equally desired by both Governments.

The reply of M. Drouyn de l'Huys is dated November 23d. The French minister says;

The Imperial Government have no intention either to apologize for or to criticise the treaties of Vienna. The Emperor declared on mounting the throne that he should consider himself bound by the engagements subscribed to by his predecessors. Lately again, in his letter to the sovereigns, His Majesty showed that the diplomatic acts of 1815 were the foundation on which rests to-day the political edifice of Europe. But this is, he considers, an additional reason for examining whether this foundation is not itself shaken to its base. Now, the Cabinet of London recognizes with us that several of these stipulations have been seriously infringed. Amongst the modifications which have taken place, some have been consecrated by the sanction of all the great powers, and at present constitute a part of international law; others, on the contrary, carried into execution, have not been recognized as law by all the cabinets. As regards the first, we cannot help calling attention to the irresistible power with which they have forced themselves on the acceptance of the governments. The eagerness of England herself to give them her adhesion proves how little the former combinations answered, according to the expression of Earl Russell, the requirements of the lapse of time, the progress of opinion, the shifting policy of governments, and the varying exigencies of nations; on the other hand, are not we authorized in believing that changes so important have diminished to some extent the harmony and equilibrium of the whole? We admit, with Earl Russell, that it is not absolutely necessary to give to these changes a more general and more solemn sanction; but we consider it would be an advantage to clear away the ruins, and re-unite in a single body all the living members. As regards the modifications to which the powers have not given an unanimous assent, they constitute so many causes of dispute which at any moment may divide Europe into two camps. Instead of leaving the decision of these to violence and chance, would it not be better to pursue their equitable solution to a common agreement, and sanction these changes by revising them?

M. Drouyn de l'Huys goes on to say that the Emperor must go into a Congress "free of every engagement." To preserve his impartiality toward the many sovereigns he has invited, he must decline offering previous explanations to any of them. He then briefly reviews the "deplorable struggle" in Poland, the "quarrel" between Denmark and Germany, the anarchy prevailing on the Lower Danube, the hostile attitude of Austria and Italy, the occupation of Rome by French troops, the burden imposed upon the nations of Europe by the disproportionate armaments occasioned by mutual distrust, and designates these as the principal questions which the powers would doubtless judge it useful to examine and decide. He adds, that in the eyes of France it would be illusory to pursue their solution through the labyrinth of diplomatic correspondence and separate negotiation, and that the way now proposed, so far from ending in war, is the only one which can lead to a durable pacification. M. Drouyn de l'Huys refers to the opinion expressed by the Earl of Clarendon at one of the last meetings of the Congress of Paris, and concurred in by the plenipotentiaries of all the courts, that states between

which any serious misunderstanding may arise should have recourse to friendly mediation before appealing to arms. "The solicitude of the Emperor," he says, "goes further; it does not wait for dissensions to break out in order to recommend an application to the actual circumstances of the salutary principle engraven on the latest monument of the public law of Europe, and His Majesty now invites his allies 'to enter into explanations, and to come to an understanding.'"

The final reply of the British Government is dated November 28th. In this despatch Earl Russell enters into a searching examination of the grounds for supposing a general Congress of European States likely to furnish a peaceful solution of the various matters in dispute. He expressed the opinion that at the present moment, after a continuance of long peace, no power is willing to give up any territory to which it has a title by treaty, or a claim by possession. This he thinks, in particular, to be the case with the questions of Poland and Italy; were all the European questions—those of Poland, Italy, Denmark, and the Danubian principalities—to be decided by the mere utterance of opinions, the views of the British Government upon most of them might perhaps not materially differ from those of the Emperor of the French. But the deliberations of a Congress would probably consist of demands and pretensions put forward by some and resisted by others; and, there being no supreme authority in such an assembly to enforce the decisions of a majority, the Congress would probably separate, leaving many of its members on worse terms with each other than they had been when they met. But if this would be the probable result, it follows that no decrease of armaments is likely to be effected by the proposed Congress. "Not being able, therefore, to discern the likelihood of those beneficial consequences which the Emperor of the French promised himself when proposing a Congress, Her Majesty's Government, following their own strong convictions, after mature deliberation, feel themselves unable to accept His Imperial Majesty's invitation."

Austria was as much displeased with the proposal of Louis Napoleon as England. Immediately upon the publication of the Emperor's speech, and the receipt of his letter, the official paper of Vienna contained a declaration that Austria had always respected the treaties of 1815, and still recognized them, so far as they were not modified by subsequent stipulations, as the public law of Europe. The Emperor of Austria, in his reply to Napoleon, dated November 15th, acknowledges the important objects of the Congress for the settlement of the political questions at present pending, and the security of the future, but wishes, before taking part therein, to learn with some accuracy the bases and programme of the deliberations of the Congress. Should the questions to be discussed be indicated beforehand,

and the powers agree upon the tendency of the deliberations of the Congress, unforeseen accidents which might overthrow everything would be less to be feared. The dangerous and insolvable problems which would create fresh instead of removing existing complications would then be set aside.

This idea is more minutely explained in a despatch of Count Rechberg to Prince Metternich, the Austrian ambassador at Paris. It says:

It is not sufficient to put forward a programme of a negative character as the basis of such important discussions. The Austrian Government wishes to know how the declaration of the Emperor Napoleon relative to the treaties of 1815 is to be understood.

These treaties have been partially modified, but so far as they have not been altered they are considered as the foundation of public right in Europe. Some improvements are necessary. Let the French Government point out those it considers desirable. Certain remedies might be more dangerous than the evils themselves. The programme of the Congress must fulfil all the conditions for the maintenance of peace, which is the principal object to be attained.

The Emperor of Russia expressed a warm sympathy with the object Napoleon had in view, that of attaining without disturbance the pacification of Europe, but regarded the consent of the other powers and the previous specifications of the questions to be discussed, necessary. The Emperor thus explained his views:

In describing the profound uneasiness of Europe and the utility of an understanding among the sovereigns to whom is confided the destiny of the nations, your Majesty expresses a thought which has always been mine. I have made it more than the object of a desire, I have deduced from it the rule of my conduct. All the acts of my reign attest my desire to substitute relations of confidence and concord to the state of armed peace which weighs so heavily upon the peoples. I took the initiative, too, as far as I was able, of a considerable reduction of my military forces. During six years I released my empire from the obligation of the recruitment, and I undertook important reforms—guarantees of a progressive development at home and of a pacific policy abroad.

It is only in presence of eventualities which might threaten the security and even the integrity of my States, that I have been compelled to deviate from this course. My most ardent desire is to return to it, and to spare my people's sacrifices which their patriotism accepts, but from which their prosperity suffers. Nothing could better hasten this moment than a general settlement of the questions which agitate Europe. Experience proves that the real conditions of the peace of the world rest neither in an impossible immobility, nor in the instability of political combinations that each generation would be called upon to annul or to remodel, at the will of the passions or of the interests of the moment, but rather in the practical wisdom which imposes upon all the respect of established rights, and suggests to all the compromises necessary to conciliate history, which is an ineffaceable legacy of the past, with progress, which is a law of the present and the future.

Upon these conditions a loyal understanding between the sovereigns has always appeared desirable to me. I should be happy if the proposition emitted by your Majesty were to lead to it.

The King of Prussia declared himself ready

to participate in a Congress, the object of which would be to effect the modifications which might be considered necessary in the treaties of 1815, which, however, none the less continue the foundation upon which the political edifice of Europe at present rests. The ministers of the various countries should prepare the propositions which would be submitted to the Congress.

The most sympathetic reply was received from the King of Italy. The Government of Italy has fully and openly espoused the nationality principle, to which the new kingdom owes its origin, and from the exertion of which it expects the annexation to Italy of Venetia and Rome. The King of Italy, therefore, not only accepts an invitation, which seems to presuppose the truth of the nationality principle, but, in emphatic language, expresses his concurrence with the views of the French Emperor. He is even more outspoken on the rightful aspirations of the nations than Louis Napoleon, and looks upon congresses, like that proposed by Napoleon, as a great progress in the history of mankind. He says in his reply, dated November 22d :

A permanent struggle has been established in Europe between public opinion and the state of things created by the treaties of 1815. Hence has arisen a sickly state of things which will increase unless European order is placed upon the basis of the principles of nationality and of liberty, which are the very essence of the life of modern nations.

In presence of a situation so dangerous to the progress of civilization and to the peace of the world, your Imperial Majesty has become the interpreter of a general sentiment by proposing a Congress to settle the rights of sovereigns as well as those of nations.

I adhere with pleasure to the proposal of your Imperial Majesty. My concurrence and that of my people are assured to the realization of this project, which will mark a great progress in the history of mankind.

As soon as the international conferences take place, I shall take part in person, or at least send a representative.

Italy will appear at the Congress in a spirit of perfect equity and moderation. She is convinced that the justice and the respect of legitimate rights are the true foundations upon which a new balance of power of Europe can be founded.

The King of Portugal, the son-in-law of Victor Emanuel, fully agrees with the views of his father-in-law. In his reply (dated November 18th) he says :

It is an agreeable duty therefore to me to announce to your Imperial Majesty that I adhere without hesitation to your conciliatory proposition, and that I subscribe with all my heart to the sentiments which have inspired it.

Congresses after war are ordinarily the consecration of the advantages of the strongest, and the treaties which result, based upon facts rather than upon rights, create forced situations, the result of which is that general uneasiness which produces violent protestations and armed reclamations.

A Congress before war, with the view of averting war, is, in my opinion, a noble thought of progress. Whatever may be the issue, to France will always belong the glory of having laid the foundation of this new and highly philosophical principle.

The youthful King of Greece, who had so recently ascended a throne, which was erected

on the basis of "national aspirations" and upon the ruins of the historical rights of another dynasty, and of treaties, could not but applaud the idea of the Imperial Congress. Says King George, in his letter dated November 26th :

This appeal to conciliation which your Majesty has just made in the interest of European order has been inspired by views too generous and too elevated not to find in me the most sympathetic reception.

The noble thought which predominates therein could not be better enhanced than by the frank language and the judicious considerations with which your Majesty has accompanied your proposition.

In accepting it without reserve, I fully share the hopes which I find expressed in your Imperial Majesty's letter. The meeting of the Congress will perhaps be the best solution of the grave questions which justly preoccupy all minds in Europe, and will contribute to develop the general prosperity by the maintenance of tranquillity. Every one feels, indeed, that it is necessary to take into account the spirit of the age, the legitimate aspirations of nations, the circumstances of the time, and to endeavor by all possible means to secure the future by regulating the present, so as to eliminate every element of trouble and discord.

The common work to which your Majesty invites the chiefs of the European States would be, beyond dispute, one of the greatest onward movements of our day. Its success would realize wishes long since formed by the friends of humanity and the noblest minds.

And, with a view to a future collapse of the Turkish empire, he, in conclusion, flatters himself with the hope that the interests and rights of the Christians in the East would find in the Emperor of the French a generous defender in the future International Congress.

The King of the Belgians, who received his own throne from a successful revolution, and expects another one for a son-in-law (Archduke Maximilian) from the arms of the French Emperor, is of course not opposed to the Congress. He assures Napoleon (November 20th) that his Government would be quite inclined, in so far as it could do so, to join in the attempt to settle the existing causes of anxiety in Europe by pacific agreement. The King of the Netherlands (November 29th) expresses himself likewise willing to join all the other sovereigns of Europe in realizing the noble object Louis Napoleon had in view. The King of Denmark eagerly embraced the invitation, as he hoped the Congress would "assure the future of the Danish monarchy," and the Emperor would sustain the Danish claims, as Denmark had always been the constant ally of the Emperor. Switzerland also accepted with eagerness the overture made by Louis Napoleon, for says the letter of the President (November 23d) :

The Swiss Confederation, to which nature as well as history and treaties has assigned a neutral position in the midst of Europe, knows how to appreciate all the benefits of peace. It understands the inestimable value of a free and reciprocal consecration of the rights and duties of each—the true base of a sincere and cordial understanding between the nations. We can only, therefore, accept with eagerness the overture your Majesty has deigned to make.

Spain hoped the Congress might aid her in the recovery of Gibraltar, and although her

policy in general has never shown much sympathy with the national movements in Europe, she endorsed the views of the French Emperor, and assured him that Spain would participate in the Congress either at Paris or any other point that may be selected for deliberations. The letter of the Queen (dated November 30th) says :

I agree with your Majesty that the treaties of 1815 are attacked by the debility produced by time and use, besides the forced influence of serious events, which in many cases have resulted in notorious and capital infractions of their letter and spirit.

I also agree with you that if war has always been a great calamity for peoples, it would be still more so now, on account of the disastrous perturbation that it would produce among nations every day more closely united by the community of their moral and material interests.

Spain, with a view to her aggressive policy in America, even expresses the hope that the Congress might be instrumental in consolidating peace and concord in the new as well as the old world.

The Germanic Confederation declared themselves disposed to accept the invitation, but thought that they could not coöperate with any hope of success in the realization of this project, if the treaties which have established the Germanic Confederation, as well as the political edifice of Europe, were not considered as the basis of negotiations.

The Kings of Bavaria, Saxony, Wurtemberg, and Hanover, declared themselves favorable to the project, but made their final decision somewhat contingent upon the decision of the Federal Diet.

The Pope, in his reply (November 10th), concurs in the project of a Congress, and will use his endeavors in order that the principles of justice, unrecognized and trampled under foot, may be reëstablished, and violated rights vindicated. The Pope also states that he should especially demand the reëstablishment in Catholic countries of the real preëminence naturally appertaining to the Catholic religion as being the only true faith.

The sultan replied, on December 5th, thanking the Emperor for the sentiments of sincere friendship expressed in his letter, and assuring him that these sentiments were reciprocated. By his order, the Turkish ambassador at Paris

communicated to M. Drouyn de l'Huys a report of the verbal reply given by the sultan to the French ambassador who presented the Emperor's letter, to the effect that the sultan accepted the conference, and was willing to attend the Congress in person in case other sovereigns of Europe did the same.

On December 8th, M. Drouyn de l'Huys addressed a new circular to the heads of all the diplomatic missions of France in Europe, giving a review of the replies of the several European governments. He said :

The refusal of England has unfortunately rendered impossible the first result that we had hoped for from the appeal by the Emperor to Europe. There now remains the second hypothesis—the limited Congress. Its realization depends upon the will of the sovereigns.

After the refusal of the British cabinet we might consider our duty accomplished, and henceforth, in the events which may arise, only take into account our own convenience and our own particular interests. But we prefer to recognize the favorable dispositions which have been displayed toward us; and to remind the sovereigns who have associated themselves with our intentions, that we are ready to enter frankly with them upon the path of a common understanding. A coincidence of views and of action among the principal Powers of the Continent who understand as we do the dangers of the present, and the necessities of the future, would have a great influence upon future events, and prevent alliances or resolutions from being left to chance.

When a general Congress was in question, the Emperor could not, without changing the part he had traced out for himself, draw up a programme, or concert with some of the Powers, in order to submit afterward to the others a plan prepared beforehand, and commence thus with a negotiation distinct from the deliberations in which he had decided to present himself without preconceived ideas, and free from special engagements. But as this reunion cannot now be completed, it will not have the arbitrary authority belonging to a European Congress. We feel, therefore, that before meeting, the sovereigns should instruct their foreign ministers to agree upon the questions to be discussed, in order that the Congress may have more chance of leading to a practical result.

By the end of the year no arrangement for the meeting of a limited Congress had been made. Italy had replied (December 24th) that she was quite ready to take part in a limited Congress, expressing, however, at the same time the firm hope that the Congress would be instrumental in annexing to Italy Venetia and Rome.

F

FINANCES OF THE UNITED STATES.

Whenever a Government adopts new measures relating to its finances, or is compelled by its necessities to seek for means beyond those obtained from its usual sources of revenue, its movements are always sensibly felt in the financial affairs of the country. If its demands are limited in amount, the enterprises of individuals are soon modified to meet the new circumstances which have occurred. When,

however, it becomes involved in a great war, and stands forth having upon its hands the greatest enterprise in the country—larger than those of most of the citizens combined, that of subduing its enemies—the financial movements of individuals must always follow and become subject to this great necessity. Its needs override all personal considerations; its wants take the force of law to all its citizens. But while it is considered that a

Government at war may thus adopt such financial measures as shall be supreme over all others, yet, in the meanwhile, it is no less under those perpetual obligations to promote the prosperity and welfare of its citizens for which it was created. These fundamental considerations appear to have controlled the financial operations of the Government throughout all the extraordinary circumstances which it has been obliged to meet.

When Congress adjourned on the 4th of March, 1861, the expenditures of the Government for the remainder of the fiscal year ending June 30th had been estimated according to the ordinary rates in previous years, and the usual sources of revenue with some small loans were regarded as sufficient to meet its wants. It was the duty of the same Congress to determine the appropriations based on the estimates of the Departments, and to provide the ways of payment during the next fiscal year, commencing July 1st, and ending June 30th, 1862. Notwithstanding the threatening aspect of political affairs, these estimates were all framed, and the appropriations made on the peaceful scale of former years. Thus, for the year 1860-61, the appropriations for the service of the Government were seventy-nine millions, and for the year 1861-62, nearly seventy-five millions. No authority appeared to foresee the enormous demands that were soon to be made on the Treasury, and no provisions whatever were contemplated to meet them. Nevertheless, under this aspect of affairs and without the future occurrence of any very serious difficulties, more than ordinary financial skill was needed to enable the Government to meet promptly the demands upon it. The usual sources of revenue fell off during the last half of the year ending June 30th, 1861, and the confidence of capitalists in the Government, in consequence of the secession of States, and the uncertainty of the future, rendered it difficult to negotiate the small loans authorized. Thus a loan of \$10,000,000 was offered in October, 1860, in a five per cent. stock, which was taken at a small premium payable in instalments; the subscribers of \$2,978,000 forfeited their deposit of one per cent., which was remitted: only \$7,022,000 were issued. In December, Secretary Thomas offered \$5,000,000 Treasury notes, payable in a year. On opening the bids on December 28th, only \$500,000 had been bid at twelve per cent. There were some offers at twenty-four, and some as high as thirty-six per cent. As the money was needed to pay interest on Federal stock, due January 1st, some bankers took \$1,500,000 at twelve per cent., on condition that the money should be applied to the interest. In January, Secretary Dix offered five millions remaining authorized of the same loan of December 17th, 1860, and it was taken at an average of $11\frac{1}{2}$ per cent. on \$10,000,000. On Feb. 8th, 1861, Congress authorized a loan of \$25,000,000 at 6 per cent., at not less than ten nor

more than twenty years. Of this stock, Secretary Dix offered \$8,000,000 on February 22d, and the bids amounted to \$14,460,250, ranging from 75 to 96.10. He accepted \$8,006,250, at rates varying from 90.15 to 96.10. At this time a tariff of high duties was passed by Congress, and a loan authorized. On April 2d, Secretary Chase offered eight millions of the loan of February 8th. Bids, ranging from 90 to 95 on the hundred, were made for it. The Secretary refused all below 94. On the 11th of May he offered the balance of the loan of February 8th, \$8,994,000. Bids were made for \$7,441,000, at rates from 81 to 93. He accepted \$7,310,000, at 85 to 93, average discount per cent. 14.65. By the disposal also of Treasury notes comparative ease for the Treasury was obtained for a moment. Its exigencies, however, were such that the struggle for money was soon renewed. Hostilities had now commenced, and the capitalists and bankers, feeling the necessity of sustaining the Government, coöperated with the Secretary, and loans were obtained to carry the Government until Congress convened on July 4th. On that day, the Secretary required \$5,000,000 to carry him along until Congress should devise means. This amount was finally borrowed of the banks at sixty days on pledge of six per cent. notes, as collateral security. During the latter part of this period, many of the States obtained considerable loans at par, or a premium.

These facts show the weakness of the Government credit, in consequence of the apprehensions of the people, and the embarrassing circumstances under which the Secretary was called upon to raise immense sums to enable the dismembered Government to conduct a great war. At the time when he was obliged to borrow five millions with collateral security for sixty days to pay current expenses, the War Department was asking for more than \$185,000,000 extra for the year, and the Navy Department more than \$30,000,000. Congress had also come together, and relied upon the Secretary to devise the means by which this great emergency could be overcome. A more difficult position than that of Secretary Chase at this moment, few men have ever been placed in. He saw that the Government must be made the master of its circumstances, and while it borrowed with the one hand, it must take largely by taxes with the other. The demand upon him for the next twelve months was \$318,519,581, and he recommended that a tax of \$80,000,000, equal to the entire annual appropriations of the Government heretofore, should be at once raised directly and indirectly from a people who, except upon one occasion, had never yet paid a dollar in taxes to their Government only in the indirect form of duties on imports, and that \$240,000,000 should be sought through loans. The \$80,000,000 were to be used to pay the ordinary expenditures of the Government and the interest on loans, with the reservation of \$5,000,000

toward a sinking fund. "It will hardly be disputed," said the Secretary, "that in every sound system of finance, adequate provision by taxation for the prompt discharge of all ordinary demands, for the punctual payment of the interest on loans, and for the creation of a gradually increasing fund for the redemption of the principal, is indispensable." With these measures, he further recommended that the ordinary sources of revenue should be modified, so as to yield a greater income. Tea and coffee, hitherto free articles of import, should now be touched by a duty. To these, many others might be added from the free list. Sugar, which was slightly taxed, could bear a heavier burden. A similar modification could be made on many articles. Thus twenty millions extra could be gathered by a single section of an act. He also proposed to Congress that the pruning knife should pass among the current disbursements, and that ten per centum should be shorn from salaries and wages, the franking privilege be abolished, and that the retrenchment be prompt and effective. He also further said: "The Secretary will but illy perform his duty to Congress or the people if he omits to urge the great importance—the absolute necessity indeed—of such full provision of annual revenue as will manifest to the world a fixed purpose to maintain inviolate the public faith, by the strictest fidelity to all public engagements."

Relative to the means to be sought through loans, the Secretary proposed a National loan of not less than a hundred millions in the form of Treasury notes or exchange bills, having a yearly interest of 7.30 per cent., redeemable at the pleasure of the Government, after three years. If the whole needed should not be raised in this manner, he then proposed the issue of bonds or certificates of debt to lenders, at par, to the amount of one hundred millions at 7 per. cent., redeemable at the pleasure of the Government, after a period not exceeding thirty years. As an auxiliary measure, he also proposed the issue of fifty millions of Treasury notes in small sums payable one year after date, with interest at $3\frac{65}{100}$ per cent., and convertible into the 7.30 Treasury notes; or, "should it be found more convenient," said the Secretary, "they may be made redeemable in coin, and issued without interest." This proposition opens the door wide to a Government paper currency; therefore the Secretary immediately added to his recommendation the following caution: "The greatest care will, however, be requisite to prevent the degradation of such issues into an irredeemable paper currency, than which no more certainly fatal expedient for impoverishing the masses and discrediting the Government of any country, can well be devised."

These measures constitute the features of the Secretary's system of finance. The ordinary expenditures, interest, and a sinking fund were to be provided by taxes upon the people—

than which nothing more wise could have been recommended. The great necessities of the Government were to be relieved by loans from the people, for which long and short and demand paper was to be provided. Loans to the Government, by the people, in its serious exigencies, may be said to be the law of modern civilization. They are the resort of all Governments; and in times of unforeseen difficulty, like commercial revulsion or war, the Federal Government has always been able to borrow sufficient to meet the occasion, and returning prosperity has always afforded the means of paying off the debt.

Congress immediately took the recommendations of the Secretary into consideration. The loans which he asked for were granted, but on the taxes they faltered. There was granted a national loan of one hundred millions, or any larger sum not to exceed the whole amount authorized, in bonds or 7.30 Treasury notes payable three years after date, and convertible into twenty-year six per cent. bonds; also a seven per cent. loan of a hundred millions, payable twenty years after date, for a foreign loan; also the issue to public creditors, or in exchange for coin, of one-year Treasury notes, with interest at 3.65 per cent. convertible into three-year 7.30 bonds or Treasury notes; also the issue of notes payable on demand and receivable for public dues, to be issued as coin in payment and exchanges. The two last descriptions were limited to fifty millions, in denominations between five and fifty dollars. Authority was also given to issue twenty millions six per cent. Treasury notes, payable in a year. The act limited the rate at which the seven per cent. stock might be sold to par, but a supplemental act allowed the sale of a six per cent. at a rate equal to par for a seven per cent stock.

The provisions adopted for taxes were: a direct tax of twenty millions upon all the United States, which would yield from the loyal States \$14,846,018, without deducting the expenses of collection; also a tax of three per cent. upon all annual incomes over \$800, since changed to \$600, to be levied in April of the next year. The increase of duties on imports embraced cocoa, tea, coffee, sugar, etc., but were less than the Secretary recommended. The direct tax was apportioned among the States and paid out of the States Treasuries to the Federal Government, by crediting the latter that amount on their claims for outfits of volunteers. The people were taxed the next year by the States for these sums. Compared with the necessities of the Government, the amount raised by taxes was insignificant. This tenderness on the subject of taxation manifested by Congress at this time produced serious results, as it caused to be withheld from the Government that confidence in its financial strength and resources to which it was entitled, and thereby greatly embarrassed the action of the Secretary; deprived him of the power to make due

preparation against the crisis of bank suspensions, and to place the finances of the country in an almost imperial position, and forever shut down the gates against an irredeemable paper circulation. Thus the Secretary was obliged to take the field practically crippled, when he should have gone forth with the resources of the country at his command, like a master. Prompt and efficient taxation, by the confidence which it would have inspired, would have relieved the Secretary from the necessity of issuing demand notes—an unusual financial measure which had been the subject of considerable discussion. To add to his embarrassment the military disaster at Bull Run had just occurred, which reawakened the old fears and apprehensions of capitalists for the future.

The first efforts of the Secretary were made to provide for immediate wants. This was done by issuing fourteen millions six per cent. Treasury notes, payable in two years, and nearly thirteen million six per cent. Treasury notes payable in sixty days. His next care was to provide for the regular and continuous disbursements of the war, under the acts of the July session. He tells us "that his reflections led him to the conclusion that the safest, surest, and most beneficial plan would be to engage the banking institutions of the three chief commercial cities of the seaboard to advance the amounts needed for disbursements, in the form of loans for three-year 7.30 bonds, to be reimbursed, as far as practicable, from the proceeds of similar bonds, subscribed for by the people through the agencies of the national loan; using, meanwhile, himself, to a limited extent, in aid of those advances, the power to issue notes of smaller denominations than fifty dollars, payable on demand. Upon this plan he hoped that the capital of the banking institutions and the capital of the people might be so combined with the credit of the Government in a proper provision for necessary expenditures, as to give efficiency to administrative action, whether civil or military, and competent support to the public credit."

Although Congress had bound the Secretary by law to obtain money at a minimum rate, the result was that the banking institutions of New York, Philadelphia, and Boston subscribed at once for a loan of fifty millions, of which five millions were to be paid immediately in coin as needed for disbursement, and to receive the 7.30 notes of \$50 and upward, at three years. When this loan was expended, another and similar was to be made, to be followed by still another. The two first were to be reimbursed by the proceeds of the national loan. At the same time books of subscription to the national loan were opened by the Assistant Treasurers, postmasters, and other designated agents in all the cities and towns where subscriptions could be expected. An enthusiasm for this loan was soon awakened, and capitalists and laborers, men and women, in crowds pressed forward to

obtain a portion. As the investors were small, the amount taken by December 1st was about \$38,000,000. Ultimately, however, when the slow confidence of capitalists was more fully recovered, more than eighty millions went through the agents and first purchasers into the hands of citizens who were then for the first time in their lives holders of national securities. In this manner the banks were partly reimbursed the first loans before the next was made. At the same time an amount of demand notes was issued by the Secretary. The banks had stipulated that none of these notes should be issued, and also that the Secretary should draw on them directly for the proceeds of these loans, thus using their paper for public dues. The Secretary declined both stipulations. He was not financially strong enough to accede to the first and decline the second. Congress had not confined its appropriations to the estimates of the Secretary. The latter were made for an army of three hundred thousand men. But the action of Congress authorized a force of regulars and volunteers amounting to five hundred and fifty thousand men, and any number of major-generals, with sufficient staff and brigadier-generals necessary to insure its efficiency. This increase of expenditures beyond estimates, unless made with extreme care, is a source of inconceivable embarrassment to financial officers. By the use of the demand notes the embarrassments were relieved. When Congress assembled in December the Secretary was able to report that complete success had attended the measures relating to loans, and presented the following results:

Six per cent. 2-year notes	\$14,019,984
Sixty-day notes	12,877,750
1st bank loan	50,000,000
2d bank loan	50,000,000
3d bank loan	45,795,479
Demand notes issued	24,550,325

Loans realized

\$197,242,587

But while the loans had been successful, the receipts of revenue from imports had not equalled the estimates. This was ascribed to the deviation by Congress in many respects from the measures submitted, through considerations of general policy, and more particularly to the changed circumstances of the country. The estimate for the fiscal year in July was 57 millions. Two quarters had now passed and the estimate of receipts from imports fell to 32 millions. The aggregate of revenue from imports, public lands and taxes for the year, it was now estimated by the Secretary, would be about 25½ millions less than the estimates made in July. In consequence of this decline in the sources of revenue devoted to ordinary expenditures, interest and sinking fund, and in consequence of the expenditures authorized by Congress exceeding the estimates, it was evident the Secretary would come far behind at the end of the fiscal year without new appropriations at this session of Congress.

The aspect of affairs financially, at this time, was quite serious. The magnitude of

the war had begun to be developed, and the vast sums which would be required to create all the appliances of immense armies and fleets made manifest; the decline in the ordinary sources of revenue designed to support the daily existence and credit of the Government, was an evidence of weakness; the loans, thus far being largely temporary discounts of banks, and the limited amount to which the subscriptions to the national loan had as yet reached, showed that the Government had not so far got the command of the resources of the country. At the same time the Secretary was obliged to ask Congress to give him nearly 214 millions additional to carry him to the end of the year on June 30th, 1862, and the War and Navy Departments asked for the ensuing year, beginning July 1st, 1862, more than 410 millions. The banks of the country now suspended specie payments. It was the most formidable picture they had ever looked upon; but the Secretary met the emergency with perfect calmness. In addition to the sums necessary for the current year, he was required to furnish estimates for the fiscal year beginning July 1st, 1862, and terminating June 30th, 1863. He proposed to meet these unusual demands by retrenchment and reform, taxation and loans. This taxation, he proposed as before, should yield adequate provision for ordinary expenditures, prompt payment of interest on the public debt, and for a gradual extinction of the principal. By way of revenue from imports he only urged increased duties on tea, coffee and sugar, and with a sanguine spirit, hoped for an improvement from other articles in future. For the increase of the amount of direct taxes, the Secretary recommended that the law of the previous session should be so amended as to raise from the loyal States 20 millions of dollars; that a tax should be laid on stills, liquors, tobacco, bank notes, carriages, evidences of debt, &c., that would yield 20 millions; also, that the income tax should be so amended as to yield 10 millions; making a total of 50 millions. The real property of the loyal States the Secretary estimated at 7½ thousands of millions, and the personal property at 3½ thousands of millions, and the annual surplus earnings of the people at 300 millions.

For the rest of the money needed, the Secretary said, "the reliance must be placed on loans." The amount required he thus stated:

For the fiscal year 1862, under existing laws.....	\$75,449,675
For the fiscal year 1862, under laws to be enacted	200,000,000
For the fiscal year 1863, under laws also to be enacted.....	379,531,245

Total required.....\$654,980,920

This was the estimated amount required through loans on December 9th, 1861, to the close of the fiscal year, ending June 30th, 1863. The Secretary suggested two plans "to enable the Government to obtain the necessary means for prosecuting the war to a successful issue without unnecessary cost." The first contemplated the gradual withdrawal from circula-

tion of the notes of the banks by a tax on their issue, and the extension of the provisions authorizing him to issue demand notes payable in coin, until they reached the average circulation of the country. Of the advantages and disadvantages of this plan the Secretary said: "The Secretary contents himself with observing that, in his judgment these possible disasters so far outweigh the probable benefits of the plan, that he feels himself constrained to forbear recommending its adoption." The several plans contemplated the negotiation of loans, facilitated by the organization of banking associations, whose circulation should consist only of notes uniform in character, furnished by the Government, and secured as to convertibility into coin by United States bonds deposited in the Treasury. On the 30th of December, the banks, as above stated, suspended specie payments. At the same time the delay in military operations, increased expenditures, diminished confidence in public securities, rendering it impossible for the banks and capitalists to negotiate the bonds they had previously taken except at a serious loss, and making it impossible for the Government to negotiate new loans of coin except at a like loss, the Government suspended also on the demand notes in circulation. If the Secretary went into the market now for more loans on his bonds or Treasury notes, all he got for them would be the irredeemable paper of the local banks. The only choice left to him was either to take this bank paper or to issue Government demand notes; for the credit of the Government was not now staunch enough to command coin, except at a high premium. If he looked to the experience of the past to guide him in this extremity, he saw in the Treasury Department millions of bank paper which had become worthless in the war of 1812; if he looked still further back he saw the history of "Continental paper" written in blazing characters. Here were the rocks of Scylla on the one side, and the whirlpool of Charybdis on the other. Yet a passage could be made over the boisterous future if the pilot was capable of commanding the resources of the country. Government paper could be made both useful and safe, if it was sustained by high taxes, and kept within reasonable limits by constant funding, with a measure for its withdrawal. This was the chart now boldly adopted by the Secretary for the future. That he has constantly urged high taxes upon Congress, the language of his reports bears witness. His success at funding the currency will presently be stated. Another measure was also steadily proposed, which was designed to secure ultimately the entire withdrawal of Government currency by substituting the currency of National banks.

At the time when the banks suspended, the Secretary had issued \$33,460,000 demand notes of 50 millions previously authorized. Another issue of 10 millions was authorized in February, and both issues amounting to 60 millions, were made receivable for all public dues, including

customs. Soon another issue of 90 millions was authorized by Congress, receivable for all public dues, except customs. Still later in the session a further issue of 150 millions was authorized, of which 50 millions were reserved from issue until actually required for the payment of deposits. The total emission thus authorized was 250 millions, besides 50 millions needed for the payment of deposits, all of which might be available for circulation. An emission of fractional currency, consisting of postage and revenue stamps, was also authorized. The Secretary was also authorized to receive on temporary deposit, at interest not exceeding 5 per cent., any sum not exceeding 100 millions, and to pay such creditors as might choose certificates of indebtedness, payable in one year, at six per cent. interest. Congress also authorized the issue of 500 millions 6 per cent. bonds, redeemable after five and payable in twenty years, with interest payable in specie. These were exchangeable for demand notes.

Such were the measures adopted by Congress. At the close of the fiscal year, June 30th, 1862, \$57,926,116 had been received on deposits; \$158,591,230 of demand notes had been issued and were in circulation; \$49,881,979 had been paid in certificates of indebtedness; and \$208,345,291 had been paid in cash. The Secretary said: "Every audited and settled claim on the Government, and every quartermaster's check for supplies furnished, which had reached the Treasury, had been met, and there remained in the Treasury a balance of \$13,043,546."

In July a call was made by the President for three hundred thousand men for three years, and in August another call for three hundred thousand for nine months, and on the first of December the Secretary estimated the amount of the public debt at the close of the fiscal year, June 30th, 1863, would be \$1,122,297,403.

When Congress assembled in December, 1862, the results presented were as follows: The actual payments, other than for principal of public debt, were \$220,175,370; and the accumulated requisitions beyond resources amounted to \$48,354,701. The amount of notes in circulation, including those receivable for customs, was \$222,932,111; the amount received on deposit was \$80,798,650; the issue of fractional currency was \$3,884,800; the issue of certificates of indebtedness was \$87,363,241; the issue of 5-20 bonds amounted to \$23,750,000. Thus there remained of the loans authorized at the previous session the following balances, viz.: authority to issue \$27,067,889 notes for circulation; in deposits there could be received \$20,201,350; it was thought that 40 millions of fractional currency would be needed by the people, therefore \$36,115,200 could be issued; if 100 millions of certificates of indebtedness could be put forth, then a balance of \$12,636,758 could yet be paid out; a balance of 35 millions of 5-20 bonds, it was estimated, would be taken before the end of the fiscal year. The aggregate of all these sums was

\$131,021,197, which constituted the total resources available, under the existing laws, up to the end of that fiscal year, June 30th, 1862. The Secretary said: "These credit resources, with actual receipts from like resources, added to revenue in all forms, may supply the Treasury with \$511,646,259. There remains a balance of disbursements of \$276,912,517 to be provided for."

The estimates for the ensuing fiscal year, commencing July 1st, 1863, beyond resources available under laws then existing was \$627,388,183. So greatly had the expenses of the war against the rebels accumulated, that the Secretary was obliged to ask Congress in December, 1862, to provide for the additional amount of \$904,300,700 to meet the expenses until July 1st, 1864.

How was this vast sum to be provided? The danger which lay in the path of the Secretary was now close at hand. He had foreseen it at the outset, and had prepared to meet it. This was an excess of paper circulation. He estimated the circulation of the banks in loyal States to be 167 millions. That of the Government notes was \$210,104,000. Total, \$377,104,000. One year previous, November, 1861, by his estimate, the circulation was in bank notes, \$130,000,000; in coin, including the specie of loyal State banks, \$210,000,000. Total, \$355,140,000. The difference in the circulation before the suspension, and one year after, was thus \$21,964,000 in favor of the latter period. This excess, the Secretary insisted did not "greatly, if at all," exceed the legitimate demands of payments. Yet, with affairs in this posture, he was called upon for more than 900 millions to be raised in the ensuing eighteen months. Only two immediate measures of safety lay before him, and he boldly proposed them both. One was to drive home the State bank paper circulation by a tax, and the other was the funding of the Government notes. Both these measures had been proposed by him at an earlier day, but their necessity had not been seen and felt before by Congress or the people. At the same time the Secretary had proposed, as above mentioned, a system of national bank paper. Taxation, direct and indirect, he reserved as a certain means by which to place the ordinary expenditures of the Government and the interest on its loans, beyond the reach of any peril. There had been a practical difficulty in funding the Government obligations since the suspension of specie payments by the banks. By law bank paper was not receivable by the Government, and coin was at such a premium, that no one would give it for Government bonds at par. The Government notes, which had now come into circulation, were the only medium by which funding could be effected. Said the Secretary: "Under these circumstances, the path of wisdom and duty seems very clear. It leads to the support of a United States note circulation, and to the reduction of the bank note circulation."

He therefore proposed a moderate tax on the State bank circulation, and also proposed that no increase of the issue of Government notes beyond the limits then authorized should be made, unless a clear public exigency should demand it; he further recommended the organization of banking associations for the improvement of the public credit, and for the supply to the people of a safe and uniform currency; he also recommended the repeal of the restrictions which required the 5-20 bonds to be converted at par, and the clauses of the act which authorized their convertibility at will, and a necessary increase of the amount of the bonds. He then said: "If Congress shall concur in these views, the Secretary, though conscious of the great difficulties which vast, sudden, and protracted expenditures impose on him, ventures to hope that he may still be able to maintain the public credit and provide for the public wants." No man was ever put in such a position as that occupied by the Secretary, at this time. \$900,000,000 were to be provided in the fiscal half year and year ensuing, at the lowest estimate; his order created millions of notes and bonds; the faith and credit of the Government were in his hand; a failure on his part was not like a reverse on the battle-field, the effects of which might be recovered on the next day—but it would paralyze armies and fleets, and perhaps ruin the cause for which they were fighting. It was not the vastness of the sums required that alone caused all the difficulties the Secretary had to encounter. The public mind was exceedingly sensitive and impatient. Delay or disaster in military operations produced depression and weakened confidence. An uncertain state of foreign relations sometimes added its influence to these causes. Amid all the circumstances, whether of success or disaster, the demands on the energies of the Secretary were constant, and could neither be postponed nor avoided.

Before stating the answer which Congress gave to the propositions of the Secretary, some fuller notice of the system of banks recommended should be made. Its principal features are a circulation of notes having a common impression, and authenticated by a common authority,—the redemption of these notes by the associations and institutions to which they may be delivered for issue; and the security of that redemption by the pledge of United States stocks, and an adequate provision of specie. In its essential features it is similar to the banking system of New York and some other States. The notes are made receivable for all public dues, except import duties, and payable for all public debts, except interest on loans. Such was the plan of the system. Its operation in connection with the present state of the finances of the Government is the view here to be taken of the measure. By the organization of these institutions about \$300,000,000 of the Government's notes are returned to the Treasury, and exchanged for 6 per cent.

bonds, or their equivalents in bonds, at other rates of interest. To that extent the currency debt of the Government is funded. By the notes which they issue a currency of a uniform character is established in all the States, based upon the obligations of the Government, which is designed to take the place of a currency issued by banks authorized in the various States, and whose solvency is based entirely on the value of their assets, composed of some specie, the obligations of individuals, &c. The currency of the National banks being receivable for public dues, could be accepted by the Government as loans, and used in its payments. It thus would ultimately dispense with the necessity for the Government currency which was now afloat—which could thus be gradually withdrawn on the approach of a resumption of specie payments. The notes are made redeemable in Government notes, and after resumption of specie payments, in coin. The Secretary says: "It is the Secretary's firm belief that by no other path can the resumption of specie payments be so surely reached and so certainly maintained. United States notes receivable for bonds bearing a secure specie interest are next best to notes convertible into coin. The circulation of banking associations organized under a general act of Congress, secured by such bonds, can be most surely and safely maintained at the point of certain convertibility into coin. If, temporarily, these associations redeem their issues with United States notes, resumption of specie payments will not thereby be delayed or endangered, but hastened and secured; for, just as soon as victory shall restore peace, the ample revenue, already secured by wise legislation, will enable the Government, through advantageous purchases of specie, to replace at once large amounts, and, at no distant day, the whole of this circulation by coin without detriment to any interest, but, on the contrary, with great and manifest benefit to all interests."

In answer to the recommendations of the Secretary for the provision of means to meet the expenditures of the remainder of the fiscal year 1863 and the year 1864, Congress, on the 17th of January, 1863, authorized an additional issue of \$100,000,000 of Government notes; and in February passed an act to provide a national currency through a national banking system. (*See CONGRESS, U. S., page 296*). By an act, approved March 3d, the Secretary was authorized to issue \$300,000,000 for the current fiscal year, and \$600,000,000 for the next fiscal year, of 6 per cent. 10-40 bonds, principal and interest payable in coin, and to exchange the same for certificates of indebtedness, or deposit, any Treasury notes or lawful money of the United States; also to issue \$400,000,000 of 6 per cent. Treasury notes payable within three years, to be a legal tender for their face value, excluding interest, and exchangeable for and redeemable by Government notes, for which purpose alone an issue of \$150,000,000

of the latter was authorized; also to issue \$150,000,000 Government notes, including the \$100,000,000 authorized in January; also to issue \$50,000,000 of fractional notes in lieu of the postage and revenue stamps for fractional currency; also to receive deposits of gold coin and bullion, and to issue certificates therefor; and to issue certificates representing coin in the Treasury in payment of interest, which, with the certificates of deposits issued, shall not exceed 20 per cent. beyond the amount of coin and bullion in the Treasury. A tax was also imposed on the circulation of State banks of 1 per cent. half yearly. Thus, to recapitulate—

On the 1st of December the Secretary estimated his available resources under existing laws for the current year ending Jan. 30th, 1863, at.....	\$131,021,197
To this should be added the balance of 5-20 bonds not deemed available before June 30th, 1863.....	441,250,000
On Jan. 17th, 1863, Congress authorized Government notes.....	100,000,000
On March 3d, Congress authorized 10-40 bonds for balance of 1863.....	300,000,000
do. do. for 1864.....	600,000,000
do. Treasury notes.....	400,000,000
do. Government notes.....	50,000,000
do. balance of \$50,000,000 fractional notes in lieu of \$20,000,000 postal currency.....	30,000,000
do. 20 per cent. on gold deposits, say \$15,000,000.....	3,000,000
Total.....	\$2,055,271,197
On the 1st of December there was a balance of disbursements of \$276,912,517 to be provided for over and above the available resources of the current year, thus :—	
Resources.....	\$131,021,197
Disbursements.....	276,934,714
	407,934,714
	\$1,647,336,483

This was the provision made by Congress for 1863-'64, after clearing away all deficiencies estimated in December, 1862, for the fiscal year ending June 30th, 1863. It was not all passed, however, until the last day of the session. Meanwhile the Secretary was closely pressed, and found it impossible to prevent a gradual increase during the session in the amount of unpaid requisitions, which finally reached \$72,171,189.

On the passage of this law, March 3d, 1863, the Secretary proceeded to organize a system of loan agents, the eminent firm of Jay, Cooke & Co., of Philadelphia, being at the head. These were allowed a commission of $\frac{3}{8}$ of one per cent. on all the sales of stocks made by them, of which Jay, Cooke & Co. received $\frac{1}{3}$, and the sub-agents $\frac{1}{4}$. The first had connections in all the States, and effective means were taken to bring before the public the advantages of the Government stocks as investments. The state of affairs brought about by the emission of paper money, causing a great rise in prices, and a liberal realization of stocks of goods at those high prices in paper, eminently favored the views of the loan agents. Those who had sold goods and realized money, were desirous of so investing it, that it would not again depreciate in value. If they repurchased goods, and specie payments should be again approximated, they would lose as much as they had made in the

rise. Whereas invested in a stock, which was to be paid interest, if not principal, in gold, it would retain its value. The same abundance of money, and rise in commodities, had induced farmers and others indebted, to economize the use of high-priced goods, and sell their own commodities, applying the proceeds to debts and mortgages. The insurance companies and others receiving these payments, became thus equally anxious to place the money on a specie basis of investment.

All circumstances thus combined to facilitate the efforts of the agents, and by the 1st of May the Secretary had raised from the 5-20 bonds 39 millions; upon certificates of indebtedness, 7 millions; by the issue of United States notes and fractional currency, 92 millions, and on temporary loans, at 4 and 5 per cent., 31 millions; making in the aggregate 169 millions. The Secretary said: "The loan act and the national bank act were followed by an immediate revival of public credit. Success quite beyond anticipation crowned the efforts of the Secretary to distribute the five-twenty loan in all parts of the country, as well as every other measure adopted by him for replenishing the Treasury. The result was that within two months after the adjournment of Congress the whole mass of suspended requisitions had been satisfied, all current demands promptly met and full provision made for the pay of the army and the navy." The long and tedious struggles of the Secretary had now achieved a great success, of which he thus speaks: "During the remainder of the fiscal year no embarrassments attended the administration of the finances except those which are inseparable from vast expenditures." During the fiscal year thus closed, the Secretary for the first time had the gratification to see that the disbursements did not greatly exceed, while the increase of the public debt did not equal the estimates submitted to Congress. Thus, while it was estimated that the public debt of the 30th of June, 1863, would reach the sum of \$1,122,297,463, its actual amount on that day was \$1,098,793,181; and while the disbursements for the year were estimated at \$693,346,321, the real total was \$714,709,995.

The receipts from the ordinary sources of revenue during the fiscal year ending June 30th, 1863, were \$124,443,313, while the estimates of the Secretary of these receipts for the year were \$180,405,345. From the customs, land sales and miscellaneous sources, the receipts were much above the estimates. But from the direct tax and internal revenue they were enough less to make the difference between the receipts and estimates. The Secretary expected to receive from these two latter sources \$97,677,020, whereas he actually received during the year only \$39,951,130. It is to his credit that he expected to receive such a large amount from taxes, as it shows that he was unhesitating to use largely this real source of the strength of the national finances. The

real discrepancy, however, was less than appears above; thus the direct tax was estimated to yield \$11,620,717, whereas only \$1,485,103 appears on the books to have been received into the Treasury, but nearly the balance was received in the form of payments for military supplies and services by the States, for which they were entitled to credit beyond their several proportions of the tax. The discrepancy between receipts and estimates of the internal revenue arose from the imperfection of the machinery to raise the tax. Thus the Secretary says: "A part of the deficiency may be attributed to the imperfect execution of the law, and a part to the changes made in it by Congress after the estimate was made; but it is not probable, had neither course operated to reduce receipts, that the revenue from this source would have exceeded half the estimated amount. It is clear that the law, unless materially amended, will not produce the revenue expected from it." The additional sums, actual or estimated, necessary to meet disbursements were, of course, derived, or estimated as derivable, from loans.

The receipts and expenditures for the fiscal year ending June 30th, 1863, may be summarily stated as follows:

RECEIPTS.	
From customs.....	\$69,059,642 40
From lands.....	167,617 17
From miscellaneous.....	3,046,615 35

U. S. stocks of 1842.....	2,580,743 36
Bonds, 7.30.....	71,500 00
Oregon debt.....	69,550 00
U. S. gold notes.....	56,177,390 00
U. S. notes.....	2,099,000 00
Certificates of indebtedness..	50,359,753 23— 895,796,630 65
Balance in treasury, July 1st, 1863.....	\$5,329,044 21

Of the sums raised by loans \$181,086,635.07 were applied to the payment of existing funded and temporary debt, which was only an exchange of new debts for old ones. Of the sum thus exchanged 54½ millions contracted in former years and making with interest about \$56,000,000, are not chargeable to the expenditure account proper of 1862-'63. The actual receipts and expenditures were therefore as follows:

Receipts, taxes, bonds, &c., and balance on hand.....	\$124,443,313.43
Current expenditures.....	714,709,995.58
Deficit.....	\$590,266,682.10

This deficit, or amount paid by loans, added to \$508,526,499.08, the amount of the debt on July 1st, 1862, makes the amount of the debt July 1st, 1863, as before stated, viz.: \$1,098,793,181.37.

Under the system adopted by the Secretary for conducting the finances, they were divided into two branches; the ordinary receipts and expenditures, and the extraordinary receipts and expenditures. It may not be amiss to notice more particularly the results of his management of the former during the fiscal year ending June 30th, 1863. The revenue derived from all the ordinary sources, including direct taxes and internal revenue, amounted to \$111,399,767. The ordinary expenditures were—for the civil service, pensions, and Indians, \$27,470,442; estimating the disbursements for the War and Navy Departments at 50 per cent. above those of the last year of peace, they would amount to \$41,884,375. The interest on the public debt was \$24,729,846. Total \$94,084,663, leaving an excess of \$17,315,104 over and above all ordinary expenses and interest of the public debt, old and new, accruing in and for the year. If to this be added the deficit in receipts arising under the direct tax and internal revenue laws, in consequence of their defective operation, and the credit to States, amounting to over 57 millions, the excess of ordinary receipts over ordinary disbursements would have been about 75 millions. This might have been applied to the extraordinary expenditures, or set apart as a sinking fund for the reduction of the public debt. At the close of the previous fiscal year ending June 30th, 1862, the ordinary receipts had fallen short of the ordinary expenditures over thirteen millions. The national stock sold at 106½ on the 1st of July, and at 107 before the end of the month.

The confidence of the people in the credit of the Government was strikingly exemplified during 1863 by the sale of the 5-20 bonds. On the 1st of May only about 64 millions had been taken. From that time forward the sales averaged 48½ millions per month, until the entire loan was taken. At the same time other loans and credits were negotiated, which together give an average of 55½ millions every month for nine months.

By the table at the top of the next page, compiled from the statements of the Register's Office accompanying the Secretary's Report, it appears that the receipts of revenue from all sources for the five months ending November 30th, 1863, amounted to \$452,959,392, and the expenses and payments during the same period were \$469,862,375. The returns of the receipts for November not being complete, the sum of \$800,000 is added by the Register for the deficiency.

	3 months to Sept. 30.	Oct. and Nov.*	Total five months.

+ Dividends payable 5th of January.

* Dividends payable 10th of October.

The largest English loans were made in 1812 and 1813, during the wars with Napoleon and the United States. In these two years the British exchequer borrowed 534 millions of dollars, being an average of 22½ millions per month. In these two years it raised from loans only 34 millions more than the United States Treasury raised in nine months. At that period the received authorities estimate the wealth of the United Kingdom to have been 10,212 millions of dollars. By the census of 1860, the wealth of the loyal States, deducting slaves, is returned at 10,716 millions of dollars. Both these calculations are doubtless too low, but they are perhaps equally so. They indicate nearly equal wealth in the two nations in their respective periods of trial. In England, then, as in the United States now, the business of the country was carried on with a currency below the par of gold. The premium on gold in Bank of England notes stood at 41½ per cent. from December, 1812, to March, 1813. It had been at 38½ per cent. from September to December, and averaged 30 per cent. during the years 1812 and 1814. Thus under remarkably similar fiscal conditions the Government of Great Britain borrowed much less than half as much money as that of the United States in equal times, and at an average interest 57 per cent. higher than the normal rate of her loans, while the latter pays but 20 per cent. increased interest upon the loans of the last two years of the rebellion, if 5 per cent. is taken to be the standard of government credit in its best condition. In 1813 and 1814 the United States Treasury sold \$42,269,776 of 6 per cent. stock at a discount of \$6,282,014, a little less than 15 per cent. In about twice the length of time in which these loans were made, the present Secretary, Mr. Chase, has raised about 900 millions on loan, for longer or shorter periods, which, if charged with the whole amount of discounts upon those negotiated below the par of 6 per cent., would amount to about one per cent. discount upon the principal at 6 per cent. interest. This result is based upon the fact that a large amount of Government notes was issued without interest and convertible into bonds at par.

The rate of interest paid by Great Britain upon 3,309 millions of dollars borrowed between 1793 and 1816, and unredeemed at the latter date, was 5 per cent. and a fraction upon the cash received for all the stock issued. In 1815 a loan of 175 millions of dollars was made at 5 and sixty-two hundredths on the cash received. In four years of her largest borrowing she raised but 89 millions of dollars at these rates. Great reliance was also placed by that Government on taxes; thus in 1815, when the expenditures reached 555 millions of dollars, about 190 millions were raised by loans; thus more than three-fifths of the whole expenditures of 1815 was raised by contemporaneous taxes, and less than two-fifths by loans. In 1863 little more than one-sixth of the expendi-

war upon the exchequer, the average price of consols for two years was 85 to 86 $\frac{1}{4}$. When the exchequer borrowed 80 millions to clear up the floating debt of that war consols fell to 90, and the loan was taken at the equivalent of 87 $\frac{1}{2}$ on the hundred, at 3 per cent. interest, corresponding to 5 in the United States. The loans and conversions of old debts into new in two years and a half made by the Federal Treasury amount to 1,800 millions.

nearly three years show a gradual advance from a condition of great weakness up to the highest point of national credit. At the outset he was hardly able to obtain the insignificant loans necessary to the ordinary wants of the Government, and in some instances he was more indebted for these to the impulses of patriotism in the citizens than to their confidence in the national credit; now he commands hundreds of millions, the whole resources of the country are at his service; the enterprises of individuals, the capital of the banks, and the energies of all the citizens are subservient to the great necessity. At the same time the prosperity of the people has kept pace with the progress of the Government in its great enterprise, and has been more universally diffused than ever before.

The foregoing table (on page 405) is an official statement of the public debt, made at the first of December, 1863:

The following statement from the "National

Almanac" exhibits the aggregate amount of internal revenue paid by each State and Territory on account of articles on which an *ad valorem* duty is levied—licenses, specific duties, tax on dividends, &c., to July 1st, 1863:

Maine.....	\$514,636 38	Illinois.....	\$2,012,592 46

This comprises most articles of importance, and shows that the rise has been universal. Each article was affected, as well those of which the supply has been cut off by the war as those of which the supply has been increased by the war, like western farm products, which, losing their accustomed markets down the Mississippi, came East in greater than their usual abundance. If we compare the average aggregates with the premium on gold, and the quantity of paper outstanding at different dates, we shall have results as follows:

It thus appears that gold under a speculative action in February, 1863, rose too rapidly, and that the same speculative action was imparted to goods, causing their rapid conversion into paper money, which was invested in the gold interest bearing stocks of the Government. There was a reaction from that speculation, and as usual in such cases, the prices fell below their natural level, gold touching 25 in July, a fall of 47 per cent., while goods fell but 26 per cent. The recovery from that point was more rapid in goods than in gold, because the supply upon the market diminished faster. Consequently at the close of the year, 1863, the rise in goods was 110 per cent. over the value of January, 1862, while gold was only 52 per cent. The following table shows the closing quotations for gold on every business day of the year, also the price of bankers' sterling for every steamer day throughout the year:

	Gold.	55 articles.	Rise per cent.	U. S. notes outstanding.

* On this day the price was the highest, touching 74 at the public board.

† Gold fell this day 6 a 7c.

‡ This was the lowest point for the year.

§ Holiday.

The amount of gold received at the mint and branches during the fiscal year, 1863, was \$23,149,495.41; silver, \$1,674,605.90. The new mines are very prosperous and are being

rapidly developed. The amount received at the mint from California from its discovery to the close of 1863, was \$528,145,666; Colorado, \$4,753,049; Arizona, \$21,500; Utah, \$80,067;

Nebraska, \$1,402; New Mexico, \$54,929; Oregon, \$963,458; Nevada, \$53,846; silver, do, \$1,973,400; other sources of gold, \$82,732; silver, \$107,584. For the year, 1863, the receipts of gold were \$23,149,495; silver, \$1,674,606. The old mines are prolific and new ones seem to rival them. Idaho was set off as a separate territory at the last session of Congress. It lies north of Colorado and Utah, and takes in the northern ranges of the Rocky Mountains, with the head waters of the Missouri, Columbia, Yellow Stone, and North Platte rivers. The localities, where workings have been commenced, are numerous, but many of them have not been reported or described. They must be various and widely separated, judging from the characteristic varieties in the quality of their productions. Among the deposits received at the mint were grades of fineness from 795-1000 to 949-1000, the latter in considerable quantity, from Salmon river, a tributary to the Columbia. The quality of the gold produced from the mines of Idaho is equal to that in the older gold regions of country, and the quantity appears to be inexhaustible.

Not less promising are the mines opening in Oregon and Washington Territory. The work-

ings are numerous, and constantly increasing in number. The characteristic energy of the people will, no doubt, soon develop the mineral wealth of those far distant regions.

In Oregon the fineness of gold seems to be tolerably regular and steady, and nearly equal to the average of California. In the gold from Washington Territory the variation is great, ranging from 650-1000 to 938-1000.

The returns from Oregon and from Idaho and Washington territories are, as yet, imperfect; but enough is known to warrant the statement, that in quantity and quality the gold of those regions will rival, if not surpass, the productions of the California mines. Arizona is now yielding both gold and silver. The amount, as yet, is small, but every new opening strengthens the assurance that the quantity of those metals is also unlimited.

From British America were received at the mint several deposits of Canadian gold, which, in some instances, yielded as high as 947-1000 fine. The mines of Nova Scotia do not yield as at first anticipated. A small portion only of the product of those mines reaches our institutions—the greater part being sent to the British mint.

By reference to page 471 of the Cyclopædia for 1862, the table for that year will be found. It will be observed that the amount of specie drawn from the interior into the banks was largest in the month of July, when the rise of gold first became important, and that for a year it reached the sum of \$43,907,975. This year, with a much greater rise in price, the sum so drawn in has been much less. The largest amount obtained was in October, when the desire to invest in Government stocks became very great, and the price of gold rose rapidly after the fall in summer. The amount drawn in from circulation and shipped out of the country in two years, has been, it appears, nearly \$75,000,000. There has been, in addition, a large amount shipped to Canada, and also from other ports than New York. The whole amount that has left the country will not fall short of \$120,000,000.

The natural fluctuations of gold were interfered with to a considerable extent by the movements of speculators, who, at some periods,

as in February and March, caused the price to rise to a very considerable extent above what the mere action of paper and purely commercial agencies would have produced. In order to prevent this movement, which it was supposed was undermining the national credit by causing a large apparent difference between the Government paper and the metals, the following law was passed by the Legislature of the State of New York:

"Any and all banks, insurance companies, trust companies, savings institutions, and other moneyed corporations, shall be and are hereby prohibited from making or continuing any loan or loans, in money or otherwise, upon gold coin or bullion, or any paper representations of these *or either of them*, or upon any foreign bill or bills of exchange whatsoever, under the penalty of a forfeiture of their charter or articles of association, as the case may be; and any such loan or loans so made, or continued to be made, shall be absolutely void, and no action for the recovery thereof shall lie in or be entertained by any court of justice of this State." Section 2 provides that this act shall take place immediately.—Feb. 18th, 1863.

These laws, passed when gold was at the

highest, of themselves were of little influence in stopping its rise. They served, however, to turn the current of speculation from operations for a rise to operations for a fall, which caused gold to become cheaper, and therefore to favor the interests of those who sent it out of the country, thereby producing ultimately a greater scarcity of the metals. It is obvious, that with the rise and fall of gold the value of all goods was changed in respect of the foreign trade. A fall in gold favored remittances, and stopped the exports of the regular produce of the country, because it lessened the ability of the shipper to sell his bills, and it was equivalent to a virtual rise in the price of imported goods. It nevertheless affected business, because buyers of goods claimed a reduction in the prices as the consequence of a lessened cost of importation. It also by its effect on the prices of stocks caused a large amount that had been held abroad to come home, and induced the realization of a considerable amount of debts due here to foreigners, who seized the moment of a favorable state of exchanges to get home what was due them. The decline in the price of gold then checked the exports of produce, induced capital to leave the country, and stocks

to come home, and promoted the export of specie, all of which caused a renewed rise in the price, which again reversed the movement of international trade. It has been seen in the table of prices above that commodities did not fall so much as gold, for the reason among others, that there was no depressive speculative action exerted upon them. The renewed rise in gold was simultaneous with a very active fall trade. The rise in bills induced active shipments of produce which enlarged the supply of bills. The same cause promoted an active speculation in exchange. The rapid rise induced numbers of operators to buy in order to benefit by the rise. But the large importers had also provided for their own wants by buying options of bills from banks, who covered their sales by purchases of commercial bills, or by the export of gold. The season was, on the whole, a very successful one with merchants, and closed with smaller stocks of goods on hand than in many former ones.

If there was little speculative action among merchants, there was a great deal among stock operators. The transactions under each general head for each month through the year are seen in the following table:

SALE OF STOCKS AT THE NEW YORK BOARD.

	Public Stocks.	Railroad Bonds.	No. of Bank Shares.	No. of Coal Shares.	No. of Railroad Shares.
January.....	\$16,891,000	\$7,308,500	\$6,326	\$44,651	\$1,276,589

Total, 1863.....	\$70,405,950	\$31,782,600	\$39,527	\$481,682	\$12,863,226
" 1862.....	76,025,900	32,986,500	33,133	60,098	5,326,546
" 1861.....	54,769,000	7,883,000	23,101	12,601	3,281,560
" 1860.....	23,012,400	14,574,000	30,063	45,557	5,577,063
" 1859.....	29,796,600	10,190,600	31,947	75,753	4,074,077

The approximate value of the transactions for the year was \$1,437,075,050, against a value of \$651,090,165 in the preceding year. The transactions, as measured in number of shares sold, are by far larger than ever before. There was some subsidence in the quantity of public stocks that changed hands. These were mostly State stocks. The heaviest transactions were in the months of May and October. The coal stocks were greatly affected by the invasion of

Pennsylvania by the enemy in the summer. Many, who had invested largely in that description of property, rather than to trust promises, were alarmed, and sought other material wealth as a means of investment. Nevertheless, the continued and rapid rise in coal sustained the desire to hold that description of property, and the values again rose after the retirement of the enemy. The following table exhibits the quarterly returns of the New York city banks:

19. Wisconsin.....	4,310,000	1,420,000	1,643,000	2,235,100
.....	8,000	81,000	198,000	62,600
	\$146,008,000	\$128,701,000	\$180,637,000	\$158,576,400

Under this law, small banks began to form in many of the States. The Secretary of the Treasury stated, in his annual report, 134 new banks in all the States, with a capital of \$16,081,200, or an average of \$120,000 each. The amount of capital paid in by 134 banks was \$6,784,710, and the amount of stock lodged for notes ordered was about \$3,675,275.

The following instructions were issued by the Comptroller of the Treasury for the guidance of those desiring to form National Banking Associations :

TREASURY DEPARTMENT,
OFFICE OF COMPTROLLER OF THE CURRENCY, }
WASHINGTON, July, 7th, 1863.

For the instruction and guidance of those who may desire to form Banking Associations under the act entitled "An act to provide a National Currency, secured by a pledge of United States Stocks, and to provide for the circulation and redemption thereof," approved February 25th, 1863, the following information is given :

1st. The corporate names of the associations will be National Banks, and they will be designated as the First, Second, Third, &c., &c., National Bank of the place in which they may be located. Even where there is but one in a particular town, and no prospect of another, it will still be designated as the First National Bank.

2d. On the preliminary or organization certificate a five cent stamp is required. The original Articles of Association must be stamped with a five cent stamp for each sheet of paper used, and the copies of the articles to be sent to this office must show that the originals have been legally stamped, and must be certified to as being true copies by some officer of the association. The certificate and oath required by the 10th section of the act must be stamped, each requiring a five cent stamp, one stamp to be attached to the certificate and the other to the oath.

3d. It is important that organization or preliminary certificates of association should be carefully prepared and executed ; that the names of the stockholders should be written in full, and that there should be no erasures or interlineations therein. It will be borne in mind that these certificates are not subscription papers, and while the parties to them must sign them with their own hands, and acknowledge them in person, it is not necessary, nor exactly proper, for them

to enter their own names in their own hands, in the 4th article.

The right of a partner to seal and acknowledge for a co-partner is at least questionable. It is therefore important, if partners unite in the preliminary certificate for the organization of a National Bank, that they should sign, seal and acknowledge the same individually, and not as co-partners. It is also desirable that the same rule should be observed in the Articles of Association.

4th. Before a certificate is given by the Comptroller, authorizing an association, organized under the act, to commence the business of banking, according to the provisions of the 10th section of the act, the following requirements of the act must have been complied with : 1st. A copy of the Articles of Association must have been forwarded to the Comptroller, and also the statement of oath contemplated by the 9th section, and the oaths of Directors required by the 39th section. 2d. United States interest-bearing bonds to an amount equal to not less than one-third of the capital stock paid in, must have been transferred and delivered to the Treasurer of the United States.

5th. The United States bonds held by the National Banks, and that part of their capital invested in these bonds, are, it is understood, exempt from National and State taxation. For the amount of national tax to which they will be subject on their circulation, and on their profits, and for license, reference is made to the laws of Congress relating to the internal revenue.

The 19th section of the act, as far as the amount of taxation is regarded, is superseded by the 7th section of an act to provide ways and means for the support of the Government, approved March 3d, 1863.

6th. Circulating notes of the highest style of engraving, and printed on the best quality of paper, will be furnished to the National Banks at the expense of the Government, under the provisions of the act, at the earliest day practicable, and in the order in which the banks are organized. The notes will first be supplied to the first associations organized under the act ; and inasmuch as serious doubts seem to be entertained in regard to the power of Congress to enlarge or increase the privileges of corporations created by the State authority, it may be deemed best to have these doubts removed by the opinion of the Attorney-General, or the decision of a competent court, before the national currency is furnished to existing State banks, under the 62d section of the act.

7th. The act provides that the preliminary certificate, with a copy of the Articles of Association which shall have been adopted, shall be forwarded to the

Comptroller, &c. This would seem to indicate that these instruments should bear date about the same time, and, as near as may be, be concurrent acts.

8th. Section 11 of the act seems to require that the Articles of Association should limit or fix the time for which the association is to continue.

9th. On the certificate of each bond (coupon or registered) to be deposited with the Treasurer, as the basis of the National Currency to be issued thereon, there must be written or printed (to be signed by the President or Cashier of the Association depositing the same) substantially the following words :

"This bond is deposited with the Treasurer of the United States by the (Here insert the No.) National Bank at (Here insert the name of the place) in trust for said bank, under the act of Congress entitled "An Act to provide a National Currency, secured by a pledge of United States Stocks, and to provide for the circulation and redemption thereof, approved February 25th, 1863."

When registered bonds are deposited they must be issued to the Treasurer of the United States, in trust for the bank depositing the same.

It is desirable that no bond of a less denomination than one thousand dollars should be offered for deposit.

A description of the bonds thus deposited will be entered upon the books of the Treasurer and on the books of the Comptroller, and the bonds will be kept in the fire-proof vaults of the Treasury.

With these precautions on the part of the National Banks, and the proper officers of the Government, it is difficult to conceive of any contingency by which any loss or injury can result to the owners of bonds by reason of their having been deposited with the Treasurer.

10th. Except in special cases, which in the judgment of the Comptroller may render an actual examination necessary, the statement, under oath, of the President or Cashier, and a majority of the Directors of the respective National Banks, setting forth the place of residence of the Directors, and the amount of stock held and owned by each, the amount of capital actually paid in, and the fact that the requirements of the act have been fully and in good faith complied with, will be considered sufficient evidence to entitle the associations to commence the business of banking ; and on the receipt of such statement, the Comptroller will give to the associations, respectively, the certificate contemplated by the 10th section of the act.

11th. Whenever a new Director or Directors are elected, the oath taken or subscribed by him or them, and duly certified, must be forwarded to the Comptroller, according to the requirements of section 39 of the act.

12th. Before circulating notes will be delivered to any bank organized under the National General Banking Law, the Comptroller must have satisfactory evidence, by the report of an examiner, or otherwise—

1st. That the Bank is located in some city, town, or village which is easily accessible, and not in some out of the way, inaccessible place, selected for the purpose of making the return of its notes difficult or expensive. 2d. That the bank is supplied with a suitable banking room or banking rooms, unconnected with any other business, and also with a vault, or safe, for the safe keeping of its funds. 3d. That the bank has procured such books as may be required for the transaction of a regular banking business, one of said books to be a record or minute book, in which shall have been recorded its Articles of Association, copies of which shall have been forwarded to this Department, and in which the proceedings of the Board of Directors shall be entered and preserved. 4th. That the bank shall have adopted by-laws for the management of its business approved by the Comptroller. 5th. That the amount of its capital stock required to be paid in, has been so paid, and that the same remains in bank, in cash, or with some safe depository, subject to sight check, or has been invested in United States bonds, or in some other satisfactory manner. 6th. That the bank has in its employment competent officers for the transaction of its business, that its Directors are men of fair standing, and that the bank has been organized to carry on legitimate banking.

The Comptroller will afford every aid and encouragement in his power to banks organized for the purpose of carrying into effect the spirit and intention of the law, but it will discountenance and prevent, as far as practicable, all attempts to pervert the law from its proper object, by establishing banks upon fictitious capital, which, by their inability to meet promptly their engagements, may at any time bring the system into disrepute.

NOTE—Under the late act of Congress, all communications addressed to the Department must be prepaid.

The rise in the prices of all commodities, and also of rent, accompanied by a drain of labor from nearly all pursuits, forced upon working people the necessity of higher wages, and at the same time presented the opportunity of making the demand successfully. To give the rise in rents in large cities is rather difficult. In many parts of New York city a dense population has rapidly filled up places which a few years before were waste, or sparsely settled. In other sections, on the east side for example, quarters which were formerly occupied as places of residence by wealthy families, have been invaded by tenement houses, and the character of the neighborhood entirely changed, while other places, formerly occupied as residences, have become great business centres, and have experienced an enormous rise in their local rentage.

Where none of these or other causes have interfered to change the character of the section ; where localities remain about the same, and have experienced only the effect of the steady increase of productive real estate, rents may be said to have advanced from twenty-five to fifty per cent. within the past fifteen years. In many instances, however, even in the more unchanged sections of the city, a higher percentage than this has been reached, and in some the rate of augmentation has not been so great. But these figures will cover, for the most part, the increase in the price of the middling class of houses.

In tenement houses, the price of rooms and floors hardly averages as much now as in the years preceding the war. Many former occupants have enlisted or been drafted, the tide of immigration, until quite recently, had somewhat lessened, and other causes have combined to prevent this class of houses from being crowded. At the commencement of the war, rents fell very low, and continued so during 1861. Many landlords did not profess to insist on stipulated rents, but took what they could get. This was especially the case in tenement-houses. But in 1862 rents began to rise again until tenement rates have now reached almost their old figure.

The rate of increase in wages from 1845 until 1863, is perhaps best exhibited in relation to carpenters, a class whose pay is generally the last to be increased, and the first to be lowered, on the occasion of any change in the condition of the affairs of the community. The wages of this body of laborers will be seen to have reached the price which they held at the beginning of this year, in 1851 ; and to have undergone no change except in 1854 and 1857, which

were exceptional years, especially 1854, in regard to almost everything:

1845 to 1849.....	\$1 38 to \$1 50 per day.
1850.....	1 63 " 1 75 "
1851 to 1853.....	1 75 " 1 88 "
1854.....	2 00 " 2 13 "
1855 to 1856.....	1 75 " 1 83 "
1857.....	1 63 " 1 75 "
1858 to 1863.....	1 75 " 1 88 "

A general movement among the working-classes took place in the autumn months of 1863, and resulted in an increase of pay. The following table will show the wages of a number of occupations:

WAGES OF LABOR IN NEW YORK.

Occupations.	Old Rates of Pay.	New Rates of Pay
'Longshoremen, per day.....	\$3 50 a —	\$3 50 a —
Blacksmiths.....	1 50 a 1 75	2 25 a —

FINLAND. (See RUSSIA.)

FLORIDA. In civil, military, or political affairs no change of importance occurred in the State of Florida during 1863. Gov. Milton, in a message to the Legislature, recommended that every man and boy capable of bearing arms, who was not already in the military service of the Confederacy, or liable to conscription, should be organized as State troops, armed and occasionally drilled. The object of this organization was for the protection of the lives and property of the citizens generally. He proposed to embrace in it those who had substitutes in the army, or who resided in the State five days, or those who might be in it an hour for the purpose of speculation, including also aliens. They were not to be subject to be ordered into the army, nor from their ordinary pursuits, except to repel invasions, and to maintain suitable police regulations.

The number of soldiers' families in the State needing assistance was three thousand three hundred and ninety-eight, comprising eleven thousand six hundred and seventy-three persons.

Early in March, Gen. Hunter, then in command of the Department of the South, ordered Jacksonville to be occupied by the colored troops under Col. Higginson. It was known that there were less than three thousand troops of the enemy in the State, and it was thought that a small force could be made effective in opening it to the occupation of local citizens, and creating an avenue of escape for the hunted negroes gathered in the interior. Jacksonville was under the command of the gunboats; but its occupation seems to have been ordered before Gen. Hunter was prepared permanently to hold it. The place is the key of East Florida, and its permanent occupation would have compelled the abandonment by the enemy of all the territory east of the St. John's. It was at first occupied by the colored troops, who were soon after reinforced by the 8th Maine and 6th Connecticut, for the purpose of making a more extended and powerful movement. They came with ten days' rations, but were delayed in disembarking, which had been accomplished but a short time when an order to return reached them. Two short reconnoissances were made. Some prisoners and cattle were taken. As the troops embarked the place was fired by incendiaries. This was the third occupation of the town, thus far during the war. Still later in the year the troops were withdrawn from Pensacola in West Florida, and that place was also burned.

FLOY, JAMES, D. D., a clergyman of the Methodist Episcopal Church, born in New York city, August 20th, 1806, died in the same city, October 14th, 1863. He was of English parentage on his father's side. His early education was obtained in the grammar school of Columbia College, and he subsequently passed through the undergraduate course of that college, but in accordance with his father's wish

left college without a degree and went to London, where he continued his studies mostly in the direction of natural and especially botanical science at the royal gardens at Kew, for three years. Having returned to his native city, he engaged in business, and about 1830 entered the Methodist Book Rooms as a clerk. In 1831, he experienced a religious change and united with the Methodist Episcopal Church. He soon interested himself in the instruction of the colored people on the Sabbath, and in February, 1863, commenced preaching, though he was not received as a preacher by the New York Conference till 1835. In 1838, not having yet been ordained as an elder, he was censured by the conference, and suspended for having attended an anti-slavery convention at Utica; but the suspension was removed before the close of its session. He soon became eminent as a preacher in the church with which he was connected, and filled in succession many of the largest and most influential charges in New York, and in the larger towns and cities of New England. He was also from 1842 to 1856 assistant secretary and secretary of his conference, and usually a delegate to the Quadrennial General Conference of the Methodist Episcopal Church, in which he soon took a position as leader of the anti-slavery party. He was appointed in 1848 on a committee to revise the Methodist hymn book, and the principal labor of the work, which was in fact the preparation of a new book, came upon him, and was performed with that conscientious care and ability which marked all his public services. In 1856, he was appointed by the General Conference editor of the "National Magazine," and conducted it with extraordinary ability and success. He was also through the greater part of his career as a preacher a frequent and valued contributor to the "Methodist Quarterly Review," and was one of the Committee on Versions in the American Bible Society. His published works were, besides those already noticed, some Sunday school books, and S. S. question books. He also edited the posthumous works of Rev. Dr. Olin.

FLOYD, JOHN BUCHANAN, a general in the Confederate army, born in Montgomery (now Pulaski) county, Va., in 1805, died at Abingdon, Va., August 26th, 1863. He was graduated at the South Carolina College in 1826, subsequently practised law for several years in Virginia, and in 1836 emigrated to Helena, Arkansas, whence he returned in 1839 to Virginia. In 1847-'49 he represented Washington county in the House of Representatives, and from 1850 to 1853 he was governor of the State. As a delegate to the democratic presidential convention at Cincinnati in 1856, he exerted his influence in favor of the nomination of Mr. Buchanan in whose interest he made speeches in many parts of the country during the ensuing canvass, and for whom he cast his vote in the electoral college of Virginia. President Buchanan rewarded his services by appointing him in March, 1857,

Secretary of War. In that capacity he labored to the best of his ability to promote the rebellion of the Southern States, and to place them on a footing of strength commensurate with the importance of the conflict upon which they were about to enter; and there seems now to be little doubt that for several years previous to the election of Mr. Lincoln he was privy to the plot for overthrowing the Government. During 1860, in accordance with his orders, the army had been dispersed in the remotest part of the country, considerable portions being on the western frontier, in California, and Southern Texas, whence they could not readily be conveyed to the Atlantic seaboard; and in the same year an extensive transfer of arms from northern to southern arsenals was made, 115,000 muskets having been transferred by one order, and great quantities of cannon and ammunition by other orders.

No sooner had the secession of South Carolina paved the way for concentrated action on the part of the conspirators, than he began to avow openly his sympathy with the movement; and during the stormy discussions in the cabinet on the subject of reënforcing the forts in Charleston harbor, he was the most strenuous opponent of that measure, threatening to resign if it were consummated. On December 26th Major Anderson unexpectedly removed his garrison from Fort Moultrie to Fort Sumter, and upon the refusal of the President to order the entire withdrawal of the U. S. troops from Charleston harbor, Mr. Floyd tendered his resignation, and was succeeded by Mr. Holt. Soon afterward he was indicted by the grand jury of the District of Columbia as being privy to the abstraction of bonds to the amount of \$870,000 from the Department of the Interior in the latter part of 1860. He had, however, been permitted to retire from Washington, and was never subsequently brought to trial.

As a reward for his eminent services to the cause of secession, he was appointed soon after the commencement of hostilities, a brigadier-general in the Confederate army, and in the summer and autumn of 1861 commanded, with Gens. Wise and Henningsen, in Western Virginia. The campaign was conducted by him with little skill or energy, and his retreat from Gauley Bridge, September 10th, after his defeat by Gen. Cox, with loss of baggage, camp equipment, and ammunition, was characterized by the Virginia papers of that period as the most disgraceful rout of the war. He was subsequently ordered to Kentucky, and commanded a brigade at Fort Donelson when that place was besieged by Gen. Grant, in February, 1862. From apprehensions that, if captured, he might be subjected to harsh treatment, while public opinion in the loyal States was embittered against him, he retired, on the night previous to the surrender of the fort, with Gen. Pillow and 5,000 men of the garrison, and made good his escape into Southern Tennessee and Alabama. Thenceforth he held no important com-

mand. A temporary reappearance in the field in the succeeding summer, under State authority, resulted in no practical success, and he died in retirement.

FOOTE, ANDREW HULL, an American rear-admiral, born in New Haven, Ct., Sept. 12th, 1806, died in New York, June 26th, 1863. At sixteen years of age, he entered the navy as acting midshipman, and made his first cruise in the schooner *Grampus*, which formed part of the squadron operating, in 1823, under Commodore Porter, against the pirates of the West Indies. In the succeeding year he obtained a midshipman's warrant; in 1830 he was commissioned a lieutenant, and in 1838 he accompanied Commodore Read in his voyage of circumnavigation, as first lieutenant of the sloop *John Adams*, participating in the attack of the squadron upon the pirates of Sumatra. In 1841-'43, while stationed at the Naval Asylum in Philadelphia, he prevailed upon many of the inmates to take the temperance pledge, and was thus one of the first to introduce into the navy the principle of total abstinence from spirituous liquors. In his next cruise, as first lieutenant of the frigate *Cumberland*, he induced the crew to give up their spirit rations, to the manifest improvement of health and discipline; and he also personally superintended their religious instruction, often preaching on the berth deck to officers and men. In 1849-'52, he commanded the brig *Perry* of the African squadron, and showed great vigilance in suppressing the slave trade; and it is worthy of note that during the cruise not a drop of grog was served out to the crew, and not an officer or man was lost or disabled, or for any considerable period on the sick list, although the station is notoriously unhealthy.

In 1852 he was promoted to be a commander, and after serving on the "Naval Retiring Board," and in other capacities, he sailed in 1856 in command of the sloop *Portsmouth*, for the China station. At the time of his arrival, hostilities were imminent between the British and Chinese, and the latter, with a recklessness which subsequently cost them dear, fired from the Canton barrier forts upon a boat from the *Portsmouth*, at the stern of which the American flag was displayed. Receiving permission, after urgent solicitation, from his commanding officer, Commodore Armstrong, to resent this indignity, he anchored his ship opposite the largest of the forts, and on November 21st, with partial assistance from the sloop *Levant*, effected a practicable breach in its walls. Immediately a force of marines and sailors were landed, and the work carried by assault, Commander Foote being one of the first to enter with the stormers. The remaining forts, three in number, yielded successively to his attacks, and on the 24th the American flag waved over all of them. In view of the disparity of strength between the contending forces, the forts being massive granite structures, mounting 176 guns, and manned by

5,000 Chinese, the engagement was justly esteemed one of the most brilliant in the annals of the American navy, and Commander Foote received abundant congratulations and compliments from foreign officers on the station, who had been witnesses of his gallantry.

At the outbreak of the rebellion, Commander Foote was executive officer at the Brooklyn navy yard. In July, 1861, he was commissioned a captain, and in the September following was appointed flag officer of the flotilla fitting out in the Western waters. He entered upon his duties with great energy, and by the commencement of 1862, his vessels were completed and awaiting their crews and armaments, the work having been, in his own words, "the most difficult and arduous" of his life. Early in February the combined advance of the gunboats and land forces against the enemy in Kentucky and Tennessee was commenced, and on the 6th, Foote, without waiting for the arrival of the coöperating land forces under Gen. Grant, attacked, with seven gunboats, the strong works at Fort Henry, on the Tennessee river, and in two hours compelled an unconditional surrender. With the least possible delay, he transferred his fleet to the Cumberland river, and on the 14th opened fire upon Fort Donelson. The contest was maintained with great vigor on both sides for an hour and a quarter, and resulted in silencing the heavy water batteries of the enemy. The flag-ship *St. Louis*, and the *Louisville*, having at this juncture become unmanageable by injuries to their steering apparatus, drifted out of the fire, and the fleet was obliged to haul off, leaving the capture of the fort to the land forces.

Foote, though injured in the ankle by the fragment of a shot and compelled to move upon crutches, proceeded up the river immediately after the surrender of the fort, and destroyed the Tennessee iron works at Clarksville. Then, after a brief respite at Cairo, he sailed with his fleet, considerably increased in efficiency, down the Mississippi; the Confederates evacuating their strong positions at Columbus and Hickman at his approach. He remained at his post during the tedious siege of Island No. Ten, but after the reduction of that place, was reluctantly compelled by intense suffering from his unhealed wound to apply for leave of absence, and early in May turned over his command to Commodore Davis. Upon being restored to health, he was placed in charge of the bureau of equipment and recruiting under the new organization of the navy, and in July the President appointed him one of the nine rear-admirals on the active list. In June, 1863, he was ordered to relieve Admiral Dupont in command of the South Atlantic blockading squadron, and died while making preparations for his departure for Charleston.

Apart from his professional career, Admiral Foote was noted as an active friend of religious and philanthropic enterprises, and when not absent on sea duties, frequently participa-

ted at the religious anniversary meetings in New York and elsewhere. While in command of the Western flotilla, he framed and enforced strict rules for the proper observance of Sunday, and for the prevention of profane swearing and intemperance. He had also some reputation as a writer, and in connection with his African cruise published "Africa and the American Flag," containing a general survey of the African continent, with remarks on the slave trade; beside a series of letters on Japan, which country he visited in 1857.

FOWLER, RICHARD, M. D., born in London, November 28th, 1765, died at his residence, Milford, near Salisbury, April 13th, 1863. He was educated in Edinburgh, and afterward went to Paris, where he was a witness of the strife and excitement of the first French revolution. He was personally acquainted with many of the actors in that political struggle, and was well known to Count Mirabeau. In November, 1790, he was admitted a member of the Speculative Society of Edinburgh, an institution which was founded in that city in 1764, and which has numbered among its members many of the most eminent men in Scotland and England. During his connection with this society he contributed essays on "Population and the Causes which Promote or Obstruct it;" on the "Effects of Grief and Fear upon the Human Frame;" and on "Belief." He took his degree of Doctor of Medicine at the university of Edinburgh, on the 12th of September, 1793, was admitted a licentiate of the Royal College of Physicians on the 21st of March, 1776, and settled at Salisbury. The same year he was elected physician to the infirmary, and continued to discharge the duties of that office with great zeal and ability up to 1847, when advancing years induced him to resign. The governors, however, did him the honor of electing him consulting physician to the institution, an appointment which he held up to the time of his death. Dr. Fowler was admitted a fellow of the College of Physicians in July, 1837; he was also a fellow of the Royal and Antiquarian Societies, and a member of the Zoological and Edinburgh Medical Societies. On the establishment of the British Association for the Advancement of Science, in 1831, he became a member, and for several years took a leading part at the annual gatherings of that body, giving particular attention to investigations connected with the mental state of the deaf, dumb, and blind, and many of his communications to the association are upon such subjects. During his long life he was on friendly terms with most of the political, literary, and scientific men of his time. In politics and religion his sentiments were of the most liberal nature. In early life he was the friend of progress and the enemy of oppression, and he lived to see most of the great principles which he espoused in the ardor of youth, carried into practice during his long and eventful life. His published works, beside those already mentioned, are: "Experiments and Observa-

tions on Animal Electricity," on "Galvanism," and "Inflammation," published in 1793; on "Literary and Scientific Pursuits as Conducive to Longevity," 1855; on the "Influences of Man's Instinct on his intellectual and Moral Powers;" "The State of the Mind during Sleep," and "Second Attempts to Unravel some of the Perplexities of the Berkeleyan Hypothesis."

FRANCE. The term of the second Legislature of the Empire, which had been elected in 1857, expired in 1863, and it was accordingly dissolved on May 7th. Three weeks later, on May 31st and June 1st, the third Legislature, which, unless previously dissolved, will serve until 1869, was elected. The last session of the second Legislature was brief, and it confined itself almost entirely to voting the address and the budget. It was opened by the Emperor, on January 12th, by a speech, which briefly reviewed the progress made from 1857 to 1863. The achievements abroad were thus summed up by the Emperor:

In the East the national wish of the Danubian Principalities to form only one people could not find us unconcerned, and our support has contributed to cement their union.

We have given our support to what we thought justifiable in the grievances of Syria and of Montenegro, and of the Christians of Syria, without disavowing the rights of the Ottoman Porte.

Our arms have defended the independence of Italy without tampering with revolution—without altering after the day of battle our friendly relations with our adversaries, even for a day—without abandoning the Holy Father, whom our honor and our past engagements bound us to support.

We have suppressed the causes of misunderstanding which might have arisen with Spain, either from the non-delimitation of the frontier line, or from the old debt of 1823; and with Switzerland the difference respecting the Valley of the Danube.

Commercial treaties have been, or are on the eve of being concluded with England, Belgium, Prussia, Italy, and Switzerland.

Finally, expeditions to China, Cochin China, and Mexico prove that there are not any countries, no matter how far distant, where any attempt against the honor of France remains unpunished. Such facts could not be accomplished without complication. Duty always advances through danger. Nevertheless, France has been increased by two provinces. The barriers which separated us from our neighbors have been removed; a vast territory has been thrown open to our activity in the far East; and what is better than conquest, we have acquired claims to the sympathy of the inhabitants, without losing the confidence and the esteem of the Government.

Of the internal policy of the Government, and its relations to the war in the United States, the Emperor spoke as follows:

I have called you to take a more direct part in the Government. I have given to your deliberations all the guarantees which freedom of discussion could claim. I have relinquished a prerogative, hitherto deemed indispensable, so as to allow the Legislative body to control the expenses in a more absolute manner, and to give more solidity to the bases upon which public credit rests.

To reduce our expenses, the army and navy estimates have been considerably diminished. The floating debt has been reduced, and by the success achieved by the conversion of the Rentes a great step has been taken toward the settlement (*unification*) of that

debt. The indirect revenues show a continual increase, from the simple fact of the general increase of prosperity, and the condition of the empire would be flourishing if the American war had not dried up one of the most fruitful sources of our industry. The forced stagnation of labor has caused in many districts an amount of destitution which deserves all our solicitude, and a grant will be asked from you for the support of those who with resignation submit to the effects of a misfortune which it is not in our power to put a stop to.

Nevertheless, I have made the attempt to send beyond the Atlantic advices inspired by a sincere sympathy; but, the great maritime Powers not having thought it advisable as yet to act in concert with me, I have been obliged to postpone to a more suitable opportunity the offer of mediation, the object of which was to stop the effusion of blood, and to prevent the exhaustion of a country the future of which cannot be looked upon with indifference.

Respecting the approaching election, the Emperor said:

Tell your fellow citizens that I shall be always ready to adopt anything in the interest of the majority, but that, if they have at heart to facilitate the work that has been commenced, to avoid conflict which only leads to disaster, to strengthen the Constitution—which is their work—they must send to the new Chamber men who, like you, accept without reserve the present system, who prefer serious deliberations to sterile discussions; men who, animated by the spirit of the age and by a true patriotism, will, by their independent spirit, enlighten the path of the Government, and who will never hesitate to place above party interest the stability of the State, and the greatness of the country.

The address of the Senate, in reply to the speech from the throne, was discussed for only two days, and adopted by all the votes save one, that of Prince Napoleon. In the Assembly, the discussion of the address was more protracted and more animated. The five members, who formed the Liberal Opposition, presented a number of amendments which together formed a political programme. M. Baroche, president of the Council of State, declared in the name of the Government, that the latter could not renounce the official action relative to candidates, but its rule would be to support only candidates who possessed at the same time the sympathies of the people. Among the most brilliant speeches made on this occasion, was that of Jules Favre, on the Mexican question, and the reply to it by M. Billault. On February 12th the address, as proposed by the Committee, was adopted by all, save six votes.

A few days before, the Assembly with entire unanimity had adopted the draft of a law, opening a credit of 5 million francs in behalf of the working men in the manufacturing districts which had been specially affected by the American war. In some departments the sufferings of these men were very severe. In that of Seine Inferieure the number of laborers who had been thrown out of work was estimated at 130,000. Private charity coöperated with the Legislature, and on Jan. 26th two million francs had already been absorbed. The resignation and patriotic attitude of the working men were generally commended, and on May 4th the Legislature voted a new credit of 1,200,000 francs in their behalf.

One of the most important subjects that engaged the attention of the Senate was a question respecting the property of Arabs in Algeria. A remarkable letter on this subject was addressed on Feb. 6th, by the Emperor to the Marshal Governor of Algeria. The Emperor declares that Algeria cannot properly be called a colony, but an Arabian kingdom. "The natives," he says, "have, as well as the colonists, an equal claim upon my protection, and I am no less Emperor of the Arabians than Emperor of the French." In conclusion the Emperor maintains, that it is necessary to transform into definitive properties (amenable to the same laws as private property) the lands possessed by the Arabian tribes, instead of claiming them for the state as successor of the Sultan, to whom alone, according to Mohammedan law, the fee in these lands belonged. The Senate passed on April 23d a resolution ("Senatus Consultum") recognizing the collective proprietorship of the tribes, by 117 votes against 2.

According to the terms of the organic decree of the Legislative Body, the list of electoral districts must be revised every fifth year. According to this list, which was first drawn up in February, 1852, and revised in June, 1857, the number of deputies was 261 for the first quinquennial period of the empire, and 267 for the second. The revision, made in December, 1862, increased this number to 283. The organs of the opposition severely criticized this last rearrangement of districts, by which for instance the department of the Seine (the city of Paris) had the number of its deputies reduced from ten to nine, although the population had considerably increased. The Government had decided that only the number of the registered votes should be taken as a basis of representation, while the opposition claimed that the population entitled to voting should be the standard. The Senate declared in favor of the view taken by the Government.

As soon as the electoral campaign began in earnest, it became apparent that many voters, who in 1857 had abstained from voting, would this time take part in the election. In Paris two central committees of the opposition parties were formed; the one, representing the Orleanists, Legitimists and moderate Republicans, was presided over by M. de Broglie, and appointed a consulting committee, consisting of Berryer, Dufaure, and Odillon Barrot; the other, representing the more radical Republicans of 1848, was presided over by Carnot. The Government forbade the candidates of the opposition to call themselves "Independent" candidates, and at the same time enforced the law prohibiting assemblies of more than 20 persons. This last step called forth a protest, signed by Dufaure, Berryer, and Marie.

A great sensation was produced by a circular of the Minister Persigny, addressed to the prefects, and explaining the principles which the Government intended to follow at the approaching election. M. de Persigny, in this

circular, violently denounced the friends of the former Governments, and declared that the Government had withdrawn its patronage from 24 of the deputies, who, elected in 1857 as official candidates, had abandoned the Government at the vote on the Roman question. On May 20th the five members, forming the liberal opposition in 1857, published a manifesto giving an account of their political attitude. On May 21st a letter appeared in the *Moniteur*, from the Minister of the Interior, declaring that the Government would oppose with the utmost energy M. Thiers, who ran on the opposition ticket for one of the Paris districts, for Aix and for Valenciennes. On May 25th seven bishops published a manifesto, explaining the interest of the Catholic Church in the approaching election. The Government regarded this manifesto as an abuse of the ecclesiastical power, and laid it before the Council of State.

The election took place on May 31st and June 1st with the greatest order. In Paris the opposition obtained a signal triumph. Eight of its nine candidates were elected; and in the ninth district, where no candidate had obtained an absolute majority, the candidate of the opposition was elected at the supplementary election on June 14th. Six of the elected candidates, Havin, Ollivier, Picard, Favre, Darimon and Simon, had a very large majority, while that of Thiers was only 1,200. In the departments, the candidates of the Government were almost everywhere successful. Altogether of the 283 deputies elected, 34 were candidates of the opposition. Of these 34 candidates, several, as the Marquis of Andelarre, the Vicomte of Grouchy, Ancel, Plichon, M. de Chambrun, had been Government candidates in 1857, and had forfeited the patronage of the Government by their votes on the Roman question. They still wished, however, to be regarded as warm supporters of the Napoleonic dynasty. The five members who formed the liberal opposition in the Legislature of 1857, were all reelected. Among the new members of this opposition were some of the most illustrious names of France, as Berryer, Marie, and Thiers. Many other leaders of the liberal parties had, however, been defeated, as Montalembert in the departments of the Côtes du Nord and Doubs, Thiers at Aix and at Valenciennes, Casimir Perier at Grenoble, M. de Remusat at Toulouse, Odillon Barrot at Strasburg, Dufaure at Bordeaux, St. Marc Girardin in the department of Vienne.

The election was followed by important modifications in the Cabinet. M. de Persigny, whose excessive zeal was supposed to have been injurious to the cause of the Government, resigned; and with him Walewski, Minister of State, Delangle, Minister of Justice, and Rouland, Minister of Public Instruction and Worship, withdrew. M. Billault, Minister without portfolio, was appointed Minister of State. The office of Minister without portfolio, established by the decree of Nov. 24th, was suppressed, and its functions assigned to the Ministry of State,

which in its turn was dismembered, one portion of its duties being transferred to the Minister of the Imperial House, and the other, concerning learned corporations and academies, to the Ministry of Public Instruction. The administration of religious worship was detached from the Ministry of Public Instruction and united with that of justice. M. Baroche, President of the Council of State, was appointed Minister of Justice and Worship. M. Rouher, Minister of Public Labors, replaced M. Baroche, with the title of Minister President of the Council of State. Three new men, Boudet, Behic, and Durny, took the portfolios of the Interior, of Public Labors, and of Public Instruction. The Minister of State and the Minister President of the Council of State were charged with explaining and defending the measures of the Government before the Legislative Body.

The influence of France on foreign questions remained as great as ever. On the outbreak of the Polish insurrection, M. Billault, Minister without portfolio, declared in the name of the Government, in the Legislature, that the Government had lost none of their sympathies with Poland, but that they regretted the insurrection. When, however, Prussia concluded with Russia an offensive and defensive alliance, France, in union with England and Austria, warmly advocated the treaty rights of Poland. At one time the Government seemed even to be willing to declare war against Russia, but the idea was at once given up, when England and Austria refused to join France. (*See POLAND.*) When it became apparent that the diplomatic negotiations on the Polish question would lead to no result, the Emperor proposed to the Governments of Europe to meet in Congress, and to discuss all the great European complications, with a view to bringing about a reconciliation between the rights of sovereigns and the rightful aspirations of the nations. This project, too, failed, because England refused to take part in the Congress. (*See EUROPEAN CONGRESS.*) In Mexico, the Emperor persisted in his determination to overthrow the lawful Government of the country, and to establish a monarchy. (*See MEXICO.*) In Asia, France now holds undisputed possession of three provinces of Cochin China, and in August, 1863, a treaty was concluded with the King of Cambodia, by which this whole kingdom was placed under the protectorate of France. (*See ASIA.*) The dispute with Switzerland concerning the Dappes Valley frontier line was settled by a treaty, Switzerland reserving the right to lay it before the Powers present at the Congress of Vienna. Those Powers were to be requested to recognize this modification of Art. 75 of the Vienna Congress Treaty as an integral part of the international right of Switzerland.

The new Legislative Body was opened by the Emperor in November. In his opening speech he expressed his satisfaction with the result of the elections. He thus referred to the internal situation of the country:

Our exportations in the first eight months of the year 1863, as compared with those of the corresponding months of 1862, have increased by 233,000,000 francs. During the same period the movement of the maritime navigation has exceeded the figures of the preceding epoch by 175,000 tons, of which 136,000 are under the French flag. The abundant harvest of the present year is a blessing from Providence, and must assure the subsistence of the population at a cheaper rate. It proves also the prosperity of our agriculture. The public works have been prosecuted with activity; nearly a thousand additional kilometres of railway have been opened for traffic; our ports, our rivers, our canals, and our roads have continued to be improved.

He then pointed out the reforms judged opportune. Among others a decree relative to the freedom of the baking trade, one which renders the maritime conscription less onerous to the population of the sea-coast, a bill which modifies the law on coalitions, and one which suppresses the exclusive privilege of the theatres.

I have caused, also, to be prepared a law destined to increase the functions of the general and communal councils, and to remedy the excess of centralization; in fact, to simplify administrative formalities, and to make more mild the legislation applicable to classes worthy of all our solicitude. In all this there will be a progress with which you will delight to associate yourselves. You will have also to occupy yourselves with the sugar question, which demands to be finally settled by a more stable system of legislation. The project submitted to the Council of State tends to accord to indigenous products the facility of exportation enjoyed by the sugars of other countries. A law upon registration will get rid of the *double decime*, and substitute for that surtax a more just imposition. In Algeria, despite the anomaly which subjects the same populations, some to the civil, others to the military power, the Arabs have comprehended how French domination was reconstructive and equitable, without the Europeans having less confidence in the protection of the Government. Our ancient colonies have seen the disappearance of barriers which were inconvenient for their transactions; but the circumstances have not been favorable to the development of commerce. The recent establishment of the institution of credit will tend, I trust, to ameliorate their condition. In the midst of those material cares nothing which touches religion, the mind, and morals has been neglected. Works of religion and charity, the arts, the sciences, and public education, have received numerous encouragements. Since 1848 the number attending at school has increased one fourth. At present nearly 5,000,000 of children, a third of whom pay nothing, are attending at primary schools; but our efforts must not slacken, for 600,000 children are still without education. The higher studies have received increased animation in the secondary schools, where special instruction is now being reorganized.

Some remarkable explanations were made on the foreign policy of the Empire:

In the life of nations events unforeseen and inevitable arise, which must be met without faltering. Of this number are the war in America, the compulsory occupation of Mexico and Cochin China, the insurrection in Poland. The distant expeditions, the objects of so much criticism, are not the result of a premeditated plan; the force of events has brought them about, and nevertheless they are not to be regretted. How, in fact, could we develop our foreign commerce if, on the one side, we were to renounce all influence in America, and if, on the other, in presence of immense territories occupied by the Spanish and Dutch, France alone remained without possessions in the Asiatic seas? We have conquered in Cochin China a position which, without subjecting us to the difficulties of local government, will permit us to make use of the immense

resources of these countries, and to civilize them by commerce. In Mexico, after an unexpected resistance—which the courage of our soldiers and sailors has surmounted—we have seen the population welcome us as liberators. Our efforts will not be in vain, and we shall be largely recompensed for our sacrifices when the destinies of that country, which will owe to us its regeneration, shall have been confided to a prince whom his enlightenment and his qualifications render worthy of so noble a mission. Let us, then, have faith in our enterprises beyond the sea. Commenced to avenge our honor, they will terminate in the triumph of our interests; and if prejudiced minds do not divine the fruitfulness inclosed in the germs deposited for the future, let us not tarnish the glory thus acquired, so to speak, at the two extremities of the globe—at Peking and at Mexico.

According to the calculation of A. Legoyt (in *Statistiques de la France*), the population of France might be divided, on Jan. 1st, 1862, as to their religious denomination, as follows:

	France.	Algeria.	Total.
Catholics.....	35,734,667	185,100	35,919,767
Protestants.....	1,561,250	6,786	1,567,986
Jews	156,000	29,007	185,007
Mohammedans.....		2,778,281	2,778,281
Other sects (not noticed in the budget)	20,815		20,815

The Synods and Consistories of the two Protestant State Churches made, however, a somewhat higher statement of their membership; that of the Reformed Church being calculated to amount to about 1,300,000, and that of the Lutheran Church to about 700,000. In the budget of 1862, the allowances to the Roman Catholic clergy amount to 49,819,936 francs, and those to the Protestant Church, 1,493,436 francs. From the returns of marriages in 1860 and 1861, it appears that in the former year 86,491 bridegrooms, and 140,530 brides, out of a total of 256,636 marriage entries, and in the latter period, 83,905 bridegrooms, and 136,447 brides, out of a total of 270,896 marriages, were unable to write their names.

According to official returns, there were, in October, 1863, 82,135 establishments of primary instruction, 16,136 more than in 1848; and the scholastic population had, in 1862, risen to 4,731,949, from 3,771,597 in 1848. The 36,499 communes provided, in October, 1863, with means of instruction, comprised 41,426 public and free schools, special for youths or mixed as to sexes, of which 37,895, numbering 2,145,420 pupils, were directed by laics or secular persons, and 3,531, numbering 482,008 pupils, by members of religious congregations.

The number of schools for girls, in October, 1863, amounted to 26,592, of which 13,491 were directed by laics provided with diplomas of capacity, and 13,101 by religious sisters, of whom 12,335 had only the "letter of obedience." These schools received 1,609,213 pupils, of whom 604,207 were in the lay schools, and 1,059,966 in the establishments of the religious congregations.

The following tables exhibit the names, area, and population of each of the 89 Departments into which France is divided, according to the census of 1861, and the statistics of births and illegitimate children:

DEPARTMENTS.	English Sq. Miles.	Population in 1861.
Ain.....	2,264	369,767

The estimated budget for the year 1864, which was laid before the Legislative Body in January, 1863, differs but little from the estimates for 1863, save that the calculated surplus is made to appear still larger. The following are the total sums of the budget of 1864, as rated by the Senate and the Legislative Body,† in the session of 1863:

	Receipts.	Expenses.	Surplus of Receipts.
Ordinary budget.....	1,780,487,986	1,775,144,001	5,343,985
Budget of special service.....	221,324,123	221,934,123	
Extraordinary budget.	108,015,236	108,015,000	236
Totals.....	2,110,437,345	2,105,093,124	5,344,221

* Special Commerce, in the column of Importations, designates the merchandise destined for the exclusive consumption of France, and in the columns of Exportation, the products of France herself.
† The Legislative Body in France is distinct from the Senate.

The budget for the year 1865 was laid by the Minister of Finance before the Legislative Body on Dec. 3, 1863. Nearly the same estimates of income, expenditures, and receipts were made as in the budget of previous years; but, this time a large actual deficit was admitted. The war expenses in Mexico were estimated at 210,000,000 francs; those in Cochín-China and other parts of Asia, at 60,000,000 francs; these, added to the deficits of 1862-1863, made the total deficit amount at 195,000,000 francs. This sum added to former deficits swelled the total to 972,000,000. To reduce this, the Minister proposed a loan of 300,000,000 francs.

The consolidated debt was in 1864 as follows:

Rentes, 4½ per cent.....	39,759,628
Rentes, 4 per cent.....	478,081
Rentes, 3 per cent.....	345,699,838
Sinking Fund (Amortissement).....	118,022,945
	503,960,292

The army, according to the budget of the Ministry of War for 1864, was composed as follows:

BRANCH.	PEACE FOOTING.		WAR FOOTING.	
	Men.	Horses.	Men.	Horses.
Staff.....	1,773	160	1,841	..
Gendarmes.....	24,829	14,769	25,688	15,000
Infantry.....	251,437	326	515,035	..
Cavalry.....	62,798	47,616	100,221	65,000
Artillery.....	39,832	16,646	66,132	49,833
Engineers.....	8,410	1,115	15,443	1,400
Military Trains.....	5,655	5,495	15,829	12,000
Administration.....	9,411	240	17,536	..
	404,195	86,368	757,725	..

In the year 1863, the army was on the peace footing at home, but on the war footing in Italy, China, and Mexico.

The navy, in 1863, was, according to the Gotha Almanac for 1864, as follows:

CLASS.	Number.	Horse Power.	Guns.
Iron-clad screw steamers (built and building).....	43	24,025	1,356
Screw steamers, not iron clad.....	245	63,860	5,523
Side-wheel steamers.....	85	19,190	533
Sailing vessels.....	105		2,344
Total.....	478	107,075	9,766

Martin's Statesman's Yearbook for 1864, gives the following exhibit of the French steam navy, as composed in November, 1863:

CLASS.	Afloat.	Building.	Total.
Line-of-battle ships.....	36	1	37
Iron-cased frigates.....	6	16	16
Screw frigates.....	25	4	29
Paddle.....	18	..	18
Despatch boats (screw).....	35	1	36
" " (paddle).....	38	5	73
Iron-plated batteries.....	14	7	21
Gunboats.....	53	5	58
Transports.....	34	9	43
Total.....	325	42	367

The sailing navy consisted, in November, 1863, of—

	Afloat.	Building.	Total.
Ships of the line.....	7	..	7
Frigates.....	23	..	23
Corvettes.....	12	1	13
Brigs.....	19	2	21
Small vessels.....	26	..	26
Transports.....	32	..	33
Total.....	119	3	122

The movements of shipping during 1862 and 1863 were as follows:

Flag.	1862.			
	ENTERED.		CLEARED.	
	Ships.	Tonnage.	Ships.	Tonnage.
French.....	12,374	1,907,897	8,201	1,445,872
Foreign.....	16,448	2,658,776	11,004	1,560,097
	28,822	4,566,673	19,205	3,005,963

Flag.	1863.			
	ENTERED.		CLEARED.	
	Ships.	Tonnage.	Ships.	Tonnage.
French.....	12,088	1,918,000	8,771	1,527,000
Foreign.....	16,783	2,641,000	11,736	1,645,000
	28,821	4,559,090	20,407	3,172,000

The merchant navy, on December 31st, 1861, consisted of—

	Ships.	Tonnage.
Sailing vessels.....	14,738	910,729
Steamers.....	327	73,267
	15,065	983,996
Coasting vessels.....	8,041	59,541

For the external relations of France, *see* DIPLOMATIC CORRESPONDENCE; EUROPEAN CONGRESS; MEXICO, and POLAND.

FRANKLIN, the capital of St. Mary's parish, Louisiana, was a port of entry, and a thriving town, on the west bank of the river Teche, 65 miles from the Gulf of Mexico. It is situated in a rich planting district. Cotton, sugar, and maize were exported by the river, which was navigated by large steamers. On the advance of Gen. Banks, in April, the division of Gen. Grover had a sharp conflict with the Confederate force, under Gen. Taylor, near Franklin.

FREDERIC VII., King of Denmark, born in Copenhagen, October 6th, 1808, died at his palace, Glücksborg, South Jutland, November 15th, 1863. He was the son of Christian VIII., and the Princess Charlotte Frederike, of Mecklenburg-Schwerin, and ascended the throne January 20th, 1848. In his youth he travelled through Germany and Switzerland, passing more than a year in Geneva, Italy, and the south of France; and on his return he married, November 1st, 1828, Vilhelmine Marie, daughter of Frederick VI., from whom he separated in 1837, and the same year was removed by royal order to Fredericia, in Jutland, where he was for some time commandant and chief of an infantry regiment. His exile ended with his father's accession to the throne, in 1839.

In June, 1841, he was married to the Princess Caroline Charlotte Marianne, of Mecklenburg-Strelitz, whom he also put away in September, 1846; and in August, 1850, contracted a morganatic marriage with a milliner of Copenhagen, whom he had previously created Countess Danner. In 1844 he visited Scotland and the Faroes as Crown Prince. Frederick VII. commenced his reign by quashing all the prosecutions which the Chancery of the day had instituted for political offences; and on the 28th of January issued a royal rescript promising a free constitution for the whole monarchy. But, in the meantime there had grown up a strong interest in the future government and control of the Duchies of Schleswig and Holstein, which had resolved itself into a powerful conspiracy, assisted by Prussia, which wished to seize the valuable harbors and rich districts of the southern part of the State. This movement was urged on, on the one hand, by the German ministers, and on the other, by the feverish spirit excited by the French revolution of 1830. Thus, only nine weeks after ascending the throne, the new king found himself involved in a war for life or death against an unexampled outbreak of treachery and revolt. On the 18th of March, 1848, the provincial deputies of these Duchies agreed to send a deputation to the king, demanding the union of Schleswig and Holstein under one Government; the former to be delivered over as a member to the German Confederation. But on the 20th there was a great meeting of the citizens in the Danish capital, and an immense assembly, headed by the mayor and magistrates, went to the king's palace to ask for a new and liberal national ministry. This wish had already been fulfilled, and on the 24th was formed the first constitutional and responsible cabinet that the kingdom had seen for more than three hundred years. This was followed by a free constitution signed by the king on the 5th of June, 1849. During the revolution, King Frederick stood fast by his people, and succeeded in preserving his Danish province of Schleswig from the German invaders, while at the same time he boldly defended the freedom of the State. During the efforts of late years to force on the nation an impracticable "whole State" Government, he still resisted all attempts to reach that object by restoring despotism, and when this scheme fell to pieces, resisted by both the Danes in Denmark, and the Germans in Holstein and Lauenburg, he laid before the Rigsraad a new law, for drawing still tighter the bonds between the Danish parts of the realm—the kingdom proper—and Schleswig. This bill has since been signed and accepted by the new king, Christian IX. Like his royal father, King Frederick was an excellent antiquary. His private museum was large and rich, though mostly in collections of the remains and antiquities of his own land, and of the Scandinavian races. Unfortunately a portion of this museum was subse-

quently destroyed by fire. He also personally took part in explorations and diggings. Almost his last hours were spent in superintending the great mossfind diggings in South Judland. He gave largely to public and private antiquarian societies, and personally presided at the annual meetings of the Northern Antiquarians, which were held in his own palace, conversing freely and instructively with the Fellows who happened to be present. His death was caused by a severe attack of erysipelas.

FREEDOM OF THE PRESS. The publication of some newspapers was interrupted during 1863, by the lawless attacks of disorderly persons who destroyed the printing offices, and by the orders of military officers suppressing their issue.

In the former case the attacks were frequent, but not always successful. On the 5th of March, late in the evening, an attack was made on the office of "The Crisis," a Democratic paper, published at Columbus, Ohio, by a body of disorderly soldiers. Everything was cleared out. The windows, doors, stoves, shelves, books, &c., were entirely destroyed. The party then proceeded to attack the office of "The Statesman," but by the interference of the police further mischief was prevented. On the same night the office of the "Volksblatt," a Democratic paper in Belleville, near St. Louis, was entered and much property destroyed. During the riot in New York, in July, an attack was made on the office of "The Tribune," an Administration paper. (*See Riots.*) The doors and windows were destroyed, and also much property in the office. Later in the year, the office of the North Carolina "Standard," a reconstruction paper, published at Raleigh, was attacked by a body of soldiers, and destroyed. The citizens of Raleigh at once retaliated and destroyed the office of the "State Journal," a rival and an advocate of secession. Instances of these disorderly attacks were very numerous during the year in different parts of the Northern States. The printing materials were generally destroyed, and a temporary suspension of the paper caused thereby.

The first case of the suppression of a newspaper by a military order was the "Evening Journal," published in Philadelphia. About midnight, January 27th, the editor, Albert D. Boileau, was arrested by order of Gen. Schenck, commanding the Middle Department, and taken to Fort McHenry, in Maryland. (*See HABEAS CORPUS.*) The order for the arrest instructed the officers to suppress the "Journal." The publication was subsequently resumed.

On the 8th of May, the following order was issued by Gen. Hascall, commanding in the District of Indiana:

HEADQUARTERS, DISTRICT OF INDIANA, }
DEPARTMENT OF THE OHIO, }
INDIANAPOLIS, May 8th, 1863. }

Editor Bluffton Banner, Bluffton, Indiana:

A copy of your paper, of May 1st, has been handed to me, in which you boast of your intention to violate

Order No. 9, from these headquarters, as much as you please. You can now disavow that intention, and advise others to do so, or discontinue the publication of your paper altogether till further orders. A violation of this notice will receive prompt attention.

MILO S. HASCALL,
Brig.-Gen. Vols., Comd'g Dist.

This order appears to have been disregarded by the editor. No further measures were taken.

On the 11th of May, an order was issued by Gen. Davidson, at St. Louis, prohibiting the sale or distribution in that district of the "Freeman's Journal," and "Caucasian," of New York; the Columbus "Crisis," a Democratic journal of Jerseyville; the Chicago "Times," and Dubuque "Herald."

On the 1st of June, Gen. Burnside, commanding the Department of the Ohio, issued the following order:

General Order, No. 84.

HEADQUARTERS, DEPARTMENT OF OHIO, }
CINCINNATI, June 1st, 1863. }

1. The tendency of the articles and opinions habitually published in the newspaper known as the New York "World," being to cast reproach upon the Government, and to weaken its efforts to suppress the rebellion, by creating distrust in its war policy, its circulation in time of war is calculated to exert a pernicious and treasonable influence, and is, therefore, prohibited in this department.

2. Postmasters, news agents, and all others, will govern themselves by this order, as any person detected in forwarding, selling, or in any way circulating the paper referred to, will be promptly arrested and held for trial.

3. On account of the repeated expression of disloyal and incendiary sentiments, the publishing of the newspaper known as the Chicago "Times" is hereby suppressed.

4. Brigadier-General Jacob Ammen, commanding the district of Illinois, is charged with the execution of the third paragraph of this order.

By command of Major-Gen. A. E. BURNSIDE.
LEWIS RICHMOND, Lieut.-Col. and A. A.-Gen.
[Official.] D. R. LARNED, Capt., and A. A.-Gen.

With the issue of this order, the following notice was sent to the editor of the Chicago "Times."

BY TELEGRAPH FROM HEADQUARTERS, }
CINCINNATI, June 2d. }

Editor of the Chicago Times:

You are hereby notified that I have issued an order stopping the publication of your paper, which order will be published in the morning papers of this city to-day (Tuesday morning). You will please govern yourself accordingly.

A. E. BURNSIDE, Major-General.

Gen. Ammen having directed Capt. Putnam, commanding at Camp Douglas, Chicago, to carry the foregoing order into effect, the latter warned the publishers of the "Times," on the night of the 2d, against issuing their paper the next morning, under penalty of the seizure of their establishment by the military. The publishers thereupon applied to Judge Drummond, of the United States circuit court, for a writ enjoining Capt. Putnam from any interference with their business or property; and after midnight a writ was issued by Judge Drummond, directing the captain to take no further steps to execute the order until the application for a

permanent writ could be heard that day in open court. A file of soldiers, nevertheless, took possession of the establishment, and after remaining for some time left, but before leaving they again warned the owners against issuing their paper.

At the opening of the court on the morning of the 3d of June, the counsel of the publishers made a motion to defer proceedings on the application for an injunction until notice of the application could be given to the military commandant at Camp Douglas. Judge Drummond, in granting the motion, said:

I may be pardoned for saying that, personally and officially, I desire to give every aid and assistance in my power to the Government and to the Administration in restoring the Union, but I have always wished to treat the Government as a Government of law and a Government of the Constitution, and not a Government of mere physical force. I personally have contended, and shall always contend, for the right of free discussion, and the right of commenting, under the law and under the Constitution, upon the acts of the officers of the Government.

In the meantime, news of the proceedings of the military authorities had reached Springfield, the capital of Illinois, where the State Legislature had convened in special session on the 2d of June, pursuant to an order adopted at the close of its last regular session. On the 3d, the following preamble and resolutions were introduced in the House of Representatives, and, after an exciting debate, were passed—yeas 47, nays 13:

Whereas information has reached this body that an order has been issued by Gen. Burnside for the suppression of the Chicago "Times;" and whereas such order is in direct violation of the Constitution of the United States and of this State, and destructive to those God-given principles whose existence and recognition for centuries before a written Constitution was made, have made them as much a part of our rights as the life which sustains us;

Be it resolved by the House of Representatives (the Senate concurring therein), That we denounce the order which threatens an act so revolutionary and despotic as contrary to liberty, destructive of good government, and subversive of constitutional and natural rights, and that, if carried into effect, we consider it equivalent to the overthrow of our form of government, and the establishment of a military despotism in its stead.

Resolved, That, in view of the monstrous consequences which must inevitably flow from such action, if justified by the General Government, we respectfully, yet firmly, request the withdrawal of the order in question, and the disavowal thereof by those in power, as the only course which can be pursued to reassure our people that constitutional freedom, so dear to their hearts, has not ceased to be. The attention of the governor is called to this infringement of popular rights, and the invasion of the sovereignty of the State of Illinois.

The office of the "Times," at Chicago, was the centre of attraction during the whole of the 3d, and at night a large concourse of people gathered there, in accordance with a call which had been issued in the forenoon of that day. This meeting, however, soon adjourned to Court House Square, where the people were addressed by gentlemen of both parties. The

speeches counselled the observance of the laws, but denounced the above order of Gen. Burnside as arbitrary and despotic. The following resolutions were reported and adopted:

Twenty thousand loyal citizens of Illinois, assembled this evening to consult upon their interests, do resolve,

1. That law is the bulwark of liberty; the abrogation of law is the death of liberty; the constitution guarantees the freedom of speech and of the press and the right of the people peaceably to assemble and to petition the Government for the redress of grievances. An infringement of these rights is a blow at the Constitution; an abrogation of these rights is the overthrow of the Constitution. He who seeks to abridge or destroy these rights is a traitor to law and liberty. The people of Illinois will forever demand and insist upon these rights. They will obey the laws themselves and insist upon a like obedience by all men. They will seek redress for grievances through the forms of law and the tribunals of justice. They will demand and insist upon the trial by jury, of men not in the military or naval service, who are charged with crime; they will demand and insist upon the right to speak and print their opinions of men in power, and the measures of those men; they will demand and insist upon the judgment of the civil tribunals upon men or newspapers charged with the expression of "disloyal and incendiary sentiments."

2. The military power is and must remain subordinate to the civil power. Military, like civil functionaries, derive all their powers from the law. So far as they act under the law they must be obeyed. When they exceed the law their orders and decrees are void.

3. General Order No. 84, promulgated by General Burnside, by which the publication of the Chicago "Times" is declared to be suppressed, is without warrant of law, and should, as we have an abiding belief that it will forthwith be rescinded by the President. If the "Times" or any other public journal has exceeded the limits of lawful discussion or criticism, the civil tribunals, and they alone, are the competent and lawful judges of its crime. To the courts of law it appeals; let the courts, and the courts alone, decide its fate.

4. The people of Illinois are devoted, with their lives and their fortunes to the glorious Union of the States under the Constitution made by our fathers; they will sacrifice life and fortune and all but liberty to preserve that Union; they will cordially sustain the authorities in all honest and lawful efforts to preserve that Union; but they will not sacrifice their liberties, though life and fortune go together. Peaceably, soberly, loyally, they will maintain their liberties, so long as they can thus be maintained, but they will have them at every hazard by some means.

During the afternoon the militia were ordered under arms, but nothing occurred requiring their interposition.

On the evening of the next day (the 4th) the following despatch from General Burnside was received by the editor:

LEXINGTON, Ky., June 4th, 1863.

To the Editor of the Chicago Times:

By direction of the President of the United States, my order suppressing the circulation of your paper is revoked. You are at liberty to resume its publication.

A. E. BURNSIDE, Maj.-Gen.

The office had been in possession of a military force from early Wednesday morning till Thursday evening. No paper was issued on Thursday morning.

On the same day the following despatch was also sent by General Burnside.

LEXINGTON, Ky., June 4th,

Editor of the New York World:

Having been directed by the President of the United States to revoke that part of my order, suppressing the "Chicago Times," I have revoked the entire order, and your paper will be allowed its circulation in this department.

A. E. BURNSIDE.

Previously, on the 2d of June, General Burnside issued the following order:

General Order, No. 87.

HEADQUARTERS, DEPARTMENT OF THE OHIO, }
CINCINNATI, OHIO, June 2d, 1863. }

It is announced, for the information of all concerned, that the publication or circulation of books containing sentiments of a disloyal tendency comes clearly within the reach of General Order No. 38, and those who offend will be dealt with accordingly.

By command of Major-General BURNSIDE.

[Signed] LEWIS RICHMOND,
Assistant Adjutant-General.
W. P. ANDERSON,
Assistant Adjutant-General.

For the order, No. 38, thus alluded to, see HABEAS CORPUS.

On the 8th of June a meeting of editors was held in New York, at which the following newspapers were represented:

1. New York Leader.....John Clancy.
2. " Express.....Jas. Brooks.
3. " Atlas.....Anson Herrick.
4. " Independent.....Theodore Tilton.
5. " Journal of Commerce...Wm. C. Prime.
6. " Tribune.....Horace Greeley.
7. " Staats Zeitung....Mr. Ottendorfer.
8. " Sun.....J. Beach.
10. " Sunday Mercury } ..Wm. Cauldwell.
 } ..H. P. Whitney.
11. " Argus.....Elon Comstock.
12. " Jewish Messenger.....M. S. Isaacs.
13. " Irish American.....P. J. Meehan.
14. " Scientific American...R. McFarlane.
15. " New Yorker.....C. Mathews.

Horace Greeley was called to the chair, and offered a series of resolutions which were referred to a committee who reported the resolutions of Mr. Greeley, somewhat amended, as follows:

Whereas the liberty and rights of the press as affected by the existence and necessities of a state of war, and especially of civil war, are topics of the highest public concern, and

Whereas recent events indicate the existence of grave misapprehensions and lamentable confusion of ideas with regard to this vital question; therefore,

Resolved, That our conception of the rights and duties of the press in a season of convulsion and public peril like the present, are briefly summed up in the following propositions:

1. We recognize and affirm the duty of fidelity to the Constitution, Government, and Laws of our country, as a high moral as well as political obligation resting on every citizen, and neither claim for ourselves nor concede to others any exemption from its requirements or privilege to evade their sacred and binding force.
2. That treason and rebellion are crimes, by the fundamental law of this as of every other country; and nowhere else so culpable, so abhorrent, as in a republic, where each man has an equal voice and vote in the peaceful and legal direction of public affairs.
3. While we thus emphatically disclaim and deny any right as inhering in journalists or others to incite, advocate, abet, uphold, or justify treason or rebellion, we respectfully but firmly assert and maintain the right of the press to criticize firmly and fearlessly the

acts of those charged with the administration of the Government, also those of all their civil and military subordinates, whether with intent directly to secure greater energy, efficiency, and fidelity to the public service, or in order to achieve the same ends more remotely through the substitution of other persons for those in power.

4. That any limitations of this right, created by the necessities of war, should be confined to localities wherein hostilities actually exist or are immediately threatened, and we deny the right of any military officer to suppress the issues or forbid the general circulation of journals printed hundreds of miles from the seat of war.

The resolutions were unanimously adopted. The effect of this emphatic declaration of sentiments was soon felt. No more papers were suppressed, and several which had been were again allowed circulation through the mails.

In the Middle Department, commanded by Gen. Schenck, the press was forbidden to make extracts from certain New York papers, as appears by the following from the provost-marshal at Baltimore:

HEADQUARTERS MIDDLE DEP'T, 8TH ARMY CORPS, }
OFFICE PROVOST-MARSHAL, }
BALTIMORE, June 21st, 1863. }

An order was published in the evening edition of the "Republican," also in the "Sunday Telegram," of to-day, purporting to emanate from this office, in reference to the suppression of certain newspapers. No such order as thus published was issued. It is perhaps a misunderstanding, which is thus explained. I was directed by the major-general commanding, to notify the editors of some of the city papers, "that no extracts from the 'New York World,' 'New York Express,' 'Caucasian,' 'Cincinnati Inquirer,' and 'Chicago Times,' would be permitted to be published in this department," which was duly done, and from this fact the mistake must have occurred. I therefore respectfully request that this explanation be published.

WILLIAM S. FISH,
Lieutenant-Colonel and Provost-Marshal.

FREEDMEN OF THE SOUTH. In the ANNUAL CYCLOPEDIA for 1861 and 1862 under the title SLAVES, there has been traced the progress which had been made, up to January, 1863, in solving the vexed question of what should be done with the Africans or persons of African descent, who had been the slaves of rebel masters, and had either escaped from, or been abandoned by, those who had formerly held them in slavery. The President's Emancipation Proclamation gave a new and greatly increased importance to this problem. That proclamation, as soon as it was promulgated, gave an impulse to the influx of the negroes into the Union lines, often in a state of utter destitution both of food and clothing, and that influx appeared to be destined to increase as the proclamation was more and more widely disseminated, until it might result in the coming in of by far the greater part of the bondmen of the insurrectionary States. Without some mode of employment for them, some means of enabling them to earn their subsistence, the army would soon be swamped, or these helpless creatures must perish by cold and starvation. In a time of peace there would have been no difficulty, since there would have been a demand for the labor of all who were able to

work, in cultivating the soil. There was, indeed, employment sufficient for a considerable number in acting as laborers, hostlers, cooks, teamsters, &c., and for the women in washing and other labor in the camps and at the hospitals, but these employments were insufficient for the vast multitude who were constantly pouring into the army lines.

The Government had hitherto discouraged the organization of regiments of colored troops, and had not favored their enlistment, even when attempted in the Northern States. There had been, it is true, two or three such regiments formed, one in Kansas, and one or two in South Carolina, but these had been considered by the Government doubtful experiments. It was known that the Confederates had, in a few instances, organized such regiments, though their fear of their fidelity had prevented them from doing so to any considerable extent. A black regiment had, however, been organized in New Orleans, and elsewhere negroes had been in the Confederate ranks as sharpshooters, sentinels, &c., though seldom in any considerable numbers. Some of the border States, and Kentucky in particular, opposed very strenuously the organization of colored regiments, and she has maintained her opposition up to the present time. In most of the States, however, after the issuing of the Emancipation Proclamation, there was an increasing feeling in favor of using the able-bodied negroes as soldiers, to aid in the overthrow of the Rebellion. It was urged in favor of this, that they possessed the qualities of obedience, docility, imitation, and emulation, which would make them good soldiers; that they were familiar with the country which was the seat of war, and would be of great value as scouts; that they were inured to the climate, which affected so seriously white soldiers, and that their employment in this capacity would more effectually cripple the resources of the Confederates than any other measure, and would tend to render further conflict on their part hopeless. To the objections that they would be guilty of great and horrible outrages upon the weak and helpless families of the enemy, it was answered that the negro was not vindictive in his nature, and that from his ready submission to his officers it was rather to be expected that, under proper discipline, the colored troops would prove more correct in their deportment than white regiments. The approach of a draft which would fall heavily upon the workshops, manufactories, and farms of the North, already depleted of their operatives to such an extent as greatly to enhance the price of skilled labor, led to the conviction on the part of the great body of the people of the North, that these thews and sinews thus at their command and for the most part ready and willing for their service, might as well be employed, so far as they would go toward filling up the ranks of the armies east and west, as their own. (*See ARMY OF THE UNITED STATES.*)

The Government had arrived at similar conclusions early in the year. They had, indeed, been foreshadowed in that passage of the Emancipation Proclamation, in which the President had said:

"And I further declare and make known that such persons of suitable condition will be received into the armed service of the United States to garrison forts, positions, stations and other places, and to man vessels of all sorts in said service."

On the 20th of January an order was issued from the War Department authorizing Governor Andrew, of Massachusetts, to raise regiments of African descent. In March the adjutant-general, Gen. L. Thomas, was sent to the West to organize colored regiments from the freedmen who were coming in large numbers into the Union lines from Cairo to Natchez. At Helena Gen. Prentiss asked the privilege of organizing a regiment (he did raise two, which afterward proved the means of the preservation of that post), and Gen. Thomas granted his request. At Milliken's Bend, General Thomas organized five regiments, at Grand Gulf three more, and before leaving the Mississippi Valley, as he was compelled to do by severe illness, in June he had completed arrangements for raising twenty colored regiments. Meantime Gen. Banks had also been active in the formation of what he denominated a *Corps d'Afrique*, a body of colored troops, at first put under the command of Brigadier-General H. E. Paine, and after he was severely wounded in the assault on Port Hudson, under that of Brig.-Gen. Ullmann. Over 15,000 of these troops were mustered into the service in the Department of the Gulf. In the Department of the South three regiments were organized at Hilton Head before June, and several others later in the year. Several regiments were also raised in North Carolina, in Norfolk, Virginia and its vicinity, in Washington, D. C., and in Maryland. At the close of the year the number of colored troops in the United States service exceeded 50,000. They were with very few exceptions officered by whites, and the applicants for commands in these regiments underwent a very severe and critical examination by a board of army officers, of which General Silas Casey was president. More than half the applicants were rejected, and of those received, by far the greater part were assigned to a rank materially below that for which they applied. The result has been that no regiments in the volunteer army have been under the command of more efficient and thoroughly competent officers than those composed of "soldiers of African descent." On the 22d of May, a bureau of colored troops was organized in the War Department. A Commission of Inquiry in regard to the numbers, condition, capacity, and future wants of the freedmen, consisting of Robert Dale Owen, James McKaye, and Samuel G. Howe, had been appointed by the Secretary of War and made a preliminary report on

these topics on the 30th of June, 1863. As may be inferred from the language of the President's proclamation, it was at first expected that the colored soldiers would be employed almost exclusively in post and garrison duty. Emergencies, however, soon occurred in which it was found necessary to bring them into the field, and even when but partially disciplined they acquitted themselves so well as to elicit the commendations of the generals in command, and to cause their being placed in several instances in the lead in assaulting columns. At Milliken's Bend, on the 6th of June, the Confederates made an attack in large force, but were repulsed with heavy loss by the determined bravery of the colored troops. At the second assault on Port Hudson, June 14th, the colored troops under Gen. Paine led the forlorn hope, and amid fearful slaughter planted the Union flag on the parapet, and when their commander was terribly wounded and had fallen in front of the enemy's works, and the entire assaulting force had returned to their lines, nearly half a mile from the Confederate works, on the call for volunteers to bring off the wounded general under the terrific fire of the Confederate batteries, when no white soldiers volunteered, sixteen soldiers from the colored regiments stepped out and moved forward in squads of four, and succeeded in bearing him to the Union lines, though fourteen of the sixteen paid the forfeit of their daring with their lives.

At Fort Wagner, Morris Island, in the Department of the South, at the assault of the 18th of July, the colored regiments, under the command of Gen. George C. Strong, fought with great bravery; the 54th Massachusetts (colored) leading in the assault, and losing their gallant colonel, R. G. Shaw, and most of their officers, and nearly two hundred of their men. At Helena, Ark., on the 4th of July, and on other occasions, they have also acquitted themselves with honor. The officers say that they will follow their officers, even in charges or assaults of great peril, far more readily than white soldiers, but when deprived of their commanders would not in general fight independently so well as those troops who have had more education. Their camps are generally in better order, and the men pay more regard to neatness and order in their own dress than most white soldiers. They endure the exposure to the climate and the privations of the camp much better than whites, and the rate of mortality among them is much lower than among the white troops.

The Emancipation Proclamation and the employment by the United States Government of the emancipated negroes as soldiers, as might have been expected, furnished occasion for violent denunciation to the Confederate authorities. In his message to the Confederate Congress, Jan. 12th, 1863, Mr. Jefferson Davis made use of the following language in reference to it: "The public journals of the North

have been received, containing a proclamation, dated on the first day of the present month, signed by the President of the United States, in which he orders and declares all slaves within ten of the States of the Confederacy to be free, except such as are found within certain districts now occupied in part by the armed forces of the enemy. We may well leave it to the instincts of that common humanity which a beneficent Creator has implanted in the breasts of our fellow-men of all countries, to pass judgment on a measure by which several millions of human beings of an inferior race—peaceful and contented laborers in their sphere—are doomed to extermination, while at the same time they are encouraged to a general assassination of their masters by the insidious recommendation 'to abstain from violence unless in necessary self-defence.' Our own detestation of those who have attempted the most execrable measure recorded in the history of guilty man, is tempered by profound contempt for the impotent rage which it discloses. So far as regards the action of this Government on such criminals as may attempt its execution, I confine myself to informing you that I shall—unless in your wisdom you deem some other course more expedient—deliver to the several State authorities all commissioned officers of the United States that may hereafter be captured by our forces in any of the States embraced in the proclamation, that they may be dealt with in accordance with the laws of those States providing for the punishment of criminals engaged in exciting such insurrection." (*See PUBLIC DOCUMENTS.*)

Mr. Davis subsequently found it advisable to recede from the execution of this threat, but in no case have the officers in command of colored troops, or the colored soldiers themselves when taken prisoners, been exchanged, and there has been reason for apprehension that the freedmen soldiers when captured have been either killed or remanded to slavery. The evidence tending to this conclusion was collected by Major-Gen. E. A. Hitchcock, the Commissioner of Exchanges, and laid before the Government, and the following general order was issued in consequence:

General Order, No. 252.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, D. C., *July 31st, 1863.* }

The following order of the President is published, for the information and government of all concerned:

EXECUTIVE MANSION, WASHINGTON, *July 30th, 1863.*

It is the duty of every Government to give protection to its citizens, of whatever class, color or condition, and especially to those who are duly organized as soldiers in the public service. The law of nations and the usages and customs of war, as carried on by civilized powers, permit no distinction as to color in the treatment of prisoners of war as public enemies. To sell or enslave any captured person on account of his color, and for no offence against the laws of war, is a relapse into barbarism, and a crime against the civilization of the age.

The Government of the United States will give the same protection to all its soldiers, and if the enemy

shall sell or enslave any one because of his color, the offence shall be punished by retaliation upon the enemy's prisoners in our possession. It is therefore ordered that for every soldier of the United States killed in violation of the laws of war, a Rebel soldier shall be executed, and for every one enslaved by the enemy or sold into slavery, a Rebel soldier shall be placed at hard labor on the public works, and continued at such labor until the other shall be released, and receive the treatment due to a prisoner of war.

ABRAHAM LINCOLN.

By order of the Secretary of War.

E. D. TOWNSEND, Asst. Adjt.-Gen.

But while the able-bodied men among the freedmen were thus enlisted in the military and naval service of the United States, and many of the women found employment in the vicinity of the camps, garrisons and hospitals, there was a much larger class who were not able-bodied, some of them capable of performing some labor, others feeble, decrepit and helpless. In the regions which were occupied by Federal troops, the planters who sympathized with the Southern Confederacy had generally fled southward, taking with them or sending before them their able-bodied slaves, and leaving to the mercy of the invading army the old and decrepit, and the children who were too young to be of much value. Those who escaped, too, and came into the Union lines, often encountered great hardships in doing so, and in many instances arrived sick, half-starved, and with only a few rags for clothing. It was obviously the duty of the Government to provide in part at least for these poor creatures, and to furnish employment for such of them as were able to work, that they might sustain themselves and their more helpless kindred. There were, however, serious practical difficulties in the way. On the Mississippi, especially below Vicksburg, it was a matter of difficulty to obtain a sufficiency of rations for the soldiers, to say nothing of the 30,000 or 40,000 helpless colored people who looked to the Government for food, and the Government ration was not well adapted to the freedmen who had been accustomed all their lives to corn bread and bacon. Clothing the Government had not, and could not procure, except for the uniforms of its soldiers. These sick, helpless, feeble and infirm persons, and all who were not employed with the army, were therefore collected in camps at different points and rations furnished them, such clothing as could be collected provided, and appeals made to the people of the North for new and second-hand clothing to supply their needs. Generous responses were made to these appeals, and vast quantities of clothing forwarded. The Western Sanitary Commission at St. Louis was particularly active in ministering to their wants, and in some measure occupied the position of a guardian to them, distributing clothing, books and medicines among them, establishing schools, and teaching them to make a judicious use of the Government rations. Those who were capable of performing some labor, were presently employed on the abandoned plantations, which

were leased under certain restrictions to tenants for one year. Different plans were adopted in different sections for accomplishing this; all of them more or less faulty, though some better devised than others. Adjutant General Thomas, who had done so much in the way of organizing colored regiments, consulted with General Grant and other officers, and with the President, and announced the following plan for the region from Columbus, Ky., to Grand Gulf, Mississippi:

First. The Government of the United States, in order to secure the safety of commerce and navigation on the Mississippi, have determined to locate on or near its beach a loyal population, who will protect instead of destroying—as is now done—the freedom of commercial intercourse on this great inland sea. That this policy may the more speedily receive its initiation, George B. Field, Capt. A. E. Shickle, and the Rev. D. S. Livermore are hereby appointed commissioners, whose duty it shall be to superintend the letting of plantations to persons of proper character and qualifications, and to see that the mutual obligations between the negroes and their employers or superintendents shall be faithfully performed; to attend in some measure to their moral and intellectual wants, and generally to carry out the policy of the Government regarding negroes that are to be put to agricultural pursuits.

Second. It being deemed the best policy as far as possible to make the employment and subsistence of negroes a matter to be left to private enterprise, plantations will be placed in possession of such persons as the commissioners shall deem of good character and pecuniary responsibility, and in lieu of rent a tax will be collected upon the product of the land, payable to such agents as the Treasury Department shall designate, care being taken to secure as far as possible the just rights of the employers and employed; in all cases the negroes will be furnished with enough clothing for comfort in advance of their earnings, in consequence of their extreme destitution, and in no case will negroes be subjected to corporal punishment by the lash or other cruel and usual modes.

Third. Upon the occupancy of plantations inspectors will visit each plantation and take an inventory of all the property upon the estate. Crops yet ungathered will be turned over to be gathered by the lessee upon such terms as shall secure to the Government its fair share, while all movable property, stock, grain, &c., will be taken possession of by the Government, or sold to the lessee, if he so desires, at their appraised value, payable out of the proceeds of the plantation in the fall; the appraisers to be appointed by the commissioners, unless otherwise designated by the Government.

Fourth. After the lessee shall have taken possession of the plantation, as many negroes of average quality as he may desire may be turned over to him upon the order of the commissioners, the lessee entering into bonds to employ them until the 1st of February, 1864, and to feed, clothe, and treat humanely all the negroes thus turned over, the clothing to be deducted from their wages, and to be furnished at cost.

Fifth. If it shall be found impracticable, in consequence of the lateness of the season, to find persons of sufficient character and responsibility to give employment to all the negroes coming within the lines of the army, the commissioners may appoint superintendents, under whose supervision the soil may be cultivated for the exclusive benefit of the Government, or may have the plantations worked upon such terms as in their judgment shall be best adapted to the welfare of the negroes, taking care that in all plans adopted the negroes shall be self-sustaining, and not become a charge upon the Government.

Sixth. The wages paid for labor shall be as follows: For able-bodied men over 15 years of age, \$7 per month; for able-bodied women over 15 years of age,

\$5 per month; for children between the ages of 12 and 15, half price. Children under 12 years of age shall not be used as field hands, and families must be kept together when they so desire. The tax on the product of the plantation, in lieu of rent, shall be at the rate of \$2 per bale of 400 pounds of cotton, and 5c. per bushel on corn and potatoes.

Seventh. While military protection will not be guaranteed for the safety of persons engaged in cultivating the soil, yet all troops will be required to give protection where it can be done without injury to the service, and it is confidently believed that the military organization of the negroes will afford all the protection necessary.

Eighth. Commanders of the army will render the commissioners such military assistance as may be necessary, without injury to the service, for the execution of their duties. The commissioners will report their proceedings to the Secretary of War every two weeks.

Given under my hand at Milliken's Bend, Louisiana, April 15th, 1863, by authority of instructions from the Secretary of War.

L. THOMAS, Adjutant-General.

This plan would have answered a tolerable purpose had the lessees of the plantations been honest, upright, humane men; but, with few exceptions, they were adventurers, and camp followers, who were ready to turn their hands to any opportunity of getting gain by the oppression of the poor, the weak, or the defenceless. Adjutant-General Thomas, himself, had not made sufficient allowance for human depravity, and hence had not guarded so closely as he should the rights of his humble protégés; and the commissioners appointed seem to have identified their interests with the lessees, and not at all with the poor negroes who were to be employed. The wages prescribed were much smaller than were paid by the planters for the hire of slaves for the same work when cotton was but ten cents a pound, while at this time it was worth seventy cents; the clothing, which by the terms of the contract was to be furnished at cost, was actually supplied at a most exorbitant profit, and while a portion of their wages (\$2 per head) was withheld for medical attendance, no physician was ever allowed to see them, and no medicines furnished on most of the plantations. The provisions concerning families were also shamefully evaded, and on many plantations every rainy day, or day when there was no opportunity for work, was deducted, and even the little pittance which remained was not paid, nor were they furnished with food according to agreement. In short, the plan enured, in its results, wholly to the benefit of the lessees, many of whom made large fortunes on the single year's labor. There were of course some exceptions, though but few, to this state of things. Fifteen small plantations were leased by negroes themselves, some of whom cultivated them by the aid of their own families, while others employed a number of other negroes. They all did well; and in a few instances in which men of a high and humane character leased plantations, and carried out their contracts in the spirit in which Gen. Thomas had conceived them, they found the people

whom they employed grateful and contented, and willing to labor faithfully, while their own receipts were such as amply compensated their exertions and expenditure.

Meantime the suffering, sickness, and mortality at many of the camps where the feeble and infirm freedmen were collected, were terrible. James E. Yeatman, president of the Western Sanitary Commission, visited these camps from Cairo to Natchez, in the autumn of 1863, and while in some of them the freedmen employed by the Government in chopping wood or other work, supported themselves and those dependent upon them in tolerable comfort; in others, and these the largest camps, there had been great distress and frightful mortality—the result of overcrowding, want of ventilation, malarious localities, the prevalence of small pox, want of medical attendance, poor and insufficient food, and lack of clothing. Many of the people under these causes were seriously affected with *nostalgia* or home sickness; their condition being more wretched than it had been on the plantations. At the camp at Natchez, where there had been 4,000 freedmen, the number was reduced to 2,100 by deaths, from fifty to seventy-five having died per day during July and August; at Young's Point, near Vicksburg, the mortality had been equally great for three months; De Soto and President's Island were among the worst of these camps. Camp Holly Springs, and Camp Shiloh, near Memphis; Helena, and the Freedman's Hospital, were in better condition, and some of them had good schools for the instruction of those who desired to learn to read.

About 35,000 colored people are gathered in these camps between Cairo and Natchez, and about four fifths of them under proper management could earn their own support.

On the 10th of August, Gen. Grant, finding that the number had greatly increased in his department after the fall of Vicksburg, issued the following general orders, intended to ameliorate their condition, and facilitate their employment:

General Orders, No. 51.

HEADQUARTERS, DEPARTMENT OF THE TENNESSEE, }
VICKSBURG, MISS., August 10th, 1863. }

I. At all military posts in States within this department where slavery has been abolished by the proclamation of the President of the United States, camps will be established for such freed people of color as are out of employment.

II. Commanders of posts or districts will detail suitable officers from the army as superintendents of such camps. It will be the duty of such superintendents to see that suitable rations are drawn from the Subsistence Department for such as are confided to their care.

III. All such persons supported by the Government will be employed in every practicable way so as to avoid as far as possible their becoming a burden upon the Government. They may be hired to planters or other citizens, on proper assurances that the negroes so hired will not be run off beyond the jurisdiction of the United States; they may be employed on any public works, in gathering crops from abandoned plantations, and generally in any manner local commanders may deem for the best interests of the Government in

compliance with law and the policy of the Administration.

IV. It will be the duty of the provost-marshal at every military post to see that every negro within the jurisdiction of the military authority is employed by some white person, or is sent to the camps provided for freed people.

V. Citizens may make contracts with freed persons of color for their labor, giving wages per month in money, or employ families of them by the year on plantations, &c., feeding, clothing, and supporting the infirm as well as the able-bodied, and giving a portion, not less than one twentieth, of the commercial part of their crops in payment for such service.

VI. Where negroes are employed under this authority, the parties employing will register with the provost-marshal their names, occupation, and residence, and the number of negroes so employed. They will enter into such bonds as the provost-marshal, with the approval of the local commander, may require, for the kind treatment and proper care of those employed, as security against their being carried off beyond the employer's jurisdiction.

VII. Nothing in this order is to be construed to embarrass the employment of such colored persons as may be required by the Government.

By order of Major-General U. S. GRANT.

T. S. BOWERS, Acting Assist. Adj.-Gen.

Near the close of the year, the management of these Infirmary farms and camps, as well as of the whole matter of leasing plantations and employing the freedmen, passed from the War Department to the Treasury Department, and the special agent appointed by the latter Department, Mr. Mellen, in conjunction with Mr. Yeatman, perfected the regulations for the year 1864, guarding so far as was possible against all chances of fraud or ill treatment on the part of the lessees, placing them under strict supervision, increasing the wages of the freedmen about threefold, and making them a first lien on the crop. The tax payable to Government on the crop was also increased, and one fourth applied to the support of schools for the colored children, and another fourth to the maintenance of the Infirmary farms. Medical attendants were also to be provided for each district, and the money reserved paid to them by the district superintendent, and they were required to attend strictly to the health of the people of their districts. The same system will probably be adopted in substance in the other departments.

The plan of leasing plantations during the year 1863 in the Department of the Gulf seems to have been in some respects worse than that of Adj.-Gen. Thomas. The wages were lower (though paid more punctually), the attendance and labor of the slave enforced by military authority, often with great rigor, and the interests of the lessee rather than those of the freedman consulted. There was also an equally frightful mortality in the Infirmary camps. That this proceeded from no intention of oppressing the freedmen on the part of Gen. Banks, it is unnecessary to say; but the whole matter was one of experiment, and surrounded by numerous difficulties; and, with the weight of so many duties pressing upon him, errors of detail in carrying out a new system of free labor were

to be expected. They will be modified the present year. (*See LOUISIANA.*) At Port Royal, S. C., a different method was adopted, and seems to work well. There had been a longer experience there, a Government superintendent of abandoned plantations, as well as a superintendent of contrabands, having been appointed there early in 1862. The first year the freedmen were employed in cultivating the land on the island for Government, receiving rations, supplies, &c., from it; and the Government undertaking to dispose of the crop. In March, 1863, the abandoned plantations were sold at auction for the collection of the direct Government tax, and thus a good title obtained for them. A considerable number of the smaller plantations or divided plantations were purchased by the negroes themselves, and have been cultivated by them successfully. Others were sold to northern purchasers, sometimes several to the same man, and have been cultivated by hired labor, each family being allotted a certain quantity of land, about an acre and a half to adults, and in proportion to children, on which they raised their own food; being allowed besides to take such quantity of cotton land as they chose, for the crops of which they were responsible. They received no fixed wages, but a certain percentage on the amount of cotton produced. During the growth of the cotton partial payments were made each month to secure them comfortable subsistence, at a fixed rate for each acre planted and hoed, and when the crop was gathered they were paid the remainder of what was due them at the specified rate of so much for each pound of cotton. In one case a proprietor of thirteen plantations employed four hundred laborers, not one of them able-bodied, all being old men, old or feeble women, and children; yet the average earnings of each laborer, aside from house rent, the food raised for himself, and the value of his own private crop, was \$16.50 per month for the year. This proprietor, with an investment of \$40,000, cleared \$81,000 as the net proceeds of his year's labor. The cotton raised was Sea Island. On these plantations he had maintained five free schools, which were attended by 300 pupils, and five stores, in which \$20,000 worth of goods, mainly clothing and housekeeping articles, was sold at cost, including transportation.

Great attention has been paid to the establishment of schools for the education of the freedmen, and to the imparting of religious instruction to them, especially at Port Royal, Roanoke Island, Norfolk, and at the Freedmen's village, Arlington, opposite Washington, D. C., under the direction of the Freedmen's Relief Societies, the American Missionary Association, the Free Mission Society, &c. In North Carolina, the land on Roanoke Island has been assigned to the freedmen for cultivation, and they are supporting themselves comfortably. At Arlington, at Fortress Monroe, and at Norfolk a large portion of them find

employment among the citizens, or in connection with the army, and others cultivate the lands around their camps. Those at Arling-

ton are engaged in the cultivation of the Arlington estate, formerly the property of the Confederate Gen. Robert E. Lee.

G

GEOGRAPHICAL EXPLORATIONS. Although it may be said that the year 1863, except its one grand discovery of the sources of the White Nile (which was actually made in 1862, though not published till 1863), has not been so fruitful in new explorations as some of the years which preceded it, yet the grand aggregate of progress in geographical knowledge is nevertheless large, and indicates the constantly increasing interest felt in the promotion of this interesting science.

Commencing with *our own Continent*, we find that the researches of the American traveller Hall, in Greenland and in the arctic regions of the continent in the year 1862, not only decided some geographical problems of interest, as stated in the *ANNUAL CYCLOPÆDIA* for 1862, p. 482, but have thrown considerable light on the character and capabilities for improvement of the Esquimaux tribes. Their susceptibility to education and their fondness for science seem to be greater than those of the Indian tribes. In these respects they resemble the Lapps and Finns, and thus corroborate the generally received theory of their common origin. Mr. Hall found them invariably amiable and gentle in their nature, skilful in mechanism, and intelligent far beyond what could have been expected from their mode of life. At Godthaob, in Greenland, a monthly illustrated journal, the *Atuagagliutit*, is published, which is edited and printed by an Esquimaux, Lars Moller, and the illustrations drawn and engraved by another Esquimaux named Aaron. The subjects of some of its articles indicate very fully the intelligence of the writers and readers; they are such as these: "The Electric Telegraph; The Great Eastern; Extracts from late Narratives of Voyages to the Arctic regions, so far as they relate to the Esquimaux; Combustibles in Greenland; The Ancient Scandinavians and their Voyages." Lars Moller has also published three volumes of indigenous traditions, communicated by the people of the country, with the Esquimaux text and a Danish translation in parallel columns, and illustrated with lithographic plates.

Iceland, which, though belonging to Denmark, is usually reckoned an American island, was, in 1862, the scene of extraordinary volcanic eruptions, not this time from Skaptur Jokul, or Hecla, but from *Trælla dyngi* (the Mountain of the Giants), a volcano which had been quiet since 1510. This mountain is in the south part of the island, and about 2,600 feet high. The eruption took place in July, 1862, and has made some changes in the harbors and

coast of the island. Several narratives of it have been published in 1863.

Returning to the American Continent, we notice the publication by Prof. Hind of his explorations, undertaken, in 1861, of the *Labrador Peninsula*. Mr. Hind and his party entered the plateau or table-land of Labrador, by its main artery the Moise river, the source of which at Lake Clare they reached after an adventurous voyage. The river abounds in rapids and portages, and fairly swarms with salmon. The Indian tribes on the southern slope of this table-land, are the Montagnais and the Nesquapias, numbering from 2,500 to 3,000 souls each. He regards them as offshoots of the great Algonquin race, but as not having a common origin with the Micmacs of the South, between whom and themselves there has been a traditional feud for many generations. Prof. Hind found the mirage very common on the elevated table-land, and the displays of the Aurora Borealis were surpassingly beautiful.

In *Canada*, the geological surveys have been continued, and have resulted in the discovery of gold deposits supposed to be of considerable value, in Lower Canada, and of new reservoirs of petroleum oil in Canada West. The year has been prolific in books of travel relative to *British Columbia* and *Vancouver's Island*. The extensive gold deposits on the Frazer river and in other sections of British Columbia are attracting an extensive emigration to that region. A grant has been made by the authorities of British Columbia of the right of way for a telegraph line from San Francisco and Washington Territory, through that colony to Russian America, where a line is already being constructed to connect with the Russian line through Siberia by way of the Aleutian Islands, thus communicating with Europe through Asia.

In the *United States* the war has led to very many topographical surveys of great accuracy, and the explorations relative to ship canals to connect the Mississippi and the Hudson with the great lakes, and to determine the best route for the Pacific Railway now organized, have also thrown much light upon several geographical points. It has been ascertained that Lake Michigan has a medium breadth of only 84 miles instead of 109, as has been generally believed, and that it has a regular periodical tide, raising and depressing its waters from two to four feet. The route of the Pacific Railway through Colorado Territory is not yet fully settled, and it begins to be more evident, as the new territories of Idaho and Arizona develop their mineral wealth, that

there must be branches northward and southward from the main trunk to enable emigrants to reach these regions, so rich in the precious metals. The discoveries of gold in Idaho indicate its existence in quantities sufficient to make mining profitable in almost every portion of that vast territory; and though in the eastern section, along the Big Horn Mountains, the Indians are ferocious and troublesome, there can be little doubt of the speedy opening of mines there, and the eventual expulsion of the Indians from the region. In Arizona, the mines as yet opened are mainly in the vicinity of the Colorado, and the yield is represented as enormous. In connection with these mines there is much interest in the discovery of a good harbor and port near the head of the Gulf of California, accessible to steamers of large draught. The attention of geographers during the past year has been called to the cañons on the Upper Colorado in this territory. These were surveyed by an exploring party sent out by the United States Government in 1860, and the report of the survey published by the Government in 1861. The cañons or perpendicular ravines through which the river has cut its way are deeper and reveal the successive strata of the plateau more perfectly than any rock cutting, natural or artificial, heretofore known. The Big Cañon, the highest of these, has 5,500 feet of perpendicular descent. The scenery is more terrible and sublime than any which has previously been discovered in the wonderful regions on the Pacific slope.

In California, the geological survey under the direction of Prof. J. D. Whitney is making fine progress, the superintendent having made two reports. The survey proposes the construction of a series of maps mostly of the mountainous portions of the State, which constitutes $\frac{1}{15}$ ths of its area, and also of the vicinity of the bay of San Francisco, on a large scale (1-126,000). The survey has determined the heights of the principal mountain peaks of the State, and has settled the point that Mt. Shasta is the highest mountain in the United States, being 14,440 feet above the sea level or almost three miles, while Mt. Hood, which has hitherto been considered the highest, is only fourth, having an altitude of only 11,394 feet. Prof. Whitney believes Popocatepetl, which, according to Sonntag, is 17,783 feet in height, to be the highest mountain in North America, and not Mt. St. Elias, which he adduces reasons for regarding as under 15,000 feet (the measurement of the English hydrographical charts, probably Capt. Dunham's, gives its altitude as 14,970 feet), which is probably below the height of Mt. Hooker and Mt. Brown in British Columbia. In connection with geographical progress the physical wall-maps of the United States and South America, and also of the Eastern Continents, prepared during the past year by Prof. Arnold Guyot, and published by Charles Scribner of New York, are worthy of notice. The chief physical

characteristics of the countries represented are designated by the colors, the lowlands having a green tint, the table-lands brown, the mountain ranges black, and the highest peaks white. The marine currents, isothermal lines, zones of vegetation and other physical phenomena are also indicated, and cross sections at the bottom of the map exhibit prominently the principal slopes and elevations.

The French invasion of Mexico has led to the preparations of many maps and geographical works relative to that country, some of them of great merit, by German and French geographers. Among these may be noticed a statistical essay on Mexico by Berendt, in Petermann's *Mittheilungen*; Moritz Welzhofer's "Republic of Mexico;" Uhde's "The Region of the Lower Rio Bravo del Norte," all in German; and monographs on Jalapa and Orizaba, by Dr. Poyet; "Notices of Sonora," by MM. Berton and Maury; "Mexico, a Resumé of its Geography, &c.," by Count Baril de la Hure; "A Map and Hydrology of Mexico," by H. de Saussure, in French.

A new archæological exploration has brought to light much of interest relative to the ruined cities and temples of Southern Mexico, and the results of the examination have appeared in a magnificent volume illustrated with photographic views of the ruins, entitled "American Cities and Ruins," by MM. De Charnay and Viollet le Duc, published the past year in Paris.

Central America was visited by severe earthquakes in the winter of 1862-'3, and portions of it have been subject to political convulsions during the year. The German geographers seem to have taken its topography under their especial care; Moritz Wagner, in particular, having explored with great zeal the Chiriqui region, the States of Costa Rica and Panama, and the isthmus of San Blas, and having visited and measured the height of several of the volcanoes of that region hitherto hardly known; on all these topics he has communicated interesting essays, with maps and charts, to Petermann's *Mittheilungen*. Frantz, another German traveller, has also communicated to the same journal some important papers relative to Costa Rica, and especially that portion of it bordering upon the San Juan river. Capt. Bedford Pym, of H. M. S. Gorgon, communicated to the English admiralty his discovery of a new route of transit across the isthmus of Nicaragua, starting on the Atlantic side from a better port than Greytown. This new point of departure he believed to be at the head of a bay situated south of Monkey Point in Mosquitia, which he named Gorgon Bay. M. Alfred de Valois has published an account of his travels in British Yucatan, and M. Gerald Raoul Perry has given a very interesting and complete account of Nicaragua.

New Grenada, or as it now styles itself, *The United States of Colombia*, was explored very thoroughly in 1861 and 1862 by the German geographer Karsten, who published the re-

sults of his explorations in 1863, in the *Zeitschrift für Erdkunde*. A New Granadian, Señor Samper, has also, during the past year, published an excellent and very complete treatise on the geography of the country, under the title of *Ensayo sobre las Repùblicas Colombianas*. Ecuador was visited in 1862 by three English geographers, who explored different portions of it, and published their observations in 1863. Mr. Jameson, setting out from Quito, visited Mount Cayamba; Mr. Richard Spruce visited the region lying southeast of Quito; and Mr. James Wilson made a geological and geographical tour through Esmeraldas, a province which he regards as destined to become of great commercial importance if it can only be provided with tolerable roads. The Ecuadorian Government has undertaken to build a road connecting the city of Esmeraldas with Quito. This province was once famous for the beautiful emeralds found there, and Mr. Wilson is satisfied that the supply is still far from being exhausted, although very few are now brought into market. It is also a fine cotton country.

Venezuela has been, during the past year, as for most of its independent history, torn by internal convulsions and revolutions, which almost prohibit any material or commercial progress. Under a strong, wise, and good government, it could hardly fail to take a high position among the South American States, from its great mineral and agricultural resources. Dr. Plassard, a French geologist, discovered in 1862 valuable and extensive gold deposits in Tupuquen, and his account of them has led to a considerable emigration thither.

In Guiana a joint French and Dutch scientific expedition was engaged in 1861 and 1862 in exploring the basin of the Maroni river, which forms the boundary between French and Dutch Guiana, and in tracing the course of its two principal affluents, the Awa and the Tapanahoni; MM. Vidal and Rech, the French members of the expedition, published in 1863, in the *Revue Maritime et Coloniale*, an extended account of the results of their explorations, with a map of the river basin. They describe the country as very rich in agricultural promise, producing in great abundance tapioca, rice, sweet potatoes, maize, sugar cane, cotton, tobacco, all kinds of leguminous plants and fruits, and rare and valuable woods for timber, and for cabinet purposes, which are fully described by M. Rech, who was the naturalist of the expedition. M. Rech also gives an interesting account of the native tribes whom he found there, the principal of whom were the Roncouyènes, a mild and gentle race of Indians, and also of the Maroons, mixed races, Indian and negro, known as the Yucas, and the Bonis, who inhabit a part of the river basin. The new governor of French Guiana, M. de Montravel, in his report to the French Government, announces that the sea-island cotton is thoroughly acclimated there, and that its culture had been commenced on a grand scale. Mr. Bollärt, the

eminent naturalist, who has devoted great attention to the ethnology, geography, and history of the South American States, has edited for the Hakluyt Society, the past year, a narrative of an expedition to Guiana, undertaken in 1560 and 1561 by Pedro de Ursua and Lopez de Aguirre, in search of the El Dorado, so often sought by the early Spanish and Portuguese navigators.

Brazil, though possessing a larger amount of unexplored territory than any other South American State, is more advanced in its intellectual condition, and is doing more to develop its own wild regions, and to ascertain their capacities and products, than any other country in South America. It has an active Geographical Society at Rio Janeiro, and its *Revista Trimensal*, a quarterly scientific review, conducted by the Imperial Institute, devotes special attention to geographical discovery and exploration in Brazil. The Emperor, who is himself one of the most accomplished physicists in the empire, gives special encouragement to this department of science. As a consequence of this encouragement, geographical explorations have been very numerous of late years in Brazil. The narratives of five have been published in 1863, viz.: "a Description of Brazil," by the eminent traveller Baril de la Hure; "An Account of the Indians of Matto Grosso," by Dr. Moore; "Report upon the Prince of Parana," by Señor Vereker; "Fred. Gerstaecker's Narrative of the Condition and History of the German Colonies in the South of Brazil, as well as of those in Peru and Chili;" and "A Description of the Province of Minas Geraes," by Dr. Von Tschudi, with a map by Messrs. Halfeld and Fred. Wagner, published as a supplement of Petermann's *Mittheilungen*.

The Argentine Confederation, though engaged in war with Buenos Ayres for a portion of the year, has with the recurrence of peace set itself to the work of developing more fully its resources. In the early summer of 1863 it sent a scientific expedition up the Vermejo river, one of the principal branches of the Parana, to examine its capacity for navigation, and the advantages of the districts which it drains for commercial enterprise. One of the members of the expedition, Mr. Porter C. Bliss, a citizen of the United States, and for several years an attentive observer of the manners, habits, and customs of our North American Indians, was specially charged with the investigations concerning the Indians of the Upper Vermejo. Mr. Bliss returned to Buenos Ayres in the latter part of September, and brought with him ample notes in regard to these tribes, and the adaptation of the country to immigrants. His narrative of his expedition has not yet been published.

Uruguay has recently completed a census, though like that of most of the South American States, it makes no great pretensions to accuracy. The number of inhabitants is stated at 350,000, distributed in 13 departments or provinces. The population of the capital, Monte-

video, is given in 1863 at 45,765. Its imports in 1862 were said to amount to \$13,568,330, and the exports to \$15,395,073. One hundred and fifty thousand of the inhabitants are said to be of foreign birth. In June, 1863, the territory of the republic was invaded by an army from Buenos Ayres, under the command of a former president of Uruguay, Venacio Flores, but after a struggle of several months he was defeated and expelled from the country.

Paraguay, under the government of President Lopez, and since his death under that of his son, has attained a high degree of prosperity. An interior State, and without an extensive foreign commerce, it has, by the industry and intelligence of its inhabitants, and the productiveness of its soil, maintained itself in peace and comfort, has no public debt, and has an annual revenue of about \$2,500,000, of which nearly two thirds arise from the sale of the *Yerba mate*, or Paraguay tea, and other products of the national domains. Its population, according to official statistics, is 1,337,431, and that of the capital, Assumption, 48,000. M. Mouchez, a French geographer, who has resided for many years in Paraguay, and is the author of a series of excellent maps of the republic, thinks the official estimate of the population too high by one half. A work on Paraguay, of great interest, and embodying much valuable information in regard to the country, by Dr. Demersay, was published in 1863. Messrs. Köner and Kiepert have also a paper illustrated with a map by the latter on the topography of Paraguay in one of the numbers of the *Zeitschrift für Erdkunde* for 1863.

There have been no further attempts during the past year, to explore *Patagonia*, or the bleak islands of the Fuegian Archipelago, but a very interesting narrative of adventure in the latter in October, 1855, has recently been given to the public in "Harper's Magazine," by the captain of a British schooner, sent to visit the inhabitants of Tierra del Fuego, after the terrible disaster which befell Capt. Allen Gardiner and his party. He describes the Fuegians as generally of tolerable height (ranging from 5 ft. 3 in. to 5 ft. 7 in.), and well formed; but as going nearly nude, even in that severe climate, covering the skin with ochre and grease. They resemble the Esquimaux, but are less amiable and honest than they. Their principal food consists of shell fish and an edible fungus, which grows upon the trees. They are cannibals, but more from necessity, the captain thinks, than from choice. They live in conical huts, built over a hollowed pit in the ground, and their tents are always filled with smoke. Their condition seems very wretched, but they were content, and exhibited strong attachment to their families, and especially to their children. An attempt made in 1857 to take some of them away to educate and civilize them, led to a rencontre, in which the entire crew of an English vessel, except the cook, was killed.

Chili, happily separated by the Andes and the

Atacaman desert from the other States of South America, is almost wholly delivered from the questions of boundaries, which have so often given rise to desolating wars in some of the States, and under a judicious government has made rapid progress during the last ten or twelve years in the arts of civilization. M. Pigris, the South American geographer, has communicated during the past year to the French Academy several memoirs on the Andes. He ascertained by careful geodesic measurement the height of Aconcagua, the most elevated of the yet known peaks of South America, as 22,210 feet. Three other peaks in the same vicinity measured respectively, 22,097 feet, 21,213 feet, and 20,628 feet. In the northern part of Chili, within the Atacama desert, 300 miles north of Copiapo, extensive mines of silver of great purity have been discovered. The region also abounds with the best copper.

In *Bolivia*, the return of peace has been accompanied by the re-discovery of extensive gold mines, all traces of which had been lost in the years of civil war. They are situated near the village of Baures, in the basin of the Beni.

Peru has for many years been a favorite region of geographical exploration and research, and the past year has contributed its full share of works relative to its geography and ethnology. Professor Antonio Raimondi, a Peruvian scholar, has presented to the Peruvian Government a memoir entitled *Apuntes sobre la Provincia litoral de Loreto*, in which he gives a very full and interesting account of the Indian tribes in that vast, wild province, which covers more square leagues than all the rest of Peru. This memoir, it is understood, is but one of a series on which Prof. Raimondi has been engaged for many years, in which he will discuss the geographical, mineralogical, geological, botanical and zoological features of Loreto. In the *ANNUAL CYCLOPEDIA* for 1862, some account was given of the Jivaros, one of the tribes inhabiting the province. Prof. Raimondi gives a further account of them, as well as the other tribes which occupy that region, some of whom, as the Mayorunas and Caschibos, are cannibals, eating the old people of their tribes. Their habits and customs, as well as their language, differ materially from each other, and would seem to indicate that they were sprung from different sources; the Jivaros may have been originally of the Quichua race, their language and habits bearing considerable resemblance to it, but the Caschibos, Setebos, Sipibos, and Conibos speak dialects of the Pana language, which abounds in aspirates and gutturals, and has no affinities with the Quichua, the Jivaro, the Piro or the Campo, which have an abundance of vowels and are soft and musical. The Conibos flatten the heads of their children between two boards, one applied in front, the other behind. Prof. Raimondi estimates the number of Indians in Loreto at about 90,000, of whom about 40,000 are independent, having never been subdued by the whites. The country

is rich in grains (rice and maize principally), cotton, coffee, cocoa, and the edible palms, bread fruit, oranges, lemons, plantains, yuccas, pine apples, plums, cherries, pawpaws and other delicate fruits; has numerous medicinal and poisonous plants and gums, as well as abundant dye-stuffs and precious woods; and its mountains yield salt, sulphate of lime, alum, sulphur, iron ore, lignite and gold.

Among the works throwing most light upon the geography of the central portion of South America, which have been recently published, there has been none more satisfactory in its portraiture of the inhabitants, animals and plants of that partially explored region, than Henry Walter Bates' "Naturalist on the River Amazon; a Record of Eleven Years' Residence and Travel under the Equator," published in London, in 1863. During his long residence in South America Mr. Bates visited all the navigable portions of the Upper and Lower Amazon, as well as several of its larger affluents, and resided for some years at Santarem, on the Rio Negro, and afterward for other years at Ega, on the Upper Amazon. Among the spoils brought or sent home from his South American explorations, were 15,000 species of insects, 8,000 of them new to naturalists, numerous new species of mammals, fishes, &c., and a great abundance of birds of most beautiful plumage. He confirms Professor Raimondi's testimony in regard to the cannibalism of some of the Indian tribes, but regards the Indian, as in general, inferior to the Negroes and Mulattoes of the country. There is no caste distinction there; the Negro, Indian, half-breed and white enjoying the same privileges and consideration, and holding the same offices. Of these, in general, he found the Negroes the most intelligent, refined and honest.

The Royal Society of London sent, some years since, Mr. Clements R. Markham to Peru, to investigate the regions producing the various spices of Chinchona or Peruvian bark, and to attempt their transplantation to India. After many difficulties the attempt has proved successful, and Mr. Markham's report of his experiences is exceedingly interesting.

The explorations of the geologist indicate that there are changes of elevation in progress along the coasts of North and probably also South America. The coast of Greenland, for a distance of six hundred miles, is subsiding, while that of the American continent, on its eastern coast, is gradually rising, from the shores of the Arctic Sea to the northern coasts of South America, and perhaps farther. On the Pacific coast, too, there is, at some points, a gradual elevation—whether at all, is not yet certain. The effect of these changes on the topography and extent of the continent is likely to be very great in the course of time. The arctic lands which now approach nearer than the eastern continent to the north pole, may reach it; Hudson's Bay may become a fertile valley with several considerable lakes; the banks of

Newfoundland join the mainland, and thus permit the crossing of the Atlantic in three or four days; the coast line of the Atlantic States may be carried out to the edge of the Gulf Stream; the West Indies be united into three or four large islands; the Delta of the Mississippi extend a hundred and fifty miles further into the Gulf, and the other rivers of the coast be lengthened in a corresponding degree. With these changes must come also material modifications of climate, an intense cold and greater barrenness at the North; fiercer and more tropical heat at the South; a milder but moister climate along the Atlantic coast. These changes will hardly come in our time, but if the present rate of elevation be continued, a century hence may be sufficient for the development of most of them.

The *West Indies* offer little of interest or novelty in a geographical point of view. Hayti, which offered, in 1862, strong inducements to colored emigrants from the United States, has not been able to fulfil all its promises, and the grant of the island A'Vache, on its southern coast, to an adventurer named Bernard Koch, who sought to improve it by means of laborers obtained from the freedmen in Virginia, has turned out badly: the emigrants have been brought back to this country, after losing nearly one fourth of their number by sickness and death, the result of exposure and hardship, the survivors having lost their time and services, and all that they had, by the fraud and dishonesty of Koch. A remarkable cave has recently been discovered in Cuba not far from the city of Matanzas. It is called the Cave of Bellamar, and in the magnificent size of its apartments, and the beauty of its stalactites and stalagmites, seems to be one of the wonders of the world. The entrance hall, called the Gothic Temple, is 900 feet in length by 240 feet wide, the roof being, at its highest point, 60 feet above the floor of the hall. It is adorned with numerous pillars and mantles of great beauty. Beyond this is the Gallery of the Fountain, a corridor 2,400 feet in length, having in its centre a spring hemmed in with stalactites of most exquisite forms. Beyond, and after passing through a finely formed arch, the visitor comes to the Hall of the Benediction, the floor, walls, and vault of which are of the purest white, and these, as well as the numerous columns and pendants, sparkle in the light with the most brilliant crystals. The Mantle of the Virgin, the Snow Drift, the Lake of Dahlias, the Closet of the Beautiful Matanceras, the Hatuey Gallery, &c., are names bestowed upon other portions of the cave. Many of the concretions possess the property of double refraction, and some of them are violet or rose colored, or of golden hues. The cave runs from west to east, and its maximum depth is 36 feet. Its temperature never exceeds 80 degrees Fahrenheit.

In EUROPE, there have been few geographical but many archæological explorations. The

insurrection in *Poland* has led to the publication of some maps and descriptions of that country, and the agitation of the *Schleswig-Holstein* question, which in the beginning of 1864 has developed into a war, caused in the closing months of 1863 the issue of some descriptions and maps of the country in dispute. Rev. Fortescue Anderson has published in London "Seven Months' Residence in Russian Poland in 1863," which gives a graphic account of a portion of the country.

In July, 1863, a submarine volcanic eruption took place accompanied by the formation of a new island, off the coast of *Sicily*, in the Mediterranean, about twenty-five miles from the shore, and near the island of Pantillaria. It is on what is said to have been the site of a former volcano, and in an old chart of 150 years ago there is a reef laid down on this spot; but for many years past the water over the present site of the island has been 135 fathoms deep. The island is now about three fourths of a mile in circumference, and seems to stand on a broad base. It is at its summit about 200 feet high, and is composed of cinders of all sizes heaped loosely together. There is a crater on the island thirty or forty yards in diameter containing boiling water, and emitting steam and sulphurous vapors. Severe earthquake shocks were experienced in *Rhodes* in April and May, 1863, destroying entire villages and causing a loss of some hundreds of lives. They were preceded by great commotion of the sea, which, for a time, receded from its ancient level; but after the shock, regained more than its former territory.

Turkey and *Greece* have been explored both for geographical and archæological purposes, and one of the latest books of travels in reference to both is Mr. Chr. Cooke's "Journey Due East," which was made in 1862-'3.

The Prussian General Beyer has issued a circular to the most eminent physicists of the different nations of Europe, proposing the measuring of an arc of meridian from Palermo to Christiania. The progress toward completion of most of the topographical surveys of the European states is rapid. The survey of France on a scale of 1-80,000 is completed; but it will be several years before the map engravers will have finished their work upon it. It is to be regretted that the scales on which these surveys are made differ so much in the different states. They range from 1-20,000 to 1-288,000; whereas if the scale of 1-100,000, which is that of Prussia, Belgium, Hanover, Switzerland, Sweden, Norway, and Portugal, or of 1-50,000, which is that of Holland, Italy, and most of the smaller German states, or even of 1-80,000, which is that of France, Naples, Denmark, and Belgium, were generally adopted, the maps of the continental countries might easily be brought together, and a map of uniform scale of all made. The number of geographical maps published in Europe during the past year is very great, amounting to several thousands, most of

them of local interest mainly. The geographical periodicals are also numerous. The following are the principal: "Journal and Proceedings of the Royal Geographical Society," London; "All round the World," edited by M. W. Ainsworth, London; *Bulletin de la Société de Géographie*, Paris; "Mittheilungen," edited by Dr. Petermann, Gotha; *Zeitschrift für Erdkunde*, edited by Dr. Keuer, at Berlin, and serving as the bulletin of the Geographical Society of Berlin; *Annuaire* of the Society of Friends of Geography at Leipzig; *Mittheilungen* of the Geographical Societies of Vienna, of Darmstadt and of Frankfurt-am-Main; *Bulletin* and *Memoires* of the Geographical Society of Geneva; *Comptes rendus* and *Memoires* of the Russian Geographical Society; the *Memoires* of the Italian Geographical Society at Turin; The Nautical and Geographical Bulletin of Rome, edited by Prof. E. Fabri Scarpellini; *Bibliotheca geographico Statistica* of W. Muldner, at Florence (?); the "Nautical Magazine," London; *Tour du Monde*, edited by M. Charton, Paris; *Globus*, edited by Dr. K. Andree, Paris; *Nouvelles Annales des Voyages*, Paris; *Revue Maritime Coloniale*, Paris; *Archives des Sciences de Russie*, edited by Dr. Erman, St. Petersburg; *Bulletin* and *Annales* of the Foreign Council at Lisbon; the *Annuario Maritimo* of the Austrian Lloyds at Trieste.

ASIA is, as it has been for many years past, one of the favorite haunts of geographers, and in its vast table lands, deserts, and mountain ranges, its inland seas, and its dense but isolated populations, they are sure of finding much that is interesting to the scientific and often to the general reader. Beginning with its western states, we find that the Sinaitic Peninsula, in Arabia, has been visited in 1862 and 1863 by two geographers, Rev. T. J. Prout, an English clergyman, and M. W. Howlett, each of whom ascended the mountain Oum Chamar, the highest peak of the Sinaitic Mountains. It is situated about 11 miles S. W. of Djebel Katherin, and according to M. Howlett is 9,100 feet high. Another English traveller, Mr. Charles Foster, has applied the photographic art to the representation of this region, and has given views of the sacred mountains of the peninsula, under the title of "Sinai Photographed."

The intellectual apathy of the Turks has given way under the pressure of European scientific enterprise, and early in the year there was published a volume of travels in the Turkish capital, by an Osmanli scholar, the narrative of a journey of exploration along the Turko-Persian frontier, entitled *Siahatanamei Hodud*.

English commercial enterprise is making itself felt on the *Euphrates* and *Tigris* as well as in *Asia Minor*. Steamboats now ply between Bassorah and Bagdad, and a line of steamships has been established between Bassorah and Bombay. A railway is also said to be in progress from Smyrna to Ephesus. *Syria* has been very thoroughly explored by the French Government since 1861, and several

eminent geographers have taken part in the surveys and have published accounts of their discoveries. The War Department of the French Government published, early in 1863, a very fine map of the Libanus range and its spurs and offshoots, the result of the topographical surveys of the French engineers. M. R. Edwards issued a semi-historical treatise on Syria from 1840 to 1862; M. Desmoulins published under the sanction of the War Department "Hydrographic and Statistical Information concerning the coast of Syria." MM. H. Guys, Louet, Stepp, Bevet, and Isaacs, have written works on Syria, and an English writer, Mr. Mansel, has published a "Coast Survey of Palestine." Dr. Beke, the African traveller, has during the past year penetrated into the country lying east of Palestine, known as the Hauran, as far as the mountains of Galaad (the ancient Gilead), but his narrative of his travels is not yet published. Two French savans, MM. Mas Latr ie and Kotschy, have been exploring the isle of Cyprus, and the former has published a map of it. Other eminent scholars, and among the number Messrs. Vogue and Waddington, have been engaged in arch eological explorations of the island, and their labors have been rewarded by interesting and important discoveries. M. Kotschy, after his return from Cyprus, penetrated into the interior of Asia Minor, and visited the pashalic of Adana, in the ancient province of Cilicia. In the district of Zeitun, in that pashalic, he found a little Armenian confederation of about 15,000 souls, who had maintained an ecclesiastical and civil independence, recognizing no other authority than that of their patriarch, whose see was at the Monastery of Sis, to the west of Marach. They had been attacked by the Mohammedans in 1862, and some of their people slain. The clergy of the confederation had sent a delegation to ask the assistance and protection of the Western powers.

Turning to *Persia*, we find evidences of abundant activity in geographical exploration. Northern Persia has been visited and explored with great thoroughness by the Chevalier Gasteiger-Ravenstein and his party. The narrative of the scientific journey of M. Dorn in Mazenduan, Ghilan, etc., in 1861 and 1862, has been translated into Russ, by the Russian geographer Khanikoff, who has himself travelled through the greater part of Persia and Khorassan. Messrs. Watson, Brugsch, and others, who ascended the peak of Demavend, in 1861, read a paper before the Royal Geographical Society of London, which was published in the proceedings of 1862, giving an account of their ascent. They state the height of the mountain as 20,800 feet. Dr. Brugsch has since published, at Leipsic, an extended narrative of these explorations in this part of Persia, under the title of "*Voyage de l'Ambassade Prussienne en Perse, en 1860, et 1861*," with a map by M. Kiepert. The "Journal of the Royal Geographical Society at London" contains a narrative of discoveries in Per-

sia, Khorassan, and Afghanistan, by Captain Claude Clark. The British Admiralty have published, in 1863, a survey of the Persian Gulf in two charts, the result of the labors of Commander Constable and Lieutenant Stiffe. The telegraph has made its way into Persia, Teheran, its capital, being in communication with Recht, Tauris, and Bagdad, and through the latter city with Constantinople and Europe. The Persians, less apathetic and indolent than Turk or Tartar, have fairly started on the highway of progress; a fondness for scientific research is manifested; the young men of the higher classes are sent to England and France to be educated, and return imbued with a fondness for science. The French language is taught in the schools of Teheran, and spoken especially by the youth in the streets of that city.

The *Caucasus* has been explored within the past two years by several Russian savans, and General Chodzko, M. Lapinsky, and M. O. Blau, have published maps and narratives of their travels. Captain Ivanchinzoff has made a survey of the Caspian Sea, and published a map of it.

Afghanistan has been the scene of some revolutionary movements during the year 1863, having for their object the obtaining possession of the city of Herat (*see* DOST MOHAMMED KHAN), but there have been no new geographical explorations. Dr. Bellew, who was at the head of an exploring party in that country, in 1857, has published, during the year, a journal of his observations at that time.

Central Asia has been explored more fully during the past two years than at any previous period. The Kirghis Prince, Sultan Valitchanoff, mentioned in the ANNUAL CYCLOPEDIA for 1862, as having traversed the slopes of the Thian-Shan mountains, has continued his explorations in Chinese Turkestan, and has published interesting narratives of his discoveries in the provinces of Kashgar, Yarkand, Khotan, Aksou, &c. M. de Semenoff, a Russian geographer, has also continued his labors in this region, and has thrown much light upon its orography. The Asiatic Bureau of the Department of Foreign Affairs of the Russian Government, has published a special map of the lower portion of the Amou-d aria, the river Oxus of the ancient geographers.

Siberia has been traversed, and its mountains and rivers, its coasts and valleys, very thoroughly explored within the past three or four years, by Russian, German, and French geographers. In 1862 and 1863, Messrs. Maack, Maximowicz, Radde, Fr. Schmidt, Schwartz, Glenn, and others, have traversed this dreary country, and have thrown much light on the eastern portion of it by their interesting narratives of travel, and their maps, which have been remarkable for their minute accuracy of detail. A summary of their discoveries has been published in London the past year, by Mr. Ravenstein, under the title of "The Russians

on the Amoor." A map of the Russian possessions on the Amoor, has been published at St. Petersburg by M. Bartholomæi.

Mantchoo-Tartary, or *Mantchooria*, as the region lying north of China Proper, and south of the Amoor, is called, has also been very fully explored since 1861. Mr. George Fleming, whose journey with Mr. A. Michal, of Shanghai, to Menkden, the capital of Mantchoo-Tartary, in the summer and autumn of 1861, was referred to in the *ANNUAL CYCLOPEDIA* for 1862, has, during the past year, published a narrative of his journey, with a map, under the title of "Travels on Horseback in Mantchoo-Tartary." The two gentlemen left Tientsin on horseback, about the beginning of July, and reaching the great wall at Shan-Hai-Kivan (where Mr. Fleming ascended the mountains over which the wall passes, and nearly lost his life from sunstroke), passed beyond the wall, visiting Chung-Hu, Ning-Yuen-chow, Kenchow-Fu, New Chwang, an important city on the Lian-Ho river, where they were assailed by a mob, descended the river to Yeng-tse, a port recently opened to foreign commerce, and returning again to New Chwang, proceeded thence to Moukden, or Shen-Yang, as the Tartars call it, the largest city of Mantchooria. Here they were so much annoyed by the inquisitiveness and curiosity of the mob, that they were unable to explore the city so thoroughly as they desired. They, however, visited the palace, and from an elevated terrace were able to comprehend the plan upon which it was laid out. They found the Chinese who have emigrated to Mantchooria monopolizing the entire business and commerce of the countries, and to all intents and purposes the master race; their language having almost entirely displaced the Tartar tongue. An English traveller, Mr. Chas. Mitchell Grant, and M. de Bourboulon, the French Minister Plenipotentiary to China, have both made overland journeys from Peking to St. Petersburg, passing through Mantchooria and Siberia, in 1862-'3. The narratives of their journeyings have not yet been published. Sir John Hay and party with him having come by sea to Ying-tse, ascended the Lian-Ho river and visited New Chwang, but were unable to proceed farther. Messrs. Francelet and Boyer in the autumn of 1862 set out from Ying-tse, visited New Chwang, and proceeded thence northward to Nicolaevsa on the Amoor, descending on their way the Songari, and visiting the city of Kirin, and afterward Sansing, the last town on the frontiers of Chinese Mantchooria. They represent the region of the Amoor, or Russian Mantchooria, as improving rapidly under the establishment of Russian military posts, and the influx of emigrants from all quarters. There have been, during the year 1863, few voyages of exploration in *China*, but some of the narratives of previous explorers have been published. The progress of commerce has been rapid, though occasional troubles have occurred from the movements of

the insurgents, who have not yet been subdued, though they are less active now than some years since. The island of Formosa has been carefully explored during the past two years. The Baron Richthofen, geologist of the Prussian expedition to Japan, has published an interesting paper upon the orography of the island, and Mr. Swinhoe, British consul at Taiwan-Foo, in that island, has communicated to the Royal Geographical Society a long and interesting paper on its currents, harbors, productions and people. It is now a Chinese province. The great equatorial current flows past the island at the rate of four and a half to five miles per hour. The island produces excellent lignite coal, which crops out on the surface, and is worked by means of adits, no shafts being sunk. Its vegetable productions are tea, jute, rice, sugar, and the general fruits and grains of a sub-tropical region. The inhabitants of the southern cape of the island are a tribe of aboriginal savages numbering 200 or 300, ferocious in character, who destroy all strangers who are shipwrecked on the coast. The other inhabitants are Chinese, who, though formerly hostile to foreigners, are now ready to trade with them.

A German traveller, W. Reinhold, has given the results of his travels in a very instructive volume entitled *China und die Chinesen*. A Swiss expedition under the direction of Dr. Rudolph Lindau, early in 1863, commenced the exploration of China and Japan. The results of its labors are awaited with interest. Passing still eastward, we find in *Japan* abundant results of geographical research. The volumes of Sir Rutherford Alcock, late English Minister to Japan, entitled "Three years in Japan," published in the beginning of 1863, are replete with interest in regard to the topography, natural history, habits, manners, customs, and political geography and history of the "Land of the Dawn;" and their abundant illustrations, many of them from drawings and maps of native artists, aid materially in giving us a knowledge of this singular people. This work has been republished in this country by Messrs. Harper & Brothers. "A Lady's Visit to Manilla and Japan," by Anna D'A., is a light pleasant sketchy narrative, but adds very little to our knowledge of the country. "Nippon and Pecheli, or two years in Japan and Northern China," by A. de Fonblanque, is a more instructive work. The lectures and writings of Rev. Dr. Macgowan on Japan, continued during the past year, have aided in giving a more vivid idea of the character and habits of the people, as well as of the geography of the country. Dr. Macgowan, now serving temporarily as surgeon of one of the Government Hospitals at Washington, has submitted to the U. S. Government propositions for an industrial and scientific exploration of Eastern Asia, chiefly in the interests of agriculture. The present threatening condition of Japan, which, under the influence of

its Mikado or spiritual emperor, and several of its daimios or princes, is endeavoring to expel all foreigners from the empire, and has rendered their residence unsafe at most of its opened ports, will render geographical or scientific expeditions hazardous for a time. Ambassadors from Japan visited Europe in the summer of 1862, and remained for some months; and another embassy was sent from thence in the summer of 1863, to remonstrate against European settlement and commerce in the empire. M. Humbert has published in the "*Bibliothèque Universelle*," of Geneva, an important paper on Japan, and the "*Annales du Commerce Extérieur*," of Paris, contains interesting and very complete information in regard to the commerce of the ports open to foreigners. Robert Fortune, for many years British consul in China, and well known for his efforts to promote the tea culture in British India, published, in March, 1863, "Yedo and Peking, a narrative of a journey to the capitals of Japan and China," a book of great value. Baron Richthofen published, about the close of 1862, an elaborate memoir on the geology of the island of Kiu-Siu; and Mr. Alexis Perry communicated to the Royal Society of London a paper on the earthquakes and volcanic phenomena of Japan. The maps of the different portions of the empire, prepared by native geographers, are remarkable for their accuracy and beauty. They greatly surpass the Chinese in their attainments, in every department of physical science.

Passing southward, we come to *Cochin China*, which has been the scene of extensive explorations and surveys by the French, who have obtained a permanent foothold in the southern portion. The *Tableau de la Cochin Chine*, by MM. Cortambert and De Rosny, gives a very full account of the geography, history, and language of the country, and is accompanied by geographical and ethnological maps. Admiral Bonard has given an interesting narrative of his expedition up the Me-Kong and the Oudong rivers, and Lake Télé-Sab, as far as the rivers of Angkor, or Nokhor. The admiral regards the canal and the port of Kankao, which is at the junction of the canal with the Gulf of Siam, and by treaty was to have been a part of the French territory, but was withheld from them by the Annamese, as of little value. The Annamese are restive under the humiliating terms to which they were subjected by the treaty of June, 1862, and have more than once put the French garrisons in jeopardy. The French hydrographic engineers have surveyed very carefully the entire coast of Cochin China, and established a light-house on Cape St. Jacques. The French Steamship Company, styled the *Messageries Impériales*, have established a steamer service to Saigon, in their route from Singapore to Hong-Kong, making the time from Singapore to Saigon (637 miles) three days, and from Saigon to Hong-Kong (915 miles) five days. The productions of

Cochin China are valuable, consisting mainly of rice, cotton, spices, indigo, silk, and ship timber. There are few metals, but the adjacent kingdoms of Siam and Burmah abound in gold, silver, iron, copper, etc., and the Malacca, not far distant, yields largely of tin. Ton-King, the kingdom north of Cochin China, has also its gold mines. A French traveller, M. Mouhot, who ascended the Me-Kong, in 1861, and passed through the forests of Cambodia and Laos, and explored the ruins of the great temple of Nokhor-Vat and of the city of Nokhor Lueng, or Angkor, sent a narrative of his discoveries to the London Geographical Society, which was published in the beginning of 1863, but the unfortunate traveller had fallen a victim to jungle fever, in November, 1861. The Baron de Richthofen traversed *Cambodia, Laos, and Siam*, in 1862, and has published papers on his discoveries in Petermann's *Mittheilungen*, and the *Zeitschrift für Erdkunde*. Mr. Schomburgk, the botanist, has published an account of the new genera and species he has discovered in Siam; M. Bocourt, a French naturalist, has brought home from the same country a remarkable collection of photographs and objects of natural history. Mr. Edward O'Reilly has traversed the Pung-loung mountains, between Burmah and Siam, in order to ascertain the best route between the two countries. The region north of Burmah Proper, lying along the Upper Irrawadi, and extending toward Thibet, has been explored by a missionary, Rev. Thomine D'Mazure, who has published an account of his discoveries in the "Journal of the Asiatic Society," at Calcutta. The British Government has united the territories of Pegu, Arracan, and the Tenasserim into a single province, under the name of British Burmah. Curlew, or Calagouk Island, off the Tenasserim coast, has been selected by Dr. Duncan Macpherson, inspector-general of hospitals at Madras, as the site of a *sanitarium*, being, in his opinion, the most salubrious locality in the vicinity of Farther India.

The *Andaman Islands*, though in the vicinity of countries which have been very carefully explored, have remained hitherto almost wholly a *terra incognita*. An attempt was made, in 1792, to establish a penal colony on the North Andaman, but it was unsuccessful on account of the deadly character of the climate, and the hostility of the natives. The crews of vessels which have been shipwrecked on the island, have, in almost every instance, been dragged off into the interior, and it is supposed eaten by the natives, who are believed to be cannibals. The appearance of strangers on their coasts seems to excite the most deadly hatred on the part of the Mincopie, as the natives call themselves, and they do not hesitate to attack them even if outnumbered. The Sepoys who were convicted but not executed, in 1859, were sent to the South Andaman, but so far as is known but one of them escaped death. Dr. Frederick Mouat, who was commissioned to

survey the islands, and select a suitable place for a penal colony, published, in 1863, a narrative of his voyage of discovery, under the title of "Adventures and Researches among the Andaman Islands." He found the islands covered with the most luxuriant vegetation; the trees equalling in girth the giant sequoias of California (one of them was seventy-six feet in circumference at the top), and belonging mostly to the mangrove and banyan families. Extensive marshes in some sections sent up their deadly exhalations, but at other points the islands seemed healthful. They saw but few of the natives, but when they did meet them, a combat always followed. In one of these skirmishes they took a young Andaman prisoner. He was about twenty-two years of age, and after a time seemed to become partially civilized, but it was impossible to obtain any information from him respecting his former mode of life. After some months he was attacked with cholera, and though he recovered from the attack itself, he did not regain his vigor, and it was resolved to send him back to his native island. Here he was left, but nothing more was ever heard from him.

Rev. Charles Parish, who also visited these islands a little after Dr. Mouat's expedition, has given an account of them in the *Proceedings of the Royal Geographical Society*, and M. Pihau-Dufeillay, who explored the South Andaman, has communicated to the *Bulletin de la Société Anthropologique* a paper in regard to the inhabitants of the islands.

The *Malayan Archipelago*, with its numerous islands, many of them of great size, and entitled, from its great extent, to be regarded as almost a continent of itself, has been made the subject of some very interesting investigations by Mr. A. R. Wallace, an eminent traveller and physicist, who has spent many years in the islands of the archipelago. Mr. Wallace communicated a paper to the Royal Geographical Society, and to the British Association, in relation to its physical geography. He regards it as divisible into two districts, having entirely distinct lines of demarcation, the one assimilating to the Flora and Fauna of Asia, and the other to the very diverse productions, animal and vegetable, of Australia. These two districts, at the little islands of Baly and Lombok, are brought very near together; being separated only by a strait fifteen miles wide; yet on the one island the birds and plants are not only of different species from those in the other, but of different genera and families. Java, a part of Sumatra, Amboyna, Sumbawa, a part of Bornou, the west end of Ceram, the north part of Gilolo, and all the small islands around it, the northern extremity of Celebes, and the islands of Siau and Sanguir, are wholly volcanic, as is also the greater part of the Philippine group. The remainder of the Malayan Archipelago is generally free from volcanic action. Sumatra, New Guinea, Borneo, the Philippines, the Moluccas, and the unculti-

vated parts of Java and Celebes, are all forest countries, but Timor, and the smaller islands near it, and to a lesser degree Flores, Sumbawa, Lombok, and Bali, are mainly destitute of forest trees. The monsoons or trade winds are deflected in their course by the islands, and, while the southern part of Borneo and Celebes have a southeast monsoon and fair weather, from April to November, the northern part of Borneo and the Philippine Islands have a southwest monsoon, and rain during the same period.

The publication by Melville, at Batavia, of the magnificent atlas of the Dutch East Indies of Carnbee and Versteeg, is an interesting event, as marking the advance of Batavia in civilization and intellectual culture. Dr. Bernstein, a Dutch naturalist, has been engaged for two years past in an exploration of the natural history of the Molucca islands, and Senor Semper continues to publish interesting and instructive monographs on the islands of Luzon, and in his later publications has given a very full account of the aborigines of the island, who are known as Negritos. The Spanish Government has caused the maps of the hydrographical survey of the coasts of the Philippines to be published. Mindanao, one of these islands, which is rich in vegetation as well as in mineral wealth, has hitherto been partly independent, but within the past year the Spanish authorities have taken possession of the whole island. A German statistician, Mr. Friedmann, has published in the *Zeitschrift für Erdkunde*, a table of the population of the Dutch East Indies. The whole population is about 18 millions, of which 11,943,019 are inhabitants of Java and Madura; 1,746,052 of Sumatra; 1,646,605 of Timor; 886,683 of Dutch Borneo; 471,061 of Palembang; 215,277 of Celebes, and the small islands adjacent; and the remainder of the smaller islands.

We complete our survey of the geographical progress of Asia with a few words on what has been done in India the past year. Geographical researches in that vast peninsula have been incessant for many years past; now measuring the Himalayas and watching their glaciers, penetrating into the beautiful vales of Cashmere, or mounting to the lofty plateau of Thibet, where amid a heat that scorches in summer, and a cold that congeals the vitals in the winter, the worshippers of the Grand Llama maintain their isolated existence; or tracing the Indus, the Ganges, or the Brahmaputra from their sources in the plateau between the Himalaya and the Kuen-Lun mountains through the gateways where they pass southward between peaks never yet trodden by human foot; or farther southward, seeking amid the Vindhya, the Ghauts, or the Nilgherry mountains, and the sources of the rivers which flow down their slopes, the wonders of the vegetable or the animal kingdom; or once more engaged in those practical labors of railway survey and construction, or the laying out of military roads, and the selection of suitable

locations for *sanitariums*, prosaic work, indeed, but not less full of promise in the future development of Hindostan in its aspects of civilization and commerce. The past year has not been less prolific than its predecessors in narratives of these explorations. The Schlagentweit brothers have continued the publication of their interesting work on the Himalayas; Dr. Hooker has contributed new additions to Indian botany; Messrs. Montgomery and Thuillier have pushed their investigations into Little Thibet and Cashmere, and the results of their labors have been laid before the Royal Geographical Society in two interesting papers. Major Walker has communicated to the "Journal of the Asiatic Society" at Calcutta a "Memoir on the Trigonometrical Survey of India," and recent additions to the geographical knowledge of districts bordering on the British trans-Indus frontier. Capt. Knight has published "The Diary of a Pedestrian in Cashmere and Thibet;" Rev. H. Baker, "The Hill Aryans of Travancore," and another missionary, in the "Church Missionary Intelligencer," "Travancore and its Population;" Dr. Hugh Cleghorn, "The Forests and Gardens of South India;" Prof. Flechia, "*Impero Anglo-Indiano*;" Dr. Hoffmeister (the botanist of Prince Waldemar's expedition), an interesting account of the botanical peculiarities of Ceylon, the Himalaya, and the frontiers of Thibet, in the *Relation du Voyage* of that expedition. Mr. Howard laid before the Linnean Society of London, in June, 1863, specimens of chinchona bark and quinine, procured from the transplanted chinchona of India, demonstrating the success of the transplantation. Messrs. Cassels and Medlicott have published further communications concerning the cultivation of cotton in India. Mr. Stokes has read a paper "On the Indian Arc of Meridian" before the Royal Society, which has been published in the "Philosophical Transactions." Surveys have been made by direction of the Admiralty, and maps and charts prepared and published of the Strait of Palk, the Gulf of Manaar, part of the coast of Ceylon, and the currents of the Gulf of Bengal during the southwest monsoon.

A paper was read before the Ethnological Society of London, at its December meeting, prepared by a Tamil, a native of *Ceylon*, on the Weddos or Widdos, a tribe in the interior of that island, of whom little has been hitherto known. They are supposed to be the direct descendants of some royal families or chiefs who were driven into the forests of the interior when the island was invaded by the Buddhists 2,200 years ago. They have remained entirely distinct from the other races of the island—neither intermarrying nor commingling with them in any way. The men have occasionally exchanged wax, ivory and dried venison for salt and arrow root. They have recently commenced cultivating the soil, but subsist chiefly on the flesh of wild animals, which they kill with the bow and arrow and preserve in honey.

They have no knowledge of fire arms; but are expert in the use of the bow and arrow—killing their game at the distance of sixty yards. They are a miserable looking race, and speak a dialect of Cingalese mixed with Telinga, which is not generally understood by the Cingalese. They worship a tortoise, called Ebba, as their only divinity, making sacrifices to it in sickness and at childbirth. If the sick person for whom the offering is made does not speedily recover, he or she is abandoned to die alone, and the body remains unburied. The women of the tribe are totally secluded; strangers are not permitted to approach their villages, and a father never sees his daughter after she has grown up, nor a mother her male children after they have reached the age of manhood. Formerly the tribe wore no clothing, but within the last generation or two they have adopted a scanty wardrobe.

The pearl fisheries of Ceylon have been famous for ages, and have yielded a princely revenue to the sovereigns of the island. The Dutch Government formerly held the monopoly of the fishery of the Tinnevely Pearl Banks near Tuticorin, and received a net income of about \$100,000 per annum from it; but they seem to have fished too recklessly, and the product had greatly diminished before it passed into the hands of the English. In 1822 the revenue derived was about \$65,000, and in 1830 about \$50,000; but from that time till 1860-'61 there was no yield. In 1861, there was a revenue to the Government of over \$100,000, and in 1862 about the same sum; but in 1863 there was a failure, owing, the divers believed, to the presence of two other mollusks on the banks, called *Soorum* and *Kollikoz* (belonging to the families *Modiola* and *Avicula*), which destroyed the oysters. The pearl oyster, it should be said, is not a true oyster, but rather a mussel, securing itself to the rocks by a byssus or foot, which it can throw off at pleasure. The superintendent of the Tinnevely Pearl Banks, Capt. Phipps, has now undertaken to propagate the pearl oyster by an artificial system, putting the adult oyster into a basin walled in and strewed with loose coral, and rearing the young oysters in a division of the basin till they are of sufficient age to be removed to one of the pearl banks, which has been cleared of all offensive or destructive shell fish, mud, &c. By thus stocking the banks successfully, he is confident that the fishery can be kept hereafter at its highest point of productiveness, and the pearls of Tuticorin now, as of old, be in demand in all the markets of the world.

Turning now to AFRICA, we find the veil of Isis at least partially lifted, and the secret of the source of the White Nile, sought for more than three thousand years in vain, at last exposed.

The history of the discovery is deeply interesting: all efforts to penetrate to the source of the White Nile by ascending the river had utterly failed; partly from the ferocity and hostility of the tribes who dwelt on its upper

waters, and partly from the difficulty of obtaining interpreters and porters to traverse the unfriendly region. Capt. Burton had proposed to reach the great lakes of the interior, and thus prepare the way for seeking the source of the Nile, by an expedition westward from Zanzibar at a distance of 4° or 5° S. of the equator. Arriving after great difficulty and danger in 1858 at Kazéh, midway between Lake Tanganyika and the coast, he was taken sick there and was compelled to send forward his companion, Capt. Speke, to continue the exploration alone. After visiting Lake Tanganyika, Captain Speke proceeded to the southern extremity of a long lake called by the natives Nyanza, which they asserted extended 400 miles to the north, and had its outlet in a river frequented by white men. Capt. Speke became at once strongly impressed with the belief that this lake was the long sought source of the Nile, and as he could not descend the lake he returned to Kazéh and communicated his belief to Capt. Burton, who received it with sneers, and finally quarrelled with him on that ground. Capt. Speke returned to England, and having laid his views, and the reasons which induced him to entertain them, before the Royal Geographical Society, that body, together with several liberal gentlemen, provided the necessary means for undertaking another expedition which should give him the opportunity of testing his theory and perfecting the discovery which he believed he had made.

It was in October, 1860, that, with an outfit as complete as he could obtain, and accompanied by Capt. Grant, like himself, an officer of the Indian army, Capt. Speke reached Zanzibar, and with a caravan of more than 200 men, consisting of a few Hottentots, who proved only a burden, 25 Beluchs or Balochs, an escort through Uzaramo, sent by the Sultan of Zanzibar, 75 freed slaves under an Arab captain, 100 negro porters, and a supply of mules, donkeys, and goats, set out for Uzaramo. The travellers were constantly annoyed by the desertions of these porters and escorts, which often compelled them to hire others, frequently worthless vagabonds, at exorbitant rates, and as often caused them heavy losses of their goods, stolen by the deserters, or plundered by the natives of the countries through which they passed. Only 18 of the whole number engaged remained with them through their journeyings, and these, whom Capt. Speke calls his "Faithfuls," were treated with great consideration at Cairo, and sent back, with an additional year's pay as bounty, by the Oriental Company's steamers to Zanzibar. From Uzaramo, the expedition passed through Usagara, an upland country, where Capt. Grant was attacked with the acclimating fever. This fever did not leave him entirely while he remained in the country, recurring at intervals of about a fortnight, though lighter in the latter part of their journey. As soon as Capt. Grant was convalescent, Capt. Speke left him and, having

ascended the hilly Usagara range to the more level lands of the interior, penetrated into the wild region of Ugogo, where the inhabitants usually have abundant crops and herds, but were this year suffering from a terrible famine, the result of an extensive drought. They were a fierce, savage people; so avaricious ordinarily that they would not admit caravans into their villages. The wild game killed by Capt. Speke and his company in this country was at once seized by these people, and an exorbitant *hongo* or toll exacted for the use of the ground on which they encamped. The two travellers (for Grant had recovered sufficiently to join his companion) reached Unyamuezi, or the Country of the Moon, about the end of January, 1861, with the loss by desertion of more than a hundred men, while over one half of their animals were dead, and a like proportion of their property stolen, and the famine made their expenses unprecedentedly high. The inhabitants of Unyamuezi, or "Men of the Moon," as the Hindoos, who formerly traded with the Eastern Coast, called them, are the greatest traders in Africa. They are quite intelligent, and smelt iron from the ore in their own country, and manufacture iron implements very expertly. They also weave cotton and keep many flocks and herds. But with this partial civilization, they are great smokers and drinkers, and lack courage. In this country the travellers encountered famine again and war between a young brigand chief and the Arab traders who visited the country, and were compelled to return to Kazéh to reinforce their caravan, and endeavor to make arrangements for peace. After many delays and wearisome experiences of native extortion, Captain Speke, leaving Grant at Kazéh, passed through Uzinza and Sorombo, when he was compelled to return to Kazéh by the refusal of his whole camp to go forward, because, as they alleged, it was an enemy's country. From Kazéh Capt. Speke sent back to the coast for more beads and clothes, and fifty armed men, and having obtained them, he moved forward, and after much trouble reached the beautiful country of Karague, where King Rumanika, an Abyssinian by birth, welcomed them cordially, and treated them with great kindness. Here the highest standard of beauty for woman is extreme obesity, and the king's wives and daughters were fattened till they could not stand. Leaving his friend Grant, who was again ill, with the kind-hearted Rumanika, Capt. Speke pushed on to Uganda, and while traversing that country, on the 28th of January, 1862, caught sight of Lake Nyanza for the first time in this expedition. He reached the capital of Mtësa, the King of Uganda, on the 19th of February, and by a judicious mixture of audaciousness and prudence, succeeded in gaining the favor of this tyrant, who seems to have been a second King of Dahomey. To gratify the caprice of the king, one at least of his subjects is executed daily, usually for some

trifling departure from the court etiquette, and nearly every day some one of the hapless wives of the despot was led away to death for the very slightest offences. When he heard that the white men were coming, in a paroxysm of fury he caused fifty big men and five hundred small ones to be executed. The country of Uganda surrounds the whole northwestern shoulder of Lake Nyanza, which is pear-shaped, the widest portion being at the southern extremity. The northern boundary of the kingdom of Uganda lies along the equator, which is also the northern line of the lake. Captain Speke spent five months in Uganda, having brought his companion there as soon as he was able to travel. In company with the king and the queen-mother, who is the most important personage in the realm after the king, he made several excursions on the lake, which he found to be over two hundred miles in length. Mtésa was not willing that he should leave him, and it was only through the influence of the queen-mother, who was extremely desirous of obtaining European goods, that he was at last permitted to depart. The king finally gave him letters of protection, and commended him to the King of Ungoro, but parted with him with great reluctance. The travellers left the capital of Uganda in July, 1862, and after some trouble and hostility on the part of the natives, reached, about two weeks later, the actual source of the Nile, which leaves the lake a broad stream 450 feet wide, and descends at once a rock-broken fall of about twelve feet, called by the natives "the stones," but named by Capt. Speke, Ripon Falls. Visiting the capital of Kamrasi, the savage King of Ungoro, the travellers were detained there from August to November, 1862, and a fortnight later reached the country of the Madi, where they found a Turkish caravan. Between these points the Nile makes a great bend westward, and is reported to unite, at its extreme corner, with another lake, named by the natives the Little Luta Nzige, or lake of the dead locusts, said to be 200 miles long and 50 broad. The tribes on the Nile at this part of its course were at this time engaged in war, and the travellers were compelled to cross on the chord of the bend, and thus failed to explore about seventy miles of the course of the river, in which it accomplishes a descent of about 1,000 feet. In February, 1863, in company with the Turkish caravan, they reached Gondokoro, where Capt. Speke was welcomed by his old friend, Capt. Samuel Baker, who had come thither in search of him, and prepared to relieve his wants. Here too he met Madame Tinne, her sister and daughter, Dutch ladies, who had embarked on the Nile at Khartüm, on a small steamer, accompanied by four other ships, with a suite of about 200 persons, among whom were two travellers, M. de Heuglin and M. Steudner. These ladies had undertaken the exploration of the White Nile, and from intelligence since received, have entered the Bahr el Ghazal,

one of the recently discovered tributaries of the Upper Nile, and are endeavoring to advance into the interior. They have met with Consul Petherick's tribes of Niam-Niams, and think his reports not entirely without foundation. Mr. Baker went forward after a short time to explore the great bend of the Nile, but has not yet been heard from. By this expedition Capt. Speke and Grant have demonstrated that the Nile, which must henceforth be reckoned as starting from the headwaters of Lake Nyanza, is over 2,300 miles in length, and that it receives very few affluents. They have also ascertained that the greater part of its course, and also that of the Lakes Nyanza and Tanganyika, are in a deep and narrow valley; and it has been rendered nearly certain that the sources of the Nile, discharging its waters into the Mediterranean Sea, the Shire, an affluent of the Zambesi, emptying into the Indian Ocean, and the Congo or Zaire, which flows into the Atlantic, are in the same vicinity on the elevated plateau about three degrees south of the equator, and that the lakes in which they take their rise are fed by streams from the group of mountains rising from that plateau, and, though nearly under the equator, lifting their peaks to the region of eternal snow. The narrative of Capt. Speke, entitled "Journal of the Discovery of the Source of the Nile," by John Hanning Speke, with portrait, maps and numerous illustrations, was published in London about the 1st of January, 1864, and in this country by Messrs. Harper & Brothers, in April, 1864. At the November (1863) meeting of the Royal Geographical Society of London, a paper was communicated by Baron von Decken in relation to the mountain peaks of Kilima-ndjaro, which lie southeast of Lake Nyanza, which the baron had ascended during the past year. He describes two mountain ranges lying between Lake Jipé and Lake Nyanza, the first, the Aruscha range, being about 4,000 feet high, and the second, a considerable distance east and north, much loftier, and as yet unnamed, but forming, as he believed, the eastern watershed of Lake Nyanza. From the Aruscha range the two snowy peaks of Kilima-ndjaro were in full view. The main peak, which he ascertained by triangulation to be 20,065 feet high, had its snow line at about 17,000 feet in height. He ascended the main peak to the height of 13,900 feet, when, his companions having given way on account of the rarefaction of the atmosphere, he was forced to retrace his steps. In his travels, the baron had met with a terrible pest, a fly called by the natives *Don-derobo*, whose bite was as deadly as that of the Tsetse, but affected asses and dogs only. The draught asses of his caravan were destroyed by it.

Retracing our steps, we recur to explorations made, or attempted, in *Nubia*, *Abyssinia*, and *Egypt*, during 1863. The delegation sent out by the Carl Ritter Association of Gotha to ascertain the fate of Dr. Vogel, proved unsuc-

cessful. Leaving the Red Sea at Massoua, it visited at first the country of the Bogos, and its capital, Keren, situated on the confines of Abyssinia and Nubia. Here the delegation separated, and Messrs. de Heuglin and Steudner (who, as we have seen, subsequently joined Madame Tinne), with Dr. Schubert, traversed Abyssinia, visiting Adoa, Axum, and Gondar, and finally reached Khartūm by a long detour; while Messrs. Munzinger and Kinzelbach, going directly to Khartūm, proceeded thence to Kordofan, and attempted to enter Darfūr, but found that their lives would almost certainly be sacrificed if they entered that savage region, and prudently relinquished the attempt. M. Munzinger returned to Massoua, and M. Kinzelbach went back to Germany.

In Egypt, an Egyptian institute has been established, which is busying itself with questions of geography, history, agriculture, archæology, and medical science. It has already published a large volume of transactions. The Egyptian Government has commenced a topographical survey of the country. Baron von Kremer, Austrian consul at Cairo, has prepared a very elaborate work on the Gipsies of Egypt. M. Burgsch has communicated to the French Geographical Society at Paris a dissertation on Avaris and Tanis.

Proceeding westward, we find that M. de Beurmann, at the commencement of 1863, traversed *Tripoli* from Benghazi to Audjelah, intending to penetrate by that route into Waday, in search of Dr. Vogel, but, finding access to that kingdom, by the direct route, cut off, he returned as far as Mourzouk, and thence turned his course toward Bornou. His arrival at Kuka, in the summer, has been ascertained. M. Duveyrier, who spent the greater part of the years 1861 and 1862 in southern *Tunis* and the *Country of the Tuaricks*, has published a very interesting monograph on the Tuaricks and their country. He found a chain of mountains (the Hoggar range) with an altitude of about 6,750 feet, in a region which all maps have hitherto represented as a vast plain. The Tuaricks are remarkable among the natives of Africa, and especially among Mohammedan natives, for the liberty, influence, and authority enjoyed by their women. In this respect they stand in striking contrast to any other people of Northern Africa. A delegation from the Tuaricks visited France, in 1862, and made a very favorable impression on the nation and on the Government, by their dignity and intelligence. An experiment has been in progress for some years for the improvement of the caravan route across the Sahara, by means of artesian wells which should render the regions around them fertile oases. Eminent French engineers have been engaged in it and it has proved successful.

Turning to the western coast, *Senegambia*, where the French have a colony of considerable extent, has been agitated by wars between several of the native tribes. M. Braouézec, a

French traveller who has spent some years in Senegambia, and made many important discoveries there, has communicated, in 1863, to the Bulletin of the French Geographical Society, an account of an excursion made by him in 1861 into Djolof, to explore the country lying between Lake Ghier and the Gambia river. Of *Soudan* there is little of interest to record. Dr. Baikië, whose exploration of the Niger has been noticed in a previous volume, has communicated to the Royal Geographical Society a paper on Nupé. The black Marabout, El Haji Omar, who has been for years one of the most bitter and bloodthirsty enemies of Europeans in Africa, and who was defeated in his repeated efforts to drive the French out of Senegambia, from 1854 to 1859, has, by the force of his character, attained to supreme power in Western Soudan.

Upper and Lower Guinea have been explored by individual travellers during the past year, though by no large expedition. The British Government have added the new and thriving city of Abbeokuta, and the country adjacent, to their African possessions, and Captain Burton, the African traveller, now British consul at Fernando Po, who visited it early in 1863, and, in connection with Captain Bedingfield, explored the river Ogun on which it is situated, states that it is fast becoming one of the most powerful States of Upper Guinea. The British Government have also occupied Whydah, and are exercising a restraining influence upon the inhuman barbarities of the King of Dahomey. MM. Guillemin and Répin, two French travellers who have visited Dahomey, confirm the previous accounts of his cruelties. The kingdom of Yarriba, which, a few years since, was an important and powerful State in the Niger, had been entirely broken in pieces, and considerable portions of it are now absorbed in Abbeokuta. The region of the Gaboon and the mountainous region about its headwaters, where M. du Chaillu hunted the gorillas, have been objects of special attention the past year. MM. Braouézec and Touchard, French naval officers, have ascended and surveyed the river, and testify to the cannibalism of the *Fans* (pronounced *Fongs*) and other tribes of that region; Captain Burton has spent some time with this tribe, and contributed an interesting paper on their habits, customs, etc., to the *Anthropological Review*; and, on another occasion, ascended the Cameroons mountain, a volcano near the Gulf of Biafra, which he regards as the *Θεῶν Οχλῆμα* of the ancient geographers.

MM. du Bellay and Sreval, two French naval officers, explored in the summer of 1862 the river Ogo-Wai, which discharges its waters into the Bight of Biafra. It is a mile and a half wide for a distance of about 180 miles, and is formed by the junction of two large rivers, the Okanda and N'Gounyai, the latter flowing from the S. E., and the former believed to have its source in Lake Tchad. The country

is rich in ivory, ebony, caoutchouc and palm oil, but the natives are ignorant and degraded. Cassange, one of the Portuguese possessions in Southern Guinea, has been seized by the natives, and is still held by them. Mossamedes, a newly founded sea port on the coast of Benguela, established by the Portuguese, is growing rapidly, and has already become an important city.

Madagascar has during the past year been the scene of a revolution, and its king, crowned in 1862, has fallen a victim to his own madness and folly. (See MADAGASCAR.) The island is peopled by two different races, each divided into numerous tribes. The ruling race, the Hovas, are of Malay origin, and comprise only one tenth of the population, being in all about 450,000. The subject tribes are of the negro race, but are taller, stronger, and more energetic than their brethren on the coast. The two large islands east of Madagascar, Mauritius and Reunion, have been very diligently explored within the past two or three years. Of the latter, M. George Azema has published a very complete history, and M. Maillard has issued, during the past year, an extended and finely illustrated work on the topography, geology, and natural history of the island. Mr. James Morris has contributed to the "Journal of Arts" an interesting memoir on the geography, &c., of Mauritius, and M. Leduc has presented to the department of manuscripts of the Imperial Library of Paris an elaborate manuscript history of that island, with numerous maps and plans. The port of Obok, near the Gulf of Tujura, on the coast of Somaui, has been acquired by France, and will be occupied hereafter as a station for the French line of steamers of the *Messageries Imperiales* Company, between Suez and Cochin China.

Oceanica, or at least that portion of it included in *Australasia* and *Polynesia*, claims our attention. In *Australia*, the result of the three exploring expeditions sent out in search of O'Hara Burke and his party, has been laid before the public during the past year. They have traversed Australia from N. to S. and from S. to N. in four different directions, all of them east of the meridian of 131° E. from Greenwich. Stuart has nearly traversed the continent three times, and in the last expedition reached the open sea on Van Diemen's Gulf, on the 24th of July, 1862. Lansborough, leaving the Gulf of Carpentaria on the 10th of February, 1862, struck S. E., and then followed nearly the course of the 145th meridian to Melbourne, which he reached on the 2d of June.

McKinlay took a more extended route, leaving Adelaide on the 14th of August, 1861, and proceeding northward, nearly on the 138th meridian, passed that locality laid down on the maps as Lake Torrens, which proved to be a shallow valley, which is covered with water during the rainy season, but becomes dry from the excessive evaporation of the dry season. Proceeding northward, with a slight inclination to the west, they reached the river Leichardt

in about 19° S. lat., nearly 100 miles from its mouth, on the 6th of May, and followed it to a point five or six miles from the Gulf of Carpentaria. From this locality they turned their faces southeastward, McKinlay having determined to explore the interior of Queensland. The previous journey across the continent had been made without serious suffering or privation, but the route to Port Denison, in Queensland, was attended with great distress from want of water and scarcity of food, and the party were compelled to kill most of their draft animals, bullocks, horses, and camels, for allaying their hunger. They reached the first station in the settled districts on the 6th of August, 1862.

These three expeditions, taken in connection with that of Burke and Wills, and the previous ones of McDouall Stuart, and Sturt and Eyre, give a very accurate idea of the interior of Australia. It is not, as was supposed by the earlier explorers, a congeries of lakes, nor, as Sturt supposed, a vast arid desert. Considerable portions of it are well watered, and have a rich productive soil. Other portions are subject to seasons of drought, but in the moist seasons will yield abundant crops. A third and remaining portion has a poor soil, and is almost wholly barren, yet in the wet seasons yields some grass for herds. There is, perhaps, a larger amount of rainfall on Central Australia than in most countries; but the evaporation which takes place in the clear intensely hot weather is very rapid, and soon reduces the plains to drought, and dries up the lakes and considerable streams. The conservation of the profuse rainfall in tanks, and the resort to artificial irrigation where cultivation is required, will cause this desert to blossom like the rose.

In January, 1863, James Morrill, a seaman who had been shipwrecked in the Peruvian in 1846, and was the only one of the four persons who had reached the shore who survived the hardships that followed their shipwreck, came into the settlements near Port Denison. He had spent nearly seventeen years in the interior of Australia, mostly among the natives, who were, on the whole, very kind to him, but were unwilling that he should return to civilized life. He confirms the reports of the cannibalism of the natives, though he says they will not kill their fellow men, simply for the sake of eating them. The bushmen, he says, are cruel and treacherous even in their dealings with each other.

Mr. Alfred Howitt, son of the celebrated author William Howitt, who had been sent out by the colonial government of Victoria to seek for the survivors of the Burke and Wills party, and who found King, the only remaining member of the party, on the banks of Cooper's Creek, has, during 1862 and 1863, been engaged in an exploration of the western portion of Central Australia, and has visited the large lakes of that region.

New Zealand has, during the past year, been

involved in further trouble with the Maoris or native inhabitants. The Maoris, like most of the Polynesian islanders, are fast melting away under the contact of civilization. Intelligent residents of the islands predict that they will not outlive another generation. The Sandwich and Society Islands are becoming depopulated so far as their aboriginal inhabitants are concerned, with fearful rapidity. The Sandwich Islands, in the time of Capt. Cook, were reputed to have 400,000 inhabitants; in 1832, by actual enumeration, they had 130,313; in 1861, 69,800. The Society Islands had 200,000 inhabitants in Cook's time; they have now not more than 10,000 aborigines.

In New Zealand, M. de Hochstetter has been engaged in the exploration of the northern island, and has visited and described the singular lake, Roto Mohama, or the Hot-water Lake. This lake has its sources in numerous springs rising from its bottom and sides. It has a temperature of about 208° F. A German geographer, Julius Haast, has been exploring the southern island, and has made a survey of its lofty mountains; the chain has a mean altitude of about 7,475 feet. He has discovered the existence of an immense glacier, which feeds Lake Tapuko, through a river which he has named, from one of the colonists, Godley river. Dr. Hector, already favorably known by his researches in the Rocky mountains, has also devoted himself to the study of the physical geography of New Zealand. The European population of New Zealand, according to the census of 1862, amounted to 109,308 persons. Valuable gold mines have been discovered at several points in both of the larger islands, the most productive being in the province of Otago, in the southern island, and in Coromandel, and the province of Auckland, in the northern island. A learned society has been established in the province of Canterbury in the southern island, called the "Philosophical Institute of Canterbury."

New Caledonia, one of the Loyalty Islands, is claimed by the French, and is rapidly settling with French colonists. Lieut. Chambeyron was engaged in 1862 in exploring the interior of the island and surveying its coasts. He ascertained the height of Humboldt Peak, the principal mountain of the island, situated between seven and eight miles from the coast, to be about 5,300 feet. The *Society or Tahitian Isles* are under the protection of France, and French emigration is commencing thither on a considerable scale. An extensive botanical garden there has proved very successful in acclimatizing the useful plants of other countries.

The *Fiji or Viti Islands*, of whose exploration by Dr. Seeman some account was given last year, have been the subject of another volume of great interest by Col. Smythe and his wife, entitled "Ten Months in the Fiji Islands." Col. Smythe was the commissioner sent out by the English Government to investigate the proposed cession of the island to

Great Britain. He regards the Fijians as in many respects a superior race, but like most of the Polynesians they are wholly under the influence of their chiefs. They have been, and some of the heathen tribes undoubtedly are still, cannibals, but they are not so fearless or ferocious as the Tonga islanders were before the introduction of Christianity, and those who have come under the influence of the missionaries are gentle and amiable. *Melanesia*, under which term are included the several groups lying N. E. of Australia, the Solomon Islands, Santa Cruz Islands, Banks Islands, New Hebrides and Loyalty Islands, has, for the last four or five years, under the constant and self-denying labors of the missionary Bishop J. C. Patteson (of the English Church) and his coadjutors, been improving in civilization. He has visited the different groups every year, and where it was possible, brought off young lads to be educated at the missionary college of Kohi-marima in New Zealand, founded by the liberality of the distinguished authoress, Miss Yonge. These lads, after receiving education and Christian instruction, are returned to their native islands to exert their influence for good there.

Philosophical Geography has received a valuable contribution in a recent work by the Hon. George P. Marsh, entitled "Man and Nature; or Physical Geography as modified by Human Action," published by Charles Scribner, N. Y.

The mortality among men eminent for their contributions to geographical science during the year 1863 has been very large. We mention the names of the following, of most of whom biographical notices will be found elsewhere in this volume. Among our own countrymen, Edward Robinson, D.D., LL.D., distinguished for his researches in Biblical geography; Major Howard Stansbury, the explorer of the Great Salt Lake of Utah; Major-General Amiel W. Whipple, one of the officers on the Pacific Railroad exploration; Colonel John J. Abert, for many years chief of the corps of Topographical Engineers; and Rear Admiral Andrew H. Foote, whose explorations on the African coast were of great interest. Of foreign geographers, there were Edme Jomard (*Jomard l'Institut*), of Paris; Dr. Carl Vogel, father of the traveller Vogel, and author of numerous geographical works and maps; Simon Fraser, the discoverer of Fraser river in British Columbia; Dr. George Robinson, an English Oriental traveller; Capt. Philippe de Kerhallet, the French hydrographer; Mallat de Bassilan, an explorer in Malaysia and author of a "*Description des Philippines*"; Moritz von Beurman, a German explorer in Africa, murdered by the Sultan of Waday; Dr. Henry Steudner, one of Madame Tinne's suite, who died on the Upper Nile; Richard Thornton, the geologist of Livingston's expedition; Rear Admiral Jehenne, a French naval officer, who had explored the coasts of Eastern Africa with great assiduity; and perhaps also Consul Petherick, of Khartûm.

GEORGIA. Much suffering was experienced in Northern Georgia from the scarcity of food in the early part of 1863. Such were the apprehensions of Gov. Brown, that he issued a call for the Legislature of the State to convene on the 26th of March. The object of the session was to secure the application of all the productive labor of the State to the cultivation of articles necessary to sustain life. The short crop of 1862, and the difficulty of transporting supplies, had forewarned the authorities of the dangers of a famine. In Savannah both corn meal and bacon were scarce in the spring, and the supplies which existed were greatly reduced by the seizures of the Government. In the hospitals bacon and corn bread were the only articles furnished for nourishment.

The impressments of provisions for the army caused much dissatisfaction. In March thirty cents per pound were allowed for bacon when the market price was ninety cents. This difference in the price allowed by the impressing officers, and the market value, led to the preparation of a case, by mutual agreement, at Atlanta, which was to be carried to the Supreme Court of the State to test the constitutionality of the law. The plaintiffs denied the authority of the Impressment Commissioners to fix an arbitrary price to be paid for every man's goods which the Government might from necessity impress, without regard to the circumstances of each particular case. They denied that prices thus fixed were or could be, in all cases, "just compensation," and that it was just compensation in this case; hence the suit involved the constitutionality of this feature of the law, and the competency of the Congress to pass such a law.

In September, Gov. Brown issued a proclamation on the subject to the people. It was based on information that subalterns, without authority, often made impressments, and gave certificates which were not valid. He admitted the power of the Government to make the impressments, and urged the citizens to resist when they were made by persons who could not show proper authority. He also directed all the civil and military authorities to assist persons in defending their property against illegal seizures, and to arrest and commit to jail all persons making impressments without authority, until a warrant could be issued against them for robbery. The following resolution, offered in the Legislature at its session in November, also illustrates the oppressive operation of the impressment law:

Whereas, the impressment laws passed by the Congress of the Confederate States have been greatly perverted and violated by the impressment officers, and those professing to be, by reason of which many of the citizens of this State have been greatly harassed, defrauded, and wilfully wronged; therefore, be it

Resolved, by the Senate and House of Representatives in General Assembly convened, That the Secretary of War be, and he is most respectfully requested to revoke the appointment of all the impressment officers of this State, and to have appointed in their place and stead, in counties where it may be necessary to

make impressments to feed and support our gallant armies, one or more responsible citizens, not liable to military duty, residing in the counties respectively.

Liberal arrangements were made throughout the State for the relief of the families of soldiers and others. As an instance, in Muscogee county, the grand jury made an assessment of sixty thousand dollars for the benefit of the poor. The State appropriation to the county amounted to thirty-three thousand dollars for the relief of indigent families of soldiers, whether living or dead. There was also a relief association at Columbus, with a capital of \$100,000, which furnished provisions to soldiers' families at less than the market prices.

The election for State officers took place on the first Monday of October. The candidates were Joseph E. Brown, who held the office when the ordinance of secession was passed, and Joshua Hill, a member of Congress at the same period. (See ANNUAL CYCLOPEDIA, 1861, pp. 211, 212, 213; also CYCLOPEDIA, 1862, pp. 272.) Gov. Brown, in his letter consenting to a renomination, said: "We should never, under any circumstances, consent to a reconstruction of the old Union, or to any political union with the Abolition States upon any terms whatever. Nor should we ever lay down our arms till the independence of these Confederate States is unconditionally recognized."

The views of Mr. Hill were also expressed in a letter that was made public. After stating that he had no desire whatever for the office for which he had been nominated, he says:

Since my resignation of my seat as a member of the Congress of the United States, which occurred immediately upon the withdrawal of my colleagues, I have taken no active part in politics. I had often expressed my honest convictions that the destruction of the Union would be followed by a long and bloody war, disastrous beyond precedent in its results to every section; and that the idea of dissolving the Union with the hopes of reconstructing it on a basis more permanent and protective of the rights of the slave States, was fallacious and absurd. I compared the effort to accomplish such an impossibility to the folly of taking the most delicate glass and crushing it to atoms, in the vain hope of collecting the scattered fragments, and, by reuniting them, making the scattered vessel more comely and durable than it was before. It was a strange delusion, without which the Union could not have been broken. I believe what I said of the impossibility of reconstruction. Time and events have deepened these convictions.

I felt little comfort in the flippant assurance of sanguine orators "that the Yankees could not fight if they would, and would not if they could." I knew the time was when they had fought, and I believed that, by collision with our brave troops, they would learn to do it again. In war, as in politics, it is unwise to underrate your adversary.

The war, with all its afflictive train of suffering, privation, and death, has served to eradicate all idea of reconstruction, even with those who made it the basis of their arguments in favor of disunion. I always regarded it as impossible, except by the success of the Northern arms, and then only the Union in name, and not the free Government of our fathers. I want no such Union as that, and will not accept it.

The best argument in favor of disunion, and the one most relied on by its advocates, was apprehension for the security of our slave property. If it was not then in danger, it is in extreme peril now.

The disasters of July evidently led to a consideration of the subject of reconstruction as well in Georgia as in other States. Thus, in August, ex-Senator Toombs was led to write as follows:

WASHINGTON, GA., August 18th, 1863.

Dr. A. Bees, Americus, Ga.:

MY DEAR SIR: Your letter of the 15th inst., asking my authority to contradict the report that "I am in favor of reconstruction," was received this evening. I can conceive no extremity to which my country could be reduced in which I would for a single moment entertain any proposition for any union with the North on any terms whatever. When all else is lost, I prefer to unite with the thousands of our own countrymen who have found honorable deaths, if not graves, on the battle field. Use this letter as you please.

Very truly, your friend, &c.,

R. TOOMBS.

In August, a print issued at Macon said:

To-day, and in the heart of Georgia, may be found men ready to discuss a reconstruction of these dissevered Unions! Men willing to degrade themselves, to enslave their wives and children—to insult our dead in their soldiers' graves—to make for their country a history of shame and infamy—to be the mock of all men for all time to come, by voluntary reunion with our vile, our despicable enemies. Reconstruction means but subjugation. To ask for readmission to the United States would be to petition for our own slavery and degradation.

Another in Savannah, a few days later, said:

That there are submissionists among us, remarks the Milledgeville "Union," all now see. They are banding together to form a political Union. Who compose this party or league? First and foremost the men who have never wanted the South to succeed. These are mostly men born at the North, or who have relatives in that section. Next comes the speculator, who has got rich out of the sufferings of our people, and who has bought property with his ill-gotten gains, which property he hopes to save by swearing allegiance to Lincoln, when it is put in danger. The next class (in shame and sorrow we say it) is composed of men who are between forty-five and fifty years of age, and who fear that they may yet be called to the field. They may have sons in the army—they may have had their sons butchered by the hated foe, but to keep at home themselves they are ready to dip their fingers in the heart's blood of an only son, and write traitor on his pale cold forehead. If we are not right, we are wrong. If we are not right in this war, we are all traitors. The man, therefore, who is ready to submit to Lincoln confesses himself guilty of treason, and deserves a halter.

It appears that there were a very few who were bold enough to come out openly for reconstruction, but there were many who secretly harbored a wish for it. The position taken by the secessionists is shown in the above extracts and in the following: "Now, the time has long passed for discussing that subject. Secession is a fixed fact: we have been fighting two years for it; and I cannot separate between opposition to seceders and opposition to secession, which means opposition to the war, and that means submission to Abraham Lincoln."

A third candidate for governor was nominated, by the name of Furlow; but it does not appear what his peculiar views were. The entire vote cast was 64,704. The vote shows that Brown had 36,558; Hill, 18,122; Furlow, 10,-

024—total vote, 64,704. For President in 1860 the total vote was 106,365.

Many of the candidates for the Congress at Richmond claimed the votes of the citizens on the ground that they were in favor of an "honorable peace."

Gov. Brown, in his message to the Legislature of the State, which convened in November, recommended the repeal of the substitute law, and the employment of negroes as teamsters and in similar capacities in the army; that the pay of officers be increased twenty-five per cent., and that of privates to twenty-two dollars per month, and that the salaries of all State officers be increased; that cotton planting be restricted to one fourth of an acre to the hand, and that every energy be directed to the production of food; that \$500,000 be appropriated to support soldiers' families; that \$8,000,000 be appropriated as a military fund, and \$2,000,000 as a clothing fund; that the militia be reorganized, so as to include all between eighteen and sixty, and that the 10th day of December be observed throughout the nation as a day of fasting, humiliation, and prayer. He also opposed loaning the credit of the State to the Confederate Government or the endorsement of its bonds.

The State debt was reported as follows:

Bonds bearing interest.....	\$5,911,750
Bonds not bearing interest.....	176,000
Treasury notes, not bearing interest.....	7,588,000
State change bills, not bearing interest.....	478,660
Total.....	\$14,149,410

To meet this indebtedness, the interest and principal, the State had not only her taxable wealth, returned in 1863 as \$991,596,383, and in 1860 returned at \$672,322,777, but held stocks in banks and railroads amounting to \$992,400, and the Western and Atlantic railroad entire, which was valued by a committee of the Legislature before the inflation of prices at \$8,840,124, and which paid into the treasury as its net earnings during the year the sum of \$1,650,000.

Resolutions were unanimously passed by the Legislature, reënacting the resolution in reference to the secession of the State, and pledging anew its entire resources, in vindication of the position then assumed, and declaring the determination not to become weary of the war until independence was achieved.

The military operations touched Georgia only on the southeastern and northwestern borders. Some naval movements in the waters adjacent to the Savannah river, which involved the attack on Fort McAllister, the capture of the iron-clad steamer Atlanta, and the burning of the town of Darien, were the most important in the southeastern part of the State. Darien was burnt on the 11th of June by a force landed from two transports, accompanied by three gunboats. All the churches except the Methodist, the market-house, courthouse, jail, clerk's office, and all the houses except three, were destroyed. The

salt works, at a distance from the town, were subsequently destroyed.

In May the governor called upon the State troops to come to the aid of the army in Mississippi, but without securing a sufficient force. On the approach of Gen. Rosecrans to Chattanooga, the reserves of the State were called into the field, and on a call for eight thousand, eighteen thousand offered themselves. The military organizations and officers had been retained, and to this cause the governor ascribed his success in securing men.

The Convention which adopted the ordinance of secession, at the same time passed an ordinance declaring that each alien within the State at that time should be regarded as a citizen, unless he made a declaration within three months before a court of record that he did not wish to be considered a citizen of the State. All aliens who omitted to make this declaration were therefore conscripted like other citizens for the army.

Claims for exemption were subsequently brought before the courts of the State by aliens, but in all cases it was decided that the plea of alienage conferred no exemption. On the same grounds the protest of the British consul, Mr. Fullerton, in similar cases was disregarded.

The number of soldiers contributed to the army during the year is at present unknown. The foreign commerce of the State was reduced to a few small cargoes in some light vessels, which escaped the blockading force.

GERMANY, a confederation of sovereign and independent states in Central Europe. The Constitution of the Confederacy consists of twenty articles. Its object, according to the first article, is "the preservation of the internal and external security of Germany and the independence and inviolability of the various German states." The organ and representative of the Confederation is the Diet of Plenipotentiaries, which is permanent, and assembles in the free city of Frankfort-on-the-Main. The executive and administrative government of the Diet is constituted in two forms: 1st. as a General Assembly or Plenum, in which every member of the Confederation has at least one vote, and the larger states have two, three, or four votes each; and 2d, the Minor Council, or Committee of Confederation, in which the eleven largest states cast one vote each, while six votes are given to the smaller states, a number of them combined having a joint vote. The General Assembly decides on war and peace, on the admission of new members, on any changes in the fundamental laws or organic institutions, but in all other cases the Minor Council is competent to act both as Legislature and Executive.

At the time of its establishment, in 1815, the German Confederation consisted of thirty-nine sovereign states, but the following five states have now ceased to exist: 1st, the Duchy of Gotha, which became extinct in 1826, by the decease of the last duke, and was according to

compact divided between Saxe Coburg and Saxe Meiningen; 2d, the Duchy of Anhalt Köthen, which, in consequence of the extinction of the ducal house in 1847, became annexed to Anhalt Dessau; 3d and 4th, the Principalities of Hohenzollern Hechingen and Hohenzollern Sigmaringen, which, in 1849 were united to Prussia, in consequence of the simultaneous abdication of the two reigning princes in favor of the king of Prussia, head of the House of Hohenzollern; 5th, the Duchy of Anhalt Bernburg, which became extinct on August 19th, 1863, and was united with Anhalt Dessau-Köthen.

The following table exhibits the present members of the German Confederation, the titles of the Sovereigns, the number of votes cast by each member in the Diet, and their rank. The Presidency of the Federal Diet is permanently vested in Austria.

STATES.	Title of sovereign.	Votes in General Assembly.	Votes in Minor Council.	Place in the Diet.
1. Austria.....	Emperor.	4	1	I.
2. Prussia.....	King.	4	1	II.
3. Bavaria.....	"	4	1	III.

The population of each German state, according to the census of 1861 (unless otherwise marked), its area in English square miles, as well as the contingent of each state in the Federal army, may be seen from the following table:

The great majority of the inhabitants of the Confederation belong to the Teutonic race. In two states only—Austria and Prussia—is there a considerable number of natives of other races. Austria has more than 6 millions Slavi and about 500,000 Roumanians in its crownlands, which belong to the German Confederation, and Prussia about 850,000 Slavi. In four

COUNTRIES.	Area in English sq. miles.	Population.	Army corps. Division.	CONTINGENT TO FEDERAL ARMY.

of the Austrian provinces of the Confederation—Bohemia, Moravia, Carniola and Illyria, Trieste, Goerz, Istria—the non-German races even form a majority of the population.

For several years Germany has been agitated by a movement for reforming the Federal Constitution and bringing about a closer union of the states. To promote this object, the "National Verein" (National Association) was founded, which soon spread through all the states, with the exception of Austria. The greatest difficulty in the way of a union of the German states, appeared to be the Government of Austria, which had announced its design by means of the new Constitution of the Austrian Empire to consolidate permanently all the various nationalities of the empire into one body politic. The majority of the National Verein were of opinion, that the first reconstruction of Germany should not embrace Austria.

One of the earliest results of the national movement was the attention paid to the construction of a German fleet. The General Assembly of the National Verein held at Heidelberg on August 23d and 24th, 1861, decided to organize a national subscription for the construction of gunboats, to appropriate from their own receipts 10,000 florins to this end, and to transmit all the contributions to the Prussian Ministry of the navy. In the Federal Diet propositions for the construction of a fleet for the defence of the coasts of the Northern and the Baltic seas were made by the Government of Hanover, on Oct. 10th, 1861. On Feb. 13th, 1862, the military committee of the Federal Diet proposed to create a commission, consist-

ing of experts, in which all the states might be represented, which should indicate all the general measures to be adopted. A second commission, composed exclusively of delegates of the sea coast states, would then be charged with elaborating the projects indicated by the first commission. This proposition was adopted by the Diet on March 8th, 1862, and the first commission assembled at Hamburg, on April 16th, 1862.

On Oct. 31st, 1861, the representative of the Duke of Saxe-Coburg-Gotha demanded a Federal decision whether the National Verein conformed to or was contrary to the Federal laws. He added that it was time that the princes should give satisfaction to the wishes of the nation, and he indicated as a means to arrive at the unity of Germany, the combination of diplomatic and military control in one hand.

A comprehensive project of Federal reform was elaborated by Mr. de Beust, the prime minister of Saxony, and together with an explanation, presented to Austria. This project, which is dated Oct. 15th, 1861, called forth a long and important diplomatic correspondence. The Prussian cabinet before which it was laid, on Nov. 16th, replied to it by a despatch, dated Dec. 20th. To the Prussian despatch Austria, the four kingdoms, and several other states of the Confederation, replied by a note of Feb. 3d, 1862. The project of Mr. de Beust retains the Diet with its 17 votes, but proposes that it meet twice a year, on March 1st and November 1st, alternately at Ratisbon and Hamburg, each session lasting four weeks. The Presidency was to be alternately in Austria

and Prussia. It combines with the Diet an assembly of delegates elected by the Chambers of the states. Austria is entitled to send to this assembly 30 representatives elected by the Diets of the German provinces; Prussia 30 members elected by the two Prussian Chambers, Bavaria 10, Saxony, Hanover, Würtemberg, 6 each, Baden 5, Hesse-Cassel and Hesse-Darmstadt, 4 each; Holstein, Luxemburg, Brunswick, Mecklenburg-Schwerin, Mecklenburg-Strelitz, Nassau, Saxe-Weimar Oldenburg, 2 each; Saxe-Coburg, Saxe-Meiningen, Saxe-Altenburg, Lübeck, Frankfort, Bremen, Hamburg, 1 each; the duchies of Anhalt together 1, the two Schwarzburg conjointly, 1, Waldeck, Lichtenstein, and the two Lippe, 1; total 128. This assembly is to meet only when convoked by the Diet; and it is to be convoked only when the Diet has elaborated a general law which the assembly may accept, reject, or amend, or when the Diet wishes to receive its opinion on political questions. During the interval from one session of the Diet to another an executive is charged with superintending the execution of the Federal acts. The executive power is to be alternately in the Emperor of Austria, the King of Prussia and a third prince elected by the other states of the Confederation. Three other institutions complete this organization; a federal tribunal, a federal chancellorship having its seat at Frankfort, and a military administration of the Confederation. The Austrian Government, in its reply of Nov. 5th, made to this Saxon project the following objections: 1. That it altered in a prejudicial manner the relations of the Germanic Confederation to Foreign Powers. 2. That it virtually incorporated all the Prussian provinces with the Confederation, by providing for the election of the Prussian deputies by the whole of the two Prussian Chambers. 3. That it gave to the deputies a certain competency in political questions. 4. That it was not likely to simplify Federal affairs. 5. That it demanded from Austria the sacrifice of the permanent Presidency without offering to her an equivalent. Austria declared her readiness to renounce the permanent Presidency, if the Confederation would admit to the rights of the Confederation all the territories of Austria and Prussia. She also declared in favor of maintaining the Diet at Frankfort, and of adding a representative element.

The Prussian Government, in its reply of Dec. 20th, expressed the opinion that it was especially necessary to avoid all that could transform Germany into a federal state, because the constitution of a federal state would require the chief direction to be given to one of the two great powers, which would force the other out of the Confederation. According to the opinion of the Prussian Government, the Saxon project gave to the small states a disproportionate influence. A closer union might be effected by means of special conventions between some members of the Confederation. Prussia

already had concluded a military convention (June 1st) with the Duke of Saxe-Coburg-Gotha, by virtue of which the military force of the Duchy was put under the command of Prussia. But on Nov. 23d, the Duke of Saxe-Meiningen formally protested against this convention, as violating the rights of the agnates, and the King of Saxony a few days later united in this protest.

The view of Prussia respecting the right of the states to form special conventions was denied by Austria, the four kingdoms, and Hesse-Darmstadt and Nassau, in a note of Feb. 2d. They regarded such conventions as clearly opposed to the spirit of the Federal Constitution. Prussia, in notes dated Feb. 14th and 21st, again supported her views, and continued her negotiations with other small states for the conclusion of special military conventions.

A new conference for discussing the subject of Federal reform was held at Vienna, in July, 1862, and attended by representatives of Austria, the four kingdoms, the two Hesse and Nassau. A new proposition of reform was agreed upon and laid before the Diet on August 14th. The main feature of the project was again the establishment of an assembly of delegates chosen by the parliaments of the different states. Austria proposed at the same time a new project of a Federal tribunal, which was to sit at Frankfort and to consist of fifteen ordinary members and fifteen extraordinary assessors. The representatives of Prussia protested against all these schemes, and contended that any resolution of this kind could not be passed by a majority, but only by a unanimity of votes.

The people of Germany, while they were unanimous in demanding a reform of the Federal Constitution and the convocation of a German parliament, were divided on the question whether Austria was to be included in the reconstructed union or not. The majority of the "*National Verein*" were in favor of reconstructing Germany without Austria and under the leadership of Prussia, and they were, therefore, called by their opponents the Little German Party (*Kleindeutsch*). Those who insisted on embracing Austria in the union called themselves the Great German Party (*Grossdeutsch*). In addition to these two national organizations, each of which held annually a General Assembly, there was also organized, in 1862, a General Assembly of the members of German legislatures ("*Abgeord-neten-Tag*"). These three bodies, which must be well distinguished from each other, namely: 1, the General Assembly of the "*National Verein*," called by their opponents the Little German Party; 2, the General Assembly of the "Great German" Party (also called the "German Reformed Association"); and 3, the General Assembly of the members of German Diets, exercised a great influence upon the progress of the Union movement. From the detailed accounts of their proceedings in 1862 and 1863, which we give below, it will be seen

that the "National Verein" and the "General Assembly of the members of German Diets," agreed in all important points, and that they demanded a more liberal and democratic basis for the reconstructed union than the Great German Party, although the latter contained likewise a strong democratic element.

The first General Assembly of the members of German Diets met at Weimar, on Sept. 28th. The members of the Austrian Council of the Empire had been specially invited, but none of them made their appearance. The assembly was attended by 213 deputies, representing most of the German states, and elected Mr. Fries, of Weimar, president, and Mr. Unruh, of Prussia, and Barth, of Bavaria, vice-presidents. Upon motion of Mr. Joseph, of Saxony, it was resolved, that the admission by the assembly of deputies from states, where constitutions had been introduced or modified without the assent of the chambers, did in no way prejudice the validity of these constitutions. It then adopted the following resolutions: 1. The Federal unity of Germany such as it was legally expressed by the German constitution of March 28th, 1849, without encroaching upon the independence of the particular states, is a political necessity both for making Germany respected abroad and for securing liberty at home. It can only be affected by the convocation of a parliament. The creation of a parliament for all Germany constitutes a right of the German people. It is the duty of every German, of each government, and of every German chamber to urge by all legal means the establishment of this constitution. 2. The German parliament must emanate from a free popular election. The proposed assembly of delegates cannot be regarded as even a first step, and ought, therefore, to be rejected. 3. The proposed Federal tribunal appears to be very dangerous to liberty, and must be absolutely rejected. 4. German unity must embrace all Germany; no people ought to be excluded, and it is the right as well as the duty of all the states to unite. This holds good, particularly of German Austria. But if insurmountable obstacles should oppose themselves in the beginning to the formation of a Federal unity embracing German Austria, this should not be a reason for the other states to delay on their part the execution of this national work. On the other hand, the admission of other countries of the Austrian empire, which have heretofore formed no part of the Germanic Confederation, is irreconcilable with the national wants of the German people. 5th. The question of the executive German power should not be definitely settled without the participation and the assent of the first German parliament. In the discussion which preceded the adoption of these resolutions, only one dissenting voice was heard, that of Herr Von Gagern, who pleaded the cause of Austria and demanded that the central power should be placed conjointly in the hands of Austria and Prussia. The assembly appointed a standing

committee of twenty members, who jointly chose eleven additional deputies.

A few days later, on Oct. 6th and 7th, the annual general assembly of the "National Verein" was held at Coburg. It passed resolutions similar to those passed at Weimar. According to a report of the committee, the "National Verein" at this time numbered 25,325 members.

The first general assembly of the "Great German" Party was opened at Frankfort on Oct. 28th, and attended by about 550 members, many of whom were representatives of the chambers of Austria, Bavaria, Baden, Hanover, and other states. The views of this assembly are expressed in the following resolutions, which were adopted almost unanimously, viz.: 1st. The reform of the constitution of the Germanic Confederation is an urgent and indispensable necessity. 2d. The reform must make it possible for all the German states to enter the union. 3d. It can be achieved only by the creation of a strong Federal executive with a national representation. 4th. The only possible form for the Federal executive under the actual circumstances would be an executive college with an appropriate distribution of votes. 5th. The assembly of delegates, proposed by eight governments, must be accepted as a first step toward the creation of a national representation; but it is to be hoped that the governments will not delay to transform this assembly into a periodical representation near the Diet with an extension of its powers. 6th. In order to procure for it the required moral authority, it ought to have a sufficiently large number of members. The legislatures of the several states ought to have the right to fix the mode of their election; but in no case should the eligibility be limited to the members of the several national representations. 7th. The reform should be effected by way of agreement upon the basis of the actual Federal Constitution. 8th. Although a Federal tribunal whose independence should be secured appears to be one of the most useful institutions, the plan proposed by the eight governments does not appear to answer the desired end.

The Federal Diet toward the close of the year had animated debates on the question of establishing an assembly of delegates. Austria and her allies (the four kingdoms, Hesse-Darmstadt and Nassau) maintained that such a measure would not be an organic change of the constitution, and that therefore no unanimity of votes was required for its passage. This view was opposed by Prussia and Baden, the latter power maintaining, moreover, that if a representation of the people was to be inaugurated at all in connection with the Diet, it ought to have greater powers than were accorded to it by the scheme of Austria and her allies. A vote on the subject was reached on Jan. 22d, 1863. Only seven out of the seventeen votes of the minor council declared in favor of the Austrian scheme. Denmark declared that the negotia-

tions concerning the position of the duchies of Holstein and Lauenburg were not sufficiently advanced to enable her to judge if so important a modification of the Federal Constitution would be compatible with the interest of the duchies. The representative of Holland declared that Luxemburg and Limburg would never consent to a modification of the Federal Constitution which would in any way interfere with their independence and legislative powers; that as to Limburg it was altogether foreign to Germany by its language, manners and nationality, and if the public opinion of the country were consulted, it would suggest rather its complete separation from the Confederation than propositions which would bind it more closely to Germany. After this vote, the representatives of Austria declared, that the imperial government reserved to itself the right to carry out the project of an assembly of delegates by means of private arrangements; that it hoped that the Diet would yet be able to take the subject up again, under more favorable circumstances; and that it was always ready to enter into deliberations upon the creation of a more effective Federal executive power and a national representation proceeding from the particular legislatures of the several states. Bavaria, Saxony, Hanover, Würtemberg, Hesse-Darmstadt, and Nassau declared their concurrence in the opinion of Austria.

On July 31st, 1863, the Emperor of Austria, in an autograph letter, invited all the sovereigns of the German Confederation and the senates of the free cities to meet in an assembly at Frankfort-on-the-Main at which all should personally attend, with the object of discussing the question of a reorganization of the German Confederation suitable to the requirements of the age. Most of the governments accepted the invitation, and the sitting of the congress was accordingly opened on August 17th, at eleven o'clock in the morning, under the presidency of the Emperor. The Emperor in his opening speech spoke at great length of the proposed reform and the King of Bavaria replied. The following is a complete list of the princes and representatives of the free cities who took part in the proceedings of this Congress. The Emperor of Austria, the Kings of Bavaria, Saxony, and Hanover, the Crown Prince of Würtemberg, Grand Duke of Baden, Elector of Hesse, Grand Duke of Hesse, Prince Henry of Holland, the Duke of Brunswick, Grand Duke of Mecklenburg-Schwerin, Duke of Nassau, Grand Duke of Saxe, Duke of Saxe-Meiningen, Duke of Saxe-Coburg-Gotha, Grand Duke of Mecklenburg-Strelitz, Grand Duke of Oldenburg, the Hereditary Prince of Anhalt-Dessau, the Prince of Schwartzburg-Sondershausen, the Prince of Schwartzburg-Rudolstadt, Prince of Lichtenstein, Prince of Waldeck, Prince of Reuss (younger branch), the Prince of Schaumburg-Lippe, the Burgomaster of Lubeck (Herr Bremer), the Burgomaster of Frankfort (Dr. Müller), the Burgomaster of Bremen (Dr. Duck-

witz), the Burgomaster of Hamburg (Dr. Haller), making altogether twenty-four princes and four representatives of free towns. The Kings of Prussia and Denmark, the Princes of Anhalt-Bernburg, Saxe-Altenburg, Reus (elder branch), Hesse-Homburg, and Lippe, who constitute the remaining members of the German Confederation, were neither present themselves nor represented by deputy.

On August 19th the King of Saxony left Frankfort for Baden, where the King of Prussia was staying, with a joint written invitation from the assembled princes to the king, to take part in the Congress, but the king persisted in declining. The session of the Congress terminated on Sept. 1st. The Emperor of Austria, at the closing sitting, expressed his satisfaction at the complete fulfilment of his hopes of a direct coöperation on the part of the German sovereigns. He hoped that this first Congress of German Princes would soon be followed by a second, that all the members might be united into one great body, and that their endeavors would be crowned with success. The "Reform Act," as finally agreed upon by all the states except six (Baden, Luxemburg, Saxe-Weimar, Mecklenburg-Schwerin, Waldeck, and Reuss, younger branch), bears the date of Sept. 1st, 1863, and is entitled as follows: "Reform of the German Bund as proposed by the Congress of Princes held at Frankfort." Its provisions, briefly stated, are as follows:

1. The objects of the German Confederation are declared to be the maintenance of the security and power of Germany in regard to foreign countries; the maintenance of public order at home, and the furtherance of the interests of the German nation.

2. A Directory is established for the management of the affairs of the Confederation; a Federal Council is organized from among the plenipotentiaries of the governments; an assembly of Federal delegates is to be convoked periodically, and a Federal court of justice is established.

3. The Directory is to consist of six votes, namely: 1. Austria; 2. Prussia; 3. Bavaria; 4. Saxony, Hanover, and Würtemberg, alternately; 5. A member elected by Baden, the two Hesse, Holstein, Luxemburg, Brunswick, the two Mecklenburg, Nassau; 6. A member elected by all the other states; the Federal Council of seventeen members nominally, but twenty-three actually, as Austria and Prussia are to have three votes each.

4. The Assembly of Delegates is to consist of three hundred and two members—elected, not by the people, but "by the representative bodies of the several German states," Austria is to have seventy-five members, and Prussia (if she pleases) the same number. The four free cities are entitled to send two representatives (the original proposition was for one only, but this was amended). This Assembly is to meet once in three years, in the month of May, and

may be prorogued by the Directory for any period not exceeding two months. Should the Assembly be dissolved, the Directory is empowered immediately to issue orders for a new election. The right to "make representations and complaints" is granted to the Assembly, and it may "pass resolutions" on national affairs, but legislative privileges are denied.

5. The Assembly of Princes "takes into consideration the results of the deliberations of the Chamber of Deputies" and "examines into the representations and complaints" of the Chamber of Delegates, and orders the promulgation, by the Directory and by the several states, of the acts it has sanctioned.

6. No formal declaration of war can be made without the consent of two thirds of the Federal Council. Should there be danger of a war between a foreign power and a state which has possessions not belonging to the Confederation, the Directory is bound by the decision of the Federal Council whether or not the Confederation shall take part in the war.

Before separating, eighteen princes and the four burgomasters of the free cities signed another letter to the King of Prussia, in which they expressed their deep regret at having been deprived of the king's personal coöperation in the great work they had undertaken, and state that they nevertheless cherished the hope that a general understanding will be ultimately arrived at. The letter concludes thus: "Being all inspired by the wish for German unity, and ready to make sacrifices, we have come to a perfect agreement upon the project of reform. We shall consider it a great success for ourselves and for our peoples if resolutions are maturing in the mind of your Majesty, by which, thanks to the unanimity of her princes, Germany will realize her desire for a wholesome reform of her Constitution, based upon the laws of the Confederation."

In its reply, dated September 24th, the Prussian Government made its participation in the work of reform contingent upon three preliminary conditions: 1, a right for both Prussia and Austria of vetoing every war which is not carried on for the defence of Federal territory; 2, complete equality of Austria and Prussia within the Confederacy; 3, the election of the Assembly of National Delegates by a direct vote of the German people.

The attempt of Austria to prevail upon the other German courts to agree upon a joint answer to Prussia failed, and it was, therefore, deemed best to call a "Conference of Ministers" to deliberate upon the next step to be taken. This conference was opened at Nurnberg on October 24th, but only ten of the twenty-three governments which had signed the letter of September 1st to Prussia, were represented. A majority of them did not agree to the propositions of Austria and Saxony, to reply to Prussia by identical notes.

On August 21st, the Assembly of German deputies (members of Legislatures of German

states) was opened at Frankfort-on-the Main. It was attended by about 300 delegates. Herr von Benningsen, of Hanover, was elected president; Herr Barth, of Bavaria, and Herr von Unruh, vice-presidents. The following resolutions were unanimously adopted: 1. The Assembly regards the initiative of the Emperor of Austria in preparing the way for a reform of the Federal Constitution, and the ready participation of most of the German princes and the free cities in this work, as a cheering testimony of the universal conviction as to the insufficiency of the actual Federal Constitution, and as to the necessity of its reform. 2. The Assembly still believes that only the idea of a Federal State, as expressed in the "Constitution of the German Empire of March 28th, 1849," can fully satisfy the national demand, but under the actual circumstances, it is unwilling to reject absolutely the proposition of the Emperor of Austria. 3. But it must emphatically declare itself against some portions of the Act of Reform, especially against the proposed plan of national representation. It regards the election of a German Representative Assembly by a direct vote of the German people as indispensable. 4. The two Great Powers ought to have equal rights; and those provinces of Prussia, which before 1848 did not belong to the German Confederation, ought to be admitted to it. 5. The Act of Reform ought not to be introduced without the consent of a German National Assembly.

The "National Verein" held its third General Assembly at Leipzig, on October 17th. It was resolved that the Act of Reform proposed by Austria does not meet the expectations of the German people; that its introduction would be no step toward the realization of German unity, and therefore the National Verein must decidedly oppose it. The counter propositions of the Government of Prussia are equally insufficient. The National Verein stands by the Constitution of 1849. It rejects no means which will tend to making Germany really a Federal state. But the German people alone, through its chosen delegates, can ultimately decide upon the Constitution of the Empire.

The General Assembly of the *Grossdeutsche* (Great German) party was opened at Frankfort-on-the Main, on October 28th. This meeting expressed a more favorable opinion of the Congress of Princes and its work. It declared in favor of adopting the Act of Reform; but at the same time proposed several amendments, as the holding of biennial instead of triennial Assemblies of Delegates of German Legislatures. It was attended by 442 members, and the principal speakers were Herr von Lerchenfeld, of Bavaria, Herr von Wydenbrugg, of Saxe-Weimar, and Prof. Brinz, of Austria.

The difficulties between the Diet of Holstein and the German majority of the Diet of Schleswig on the one hand, and the Danish Government on the other, led, toward the close of the year, to a very serious complication between

Denmark and Germany, and the year 1863 closed with the almost certain prospect of a speedy war. (*See SCHLESWIG-HOLSTEIN.*)

GETTYSBURG is the capital of Adams county, Pennsylvania. It is situated on the head waters of the Monocacy, about forty miles north of Frederick in Maryland. It has a beautiful location, surrounded with hills, valleys, and the dark outline of the Blue Ridge on the west, and the billowy Catoctin range on the south. A great battle was fought here on the 1st, 2d, and 3d days of July. Subsequently the bodies of the slain of the Union Army were gathered in a national cemetery located on the battle field. This was dedicated with much ceremony in November.

GILBART, JAMES WILLIAM, Esq., born in London, March 21, 1794, died at Brompton-crescent, Middlesex, August 8, 1863. He became a clerk in a London bank in 1813, and while in that position took an active part in the Athenian Debating Society, and was subsequently connected with the Union Society, of which Mr. J. S. Mill and Lord Macaulay were members. From 1825 to 1827 he was a cashier in a Birmingham office, and during that time delivered an interesting course of lectures on the philosophy of history. Shortly after this he was appointed manager of a branch of the Provincial Bank of Ireland, but retired from that post to take the general management of the London and Westminster Bank, the duties of which he discharged with much ability until 1859, and on his retirement from the office of general manager he was elected a director of the company. Mr. Gilbert was the author of many works, among which may be mentioned "A Practical Treatise on Banking," "The History and Principles of Banking," "A History of Banking in Ireland," "The Logic of Banking," "Banking and the Currency," "History of Banking in America," "Logic for the Million," &c. He was a Fellow of the Royal Society, and in the International Statistical Congress, held in July, 1860, he was appointed one of the committee of the section of Commercial Statistics.

GRAND GULF, a village in Claiborne county, Mississippi, on the Mississippi river, two miles below the mouth of Big Black river. It contained two or three churches, a market, and several steam mills. Considerable cotton was formerly shipped from the place. The population was about 1,000. It was fortified by the Confederates with batteries fronting on the river, but evacuated on the approach of Gen. Grant in the rear. (*See ARMY OPERATIONS.*)

GREAT BRITAIN, OR THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. Area, 112,406 square miles; population, 1861, 29,334,788. Capital, London. Government, a Constitutional Monarchy. Parliament, two Houses, Lords and Commons. Queen, Alexandra Victoria. Heir apparent, Albert Edward, Prince of Wales, eldest son of the Queen. Cabinet: Viscount Palmerston, First Lord of

the Treasury; Lord Westbury, Lord High Chancellor; Right Hon. W. E. Gladstone, Chancellor of the Exchequer; Earl Granville, K. G., Lord President of the Council; Duke of Argyle, Lord Privy Seal; Rt. Hon. Sir George Grey, Baronet, Secretary of State for the Home Department; Earl Russell, Secretary of State for Foreign Affairs; the Duke of Newcastle, Secretary of State for the Colonies; Earl De Grey and Ripon, Secretary of War; Rt. Hon. Sir Charles Wood, Baronet, Secretary of State for India; the Duke of Somerset, First Lord of the Admiralty; Rt. Hon. T. Milner Gibson, President of the Board of Trade; Lord Stanley of Alderley, Postmaster General; Rt. Hon. Edward Cardwell, Chancellor of the Duchy of Lancaster; Rt. Hon. C. Pelham Villiers, President of the Poor Law Board.

There was nothing of special interest to the United States in the events transpiring in Great Britain previous to the opening of Parliament on the 6th of February, 1863. In the royal speech at the opening of the session, the approaching marriage of the Prince of Wales to the Princess Alexandra of Denmark was announced; the offer of the Greek crown to Prince Alfred and its declination were stated. It was further declared that the protectorate of the Ionian Isles would be resigned, in order that they might be incorporated with the kingdom of Greece whenever a stable government was organized. The patient endurance exhibited by the manufacturing population of the cotton districts, under their severe privations was eulogized. The neutral position hitherto maintained between the contending parties in the United States, it was announced, would still be preserved. The speech closed with a reference to the beneficial results of the commercial treaty with France, and the adjustment of a similar treaty with Belgium, and the announcement that papers relating to the recent transactions in Japan would be laid before the two Houses. The arrival of the Princess Alexandra at Margate, on the 5th of March, her subsequent progress through London, and her marriage on the 10th of that month occupied public attention to the exclusion of other topics. The relations of the British Government at this time and for two months later with the United States were of a very unsatisfactory character, and the opinion was widely entertained in Europe that ere long the two nations would drift into a war with each other. There was far less apprehension of such a result on this side the Atlantic than on the other, but there was for some time real danger of a collision. The Government of the United States, annoyed by the legal quibbles by which the escape of the Alabama had been permitted, and the spirit of the Foreign Enlistment Act violated, and fully apprized that other armed vessels, some of them of a formidable character, were in progress of construction in English ports and destined soon to add to the fleet of marauders on the high seas, unless the British Government maintained

in better faith its neutrality, remonstrated in strong terms against this unfriendliness in the treatment of a power with whom its relations had hitherto been so intimate and cordial, and gave notice of its intention to make reclamation for all losses occurring to American citizens through the destruction by the Alabama.

On the other hand the ship owners, many of them engaged in blockade running, had been subjected by Adm. Wilkes and other American commanders to so rigid a scrutiny of their vessels, under the right of visitation and search, which, following British precedent, had been most rigorously exercised, and had so often had them seized when their real destination differed from their professed ones, that they constantly besieged the British Ministry with appeals for the recognition of the Southern Confederacy, and for forcible seizure of American property to reimburse their losses. Two incidents, occurring about this time, added to the excitement. The *Peterhoff*, a new iron steamer, very fast, and having a valuable cargo on board, was overhauled by the American cruisers, and though her ostensible destination was Matamoras, Mexico, yet the character of her cargo and the evidence afforded by her papers was so conclusive of the intention of her officers to run the blockade, that she was captured, and sent into New York for trial and condemnation in the prize court. Her owners in England protested that she was engaged in a lawful voyage, and besought the British Government to interfere. Her mails were seized, but at the request of Lord Lyons were placed in charge of the British Consul at New York, and finally forwarded to their destination. The vessel and cargo, after a very fair and careful trial before the U. S. District Court, were adjudged lawful prize, and sold. (*See PRIZE.*) During the pendency of this case, a shipping house in England, Messrs. Howell & Zirman, one at least of the firm an American citizen, being about to despatch a vessel with cargo intended for the Mexicans, applied to Hon. Charles Francis Adams, the American Minister in England, for a certificate of their real design, to be placed in the hands of their captain, to secure them from capture if overhauled by one of the blockading squadron. Mr. Adams gave them the following:

LEGATION OF THE UNITED STATES, }
LONDON, April 9th, 1863. }

Amid the multitude of fraudulent and dishonest enterprises from this kingdom to furnish supplies to the rebels in the United States, through the pretence of a destination to some port in Mexico, it gives me pleasure to distinguish one which has a different and a creditable purpose. Messrs. Howell & Zirman have furnished me with evidence, which is perfectly satisfactory to me, that they are really bound to Matamoras with a cargo intended for the Mexicans. I therefore very cheerfully give them this certificate at their request. It is not the disposition of the Government of the United States to interfere in any way with an honest neutral trade, and it is deeply to be regretted that the frauds which have been so extensively practised in this country have contributed so much to throw it under suspicion.

CHARLES FRANCIS ADAMS.

This letter was made public at Lloyd's, and a deputation of merchants and others interested in the *Peterhoff* at once brought the matter to the notice of Earl Russell, commenting very severely upon the course of the American Minister. The matter was brought up in the House of Lords, and an attempt was made to charge upon Mr. Adams an interference with British commerce, and the giving advantage by his certificates to one British ship over another. Mr. Adams denied any such intention, and stated that he believed himself to have a perfect right to give certificates to American citizens to trade with Mexico, which was all that he had done. Notwithstanding this explanation, Earl Russell, on the 18th of May, in the House of Lords, declared his opinion to be that the letter was one which ought never to have been written. The noble earl was indeed in a trying position. His own views may be gathered from the following extract from a speech which he made in the House of Lords on the 23d of March:

I do not believe those efforts of the Federals will be successful. But no man can say that the war is finally over, or that the independence of the Southern States is established. Well, then, what is the present state of the case? Although great efforts have been made in vain, the great Federal Republic seems unwilling to accept the decision of events. So far from it, we find the last acts of the Congress which has just expired are to place, by conscription, every man fit to carry arms at the disposal of the President of the United States, and to vote sums of money amounting to not less than £180,000,000 sterling for the purpose of carrying on the war. Well, then, in this state of affairs, I should say that, looking to the question of right, it would not be a friendly act toward the United States, it would not be to fulfil our obligations to a country with which we have long maintained relations of peace and amity—a great country, which says it can still carry on the war—it would, I say, be a failure of friendship on our part, if at this moment we were to interpose and recognize the Southern States.

I have endeavored to guard myself by saying that I speak now with reference to the present aspect of affairs. I hardly know any moment in which my noble friend could have brought forward his motion with less encouragement from events. It may turn out that these immense efforts which are being made shall be made in vain; that the spirit of the South is unconquerable as their determination never to be united again with the Northern States is final and irrevocable, and that a time may come when the duty of this country will be totally different from what it is at the present moment. All I maintain is, that it is our duty at present to stand still, and not to proceed to an act so definite, so positive—an act so unfriendly to the United States, as that of the recognition of the South.

My noble friend spoke of various topics, of danger of Canada being attacked by the Northern Republic, and of the West Indies being attacked by the Southern. My lords, I cannot follow my noble friend into these suppositions. I do not venture to say what may be the future course of events. I confine myself to that which I think to be our duty now, which I think is right; and, if that be so, we must be content in future days to meet with future dangers, and it will not enfeeble our arms if we have it in our power to reflect that we have never failed in our obligations to those which have been great States in peace and amity with us, and that it has not been through any fault of ours that a great affliction has fallen on them.

But while thus measurably friendly to the United States Government, and at least disposed

to act justly and fairly by it, he was hampered in his action by some of his colleagues, who did not disguise their hostility to that Government, two only of them (Rt. Hon. T. Milner Gibson, and the late Sir George Cornwall Lewis) entertaining similar views to Earl Russell; and at the same time the Conservative, or Tory party, in Parliament, led by Earl Derby and the able and persevering Benjamin Disraeli, were constantly watching for an opportunity to overthrow the administration on this very question. They professed to be in favor of immediate recognition of the Southern Confederacy, and, whenever occasion offered, pressed a resolution to that effect upon the ministers. On the 24th of April, Mr. Cobden came to the relief of the Government in a speech of great eloquence and power in the House of Commons, in which he stated with much clearness the principles which obliged the English Government to act up to the spirit of the Navigation and Foreign Enlistment Acts, in prohibiting the furnishing of war vessels to a foreign belligerent power to be used against a nation with whom they were at peace. He reviewed the past intercourse and traditions of the two nations (Great Britain and the United States), and enforced the lesson of friendship and kindness thus inculcated by a vivid picture of the probable results of the opposite course to Great Britain herself. This speech excited a powerful influence in averting the threatened war, and in confirming the ministry in their resolution to refuse all resolutions looking to recognition, and to adhere to their position of neutrality.

The case of the *Alexandra* and her sister ship, two ironclad rams, building in the Mersey by the eminent shipbuilders John Laird & Sons, who had built the *Alabama*, began to attract attention in May. The American minister had procured evidence which he regarded as conclusive that these two vessels were intended for the Confederate Government, and he laid this evidence before Earl Russell. The builders, on being questioned, professed at first that the vessels were intended for the Emperor of China, and, when this was disproved, that they were for the Viceroy of Egypt; but the Government became satisfied that these statements were mere subterfuges, by a forged report of the Confederate Secretary of War, then believed to be genuine, which acknowledged that these vessels were intended for them. There was some difficulty, however, in securing the requisite proofs to bring the case within the strict letter of the Foreign Enlistment Act, and there was reason to fear that while the Government were engaged in these efforts, the rams would escape. This result was finally prevented on the 10th of October, by the seizure of the rams by order of the British Government, and their detention under strong guard. A suit was presently instituted under the Foreign Enlistment Act, and, being dismissed by the courts on technical grounds, was carried before the House of Lords on an appeal, but was eventually (since

the commencement of 1864) dismissed by that body, on the ground that the special case proposed at the instance of the chief baron to carry the matter before the court of the exchequer chamber, was informally and improperly made up. For the correspondence between the Government of the United States and the British ministers on this subject, *see* DIPLOMATIC CORRESPONDENCE.

On the 30th of June, Mr. Roebuck, who had distinguished himself in Parliament since the commencement of the war as the friend and advocate of the Southern Confederacy, moved an address in the House of Commons, praying that negotiations might be entered into with the Great Powers of Europe for the purpose of obtaining their coöperation in the recognition of the independence of the Confederate States; by the Great Powers he said he meant France, and gave an account of an interview which he said had taken place between the Emperor of France, Mr. Lindsay (another member of Parliament), and himself, in which the Emperor told him that he had already made an offer, through Baron Gros, to join England in such a measure. Sir George Grey declared that no such communication as that stated by Mr. Roebuck had ever been made to the Government. The Chancellor of the Exchequer (Mr. Gladstone), objected to the motion, and said that he was most anxious for the termination of the war, but recognition would only produce reaction in the North. Mr. Bright eloquently denounced the motion, and demonstrated its injustice and folly. The debate was adjourned, but when called up again on the 13th of July, Mr. Roebuck himself moved its discharge. So far from accomplishing the design of its mover was the result of this debate, that it materially strengthened the purpose of the Government now fully formed to adhere more strictly than before to a firm neutrality.

While, however, there were indications of a better state of feeling growing up between the two Governments—(to which Earl Russell gave expression in a public speech on the 26th of September, in which he said: "The Government of America discusses these matters very fairly with the English Government. Sometimes we think them quite in the wrong; sometimes they say we are quite in the wrong; but we discuss them fairly, and with regard to the Secretary of State I see no complaint to make. I think he weighs the disadvantages and difficulties of our situation in a very fair and equal balance")—there was still a hostility and bitterness toward the United States on the part of some classes in Great Britain, which manifested itself on every occasion. The masses and a considerable portion of the intelligent middle class, especially of the dissenting bodies, were friendly to the United States, but they were not generally the voters. The efforts of some of our citizens to set the people of England right in the matter were attended with good success. The public addresses delivered in

England by Rev. Henry Ward Beecher, in August and September, and the wide diffusion of pamphlets and documents, coupled with the eloquent speeches and essays of John Bright, Richard Cobden, J. Stuart Mill, Prof. Newman, Goodwin Smith, J. E. Cairnes, and others, have effected a decided change of feeling in that country, in favor of the United States, and have rendered it probable now at least that a majority of the people of England are our friends. The bitterness with which, for the last six months, Mr. Jefferson Davis has denounced the British Government, and the spirit of mortification and resentment which his ambassador, Mr. John Mason, manifested on leaving England, on finding that he could not hope to be received in any official character, fully corroborate the extent of this change.

The Polish question occupied much of the attention of the ministry and the two Houses of Parliament during the first half of the year. As early as the 20th of February, in the House of Lords, and on the 27th of the same month, in the House of Commons, the subject was introduced, and addresses to the crown asked for. The ministers avowed their sympathy with the Poles, and their belief that the treaty of Vienna had been violated systematically. The British Government subsequently united with France, Austria, and Prussia in a joint note to the Government of Russia, covering several propositions for the relief of Poland and the cessation of the civil war; these propositions were declined by Russia (*see* RUSSIA and POLAND), and France subsequently proposed a European Congress to settle this and other European questions; to this congress England declined becoming a party. Late in the year another troublesome foreign question arose, by which the British Government was placed in a condition of great embarrassment and difficulty, viz., the Schleswig-Holstein affair. This eventually resulted in a war, in which Prussia and Austria, forestalling the action of the German Diet, were the attacking party (*see* SCHLESWIG-HOLSTEIN); and the war is still in progress (May, 1864). The royal family of Great Britain were intimately connected by marriage with both the belligerents, the princess royal, Victoria Adelaide, being the wife of the Prince of Prussia, heir apparent to the Prussian throne, while Prince Albert Edward, the heir apparent to the British throne, had married Alexandra, eldest daughter of the King of Denmark. The British Government had moreover been one of the three powers (Austria and Russia being the other two) which had by a treaty or agreement in 1852, guaranteed to the new King of Denmark, Christian IX., the government of the two duchies of Holstein and Schleswig. Thus situated, the efforts of the British ministry were directed to the prevention of hostilities, and failing in this, they have sought to settle the difficulty by a conference of European powers, but thus far without much success.

The protectorate of Great Britain over the

Ionian Islands was relinquished in October, 1863, and in the same month those islands were annexed to the kingdom of Greece. The Conservatives in Parliament objected to the relinquishment of the important port of Corfu, but the ministers deemed it sufficient reply to say that the people of the Ionian Islands were averse to the British protectorate, and desired to unite with Greece, and that it was not in conformity with the national policy to retain unwilling subjects under its sway.

Mr. Richardson, connected with the British embassy to Japan, having been murdered by the adherents of the Prince of Satsuma, in September, 1862, and no complete satisfaction having been obtained either from the Tycoon or the Mikado (the temporal and spiritual emperors), and the Prince of Satsuma having withdrawn to his principality, a British squadron was despatched under Admiral Kuper, to reduce his fortified town of Kagosima. The bombardment was commenced on the 15th of August, and the forts at first replied vigorously, but by dusk the town was in flames, and three of the forts silenced; on the following day the attack was renewed, the town was reduced to a mass of ruins; the palace, arsenal, factories, and three steam vessels utterly destroyed. The British lost two captains and eleven seamen killed and thirty-nine wounded.

The difficulties with the Brazilian Government in consequence of the arrest of some British naval officers while in undress uniform, were referred to the arbitration of Leopold, King of Belgium, who decided "that in the mode in which the laws of Brazil have been applied toward the English officers, there was neither premeditation of offence, nor offence to the British navy."

In the internal affairs of the kingdom, the topic of most interest was the condition of the operatives in the cotton-manufacturing districts, of whose deplorable sufferings some account was given in the ANNUAL CYCLOPEDIA for 1862. The suffering seems to have reached its maximum intensity in December, 1862, and from the first week in December it gradually though slowly declined, till, at the close of September, 1863, the number receiving relief from the Poor Law Guardians and local committees, was 184,265, against 456,786 who had received aid in January, 1863. The moderate influx of cotton from India, Egypt, Turkey, the West Indies, South America, Central America, and small quantities from the United States, coupled with the high prices of fabrics, enabled most of the manufacturers to resume work, and the great pressure of want ceased. The number receiving relief was, however, as will appear from the following table (which we copy from the "National Almanac" for 1864), in September, 1863, more than three times as many as in times of ordinary prosperity, or on an average about one fourteenth of the entire population.

In this table the first column of figures gives

the average degree of pauperism in the prosperous period of the first quarter of 1861, by showing the numbers weekly relieved in every 1,000 of the population; the second column contains the actual mean of the numbers so relieved; the third column shows the highest numbers returned as receiving relief during the cotton famine; and the fourth column the number on the 12th of September, 1863.

Finances of Great Britain.—The revenue actually collected in the United Kingdom in the year ending June 30, 1863, was £70,683,860=\$342,109,887.24 in gold. The expenditure for the same time was £69,302,008=\$335,421,718.72. The corrected estimates of the Chancellor of the Exchequer for the year ending March 31, 1864, were, Revenue £68,171,000; Expenditure, £67,705,000=\$327,692,200. Of the revenue collected in the year ending June 30, 1863, £24,100,000 was received from Customs; £16,674,000 from Excise; £9,135,000 from Stamps; £3,183,000 from other taxes; £10,713,000 from the Property and Income tax; £3,750,000 from the Post Office; £300,500 from Crown Lands; Miscellaneous, £2,828,361. The interest on the public debt for the year 1863-'4 was £26,400,000=\$127,776,000. The debt itself on the 31st of March, 1863, was £799,802,139=\$3,871,042,352.76.

Army.—For the year 1863-'4, the regular army of Great Britain consists of a general staff of 104 officers, 137,769 officers and men in the regiments in active service; 9,349 officers and men in the depots of Indian regiments; 697 officers and men in the recruiting and other establishments, and 323 officers and men in the training schools, making a total of 148,244 officers and men comprising the regular army. In addition to these, the British forces in India consist of 3,474 officers, 5,480 non-commissioned officers, 63,722 rank and file; in all 72,676 officers and men. There is also a force of disembodied militia, consisting of 29,730 officers and men who have 35 days' drill and training, and 128,968 who have 21 days' training; and 162,681 officers and men of the volunteer force. There are therefore 220,918 officers and men in the regular and Indian armies, and 321,380 militia and volun-

teers, who can be called out in case of invasion. The total cost of the maintenance of this force for the year 1863-'4 is set down as £15,060,237=\$72,891,547. The annual cost of each private soldier to the Government for pay, beer, money, clothing, fire, forage, and other allowances, is: in the Royal Horse Artillery, £55 6s. 1½d.=\$267.68; in the Life Guards, £68 16s. 8½d.=\$332.13; in the Horse Guards, £63 14s. 2½d.=\$308.33; Cavalry of the Line, £52 11s. 3½d.=\$294.39; Royal Foot Artillery, £32 6s. 11½d.=\$156.55; Royal Engineers, £31 5s. 3½d.=\$151.31; Military Train, £31 15s. 9½d.=\$153.78; Foot Guards, £28 17s. 7½d.=\$139.75; infantry of the line, £26 3s. 5½d.=\$126.68.

Navy.—The navy of Great Britain in January, 1863, including vessels under construction, consisted of 1,014 vessels of all sorts, but of these on the 20th of March, 1863, only 669, including the vessels in process of construction, were effective. Of these 28, viz., six second rates, screw steamers, carrying from 30 to 40 guns; four iron and six wood third rates, carrying from 16 to 35 guns, three small turreted vessels, carrying from 5 to 8 guns each, two sloops, and three iron and four wood floating batteries, were armor plated; 59 were steamships of the line, of which 3 were building; 44 were screw and 15 paddle frigates; 9 were screw block ships; 26 were screw corvettes; 37 screw, and 23 paddle sloops of war, 166 screw gunboats (of which, however, the larger number have since proved worthless); 54 screw gun vessels, 4 screw, and 73 sailing mortar ships and vessels, and the remainder despatch vessels, troop and store ships, yachts, tenders, tugs, &c. Twenty-nine steam vessels not armor plated even in course of construction were ordered suspended. On the 1st of July, 1863, there were only 355 steamships and 36 sailing vessels afloat in the navy, aside from the coast-guard vessels (revenue service), and of these, 35 steamers and 7 sailing vessels were without guns. The number of officers, men, and boys in the British Navy is 48,000 (9,000 boys); in the coast-guard service, 10,000, and the Royal Marine Force, 18,000.

Commerce and Navigation.—The latest returns of imports and exports are to January 1st, 1853. The imports of the year 1862 were in value £226,592,720=\$1,096,808,764.80; The exports except bullion were £167,189,398,=\$809,196,686.32, and the amount of bullion exported was £29,326,191=\$141,938,766.44. The total amount of cotton imported into Great Britain in 1862 was 523,973,296 lbs., against 1,390,938,752 lbs. imported in 1860. the amount exported was 214,714,528, against 250,339,040 lbs. in 1860, leaving for home consumption 309,258,768 lbs., or about $\frac{3}{11}$ of the amount in 1860.

Education.—The number of primary schools inspected in Great Britain in 1862 was 8,014; there were present in them 1,057,426 children, who were taught by 9,115 certificated teach-

ers and 15,752 apprentices. The inspectors also visited 39 training colleges for teachers (normal schools, we should call them) and found in them 2631 students, 2,779 having passed successfully in the course of the year. They also report 442 schools for pauper children containing 33,835 inmates, and 58 ragged and industrial schools containing 2,818 inmates. The amount voted for public education in Great Britain is £804,002, equal to nearly \$4,000,000; for public education in Ireland £306,016, equal to about \$1,500,000. Besides these sums about £35,000 or nearly \$170,000 is granted to certain universities in England, Scotland, and Ireland. Aside from the public school provision thus made, there is a very large number of endowed schools and colleges in England, and a moderate number in Scotland and Ireland, accessible under certain circumstances to those desiring an education.

North American Colonies of Great Britain. Under this head are comprised Canada, New Brunswick, Nova Scotia, Newfoundland, Prince Edward's Island, Vancouver's Island, British Columbia, and Bermuda.

CANADA, the most important of these, has an area of about 350,000 square miles, and a population in 1861 of 2,500,755. Its capital is for the present Quebec, but will be removed to Ottawa when the Government buildings there are completed. The Governor General, who is also Governor General, Captain General, and Commander-in-Chief of all the British Provinces of North America, is the Right Hon. Charles Stanley, Viscount Monck. The Executive Council or Cabinet consists of 13 persons, and is chosen by the Governor General from the majority in the Provincial Parliament, and they are responsible for the Government. The Provincial Parliament has two Houses; the Legislative Council of 70 members, 48 of whom are chosen by qualified electors for a term of years and 22 are appointed for life; and the Legislative Assembly, composed of 130 members, chosen from districts by the qualified electors.

Finances.—The receipts into the Provincial treasury from all sources in 1862 were \$10,629,204, and the expenditures \$11,395,923. Of this latter sum, \$3,774,315 was for interest on the Public Debt; \$533,570 for Education; \$486,621 for the Civil Government; \$433,048 for the Legislature; \$820,300 for Judicial purposes, and \$307,687 for Hospitals and other charities.

Commerce and Navigation.—The imports for the year 1862 were \$48,600,633, of which \$25,173,157 was from the United States, \$21,179,312 from Great Britain, \$574,320 from other British Colonies, and \$1,673,844 from other countries. The exports for the same year were, \$31,679,045, of which \$15,063,730 was sent to the United States, \$15,224,417 to Great Britain, \$840,646 to other British Colonies, and \$550,252 to other countries.

The value of goods of the growth and product of the United States, imported into Can-

ada under the reciprocity treaty, in 1862, was \$14,430,626, an advance of about four and a half millions of dollars on the previous year, and of nearly six millions on any year before. The total number of vessels passing through the Canadian canals in 1862, was 32,842, and their tonnage 3,582,396 tons. The amount of tolls paid by them was \$58,603.86; of these, 27,757 vessels, having a tonnage of 2,536,586, belonged in Canada, and 5,085; with a tonnage of 1,045,810, were from the United States. The gross revenue of the canals from all sources was \$527,606.88, and the expenditure, \$482,813.53.

Education.—In Canada East there were, in 1862, 3,501 schools, with 188,635 pupils, maintained at a cost of \$542,728, and 200 pupils in the normal schools. In Canada West, the same year, there were 4,554 schools of all kinds, with 357,572 pupils, and the expenditure for educational purposes during the year was \$1,535,239, of which \$1,231,913 was for common schools.

NEW BRUNSWICK has an area of 27,037 square miles; a population of 252,047 inhabitants. Its seat of Government is Fredericton. The chief officer of the colony is called lieutenant-governor and commander-in-chief. Hon. Arthur Hamilton Gordon, C. M. G., is now lieutenant-governor. The Provincial Legislature consists of a legislative council of 21 members, appointed for life by the crown, and a house of assembly of 41 members, chosen by qualified electors for five years.

Finances.—Receipts, 1862, \$668,197; expenditures, \$675,189. Of the expenditures, \$116,275 were for education, \$191,534 for interest on the public debt, and \$124,290 for public works. The debt of the province is \$5,788,166.

Commerce and Navigation.—Exports, 1862, \$3,856,538; imports, \$6,199,701, of which \$2,960,703 were from the United States. Of the exports, \$889,416 were to the United States. The number of vessels belonging to the province in 1862, was 814, measuring 157,718 tons.

Education.—Whole number of children of school age, 64,000; number in attendance, 29,500; number of teachers, 810; provincial expenditure for schools, \$94,437; local contributions, \$106,524; total expenditure, \$200,961.

NEWFOUNDLAND.—Area, 35,850 square miles; population, 122,638; capital, St. John's; governor, Sir Alexander Bannerman, Kt.; legislature, two houses: legislative council of not over 15 members, appointed by the crown, to hold office during her majesty's pleasure; the house of assembly, 30 members, elected for 4 years. Revenue for the year, about \$452,000; expenditure about \$552,000. Exports in 1862, \$4,684,000; imports, \$4,028,000. Number of vessels owned in the province, 1,386, measuring 87,030 tons. Education, sectarian only. Whole number of schools, 242; scholars, 13,444; average attendance, 8,357.

NOVA SCOTIA.—Area, 17,279 square miles; population, 330,857. Exports in 1862, \$5,646,461; imports, 8,445,042. Number of vessels, 3,408, measuring 277,718 tons.

GREECE, a kingdom in Southeastern Europe. In 1861, it was divided into (Prefectures) Departments: the names, area, population, and capitals, are exhibited in the following table:

Department.	Geogr. sq. miles.	Population.	Capitals.
Attica and Bœotia...	116.4	116,024	Athens.
Eubœa.....	79.95	72,363	Chalcis.
Phthiodis and Phocis	111.67	102,291	Lamia.
Acarnania and Etolia.	133.24	109,392	Missolonghi.
Argolis and Corinth..	91.25	138,249	Nauplia.
Achaia and Elis.....	94.31	113,719	Patras.
Arcadia.....	89.62	96,546	Tripolitza.
Messenia.....	62.52	117,181	Calamoc.
Maconia.....	76.73	112,910	Sparta.
Cyclades.....	49.56	113,130	Syra.
	900.6	1,096,810	

Of the inhabitants, 552,414 lived upon the Peloponnese; 318,535 on the main land; 225,-861 upon the islands. In 1863, the territory of Greece was enlarged by the annexation of the Ionian Islands. A complete list of these islands, with their territory in geographical square miles, is given in the following table:

Names.	Geogr. square miles.	Names.	Geogr. square miles.
*Corfu.....	12.93	The Echinades.....	0.12
*Fano.....	0.20	Pelala.....	0.13
Merlera.....	0.14	Oxia.....	0.09
Samothraki.....	0.08	Bromona.....	0.02
Paxo.....	0.34	Makri and minor is-	
Antipaxo.....	0.05	lands.....	0.03
*S'ta Maure.....	5.13	*Zante.....	7.75
Meganisi.....	0.42	*Cerigo and adjacent	
Arkudi.....	0.03	islands.....	5.04
Calamo.....	0.37	Strivali islands.....	0.05
Castus.....	0.15	Cerigitto.....	0.03
Atoke.....	0.03		
*Ithaca.....	1.77		47.34
*Cephalonia.....	12.06		

The population of the Ionian Islands was, in 1862, as follows:

Corfu.....	75,532	Zante.....	33,627
Paxo.....	5,025	Cerigo.....	13,007
S'ta Maure.....	20,043		
Ithaca.....	11,343		234,123
Cephalonia.....	70,541		

The reigning sovereign is George I., king of the Hellenes, born December 24th, 1845, the second son of the present king, Christian IX., of Denmark, and elected king of the Hellenes by the Assembly of Athens, March 18th (30th), 1863; accepted the crown, through his father (then Prince of Schleswig-Holstein-Sonderburg-Glücksburg), and King Frederick VI. of Denmark, acting as his guardians, June 4th, 1863; landed in Greece, November 2d, 1863.

By decision of the Greek National Assembly, of May 15th, 1863, a civil list of 12,000,-000 drachmas, or £41,860, was settled on King George I., to which the Governments of Great Britain, France, and Russia, added £4,000 each, making the total income of the new sovereign of Greece £53,860 per annum. By decree of the National Assembly of March 18th, 1863, the legitimate successors of King George I.

must profess the tenets of the orthodox Church of the East. The election of the king took place, under the guardianship of the three great Powers, embodied in the protocol of a conference held at the British Foreign Office, June 5th, 1863. In the protocol the Principal Secretary of the Queen of England declared that if the union of the Ionian Islands to the Hellenic kingdom, after having been found to be in accordance with the wishes of the Ionian Parliament, should obtain the assent of the courts of Austria, France, Prussia, and Russia, the British Government would recommend to the Government of the United States of the Ionian Islands, to appropriate annually a sum of £10,-000 sterling, for the purpose of augmenting the civil list of his Majesty, George I., king of the Greeks.

The Constitution of the kingdom, introduced in consequence of the revolution of September 3d, 1843, was modified by a decree of the Provisional Government, of December 4th, 1862, which proclaimed universal suffrage, and a reduction of the age of electors from twenty-five to twenty. The executive is divided into six departments, namely: the ministries of the interior; of finance; of justice; of public worship; of war, and of foreign affairs. A president of the council superintends the deliberations of the ministry, as chief functionary of the Government. The following heads of departments were appointed on November 6th, 1863, after the arrival of King George I. at Athens: Minister of the Interior, and President of the Council, Bulgari; Minister of Finance, Drosos; Minister of Justice, Dramantopulos; Minister of Foreign Affairs, Belyami; Minister of Public Worship, Petzalis.

The budget of the year 1862, voted by the Chambers which were closed on August 23d, 1861, estimated the expenses at 24,785,795 drachmas, and the receipts at about 22 million drachmas. The deficit in the treasury, in July, 1863, was estimated by the minister of finance at about 10,700,000 drachmas.* The public debt was, in 1860, as follows:

	Drachmas.
Loan of 1832, guaranteed by the Three Protecting Powers, to Mr. Rothschild.....	44,444,107
Advanced by the three Powers.....	66,142,693

Total.....110,586,805

Debt to Bavaria, 1,529,333 florins. To this must be added a debt contracted in 1824, at London, to Jacob and Samson Ricardo; the interior debt, and the one to the bank Capo D'Istria; the amount of all of which is not known. The debt increases annually about 3,800,000 drachmas.

The army, at the close of 1863, was entirely disorganized. The navy consisted of 31 vessels, carrying 154 guns, and having 415 horse power.

The movements of shipping, in 1860, was as follows:

	Vessels.	Tonnage.
Arrivals.....	77,958.....	2,293,153
Departures.....	78,107.....	2,321,043

* 5.78 drachmas are equivalent to \$1.

* The islands marked with a star are those from which the Ionian Islands are often called the "Republic of the Seven Islands."

The following table gives an exhibit of Greek commerce in 1860 (value in drachmas):

Countries.	Importation.	Exportation.
Great Britain.....	14,282,602	13,161,830
Egypt.....	1,624,226	88,862
America.....	564,888	269,710
Austria.....	8,252,419	3,770,171
Belgium.....	487,706	7,150
France.....	7,863,478	1,873,078
Ionian Islands.....	1,333,163	1,496,263
Spain.....	190	9,324
Italy.....	1,718,346	1,017,838
Netherlands.....	746,319	
Danubian Principalities.....	3,333,031	381,632
Russia.....	4,032,141	533,623
Turkey.....	9,791,390	4,321,877
Total.....	53,979,899	26,931,413

The National Assembly, on February 3d, 1863, confirmed the decree of October 22d, 1862, by which the Greek throne had been declared to be forfeited by King Otho and his family. Another decree declared that Prince Alfred, of Great Britain, had been elected king of Greece by 230,016 out of 241,202 voters, and consequently proclaimed him constitutional king of Greece, elected by the sovereign will of the Greek people.

On February 20th, Admiral Canaris resigned his functions as member of the Provisional Government. The two other members of this Government then formed a new ministry, which was confirmed by the National Assembly. But on February 21st, a military revolt under the command of Lieutenant Canaris broke out against Bulgaris, Roufos, and their ministry, who consequently offered to the National Assembly their resignation, which was accepted. The National Assembly took possession of the executive power, and, on July 23d, conferred it upon a minister without portfolio, Balbis, assisted by seven ministers.

As Prince Alfred, as well as King Ferdinand, of Portugal, and the Duke of Saxe-Coburg declined the acceptance of the throne, the National Assembly, on March 30th, proclaimed Prince William, of Schleswig-Holstein-Sonderburg-Glücksburg, son of Prince Christian (at present King Christian IX. of Denmark), king of Greece, under the name of King George I.

On April 8th, the National Assembly, having dismissed the ministry of February 23d, appointed a new ministry, under the presidency of Diomedes Kyriaku. This ministry was again relieved, on May 12th, by another under the presidency of Roufos.

On April 12th, the Bavarian Government instructed all the foreign ministers to protest against any act prejudicial to the claims of the Bavarian dynasty to the Greek throne. On April 22d, Prince Christian of Denmark announced that, the obstacles being removed, he accepted definitively the crown of Greece for his son. The representatives of the three great Powers, under whose protection the kingdom of Greece was placed at its organization—England, France, and Russia—held a conference at London, and on May 27th signed a protocol

by virtue of which the throne of Greece was declared vacant. Another treaty relative to the accession of Prince William of Denmark to the throne of Greece was signed by the representatives of France, England, Russia and Denmark, on June 5th. The Greek deputation which was sent to Copenhagen, was received on June 6th by the king of Denmark, who declared on this occasion that Prince William accepted the Greek crown on condition of a complete union of the Ionian Islands with Greece. Soon after the new king addressed the following letter to the National Assembly:

Gentlemen,—Obedient to the dictates of my heart, I wished to accompany, by the personal testimony of my sentiments, the message by which the King of Denmark accepts for me the crown which the Hellenic nation calls me to wear. I shall proceed to my new country with transport, in order to prove to you that from the present moment I know no other duty than to live and die as a good Greek, for the happiness and independence of the nation; and I am convinced, gentlemen, that, with your aid, by the friendship of the Powers, and above all by the assistance of God, the interests of the country, henceforth my own, will prosper to its advantage. I am happy and proud, gentlemen, to be able to salute you by the voice of those good and noble patriots who, named by your confidence, have come here, far from their country, to salute me as your King. They will tell you that they have found me full of sympathy for my new country; and that I ardently desire to be able soon to find myself in the midst of you. Accept me, gentlemen, with the same confidence that actuates my heart for you, and teach me to labor with you for the happiness of my fine country, which may God protect. GEORGE I.

The National Assembly replied to this letter as follows:

Sire,—It was with joy and enthusiasm that the National Assembly read your Majesty's letter which accompanied the solemn act of the acceptance of the Crown, and heard the explanations of the deputation concerning your Majesty's affection for your new country, and the noble assistance of the King of Denmark, as well as of your august father, in accomplishing the common desire of the nation. The sentiments so royally expressed by your Majesty are those which the nation expected from its King when it unanimously offered to him the crown of Greece. The annexation of the Ionian Islands is the best augury of the grandeur of our country. While eagerly awaiting your Majesty's early arrival, which offers every guarantee of security and order, the Assembly, confident in the virtues with which your Majesty is endowed, declares you from this moment to have obtained your majority. Your Majesty will find on the part of the Greek nation an enthusiastic reception, that fidelity, affection, and support which render populations happy and thrones glorious. The Assembly, convinced that the nation and the King will forever bless the day of the 30th of March, addresses its prayers to the Most High that he may render your throne powerful, and your Majesty's name glorious.

On September 12th King George signed, at Copenhagen, the agreement relating to the succession to the Danish throne. By this document King George renounces his right of succession in favor of his younger brother and his heirs. King George himself and his own line then become last in order of succession to the Danish crown.

At the beginning of August King George, accompanied by Count Sponnerk as his chief

adviser, left Copenhagen for Greece, where he arrived on the 30th of October. Immediately upon his arrival at Athens he issued the following proclamation:

Hellenes,—On ascending the throne to which I have been called by your suffrages, I feel a desire to say a few words to you. I bring to you neither experience nor wisdom, qualities which you cannot expect at my age; but I come to you with confidence and sincere devotion, as also with a firm belief in the prosperity of our future, to which I promise to devote my whole life. I shall respect and conscientiously observe your laws, and especially the Constitution, that keystone of the Greek edifice. I shall also endeavor to love and respect your customs and language, everything that is dear to you, as I love you already. I shall collect around me the best and the wisest men among you, without any regard to past differences. Assisted by their intelligence, I shall endeavor to foster the numerous and happy germs of the material resources of your noble country, which henceforth is mine. My ambition is to make Greece the model State of the East. The Almighty will give strength to my weakness and enlighten my efforts. He will aid me not to forget the obligations which I have contracted toward you. Whereon I pray God to have you in his safe keeping.

ATHENS, Oct. 30th.

GEORGE.

On the following day, October 31st, the king went to the National Assembly to take the oath of fidelity to the Constitution. On November 6th, at the request of the king, M. Bulgaris formed a new ministry.

In the early part of the year, while the negotiations with the Royal Family of Denmark respecting the Greek throne were still progressing, the country was repeatedly agitated by military revolts. On the 3d of July the French, English, and Russian Legations at Athens, addressed "identical" notes to the National Assembly, declaring that they would quit Athens if it did not reestablish order in the country. The National Assembly replied to this collective note, on July 22d, thanking the foreign ambassadors for the service they had rendered to the cause of order, and announcing that steps had been taken for ameliorating the situation. These disturbances mostly ceased upon the arrival of King George, although a considerable excitement continued from time to time to manifest itself.

On December 24th, 1862, the extraordinary English plenipotentiary, Henry George Elliott, presented to the Provisional Greek Government at Athens a memorandum, according to which the English Government declared itself disposed, under certain conditions, to cede the Ionian Islands to Greece. The Danish Court, in accepting the throne of Greece for Prince William, made it in the protocol of the 5th of June, a distinct condition that the Ionian Islands should be effectively united with Greece. The views of England were fully set forth in the speech which the Lord High Commissioner of the islands made to the Legislative Assembly on the 3d of October. He first called upon the Assembly, which had been specially elected for the purpose of deciding the annexation question, to make known the wishes of the people. In case their answer should be

in favor of annexation, he stated that certain detailed arrangements were necessary for the completion of this measure. On this subject he expressed himself as follows:

1. It will be necessary that you should pass a resolution in the usual constitutional form, by which, after the cessation of the British protectorate, and until the establishment of the new Constitution, his Majesty the King of the Hellenes shall be enabled to exercise in these States all rights of sovereignty, including those privileges and functions heretofore exercised by the protecting sovereign, the Lord High Commissioner, and the most illustrious the Senate. 2. I shall propose to you, in the name of her Majesty, that, on the cessation of the payment of the sums heretofore reserved as the contribution for military protection, and as the civil list of the Lord High Commissioner, there shall be reserved, as the first charge on the Ionian revenue, the sum of £10,000 yearly in augmentation of the civil list of his Majesty King George. 3. I shall call upon you to recognize all contracts and engagements entered into by or on behalf of the Ionian Government up to this time, and all equitable claims on the same. 4. I shall also invite you to make provision for the preservation and safeguard of the British cemeteries in this and the other islands. 5. I shall have to inform you of the terms on which her Majesty's Government is prepared to come to a settlement of the debt of £9,029 5s. 7d., due to Great Britain for arrears of military contribution. Should your vote be in favor of the cessation of the protectorate, and of the proposed union with Greece, it will be necessary that her Majesty the Queen should invite the powers, parties to the treaties of November, 1855, to revise that treaty, and, in conjunction with France, one of the protecting Powers of Greece, to make such arrangements as may tend to the future welfare of these States and the permanent interests of Europe.

On the 5th of October the Ionian Parliament passed a vote in favor of annexation to Greece. The conditions on which England made the surrender of her authority contingent were not received favorably by the Parliament which, on the 18th of October, 1863, resolved, by a vote of 33 to 3, that the protectorate of England over the islands should cease immediately; that the Senate should be dissolved, and the islands forthwith annexed to Greece. They demanded that the fortresses should be handed over to King George in their present condition, and not razed, as they supposed the intention of the English Government to be. On the 14th of November a treaty was concluded between Austria, France, Great Britain, Prussia, and Russia, by which the following stipulations with regard to the islands were made:

ART. 1 The Queen of the United Kingdom of Great Britain and Ireland renounces the protectorate conferred on England by the treaty of 15th November, 1815.

ART. 2. The Ionian Islands are placed in a condition of perpetual neutrality.

ART. 3. The fortifications of Corfu will be demolished preliminary to the evacuation by the English troops.

ART. 4. The commercial stipulations resulting from the treaties concluded by the protecting Powers are maintained, notwithstanding the union of the Ionian Islands with Greece.

ART. 5. Religious Liberty is maintained in the Ionian Islands, and the subjects of those islands, to whatever communion they belong, will be eligible for all public offices, the same as in the kingdom of Greece.

ART. 6. A special treaty will be concluded between

the three protecting Powers and the Hellenic Government, to regulate the stipulations which the Union of the islands with Greece should render necessary.

ART. 7. The convention mentioned in the preceding article will be communicated to Prussia and Austria.

ART. 8. The dispositions of the Treaty of 15th November, 1815, cease to be in force, and are abrogated.

Two of the above articles (arts. 2 and 3) were declared by both the Greeks and the Ionians to be inconsistent with the rights of the republic, as those rights were defined by the treaty of the 15th of November, 1815, which constituted the republic, and defined the powers of the British Protectorate. The Greek Government, and the President of the Ionian Assembly, in the name of that body, also complained that the message of the Lord High Commissioner, on the 6th of October, while it specified the conditions of Ionian annexation to Greece, made no mention either of the neutralization of the islands or of the dismantling of the fortifications, although those much more important conditions were in point of fact agreed to by all the great Powers, as soon afterward as the 14th of November.

GREEK CHURCH, also called the Greek Catholic, the Orthodox Greek, the Orthodox, the Oriental or the Eastern Church, is that part of the Christian Church which adheres only to the doctrinal decrees of the first seven œcumenical councils, to wit: of Nice, 325; Constantinople, 381; Ephesus, 431; Chalcedon, 451; Constantinople, 553 and 680; Nice, 787; of the so-called Quini-Sextum of Constantinople, held in 692, and of the council held at Constantinople under Photius, in 879 and 880, while it rejects the authority of all the succeeding councils recognized by the Roman Catholic Church as œcumenical.

The Church is made up of the following independent groups: I. The Church of Jerusalem. The bishop of this See is styled the "Most Blessed and Holy Patriarch of the Holy City Jerusalem, and all Palestine, Syria, Arabia beyond Jordan, Cana in Galilee, and Holy Sion." He resides at Constantinople, and the titular bishop of Petra, in Arabia, resides at Jerusalem, as his assistant or vicar. The Patriarchate has thirteen Sees, of which six are Metropolitan (viz.: 1, Caesarea, in Palestine; 2, Scythopolis; 3, Petra, in Arabia; 4, Ptolemais; 5, Bethlehem; 6, Nazareth), and six Archiepiscopal (viz.: 7, Lydda; 8, Gaza; 9, Joppa; 10, Neapolis; 11, Sebaste; 12, Mount Tabor; and one Episcopal See, Philadelphia). II. The Church of Antioch. The bishop of this Church is entitled "The Most Blessed and Holy Patriarch of the Divine City of Antioch, Syria, Arabia, Cilicia, Iberia, Mesopotamia, and all the East; Father of Fathers, and Pastor of Pastors." To this Church belong the following sixteen Metropolitan Sees: 1, Tyre and Sidon; (See at Chasbe); 2, Damascus; 3, Berrhœa or Aleppo; 4, Epiphani or Cham; 5, Laodicea or Latakia; 6, Seleucia (See in the Monastery

Sacdonos); 7, Anida or Diarbekir; 8, Tripoli; 9, Bostra; 10, Emessa or Homs; 11, Berytus or Beyrout; 12, Adana (See at Païas, the ancient Issus); 13, Heliopolis or Baalbeck; 14, Acre (there is a suffragan of Jerusalem who also claims this See); 15, Palmyra (this prelate resides in Wallachia); 16, Theodosiopolis or Erzerum. III. Alexandria. The patriarch resides at Alexandria or Cairo, and is called "The Most Blessed and Holy Patriarch of this Great City Alexandria, and of all Egypt, Pentapolis, Libya, and Ethiopia, Pope and Œcumenical Judge." To this Church belong four Metropolitan Sees. 1, Libya; 2, Memphis; 3, Pelusium; 4, Metelis. IV. Constantinople, which patriarchate embraces one hundred and thirty-five Sees, of which ninety are Metropolitan, and four Archiepiscopal. The Metropolitan in the Turkish dominions proper are eighty-three, and the whole number of bishops is one hundred and sixteen. The principalities (Wallachia 4, and Moldavia 3) have seven bishops; Servia, 4; Venice, 1 (who is a Metropolitan, and is called president); and the Ionian Islands, 7. The bishoprics of Servia are: 1, Belgrad (Metropolitan); 2, Schabatz; 3, Negotin; 4, Tchatchat. The Ionian Islands have three Metropolitan dioceses (1, Corcyra; 2, Cephalonia; 3, Zacynthus); two archbishoprics (4, Leucadia; 5, Cythera); two other bishoprics (6, Ithaca; 7, Paxos). V. The Church of Russia, under the "Most Holy Governing Synod of all the Russias." This Church has sixty-five Sees, of which five are Metropolitan, and twenty-five Archiepiscopal. VI. Cyprus. The bishop is called the "Most Blessed and Holy Archbishop of Nova Justiniana, and all Cyprus." To it belong the bishoprics of: 1, Paphos; 2, Citium; 3, Cyrene. VII. Austria. The "Most Blessed and Holy Archbishop of Carlowitz" is Metropolitan, with the title of patriarch. This Church contains, in all, eleven Sees. VIII. Mount Sinai. This Church has only one bishop, "The Most Blessed Archbishop of Sinai." IX. Montenegro. This Church, likewise, forms a single diocese under the "Metropolitan of Scanderia and the Sea-Coast, Archbishop of Tsetineke." X. Greece. This Church is governed by the "Holy Hellenic Synod," at Athens, which is composed of the archbishop of Athens as president, and four other prelates, who change every year. This Church numbers the following twenty-four archbishoprics and bishops: 1, Athens; 2, Thebes and Livadia; 3, Chalcis; 4, Carystia; 5, Phthiotis; 6, Phocis; 7, Acarnania; 8, Naupactus; 9, Argslide; 10, Corinth; 11, Hydra; 12, Patras and Elis; 13, Kalavrita; 14, Mantinia; 15, Gortyna; 16, Messenia; 17, Triphyllia; 18, Monembasia and Sparta; 19, Gythium; 20, Octylon; 21, Lyra and Lenos; 22, Andros and Zea; 23, Naxos; 24, Thera. In consequence of the annexation of the Ionian Isles to Greece, the Sees of these islands will, of course, be separated from the patriarch of Constantinople, and placed under the Hellenic Synod.

Among the most important events in the recent history of the Greek Church belongs the movement among the Bulgarians to free themselves from the jurisdiction of the Patriarch of Constantinople, and to establish a National Bulgarian Church. In April, 1860, a pamphlet appeared in Constantinople, in Bulgarian and French, setting forth the grievances of the Bulgarians, and denouncing in the most emphatic language the pretensions and encroachments of the Holy Synod of Constantinople. The Bulgarians, to support their claims, referred to the former independence of the Bulgarian Metropolitan See of Achrida, to the equality of rank which their Metropolitan had shared with the Patriarch of Constantinople, throughout the middle ages, and which had entitled him to crown their kings. They asserted that the patriarch Samuel, of Constantinople, had, in 1767, illegally abolished the independence of the Bulgarian Church, in order to Grecize all Bulgaria, and the Ottoman Porte from political considerations had connived at these endeavors. They complained that Greek bishops had been appointed to Bulgarian dioceses; that many of the priests also were Greeks, and that the Greek language, of which the people do not understand a word, had been until lately universally in use in the services. In many places of Bulgaria, in Roumelia, even in Philippopol and Adrianople, the Greek priests were expelled by the Bulgarian congregations, the Slavic language introduced at divine service, and the payment of the taxes annually levied by the patriarchate of Constantinople, refused. At the Easter festival in 1860, the Bulgarian Bishop Hilarion, of Marianopolis, the head of the Bulgarian Church of Constantinople, even dared to omit the prayer for the Patriarch of Constantinople, and the patriarch who was present in the Bulgarian church was hissed and insulted. Being summoned, on April 14th, before the patriarchal council, he declared that he could not and would not oppose the demands of his nation, and that he could not promise a change of his views. Patriarch Cyrillos, of Constantinople, was too weak to oppose this movement efficiently, but his successor, Joachim (elected October 16th, 1860), at once proceeded against the Bulgarian secessionists with great energy. The bishops Hilarion and Auxentius were exiled for insubordination against the orders of the patriarch of Constantinople, and when the Bulgarians of that city armed themselves to resist the execution of this order, the Turkish Government enforced it through its army. These measures, however, did not put an end to the national movements of the Bulgarians. Monster petitions, covered with thousands of signatures, appealed to the Ottoman Porte and the ambassadors of the European Powers for the redress of their grievances, for the appointment of Bulgarian priests to all the ecclesiastical offices in the national churches, and for either total separation from the patriarchate or admission

of at least six Bulgarian bishops to the holy synod, and a sufficient representation of the Bulgarians at the election of a patriarch. During the summer of 1861, a pamphlet of considerable learning was put out by the secretary of the Constantinopolitan Synod, reviewing the history of the Bulgarian relation to the Greek Church, and showing the groundlessness of their pretensions and complaints. The writer urges that the Bulgarian formed but a small part of the population of Western Macedonia. He says that many of the people are only Greeks who speak Bulgarian; and even goes so far as to assert that the physical appearance and customs of the Bulgarians in these parts show them to be originally Greek, and not Bulgarian. Then addressing himself to the Wallachians and other inhabitants of the district, with a view apparently to "divide and conquer," he warns them that the Bulgarians are endeavoring to get the ecclesiastical superiority over them, and that by submitting they will bring about their "Bulgarization." The Roman missionaries in Turkey endeavored to avail themselves of this internal dissension in the Greek Church, and to some extent they were successful. (*See ANNUAL CYCLOPEDIA for 1862, art. ROMAN CATHOLIC CHURCH.*)

In the Danubian Principalities a grave contest broke out between the State Government and the Greek Church, in which even the great Powers of Europe regarded themselves entitled to interfere. The "Daily News" of London gives the following explanation of this difficulty:

"Long ago the chiefs of the Greek, like those of the Latin Church, established regulations which they considered calculated to preserve at once its unity and the supremacy of themselves and their successors. They insisted on the ritual being in the Greek language, even amongst nations which understood not a word of Greek. They also outdid the Roman Pontiff, in ordaining that the upper clergy should invariably be of the Greek race and tongue. They recognized, indeed, that purely Greek clergymen or papas would be very useless as parish priests amongst Slavonian or Roumain tribes, for the people would not have heeded a priest not speaking their tongue. But a line of separation was drawn between the upper and lower, the titled and the working clergy. The latter, as parish priests, were confined to their humble task, and allowed to marry and mingle with the population. But the bishoprics, abacies, and all lucrative and authoritative positions, were reserved for the Greek clergy, who were brought up in convents, especially in those of Mount Athos, whence they issued to become bishops and archimandrites at Bucharest, at Jassy, and elsewhere. In order that this foreign race of clergy might not be isolated in the Principalities, convents were founded there of Greek monks, and richly endowed. This was done at a time when the Fanariot Greeks were always the functionaries and hos-

podars appointed by the Porte. These convents have extensive property, which has not only supported their inmates, but contributed large annual sums to the Greek convents on Mount Athos and in the Holy Land.

"It was utterly impossible to suppose that this system, imposed on a barbarous and tyrannical age, could endure. The Christian races, once governed most cruelly and rapaciously by Fanariot governors, sent by the Porte, are now ruled by native princes, have their own representative assemblies, and enjoy European codes of laws. The tenets of the Greek Church or its traditions do not tie its votaries down to respect or obedience toward one foreign head. Each country and each race has its Patriarch, or feels itself entitled to have one. The Russians have theirs. Why should not Roumains and Serbs? Even the Bulgarians, who have remained serfs and rayahs of the Sultan, refuse to obey the Patriarch of Constantinople, partly on account of his rapacity, partly because the clergy he appoints are of a race and language foreign to theirs. And in order to escape from bondage to him, many of them have declared themselves Catholics. The first use that the Danubian Principalities made of their quasi-independence was to shake off the yoke of the Greek monks. They have declared and passed a law, that the clergy, high as well as low, and their ritual, shall be Roumain. However willing to support the monasteries of the country, they are determined that their ecclesiastical revenues shall not be diverted to Mount Athos or Jerusalem."

The laws passed with regard to the convents led to remonstrances on the part of most of the European Powers. Prince Couza, in order to explain and justify his course, addressed a letter giving a detailed history of the whole case, to the Turkish Government and to all the great Powers which had signed the Paris Convention. The "orthodox communities of the East" (the convents of Athos) replied to this statement by a counter one, which the Archimandrite Nylos by their order presented to the courts of Paris, London, and St. Petersburg. All these Powers took sides with the religious houses and instructed their ambassadors in Constantinople, to concert means for supporting the claims of the religious communities. The Prince, however, formally adhered to his policy, and was supported in it by the vast majority of the people. On Jan. 1st, 1864, addresses were presented to the Prince by a deputation from the Chamber, by the Court of Cassation, the municipality of Bucharest, the chiefs of corporations, all of which congratulated him upon the secularization of the convent property. The Prince, in reply to these addresses, proposed the adoption of the Gregorian calendar, and the suppression of the religious communities, except those devoting themselves to the hospitals and to education. Notwithstanding the protest of the Porte, made in conjunction with the Cabinets of Paris,

Petersburg, Vienna, and Berlin, against the secularization of the monastic property, the Chamber unanimously maintained its former vote on the subject.

The efforts made in England and America for bringing about an intercommunion between the Anglican and the Greek Churches, as well as those Episcopal bodies in general which hold the Apostolic succession, met with some responses among the members of the latter. (See ANGLICAN CHURCH.) In Paris, a paper has been established, entitled *Union Chrétienne*, which is edited by a French priest of Gallican sentiments, Abbé Guettée, and a priest of the Russian Church, Joseph Vasscheff, and which is devoted to the advocacy of the Eastern Churches and the Episcopal bodies of Western Europe, including, in particular, such members of the Catholic Church as repudiate the belief in the supremacy of the Pope. The following letter from the Patriarch of Constantinople and the "Synod of the Œcumenical Throne" explains the sentiments animating the bishops:

Joachim, by the grace of God, Archbishop of Constantinople, New Rome, and Œcumenical Patriarch:

Most reverend Arch-Priest Joseph Vasscheff, most pious and honorable Abbé Guettée, whose learning is so widely useful, and who represent the editors' staff of *L'Union Chrétienne*, our well-beloved and valued sons in the Lord.

The grace, the peace, and the mercy of our Lord Jesus Christ be with you!

We are not ignorant, well-beloved sons, of the courageous and useful works of the editors of *L'Union*, for the integrity of the faith of Christ: on the contrary, we have long praised it, and bestowed our blessing upon it, when we received with joy the delightful letter of your piety, together with the precious collection of your journal. Thus, having more perfectly conceived your aim, we rendered thanks to God, "who willeth that all should be in union, and giveth mighty words to them that preach it." We regard, indeed, as the work of God, not only a salutary thought which has inspired a labor so useful to the body of the Church, but also the perfect concord which exists between you, and which enables you to labor as brothers in Jesus Christ. The meritorious end which you pursue with sincerity, the legitimate means which you employ, the sure guides which you follow, the solid bases on which you lean, the marvellous sweetness of your words, which enters the ears not as the clap of thunder, but as the light breeze which gently penetrates souls. It is thus that your words are worthy of the God whose cause they assert, and whose service finds its perfection not by vehement speech, but by sweetness. You will receive, without doubt, well beloved sons, the recompense from God of the pious works which you have undertaken for so holy a cause.

As to our Orthodox Church of the East, she has always grieved for the alienation of her western sisters, once so venerable; and more especially ancient Rome. Yet she consoles herself by consciousness of her innocence, for she did not provoke at first, any more than since she has perpetuated or strengthened the division. Nay, she has never ceased to offer with tears fervent prayers to her God and Saviour who maketh of two one, breaking down the middle wall of separation between them, that He may bring all Churches into one unity, giving them sameness of faith and the communion of the Holy Ghost. And that she may cause Him to hear her, she shows Him the marks of her martyrdom, and the wounds which she has through so many ages received on account of her Catholic Orthodoxy from those who envy her, who trouble her tranquillity and her peaceful life in Jesus Christ.

For these causes: our humility and the holy synod of most holy metropolitans, our brothers and coadjutors in the Holy Ghost, having been informed, especially by your letter, of the divine zeal which inflames you for the desired union of the churches, are filled with spiritual joy; we crown your holy work with the most just praises, we pour forth for you the most ardent prayers, and we bestow on you with our whole heart, on you and on your fellow laborers, our fullest benediction, patriarchal and synodal. And as we have seen with joy, in the letter of your piety, one western and one eastern priest united in the same love for the truth, joining their names as brethren, so may we, one day, by the grace of that God, whose judgment and mercies are infinite, behold the sister Churches of East and West embracing each other with sincerity and truth in the unity of the Spirit, in the bond of peace, to the end that we may be one body, and only one, in Jesus Christ, to the glory of the Father, the Son, and the Holy Ghost, the most Holy and Undivided Trinity.

His grace and benediction be with you.

INDICTUM the 5th, August 23d, 1862.

The Archbishop of Constantinople, who blesseth you in Jesus Christ.

Paisius, Metropolitan of Cæsarea, who blesseth you in Jesus Christ.

Paisius, of Ephesus, who blesseth you in Jesus Christ. Methodius, Vicar-General of Carpathos, who blesseth you in Jesus Christ.

Stephen, Metropolitan of Larissa, who blesseth you in Jesus Christ.

Sophonines of Arta, who blesseth you in Jesus Christ.

The Church of Russia is laboring, with considerable success, for the propagation of Christianity in the vast dominions of Russia, in Eastern Asia, and Northwestern America. The most efficient of the Russian missionaries is Priest Benjamin, who commenced laboring in 1823 on the peninsula of Alaska, in Russian America. His main efforts at first were for the natives of the Aleutian islands. He established himself, at length, upon one of them (Unalaska), learned their language, translated for them part of the Scriptures and several religious books, and taught them to read and write. From 1830 onward these islands rapidly turned from heathenism to Christianity, and to this day remain among the most prosperous of the Russian missions. Priest Benjamin, after a time, removed to New Archangel, on the island of Sitka, southeast of the Aleutian islands, and near the part of Russian America, which runs down the side of British America. From this point he labored especially for the tribes on the southern extremity of Russian America. He met at first with but little success; but other missionaries, having translated the Gospel of Matthew and some religious books for the natives, gathered more fruit. In 1845, one missionary, Sitziazen, baptized 530 of one tribe, the Kolustres. The whole number of converts among them up to 1860, was estimated at 4,700. But on the whole, this mission is not regarded as successful. Greater success attended the work on Cook's Sound, further north and west, among

the tribe of the Kenaiz. The missionary, Nezvetoff, labored with success among tribes on the rivers Kvickpack, Kooskovim, and Nushayack, near Behring's Straits. The extreme northern tribes of Russian America have manifested a strong tendency toward Christianity, and as no missionary has yet penetrated those wilds, small bands of them often come to the southern coast for baptism. In all these colonies of Russian America, including the Aleutian islands, there were, in 1860, seven parish churches and 35 chapels, served by 27 priests. Priest Benjamin, after laboring for years in Russian America, was made Archbishop of Kamschatka and Superintendent of the Polar Churches, with the title "Innocent I." His diocese is one of the largest in the world, but he still, though very aged, visits all parts of it. Dr. Stanley, in his "Eastern Church," says: "Innocent, Archbishop of Kamschatka, is to the Russian Church, as the Bishop of New Zealand is to our own, an example of the revived missionary spirit in their vast Colonial Empire. Not in canoes or steamers, but in reindeer sledges he traverses to and fro the long chain of pagan islands which unite the northern frontiers of the Asiatic and American continents, and has, it is said, brought many to the Christian faith."

The archbishop is surrounded by a number of assistants, among whom some natives have won distinction. By their labors the Kamschatkadales were almost wholly christianized as early as 1847. Giving up nomadic life, they have settled in small villages, and 3,000 were attending the ten churches erected for them in different parts of the peninsula.

The tribe of Lamutes, on the gulf of Ochotsk, has also been almost wholly christianized. They have three chapels in the towns of Ochotsk and Ajan. Among the people of the Amoor country, a mission has been established, which bids fair to extend its operations into China.

The Christianization of Northern Asia is making rapid progress, and paganism is fast disappearing. Nearly all the tribes are furnishing their contingent to the native priesthood, for the training of which a seminary has been established at Jakutsk.

GREEN, REV. L. W., D. D., an American Presbyterian clergyman, and at the time of his death president of Centre College, Danville, Ky., born about 1802, died at Danville, Ky., May 26th, 1863. He was educated at Transylvania University, Lexington, Ky., and entered the ministry in the Presbyterian Church about 1825. He was early appointed a professor in Centre College, and after many years' service in that capacity was called to professorships successively in Hanover and Alleghany Theological Seminaries, to the presidency of Washington College, Virginia, to that of his alma mater, Transylvania University; and in 1857, on the death of Dr. Young, to the same position in Centre College. In the controversy engendered by the outspoken loyalty of Rev. Dr. Breckin-

ridge, in connection with the Danville Theological Seminary, he took a firm position on the side of the Union. His death was caused by congestive fever.

GRIMM, JAKOB LUDWIG, a German philologist and antiquarian, born in Steinau, in Hesse-Cassel, Jan. 4th, 1785, died in Berlin, Prussia, Sept. 20th, 1863. He was educated with his brother Wilhelm, a year younger than himself, and through life the two were almost inseparable in their studies, pursuits, labors, recreations and companionship. Their early education was obtained at the Lyceum of Cassel, and at the wish of their father, himself a jurist and magistrate, they entered the University of Marburg together, and studied law under Savigny. In 1805, Jakob accompanied Savigny to Paris to aid him in exploring the libraries of that capital. The next year he returned to Hesse-Cassel, and became a clerk in the bureau of the Hessian Secretary of War. In 1808, Hesse was incorporated in the new kingdom of Westphalia, and Jakob Grimm was appointed royal librarian, and Wilhelm his assistant. The library which had been seized from the elector of Hesse was large, and the king of Westphalia, who cared little for books, left the brothers Grimm to make the most of their opportunities, seldom requiring their services. This opportunity of study was eagerly improved, and lasted for five years. During this period Jakob was also Auditor of State. In 1813, the elector was restored, and Jakob Grimm was made Secretary of the Hessian legation at the headquarters of the Allies in 1814, and was one of the members of the Congress of Vienna in 1814 and 1815. The French had carried the library to Paris when the kingdom of Westphalia was swept away, and Jakob was sent to that city with the special mission of reclaiming it, which he succeeded in accomplishing. The brothers were now both retained in charge of it, and continued in these duties till 1829, when Jakob was appointed Professor of the German Language, Literature and Laws at the University of Gottingen, and Wilhelm sub-librarian of the University. In 1837, when Ernest (Duke of Cumberland) became King of Hanover, one of his first measures was an attempt to abrogate the Hanoverian Constitution, and seven of the professors of the University, including the two brothers Grimm, Dahlmann, Gervinus, and others, drew up and signed a protest against this violation of the rights of the people. For this offence the king dismissed them from their posts and banished them from the country. The brothers returned to Hesse-Cassel, where they lived in retirement, engaged in literary labors till 1841, when the King of Prussia called them both to Berlin, appointed them professors in the University, and made them members of the Academy of Sciences. Here they continued to reside for the remainder of their lives. Jakob presided over the assemblies of German philologists held in Frankfort in 1846, and in Lubeck in 1847, and sat in the

national assembly of 1848, and in the assembly of Gotha in 1849, voting always with the moderate liberal party. In private life, Jakob and Wilhelm Grimm were remarkable for their affection, tenderness and gentleness, and the two genial, yet dignified old men were greatly beloved by a wide circle of friends throughout the continent of Europe. The death of Wilhelm in 1859 was a severe blow to the surviving brother, but was borne with great fortitude and resignation. The tribute to his brother's memory, before the Academy of Sciences of Berlin, is one of the most touching records of fraternal affection, and at the same time one of the best memoirs of life-long literary labor ever published. Wilhelm Grimm was especially devoted to German poetry of the mediæval age, in which he was profoundly versed, and for which a natural poetical taste eminently qualified him. He edited with great success many of the works of the earlier German poets, enriching the editions with ample notes and parallel passages from other writers. Jakob Grimm was a philologist in the best sense of the word, and though possessing a keen appreciation of the poetical, romantic and legendary in his own and other languages, this was subordinated to a critical acquaintance with the language, laws, customs, faith and literature of every European and many Oriental nations. One of his ablest works is his "German Grammar," in five volumes, a treatise of vast erudition, containing a history of the grammatical forms of all the Germanic dialects in the different eras of the language. He had previously written a history of the Minnesingers and Meistersingers of Germany, demonstrating their relation to each other. To his German grammar succeeded his *Deutsche Recht-altenthümer*, an account of the poetical and fantastic customs prevalent in Germany in the middle ages. To them were added an elaborate work on German mythology in the early ages, a "History of the German Language," in which he traced the ethnological affinities of the Germanic nations by the aid of comparative philology; a collection of German proverbs, editions of the old Spanish romances, or fairy stories; of the Hymns of the Ancient Church; of several Anglo-Saxon poems; of the Latin works of the tenth and eleventh centuries, in connection with Schmeller, and of Reynard the Fox, the great comico-political poem of Germany. In connection with his brother Wilhelm, he had published the *Kinder und Hans Märchen*, a collection of fairy legends and popular tales of all ages, which has attained a wide reputation, not only in Germany, but in every other country of Europe, having been translated into all the languages of the Continent, and having appeared in three or four English versions. The greatest labor of the two brothers was their *Deutsches Wörterbuch*, a German dictionary, of which two volumes had appeared, and which was nearly completed at the time of Jakob's death. In this

dictionary no word employed in German literature between the time of Luther and that of Goethe was to be omitted, and the varied learning and research of the two brothers were tasked to make it the most perfect contribution to philological science ever published.

II. GRIMM, LUDWIG EMIL, a younger brother of the preceding, born in Steinau in 1790, died at Cassel in March, 1863. He was eminent as a painter, and at the time of his death was professor of painting in the academy at Cassel. He had studied painting under Karl Hess at Munich, served in the campaign of 1813, and after the peace resumed his studies at Cassel and Munich. He went to Italy in 1817, and returned the following year. In 1832 he was appointed professor in the Academy of Art in Cassel. Of his paintings, a madonna and numerous portraits are most admired. He also attained high reputation as an engraver, having executed nearly 150 engravings of great merit, many of them his own compositions.

GWILT, JOSEPH, Esq., an English architect, born in the parish of St. George the Martyr, Southwark, Jan. 17th, 1784, died at South Hill, Henley-on-Thames, Sept. 14th, 1863. After having passed some years at a boarding school, when about fourteen years of age, he was sent to St. Paul's School, where he remained nearly two years. In 1801, he was admitted a student in the Royal Academy, and the same year obtained the silver medal of that institution, for the best drawing of the tower and steeple of the church of St. Dunstan-in-the-East. In 1815 he was elected a Fellow of the Society of Antiquaries of London. At the end of the following year he visited Rome and the other principal cities of Italy, having previously, in order that nothing worthy of notice might escape him, compiled a catalogue of the buildings in the chief towns, classified under the names of their architects. In 1818 he published the work under the title "*Notitia Architectonica Italiana*," or, Concise Notices of the Buildings and Architects of Italy, preceded by a Short Essay on Civil Architecture, and an Introductory View of the Ancient Architecture of the Romans; a work of great val-

ue for reference and as a handbook in travelling. In 1822 he made a design for London Bridge. His principal work, however, was Markree Castle, near Sligo. He designed and executed the Byzantine church at Charlton, near Woolwich, dedicated to St. Thomas, and alterations to the Hall of the Grocers' Company. To this Company he was appointed surveyor; and was also architect to the Imperial Insurance Company. Mr. Gwilt was for more than forty years one of the Surveyors of the Sewers in Surrey, having succeeded his father. Though known as the author of few designs or erected buildings, he possessed in an eminent degree the combination of attainments required in the practical architect, and the work of his pen has conferred a lasting benefit upon the profession. In 1820 he wrote a pamphlet entitled "*Cursory Remarks on the Origin of Caryatides*," the substance of which is embodied in his introduction to "*Chambers' Civil Architecture*." In 1824 he published a second edition of a work on the projection of Shadows, intended for the use of Architectural Draughtsmen and other Artists. In 1825 was commenced the publication of the well-known octavo edition of Sir William Chambers's "*Treatise on the Decorative Part of Civil Architecture*," enriched with valuable notes, and prefaced with original matter on Grecian Architecture. The work appeared in six numbers on alternate months, and is generally bound in two volumes. In 1826 Mr. Gwilt produced a translation upon which he had been engaged for many years, of the "*Architecture of Vitruvius*," preceded by a short life of Vitruvius, and a list of the several editions and versions. In the same year he published an octavo volume, the "*Rudiments of Architecture, Practical and Theoretical, with plates*." The treatise on the Art of Music, published in the Encyclopædia Metropolitana in 1835, was from his pen. In 1842 was first published "*An Encyclopædia of Architecture, Historical, Theoretical, and Practical*." His last literary labor was a new edition of the "*Principles of Architecture*" of Peter Nicholson, whose labors were held by Mr. Gwilt in great esteem.

H

HABEAS CORPUS. The summary arrest and confinement of persons continued to be enforced during the year. In many cases the parties arrested or their friends applied to the courts for the benefits of the writ of *habeas corpus*, which, though in some cases granted by the judges, was ineffectual to procure the release of the prisoner or any examination into the charges against him, by reason of the refusal of the military authorities to obey the mandate of the writ. In one of the earliest cases in the year, that of Nicholas Kemp arrested as an anti-draft rioter, the Supreme Court of Wis-

consin unanimously decided against the right of the President to suspend the writ of *habeas corpus* in time of civil war. The case arose in January, and sought the release of Nicholas Kemp from the custody of General Elliot commanding the Department of the North-West. The production of the body of the petitioner was refused and a motion was made for a writ of attachment, and on this motion the decision of the Court was rendered.

Chief Justice Dixon, in his opinion, expressed his regret that Congress had not, in the exercise of its undoubted power (5th Wheaton,

25, 71), withdrawn all cases arising under the Constitution and the laws of the United States from the jurisdiction of the State courts, and committed them exclusively to the Federal courts.

Regarding the case as involving the right of the President in time of civil war to suspend the writ of *habeas corpus*, to punish by sentence of a court martial for offences against the laws of war, and even for acts not made offences by any law of Congress, but named in the President's order of September 24th, the Court denied that right as to Wisconsin, or any State where the civil authorities are able, by ordinary legal process, to preserve order, and claimed that the power to suspend the writ of *habeas corpus* was possessed only by Congress.—(See ANNUAL CYCLOPEDIA, 1862, HABEAS CORPUS.)

The Court declined for the present to issue a writ of attachment requiring the production of the body of the petitioner, though holding that no sufficient cause was shown for his detention—Chief Justice Dixon saying that the issuing of the attachment at the present time might lead to collision between the State and civil authorities and the United States military authorities, which it was possible to avoid by a short delay, it was deemed advisable, adhering to the precedent set by other courts and judges under like circumstances, and out of respect for the national authorities, to withhold it until they shall have had time to consider what steps they should properly take in the case.

The conclusions arrived at by Judge Paine are briefly stated as follows:

1. The Government of the United States is invested with full power by the Federal Constitution to prosecute war, and there is no war-power outside the Constitution.
2. Only the people, through their representatives in Congress, can suspend the writ of *habeas corpus*.
3. The President can execute the laws only by such means as the Constitution and the laws themselves have given him power to employ.
4. A military commander may declare martial law in districts which are the actual theatre of war, where hostile armies are met for the purpose of destruction, or in insurrectionary districts where domestic violence and discord have effectually displaced the civil authorities, but not elsewhere.
5. Courts martial are courts of limited and inferior jurisdiction, and have no jurisdiction to try any person except such as are by law amenable to such trial.
6. The legislative is the political department of the Government, and when the writ of *habeas corpus* is not suspended by Congress, the Executive has no political power to imprison the people.

Judge Paine further declares that he should consider the establishment of the doctrine that the President possesses illimitable power over the land by a declaration of martial law “as a calamity little if any less to be deplored than the success of the rebellion.”

On the 20th of January an article appeared in the “Daily Philadelphia Evening Journal,” under the title of “Davis’s Message.” Between twelve and one o’clock in the night of the 28th Mr. Albert D. Boileau, the editor and publisher of the paper, was arrested at his residence in

Philadelphia by a detachment of soldiers, sent to Baltimore and confined in Fort McHenry. As soon as the fact became known it created great excitement. A paper published in Philadelphia gave the following reason for the arrest and account of the subsequent transactions: “The columns of the Journal have recently been filled with articles abusing the Government and bitterly denouncing the Administration, and it is probable that to this fact Mr. Boileau owes his sudden and involuntary visit to Washington.”

On Wednesday afternoon, at four o’clock, the provost marshal, with his guard, in pursuance of the same order, marched to the office of the “Evening Journal” and took possession of it. Their orders were to retain possession, and until further orders allow no future publication of the paper. The guard stacked their arms in the office, and remained there.

On the 29th Judge Ludlow directed the attention of the grand jury of Philadelphia to the arrest as follows:

Gentlemen of the Grand Jury: It comes to my knowledge that within the last twenty-four hours a citizen of this Commonwealth, and of this county, has been suddenly arrested at his residence in this city, and has been forcibly carried, against his will, beyond the limits of this State and the jurisdiction of this court.

Such events have heretofore taken place, but, as we have been anxious to support the United States Government in every way compatible with a proper discharge of our duty, we were not inclined to believe that those in authority would attempt to exercise a power, under all circumstances questionable and delicate, when temporary excitement had given way to reason, and a patriotic and I believe an honest desire to do a great public duty had resolved itself into a settled purpose to discharge that duty according to law, and with at least a decent respect for the laws of this Commonwealth and for the constituted authorities of the State.

The time has arrived when we can no longer hold our peace, when the obligations imposed upon us by our oaths of office compel us at every hazard to direct the Grand Jury to inquire into and determine by whose order and by what persons this arrest has been made; and if, after an impartial examination, it shall appear that any citizen has been forcibly abducted from the county, to inform the Grand Jury that it is their duty to present the facts in the case to the Court where bills of indictment may be framed, and the accused persons, if they have committed a crime, be tried, and if guilty be punished for what in that event may become a criminal act.

You will see, gentlemen, that the Federal and State Governments provided for the trial of those charged with having committed offences against either, but the framers of these Constitutions intended that the citizen should not be arrested without having an opportunity to defend himself.

It may be supposed by some that the offence of treason cannot be punished under the Constitution of the United States except by the exercise of military power. Such, however, is not the case, and that man is not only ignorant of the law, but must be intentionally so. You will observe that, under the Constitution and laws of the United States and of this State, a man who is in point of law a traitor, or who aids in any material way the enemy, may be punished, and that with great severity, and he ought thus to suffer.

As the laws then do exist, as the tribunals of the United States Government and the State are open, as magistrates abound at every corner of the streets, and are known to be loyal men—as peace reigns in this

county, and no impending danger destroys the authority of law as duly administered by the State courts, and lays its power in the dust, by what right or pretended right can the persons making this arrest justify it? Certainly not upon the ground of necessity, for no necessity exists, and certainly not upon a pretended Executive power, for it will be, it must be, admitted that that power can only exist when the law is silent, and we have distinctly shown that by the Constitution of the United States, and the law of this State, the Government is already secured, at least in this court, against the designs of those who may attempt by any method to destroy it.

Did the people of this Commonwealth, when they entered into the Union ever agree to devolve upon either the President of the United States, Congress, or the Judiciary, or all three combined, the power to suspend the privilege of the writ of habeas corpus in a State or district when the "public safety did not require it." If, in the case soon to be examined by you, you discover that the arrest was ordered by authority of the laws of the United States, and commonly called the "military," as distinguished from the "martial law," you will state that fact, because it may possibly be that Congress has enacted such laws as they may by virtue of the Constitution legally enact, and which, as they affect the government of the army of the United States, may be constitutional and legal when applied to those who are amenable to that particular code of laws.

Gentlemen, I have alone to take the responsibility of addressing you to-day. It has not been done without serious reflection. From the commencement of the rebellion I have endeavored, in every possible legal method, to support the constituted authorities. We have even failed to notice the fact officially that arbitrary arrests have been made in this county, because, as we have before intimated, we had hoped that they would cease. That hope has been destroyed. A legal and moral necessity urges us to this step, not to countenance any act committed by any man against the authority of the General Government, but to sustain a right as clear as the noonday sun, as vital as life-giving breath, without the existence of which the Government itself is a stupendous deception, and which, if firmly maintained now and here, will go far to unite a people of immense resources, and which power can yet be wielded as a unit, when and as soon as the constitutional rights of each citizen shall be respected and enforced.

I request you at once to suspend all other business before you at present, and instruct the District Attorney of this county to send to Gen. Montgomery and the Provost Marshal, together with all other persons who have any knowledge of this transaction, and, after you shall have heard them, your duty will be simply to represent the facts to the Court.

The Grand Jury then retired.

On January 30th, the Grand Jury made a presentment relative to the arrest of Mr. Boileau, of the "Evening Journal." They stated that the testimony before them showed that the arrest was made by order of Gen. Schenck, for the publication of an editorial article under the title of "Davis's Message," and other articles of a like dangerous character, tending to the support and encouragement of the rebellion against the United States Government. After quoting the editorial article alluded to, the jury stated that they could not refrain from saying that, whilst they individually or as a body could not conscientiously do anything which would have a tendency to weaken the arm of the General Government in the exercise of its constitutional authority for the suppression of this most wicked and causeless rebellion, yet

they feel equally bound to enforce all laws that have the protection of life, the security of property, and the liberty of the citizen in their sacred keeping. After reading the presentment, Judge Ludlow said:

I shall direct the District Attorney to examine the document, and to frame such bills of indictment as he may find to be necessary in support not only of the laws of Pennsylvania, but of the Constitution of the United States. We can then arrive at the question of the legality of the charges therein contained. The record will then present detailed charges, and the defendants may object to prosecution for any cause they may have, and they may also have the judgment of this Court, and also final judgment of the Supreme Court, in case they should be dissatisfied with the finding of this court.

The Grand Jury was then discharged.

This action of Judge Ludlow was severely commented upon and repudiated by Judge Alison, who presided at the next term of the Court, commencing a few days after. He says, in his remarks to the Grand Jury:

His Honor Judge Ludlow, on Thursday, the 29th ultimo, called the attention of the Grand Jury, in a special charge, to the fact that it had come to his knowledge that a citizen of this Commonwealth, and of this county, had been suddenly arrested at his residence, and had been forcibly carried against his will beyond the limits of this State, and the jurisdiction of this court. Accompanying this statement was a request that the Grand Jury would suspend all other business, and an instruction to the District Attorney to send for the persons named; directing that the Grand Jury, after having heard the witnesses brought before them, present the facts to the court.

On the following day a presentment was made to the court in substance that A. D. Boileau, the proprietor of the "Evening Journal," had been arrested by military officers in the service of the United States, and conveyed to Fort McHenry; the alleged cause of the arrest was the publication of articles tending to the support and encouragement of rebellion against the Government of the United States.

Upon this presentment, the District Attorney, by the Judge, then holding the court, was directed to prepare and send before the Grand Jury bills of indictment.

To this proceeding I am compelled to except, regarding it as wrong in every aspect in which it can be viewed. I would be derelict in my duty as a judge of this court, if, by my silence, I might even seem to sanction it, and if, in speaking, I did not place upon it my most emphatic condemnation. It was unwise, because it was unnecessary; the ordinary mode of criminal procedure being fully adequate to remedy the wrong, if a wrong has been committed; and that method being, in my judgment, the only proper and legal way in bringing the case in court. It was injudicious, for, however well intended, the consequence of a judge, of his motion, upon mere information obtained in no legal way, for there was no complaint under oath, with unnecessary and unusual haste, making use of his official position, to institute a prosecution, strictly personal and private in its nature, is to render the whole proceeding liable to misconstruction; to place this court in a false position before the country, as anxious for and of its own motion seeking a cause of difficulty with the Government; and because the legitimate result of such action is to precipitate a collision between the courts and General Government, when such collision should by all proper means and to the last extremity be avoided.

There is still another reason why I cannot approve of the proceedings under consideration, and that is, because I believe them to be unauthorized by the law of the land, having no established principle regulating

proceedings before grand juries to sanction or sustain them; a brief reference to the essentials of the three extraordinary modes of instituting procedure, to which I have called your attention, will make this clear to a demonstration.

It is not such a presentment as can be made the basis of any action by the Court, for being aimed at individual offenders, and at a specific and distinct offence, it could be legally founded only on the personal knowledge of the grand jurors.

Neither does this fall under the second classification; the proceedings did not originate with the District Attorney, nor was any indictment of his own motion or otherwise laid before the Grand Jury.

It is equally clear, that it does not fall in with the only remaining mode, which is where the Court of their own motion call the attention of the Grand Jury to, and direct an investigation of, matters general in their nature, for, as we have already seen, that can only be done where the evil affects the entire community, and in no case where it is personal and individual.

Under these instructions no further notice was taken of the arrest by the court or Grand Jury, but the case attracted attention in the Legislature of Pennsylvania, being brought to the notice of the Senate by resolutions offered by Senators Donovan and Wallace. The resolution of the former authorizes the governor to go to Washington to demand the release of Mr. Boileau. Mr. Donovan supported it in an able speech, and was replied to by Mr. Lowry. The resolution was referred to the Committee on Federal Relations, and a motion to discharge the committee failed by a strict party vote. Considerable excitement prevailed in regard to the arrest.

Mr. Boileau was released from confinement, in consequence of his being willing to make the apology and avowal contained in the following paper:

HEADQUARTERS MIDDLE DEPARTMENT, EIGHTH
ARMY CORPS, BALTIMORE, MD.,
February 1st, 1863.

I, Albert D. Boileau, citizen of Philadelphia, and editor and publisher of the "Evening Journal," now confined in Fort McHenry for the publication of an editorial article under the title of "Davis's Message," in that paper, January 20th, 1863, and "for the publication of other articles of a like dangerous character, tending to the support and encouragement of the rebellion against the Government of the United States," do hereby freely and voluntarily express my regret for the publication of that article, or of any other article of like tendency or character, and do distinctly disavow such articles being published with my proper authority or knowledge, and declare that such publication has been made by other persons, agent or employé, and without my sanction and intention; and I do furthermore give to Maj.-Gen. Robert Schenck, commanding the Middle Department and Eighth Army Corps, by whose order in behalf of the Government I have been arrested, my sacred parole of honor, that upon being discharged from my present imprisonment, and suspension of publication of my newspaper being removed, I will not write, print, or publish, or permit others in my name to write, print, or publish any articles having such dangerous character, or tending to the support or encouragement of the rebellion, but will demean myself in all things as a true and loyal citizen of the United States, intending only to support the Government, the Constitution, and the Union, as a faithful citizen should. And it is to be further understood that these declarations and pledges are made to relate as well to matters hereafter to be published in the weekly newspaper called the "Democratic Leader," made up

from the "Daily Philadelphia Evening Journal" itself, and to any other newspaper that may be published or controlled by me.

Given at Baltimore this 1st day of February, 1863.
ALBERT D. BOILEAU.

During the month of March, complaint was made before a justice of the peace at Marshall, Clarke county, Illinois, that two men from Indiana were attempting to kidnap a citizen of that place. A warrant was issued, and the parties arrested and brought before the justice. At the instance of the defendants' counsel the investigation was continued before Charles H. Constable, judge of the fourth judicial circuit of Illinois. The defendants sought to justify their acts under a written communication from the authorities of Indiana purporting to give them authority to arrest deserters in the city of Terre Haute and county of Vigo, State of Indiana. There was no proof that these parties were the persons they represented themselves to be. It was also disclosed in the examination that James Gamron, for whom the complaint was made, volunteered in the — Illinois regiment; that he had been taken prisoner in Tennessee about the 1st of February, and was paroled; had arrived, sick, at his mother's house, in Clarke county (Ill.), and remained so up to the time of the arrest. The judge, after hearing all the evidence, held that there was probability of the guilt of the accused, and thereupon required that they make their bond to the people of the State of Illinois, jointly, in the sum of five hundred dollars, conditioned that they appear and answer further to the charge on the Thursday following.

One of the parties arrested obtained from Judge Constable the following statement of the proceedings:

March 8th, 1863.

At the request of John McFarland, as judge of the fourth judicial circuit of the State of Illinois, I state that Messrs. McFarland and Thomas Long have been arrested and brought before me for examination on a charge of kidnapping, and that I have deemed it my duty to hold them over in a bond of five hundred dollars to appear on next Thursday morning, being the tenth judicial day of the term of the Clarke Circuit Court, now in session, to answer further to said charge, and have ordered the discharge from custody of James Gamron, Hugh Scott, M. Belcher, and John Tanner, four men whom they had arrested upon the ground that they were deserters from Company K, 130th regiment Illinois volunteers.

CHARLES H. CONSTABLE,
Judge Fourth Judicial Circuit of Illinois.

The military authorities thereupon caused the arrest of Judge Constable upon the charge of interfering with the capture of deserters. An examination took place before S. H. Treat, district judge of the southern district of Illinois, on the charge of encouraging soldiers to desert. A full examination showed that the sergeants McFarland and Long had no authority to take deserters in Illinois, and that the judge had acted properly in releasing the men arrested and in holding the officers to bail. He was accordingly discharged from custody. The judgment of the Court was rendered simply

upon the evidence submitted, the merits of Judge Constable's decision not being discussed.

The action of the President in suspending the writ of habeas corpus had been hitherto taken without direct Congressional sanction. Congress, however, by an act approved March 3d, authorized the President, whenever in his judgment the public safety may require, to suspend the privilege of the writ, in any case throughout the United States or any part thereof. (See page 255.) Under this act the proclamation of September 15th was issued. (See page 485.)

The arrest, trial, and subsequent banishment of Clement L. Vallandigham, gave rise to more extended comment and excitement than any arrest which had previously been made. The prominence of the person, the manner of the arrest, the startling singularity of the tribunal, and the hitherto unknown punishment, tended to awaken and sustain a state of intense excitement throughout the country.

General Burnside, as commander of the Department of Ohio, on the 19th of April issued the following order:

General Order No. 38.

HEADQUARTERS DEPARTMENT OF THE OHIO, }
CINCINNATI, April 13th, 1863. }

The commanding general publishes for the information of all concerned:

That hereafter all persons found within our lines who commit acts for the benefit of the enemies of our country will be tried as spies or traitors, and, if convicted, will suffer death. This order includes the following classes of persons:

Carriers of secret mails.

Writers of letters sent by secret mails.

Secret recruiting officers within the lines.

Persons who have entered into an agreement to pass our lines for the purpose of joining the enemy.

Persons found concealed within our lines belonging to the service of the enemy; and in fact all persons found improperly within our lines who could give private information to the enemy.

All persons within our lines who harbor, protect, conceal, feed, clothe, or in any way aid the enemies of our country.

The habit of declaring sympathies for the enemy will no longer be tolerated in this department. Persons committing such offences will be at once arrested, with a view to being tried as above stated or sent beyond our lines into the lines of their friends.

It must be distinctly understood that treason, expressed or implied, will not be tolerated in this department.

All officers and soldiers are strictly charged with the execution of this order.

By command of Major-General A. E. BURNSIDE,
LEWIS RICHMOND,
Assistant Adjutant-General.

Mr. Vallandigham commented upon the contents of this order in a speech delivered by him at Mount Vernon, Knox county, Ohio, on the 1st of May, at which meeting some officers of the army were present in citizens' clothes. His remarks at this time led to an order for his arrest by the military authorities, which, we learn from the Cincinnati papers, was effected in the following manner:

A special train was sent up on the Cincinnati,

Hamilton & Dayton railroad, on Monday evening, May 4th, shortly before midnight, with a company of the 115th Ohio regiment, to arrest and bring Mr. Vallandigham to Cincinnati. The train reached Dayton at three o'clock Tuesday morning, and the party at once proceeded to the residence of Mr. Vallandigham and sought admittance. Mr. Vallandigham came to an upper window, and asked their business, and on being informed that they had orders to escort him to this city, he refused to allow them to enter. While at the window, he shouted at the top of his voice, "Asa, Asa, Asa," and about the same time a pistol was fired from an upper side window of his house, to give the alarm that had been agreed upon, it is supposed, to call out his friends. In a very few minutes the fire bells began to toll to arouse his friends. The troops forced their way into the house, and Mr. Vallandigham was given time to make his toilet, when he was hurried to the cars, and they departed for Cincinnati before the crowd could assemble. The train reached the city about 6 o'clock Tuesday morning, and the prisoner was at once conveyed to the military prison on Columbia street, near Sycamore, where he was confined during the day. No one was allowed to see him, although several of his friends applied for the privilege.

From the same source we also learn that the arrest of so prominent a man gave rise to much discussion and feeling in political circles in that city, while in Dayton, the home of Mr. Vallandigham, the excitement ran so high as to lead to a popular outbreak, of which this account was telegraphed:

[Special Despatch to the Cincinnati Gazette.]

DAYTON, May 5th—9 P.M.

There has been a good deal of excitement to-day, but no disturbance occurred until after dark. Groups of people have congregated on street corners, discussing the arrest of Mr. Vallandigham, and denouncing the manner in which it was done.

A large number of wagons, with Vallandigham's friends, came into the city to-day from the country and joined in with the crowd.

At dark a crowd of between five and six hundred men proceeded to the "Journal" office, and commenced hooting and yelling. Presently some few bricks and stones were thrown, breaking in the windows and doors.

Soon after several pistols were fired into the building and the torch was applied. The "Journal" office was completely gutted, and the flames spread to the adjoining stores.

One man in the crowd was severely injured by a brick thrown by a rowdy. The fire spread to the hat store of Leobold, the shoe store of Darrow, Bornsten's segar store, the "Gospel Herald" office, and as far back as S. Wild's livery stables—all of which were completely destroyed.

10 P. M.—A portion of the 115th Ohio regiment, under command of Capt. Frazer, has arrived here from Cincinnati. It is the general impression of all that much blood will be shed before morning.

11.15 P. M.—The "Journal" office has been completely burned to the ground, with other buildings adjoining.

The mob seems to have quieted down, and it is thought they will give it up for to-night.

The troops are on the ground, guarding the engines, which are now at work.

John Lowe's house was attacked, and some windows broken, when the troops dispersed the crowd.

11.30 P. M.—Everything is quiet now.

On the 5th of May Mr. Vallandigham published the following address to his political friends:

MILITARY PRISON, CINCINNATI (OHIO), *May 5th*, 1863.

To the Democracy of Ohio:—I am here in a military bastille for no other offence than my political opinions, and the defence of them, and of the rights of the people, and of your constitutional liberties. Speeches made in the hearing of thousands of you in denunciation of the usurpations of power, infractions of the Constitution and laws, and of military despotism, were the sole cause of my arrest and imprisonment. I am a Democrat—for the Constitution, for law, for the Union, for liberty—this is my only "crime." For no disobedience to the Constitution; for no violation of law; for no word, sign, or gesture of sympathy with the men of the South, who are for disunion and Southern independence, but in obedience to *their* demand as well as the demand of Northern abolition disunionists and traitors, I am here in bonds to-day; but

"Time, at last, sets all things even!"

Meanwhile, Democrats of Ohio, of the Northwest, of the United States, be firm, be true to your principles, to the Constitution, to the Union, and all will yet be well. As for myself, I adhere to every principle, and will make good, through imprisonment and life itself, every pledge and declaration which I have ever made, uttered, or maintained, from the beginning. To you, to the whole people, to TIME, I again appeal. Stand firm! Falter not an instant!

C. L. VALLANDIGHAM

He was ordered to be tried by a military commission, which met on the 6th of May.

The Commission convened at 10 o'clock A. M.

The Judge Advocate read the general order from the headquarters of the Department of the Ohio, appointing the following officers a commission to try all parties brought before it, and Mr. Vallandigham was asked whether he had any objections to offer to any member of the court.

The following officers composed the court: Brig.-Gen. R. B. Potter, President; Capt. J. M. Cutts, Judge Advocate; Col. J. F. DeCourcy, 16th Ohio; Lieut. Col. E. R. Goodrich, Commissary of Subsistence; Maj. Van Buren, aide-de-camp; Maj. Brown, 10th Kentucky cavalry; Maj. Fitch, 115th Ohio; Capt. Lydig, aid-de-camp.

Mr. Vallandigham said he was not acquainted with any of the members of the court, and had no objection to offer to them individually; but he protested that the Commission had no authority to try him, he being neither in the land nor naval force of the United States, nor in the militia in the actual service of the United States, and was not therefore triable by such a court, but was amenable only to the judicial courts of the land.

The members of the Court were then sworn to try his case impartially.

The Judge Advocate then read the following charge and specification.

Charge.—Publicly expressing, in violation of General Orders, No. 38, from headquarters, Department of the Ohio, his sympathies for those in arms against the Government of the United States, declaring disloyal sentiments and opinions, with the object and purpose of weakening the power of the Government in its efforts to suppress an unlawful rebellion.

Specification.—In this, that the said Clement C. Vallandigham, a citizen of the State of Ohio, on or about the 1st day of May, 1863, at Mount Vernon, Knox county, Ohio, did publicly address a large meeting of citizens, and did utter sentiments in words, or in effect,

as follows, declaring the present war "a wicked, cruel, and unnecessary war;" "a war not being waged for the preservation of the Union;" "a war for the purpose of crushing out liberty, and erecting a despotism;" "a war for the freedom of the blacks and the enslavement of the whites;" stating "that if the Administration had so wished, the war could have been honorably terminated months ago;" that "peace might have been honorably obtained by listening to the proposed intermediation of France;" "that propositions by which the Northern States could be won back and the South be guaranteed their rights under the Constitution, had been rejected the day before the late battle of Fredericksburg by Lincoln and his minions;" meaning thereby the President of the United States, and those under him in authority. Charging "that the Government of the United States were about to appoint military marshals in every district, to restrain the people of their liberties, to deprive them of their rights and privileges." Characterizing General Order No. 38, from headquarters, Department of the Ohio, "as a base usurpation of arbitrary authority;" "inviting his hearers to resist the same by saying, 'the sooner the people inform the minions of usurped power that they will not submit to such restrictions upon their liberties the better;'" declaring "that he was at all times and upon all occasions resolved to do what he could to defeat the attempts now being made to build up a monarchy upon the ruins of our free government," asserting "that he firmly believed, as he said six months ago, that the men in power are attempting to establish a despotism in this country, more cruel and more oppressive than ever existed before."

All of which opinions and sentiments he well knew did aid, comfort, and encourage those in arms against the Government, and could but induce in his hearers a distrust of their own government and sympathy for those in arms against it, and a disposition to resist the laws of the land. J. M. CUTTS,

Capt. 11th Inf., Judge Advocate, Dep't of Ohio.

Mr. Vallandigham was asked by the Judge Advocate what his plea was.

Mr. Vallandigham refused to plead, and asked time to consult his counsel, and for a process to compel the attendance of Fernando Wood, of New York city, who should be required to bring with him a letter which he received from Richmond in relation to terms offered for the return of Southern Senators to their seats in Congress, with the letter of the President declining to entertain the proposition.

Mr. Vallandigham continuing to refuse to plead to the charge, the President directed that the plea of "not guilty" be entered on the record.

The Court then gave Mr. Vallandigham time to consult his counsel, and for that purpose ordered a recess to half past one o'clock.

The court was then cleared for deliberation, as to whether the delay asked for by Mr. Vallandigham should be granted, and remained closed until near noon.

The Court again met pursuant to adjournment, and the doors were opened.

The President asked Mr. Vallandigham whether he desired to appear with counsel.

Mr. Vallandigham said he did not. His counsel, G. E. Pugh, George Pendleton, and Alexander Ferguson, remained in the adjoining room.

The Judge Advocate announced that the case would be proceeded with, and called the first witness for the prosecution.

Capt. H. R. Hill, of the 115th Ohio volunteers, was sworn.

Question by Judge Advocate: Were you present at a meeting of citizens at Mount Vernon on May 1st, 1863?

Answer, I was.

Q. Did you hear accused address that meeting?

A. I did.

Q. What position did you occupy at the meeting, and were you near enough to hear all he said?

A. I was leaning against the end of the platform on

which he was speaking; was about six feet from him; I remained in this position during the whole time he was speaking.

By Judge Advocate: State what remarks he made in relation to the war; what he said about the President of the United States, and the orders of military commanders.

Witness: In order that I may bring in events as they were referred to by the speaker, I ask permission of the court to refresh my memory from the notes which I took at the time.

President: You can read from your notes.

Witness: The speaker commenced by referring to the canopy under which he was speaking—the stand having been decorated with an American flag—the flag under the Constitution.

Judge Advocate: You need not give his introductory remarks. Confine yourself to what he said about the war.

Witness: After finishing his exordium he spoke of the designs of those in power being to erect a despotism. That it was not their intention to effect a restoration of the Union. That previous to the battle of Fredericksburg an attempt was made to stay this wicked, cruel, and unnecessary war. That the war could have been ended in February last. That a day or two before the battle of Fredericksburg a proposition had been made for the readmission of Southern Senators into the United States Congress, and that the refusal was still in existence over the President's own signature, which would be made public as soon as the ban of secrecy imposed by the President was removed. That the Union could have been saved if the plan proposed by the speaker had been adopted; that the Union could have been saved upon the basis of reconstruction; but that it would have ended in the exile or death of those who advocated a continuation of the war. He then referred to Forney, who was a well known correspondent of the "Philadelphia Press," and said he had no right to speak for those who were not connected with the Administration. That some of our public men, rather than bring back some of the seceded States, would submit to a permanent separation of the Union. He stated that France, a nation that had always shown herself to be a friend of our Government, had proposed to act as intermediary; but that her proposition, which, if accepted, might have brought about an honorable peace, was insolently rejected.

Mr. Vallandigham here corrected the witness. The word he used was "instantly," not "insolently."

Witness: I understood the word he used to have been "insolently." That the people had been deceived; that 20,000 lives had been lost at the battle of Fredericksburg that might have been saved. In speaking of the objects of the war, he said it was a war for the liberation of the blacks and the enslavement of the whites. We had been told it would be terminated in three months; then in nine months, and again in a year. That the war was still in progress, and that there was no prospect of its being ended. That Richmond was theirs; that Charleston and Vicksburg were theirs; that the Mississippi was not opened, and would not so long as there was cotton on its banks to be stolen, or so long as there were any officers to enrich. That a Southern paper had denounced him and Cox, and the peace democrats, as having done more to prevent the establishing of the Southern Confederacy than ten thousand soldiers could do. That they proposed to operate through the masses of the people in both sections who were in favor of the Union. That it was the purpose or design of the Administration to suppress or prevent such meetings as the one he was addressing. That military marshals were about to be appointed in every district, who would act for the purpose of restricting the liberties of the people; but that he was a freeman. That he did not ask David Tod or Abraham Lincoln, or Ambrose E. Burnside for his right to speak as he had done, and was doing. That his authority for so doing was higher than General Order No. 38—it was General Order No. 1—the Constitution. That General Order No. 38 was a base usurpation of arbitrary power; that he had

the most supreme contempt for such power. He despised it and spit upon it. He trampled it under his feet. That only a few days before a man had been dragged from his home in Butler county by an outrageous usurpation of power, and tried for an offence not known to our laws, by a self-constituted court-martial. Tried without a jury, which is guaranteed to every one; that he had been fined and imprisoned. That two men were brought over from Kentucky and tried, contrary to express laws for the trial of treason, and were now under the sentence of death. That an order had just been issued in Indiana, denying to persons the right to canvass or discuss military policy, and that if it was submitted to would be followed up by a similar order in Ohio. That he was resolved never to submit to an order of a military dictator, prohibiting the free discussion of either civil or military authority. The sooner that the people informed the minions of this usurped power that they would not submit to such restrictions upon their liberties, and that they would not cringe and cower before such authority, the better. Let them not be deluded by the image of liberty when the spirit is gone. He proclaimed the right to criticize the acts of our military servants in power. That there never was a tyrant in any age who oppressed the people further than he thought they would submit to endure. That in the days of democratic authority, Tom Corwin had in the face of Congress hoped that our brave volunteers in Mexico "might be welcomed with bloody hands to hospitable graves," but that he had not been interfered with. It was never before thought necessary to appoint a captain of cavalry as Provost Marshal, as was now the case in Indianapolis, or military dictators as were now exercising authority in Cincinnati and Columbus. That a law had recently been enacted in Ohio, as well as in some other States, regulating the manner in which soldiers should vote, that the officers have to be judges of the election.

Judge Advocate objected to this part of the testimony as irrelevant.

Mr. Vallandigham desired the Court to permit the witness to go on with his testimony.

Witness: The speaker closed by warning the people not to be deceived. That an attempt would shortly be made to enforce the Conscription law, and to remember that the war was not for the preservation of the Union, but that it was a wicked abolition war, and that if those in authority were allowed to accomplish their purposes, the people would be deprived of their liberties and a monarchy established; but as for him, he was resolved that he would never be a priest or minister at the altar on which his country was being sacrificed.

Question by Judge Advocate: What other flags or emblems were used in decorating the stage?

A. There were banners made of frame work, and covered with canvas, which were decorated with butternuts, and bore inscriptions. One banner, which was carried at the head of a delegation which came in from a town in the county, bore the inscription, "The Copperheads are coming."

Mr. Vallandigham: The South never carried copper cents.

Judge Advocate: But butternuts are a Southern emblem.

Mr. Vallandigham shook his head, and said they were not.

Question by Judge Advocate: Did you see any persons have emblems on their persons?

A. Yes; I saw hundreds of persons wearing butternut and copperhead badges.

Mr. Vallandigham: The copper badges were simply the head cut out of the common cent coins, with pins attached.

Mr. Vallandigham: Did you notice what inscription these copperhead badges bore?

A. No; I did not look at them.

Mr. Vallandigham: The inscription on them was "Liberty."

Question by Judge Advocate: Did you hear any cheers in the crowd for Jeff. Davis.

Mr. Vallandigham: That is not in the specification. I did not hear cheers for Jeff. Davis, but I heard a shout in the crowd that "Jeff. Davis was a gentleman, and that was more than the President was."

CROSS EXAMINATION BY MR. VALLANDIGHAM.

Q. Did not I refer in my speech to the Crittenden Compromise propositions, and condemn their rejection?

As the witness was about answering, the Judge Advocate objected to the question, on the ground that it was bringing in matter foreign to the charge and specification. The Court allowed the question to be answered.

A. When endeavoring to show that the party in power had not the restoration of the Union in view in conducting the war, and that that was not their object, he stated a number of means by which that could have been accomplished; and from the fact that none had been adopted, he considered it proof that the restoration of the Union was not the object for which the war was being waged.

Q. Did I not quote Judge Douglas's declaration that the rejection—

Mr. Vallandigham: I desire to prove that in my speech I stated that Mr. Douglas had said that the responsibility for the rejection of the Crittenden propositions was with the Republican party.

The Judge Advocate stated that his objection was that the question was bringing in political opinions and discussions with which the Court had nothing to do.

The room was cleared for deliberation, and the doors closed.

After an interval of fifteen minutes, the doors were again opened, and then the Judge Advocate announced that the question would not be admitted.

Q. When speaking in connection with Forney's "Press," did I not say that if other democrats in Washington and myself had not refused all idea and suggestions of some prominent men of the party in power to make peace on the terms of disunion, that I believe the war would have been ended in February.

A. When speaking of the propositions before referred to, and that this war was not being carried on for the restoration of the Union, he stated that if the democrats in Washington had united in influence for the permanent separation of the Union, it would have been accomplished in February.

Q. Did I not refer expressly to myself in that connection, and say that I had refused, and always would refuse, to agree to a separation of the States, in other words, to peace on terms of disunion?

A. Well, that idea is not exactly as it was expressed. He stated something to that effect. That he wished to have a voice in the manner in which the Union was to be reconstructed, and that our Southern brethren should also have a voice in the matter.

Q. Referring to the "Richmond Enquirer" article, did I not say that Jeff. Davis's organ had called Dictator Lincoln to lock up Mr. Cox, Senator Richardson and myself in one of his military prisons, because of our doing so much against Southern recognition and independence.

A. That is substantially what he said.

Q. Referring to General Order No. 38, did I not say that, in so far as it undertook to subject citizens not in the land or naval forces of the United States, or militia of the United States in actual service, to trial by court-martial or military commission, I believed it to be unconstitutional, and a usurpation of arbitrary power?

A. Yes; except in the words "in so far."

Q. Referring to two citizens of Kentucky, tried by military court in Cincinnati, did I not say that if what they were charged with was actual treason, punishable by death, and that if guilty, the penalty by State law was hanging, that they ought to be hung, after being tried by a judicial court and a jury, instead of which they had been tried by a military court, and, as I understood, sentenced to fine and imprisonment—one of them \$300 fine.

A. I don't think he put those "ifs" in. I think he said they were improperly tried, and by a usurpation of power.

Mr. Vallandigham: Strike out the "ifs" then.

Witness: That was substantially what he said.

Q. Did I not also say in that connection that the rebel officer who was tried as a spy by the military court of Cincinnati, was legally and properly tried, according to the rules and articles; tried and convicted—that that was a clear case, where the Court had jurisdiction?

A. It is my recollection that he denounced the Court as an unlawful tribunal, and did not make any distinction?

Question by Judge Advocate: Did he refer to the case of Campbell, the rebel spy, and make any distinction?

A. No. He denounced the Court first, and then gave the instances, which I have already related in my direct testimony.

Question by Mr. Vallandigham: Do you not remember my speaking of the Campbell case, and saying that he was properly tried?

A. He may, but I don't recollect it. He probably did refer to the Campbell case.

Q. May I not have made the distinction, and you not have heard it?

The Judge Advocate said he would admit that the accused did draw the distinction between the cases, and that he admitted the right of the court to try the spy. In other words, that he condemned the trial of the Butler county man, and approved the case of the spy, who was tried and convicted.

Q. Did I not distinctly, in the conclusion of the speech, enjoin upon the people to stand by the Union at all events, and if war failed not to give the Union up, but to try by peaceable means, by compromise, to restore it as our fathers made it; and that though others might consent, or be forced to consent, I would not myself be one of those who would take any part in agreeing to a dissolution of the Union?

A. Yes. He said that he and the peace men were the only ones who wished the restoration of the Union.

Q. Did not one of the banners you refer to as decorated with butternuts, bear the inscription, "The Constitution as it is, and the Union as it was."

A. The banners were numerous. One of them, I believe, did bear that inscription.

Q. Do you mean to be understood to say that I heard the reference to Jeff. Davis in the crowd, or gave any assent to it whatever?

A. I cannot say that he did. Did not see or hear him give any assent to it. There were many other remarks of that character uttered.

Q. What was the size of the crowd assembled there?

A. I do not know the proper estimate, but the crowd was very large.

The Court then adjourned to Thursday morning at ten o'clock.

SECOND DAY.

The Court met at ten o'clock A. M. President as before. Yesterday's proceedings and testimony were read and approved, and were signed by the President.

Capt. Hill was again called to the stand, and his cross-examination was resumed by Mr. Vallandigham.

Q. In speaking of the character of the war did I not expressly say, as Mr. Lincoln in his proclamation, July 1st, 1862, said, "This unnecessary and injurious civil war?"

Judge Advocate: So, Mr. Vallandigham, was that used in your speech as a quotation from the President's proclamation?

Mr. Vallandigham: Yes, it was.

Witness: I do not recollect that he did. The language he made use of I understood to be his own.

Mr. Vallandigham: Of course I could not put the quotation marks in my speech.

Q. Again, in speaking of the character of the war, did I not expressly give the President's proclamation

of September 22d, 1862, and January 1st, 1863, declaring the emancipation of the slaves in the Southern seceded States as a proof that the war was being waged for that purpose.

The witness was about to answer, when the Judge Advocate checked him. He said it was bringing up matters which were foreign to the charge and specification, and that the Court was not called upon to pass upon the merits of the President's proclamation. He then desired that the Court should be closed for deliberation.

Mr. Vallandigham: I desire to show this fact, in explanation of the purpose and object of my declaration as to the present character of the war, and as my authority for the statement; for I assume that the President is not disloyal.

The Judge Advocate insisted that the question required the Court to pass judgment upon the merits of the President's proclamation, and not whether he (Mr. V.) was expressing his own sentiments or those of the President.

The Judge Advocate said the question would not be admitted.

Q. Did you continue at the same place during the delivery of the whole speech?

A. I did.

Q. Were your notes taken at the time or reduced to writing afterward?

A. They were taken at the time, and as they fell from the speaker's lips.

Q. Were you not in citizen's clothes, and how came you to be at Mount Vernon that day? Did you go to Mount Vernon for the purpose of taking notes and reporting the speech?

Judge Advocate: I object to this question on the ground of its immateriality.

Mr. Vallandigham insisted on the question on the ground that it explained the temper and spirit of the witness, and his prejudices, and as showing that the notes were taken with reference to the arrest and prosecution before this Commission; he being a captain in the service, and his regiment in Cincinnati.

The question was objected to by the Judge Advocate, and the Court was cleared for deliberation.

On opening the doors again the Judge Advocate announced that the question would be allowed.

A. I was in citizen's clothes, and I went up for the purpose of listening to any speech that might be delivered by him. I had no order to take notes or report.

Q. Did you go provided with pencil and paper?

The Judge Advocate objected to the question. Of course the witness had pencil and paper.

Q. Did you take notes of any other speech?

A. I commenced taking notes of Mr. Cox's speech, but considered it harmless, and stopped. I took no notes of any other speech.

Q. Were you not sent expressly to listen to my speech?

A. I was not any more than any other speech.

Q. By whom were you sent or requested to go?

A. By Captain Andrew C. Kemper, Assistant Adjutant-General of the Military Commandant of the city.

Q. From whom did you obtain leave of absence?

Judge Advocate: He did not need any leave of absence; the order was enough.

Mr. Vallandigham: Then strike out the words "or requested" from the answer, for it leaves it ambiguous.

Q. Did you make report to Captain Kemper on your return?

The Judge Advocate objected to the question, but the Court allowed it.

A. On my return I did not report to Kemper.

Q. To whom did you report?

A. To Colonel Eastman himself, and he sent me to headquarters Department of the Ohio.

This closed the testimony of Captain Hill on both the direct and cross-examination.

The Judge Advocate called

Capt. John A. Means, 115th Ohio Volunteer Infantry, who was sworn. He was asked by the Judge Advocate if he was at the Mount Vernon Meeting, and

whether he heard Mr. Vallandigham speak, and, if so, what he said of the war, &c.?

Witness: I was present at the meeting, and heard Mr. Vallandigham address the people. I was in two or three positions most of the time, and about five or ten feet from the stand. I heard the whole speech.

By the Judge Advocate: State what remarks you heard him make, and give as near as you can his language.

Witness: He stated the war was not carried on for the restoration of the Union, and that it might have been stopped some time ago, and the Union restored, if the plans which had been submitted had been accepted.

Mr. Vallandigham objected to this testimony on the ground that he had applied for a subpoena to compel the attendance of Fernando Wood, who would produce the written evidence of what he (Mr. V.) had asserted about the return of Southern senators to their seats in Congress.

Judge Advocate: I will strike from the specification that part which refers to the "propositions by which the Southern States could be won back," &c.

To the witness: You will omit that part of your testimony.

Witness continued: If the plans he had proposed himself had been adopted, peace would have been restored, the Union saved by a reconstruction, the North won back and the South guaranteed her rights; that Richmond, Charleston, and Vicksburg had not been taken, and the Mississippi was not opened, and could not be as long as there was cotton on the banks to be stolen or officers enriched. He said that after the rebuke which the Administration received at the last fall election, no more volunteers could be had, and the Administration had to resort to the French Conscription law. But he would not counsel resistance to military or civil law. That was not needed. The people were not deserving to be freemen who would submit to such encroachments on their liberties.

Mr. Vallandigham: What was I referring to when I made the remark you say I did?

Witness: He was speaking of the Conscription Act. He said he believed the Administration was attempting to erect a despotism, and in less than one month Mr. Lincoln had plunged the country in this cruel, bloody, and unnecessary war. He stated that General Order, No. 38, was a usurpation of power that he despised—he spit upon it and trampled it under his feet—that he, for one, would not regard it. He styled the officers of the Administration and officers of the army as Lincoln minions. He said he did not ask Lincoln or Burnside whether he might speak; that he was a freeman and spoke as he pleased. He stated the military orders and proclamations were intended to intimidate the people and prevent them from meeting as they had done that day. He claimed the right to discuss and criticize the actions of the civil and military authorities.

Q. Did he advise the people to take any steps to obtain their rights?

A. At the close of his speech he advised the people to come up together and at the ballot box to hurl the tyrant from his throne. In one part of his speech he styled the President as King Lincoln.

Cross-examined by Mr. Vallandigham: Did you take notes at all during the delivery of the speech, or are you testifying solely from memory?

A. I took no minutes during the delivery of the speech. After Pendleton commenced speaking, I went and wrote out what I had heard. It was, perhaps, an hour and a half after I heard the speech.

Q. About what was the length of the speech?

A. I think about an hour and a half.

Q. You made no shorthand report of it, I suppose. Did you ever report in shorthand?

Judge Advocate: The witness has already said he made no report of the speech.

Mr. Vallandigham wanted to know if he was accused to reporting speeches.

The Judge Advocate objected to the question.

Q. You speak of my saying the North might be won back—was it not the South that was to be won back?

Mr. Vallandigham said he noticed that the witness used the word "North" in place of the "South." It was the South he referred to.

A. No. I noticed this particularly. It struck me very forcibly.

Q. You say that I said that I would not counsel resistance to military or civil law. Did I not expressly counsel the people to obey the Constitution and the laws and to pay proper respect to men in authority, but to maintain their political rights through the ballot box, and to redress personal wrongs through the judicial tribunals of the country, and in that way to rebuke and put down administrations and all usurpations of power?

A. Not in that connection. He said, at the last of his speech, to come up to the ballot box and hurl the tyrant from power.

Q. Do you recollect the whole connection in which that sentence was used?

A. I did not understand him to advise submission at all times.

Q. Do you recollect the sum and substance of what I said?

A. I remember part of it; but I cannot remember the language or the substance so as to answer the question.

Q. Did I not say that my authority to speak to the people in public assemblages on all public questions was not derived from General Order, No. 38, but from General Order, No. 1—the Constitution of the United States, George Washington commander?

A. I understood him to say that his authority to speak to the people was higher than General Order, No. 38, by that military despot, Burnside. It was Order No. 1, signed Washington. I did not hear him say "constitution."

Q. Were not the names Tod, Lincoln, and Burnside used in the same connection, and that I did not ask their consent to speak?

A. At another time he did use these words.

Q. Were not the remarks you say I made about despising, spitting, and trampling under foot, expressly applied in reference to arbitrary power generally, and did I not in that connection refer to General Order, No. 9, of Indiana, signed by General Hascall, denying the right to criticize the war policy of the Administration?

A. The remarks in regard to despising and spitting upon were in direct reference to Order No. 38. Some time afterward, in speaking of the tyranny of the Administration, he did refer to Order No. 9, and of the right to criticize the acts of the Administration, and said that if submitted to it would be followed by civil war in Ohio.

Q. Did I approve or condemn the order?

Judge Advocate: The question, I think, has already been answered.

Q. Will you undertake to give any connected or methodical statement of my speech of over one hour and a half long?

A. I simply remember parts of it. I do not pretend to give the speech just as he spoke it.

Q. Were you not present in citizen's clothes, and how came you to be at Mount Vernon that day, by whose order, and were you sent for the purpose of listening to and reporting the speech?

A. I was there in citizen's clothes by order of Col. Eastman. I was sent to listen to the speech, and to give my careful attention, and to get his language as near as I could.

Q. Did you make such a report?

A. I did; to Colonel Eastman.

Q. Did you make report of any other speeches on that occasion?

A. I did; I got the substance of Cox and Reiney's speeches.

Q. Were you directed to go to Mount Vernon and make a report of my speech, with reference to the prosecution under General Order, No. 38?

A. I was not.

Q. Were any reasons given you why you should go?

The Judge Advocate objected to the question, as the answer had been sufficiently given before.

Q. Was any object stated to you, and if so what, for your going there in citizen's clothes, listening to and reporting the speech?

A. There was not any.

The cross-examination here closed, and the Judge Advocate stated that he did not propose to introduce any further testimony on the part of the prosecution.

Mr. Vallandigham asked for a few minutes to consult with his counsel, which was granted, and the Court took a recess of fifteen minutes.

THE DEFENCE.

On the reassembling of the Court, Mr. Vallandigham called Hon. S. S. Cox, who was sworn. He was examined by Mr. Vallandigham.

Q. Were you present at a public political meeting of citizens of Ohio, at Mount Vernon, on Friday, May 1st, 1863, and if so, in what capacity?

A. I was present as one of the speakers.

Q. Did you hear the speech of Mr. Vallandigham on that day made to the assemblage?

A. I did.

Q. State where your position was during its delivery; what your opportunities for hearing were, whether you heard it at all, and whether and why your attention was particularly directed to it?

A. Before the speaking began I was on the stand, a few feet from Mr. Vallandigham, and was most of the time standing near him, so that I could not fail to hear all that he said. I do not think my attention was distracted unless for a very few minutes during the whole speech. I had not heard Mr. Vallandigham speak since the adjournment of Congress, and as I came in from a different direction, from the West, I did not know that he was to be there. I took an especial interest in listening to his speech throughout. Having to follow him, I naturally noticed the topics which he discussed. I believe that answers the question.

Q. Did you hear any allusions to General Burnside, by name or description, and if so, what were they?

A. The only allusion he made to the General was, I think, near the beginning of his speech, in which he said he was not there by the favor of David Tod, or Abraham Lincoln or Ambrose E. Burnside.

Q. Were any epithets applied to him during the speech?

A. No, sir. If there had been I should have noticed them, because General Burnside was an old friend of mine; I should have remembered any odious epithets applied to him.

Q. Did you hear the reference to General order No. 38, and if so, what was it?

A. The only reference made in that speech to that order was something to this effect: that he did not recognize (I do not know that I can quote his language) Order No. 38, as superior to General Order No. 1, of the constitution from George Washington, commanding. It was something to that effect. I thought it was a handsome point at the time. I remembered that, because Mr. Vallandigham used the same expression in the debate in Congress on the conscription bill, or in some debate somewhere else when I heard him speak.

Q. Were any violent epithets, such as spitting upon, trampling under foot or the like used at any time in the speech in reference to that Order No. 38; and if any criticism was made upon it, what was that criticism?

A. I cannot recall any denunciatory epithets applied to that order. I did not hear them, and if I had I should have remembered them. The criticism upon the order was made as I have stated before.

Q. In what connection did I use the strong language?

A. Mr. Vallandigham discussed the order very briefly, in order to get away on the four o'clock train, and occupied most of his time in discussing other

propositions. It was in connection with remarks about closing the war by separation of the Union. He charged that the men in power had the power to make peace by separation. He exhausted some time in reading proofs of this—one was from Montgomery Blair and another from Forney's "Press." He also said there were private proofs which time would disclose. He said they pursued this thing until they found that the democrats were unwilling to make any peace except on the basis of the restoration of the whole Union.

Q. Do you remember to what, if at all, in connection with future usurpations of power he applied his strongest language?

A. I cannot say as to the strongest language, for he always spoke pretty strongly. He denounced in strong language any usurpations of power to stop public discussions and the suffrage. He appealed to the people to protect their rights, as the remedy for every grievance. Twice in his speech he counselled and warned against violence and revolution. By the peaceful means of the ballot box all that was wrong of a public nature might be remedied, and that the courts would remedy all grievances of a private nature. I cannot quote the language, but that is the substance. During his speech he referred to those in power having rightful authority, and that they should be obeyed. He counselled no resistance, except what could be had at the ballot box.

Q. Was anything said by me at all looking to forcible resistance of either law or military orders?

A. Not as I understand it.

Q. What was the sole remedy that I urged upon the people?

A. The sole remedy was, as I have stated, in the courts and in the ballot box. I remember this distinctly, because I had been pursuing the same line of remark at Chicago and Fort Wayne, and other places where I had been speaking, and for the purpose of repressing any tendency toward violence among our democratic people.

Q. Was anything said by me on that occasion in denunciation of the Conscription Bill, or looking in any way to resistance to it?

A. My best recollection is that Mr. Vallandigham did not say a word about it.

Mr. Vallandigham: Not one word.

Q. Did I refer to the French Conscription law, and if not, by whom was reference made to it?

A. He did not. I did in this connection.

The Judge Advocate objected to what Mr. Cox had said, as not being competent evidence.

Mr. Cox desired to say to the Court, in explanation of what he had said about the conscription law, that he had just before the meeting been talking with Judge Bartley about our conscription law having been copied from the French law, and I merely referred to that in my speech.

Q. Do you remember my quoting from President Lincoln's proclamation of July 1, 1862, the words "unnecessary and injurious war?"

A. I do not. He may have done so, but I did not hear it.

Q. Did you hear similar language used by me?

A. I cannot recollect it.

Q. Do you remember my comments on the change of the policy of the war some year or so after its commencement, and what reference was made by me in that connection?

A. He did refer to the change in the policy of the war, and I think devoted some time to show that it was carried on for the abolition of slavery, and not for the restoration of the Union.

Q. What did he claim to have been its original purpose, and did he refer to any message or proclamation of the President in that connection?

A. He referred in that defence to the Crittenden proposition, declaring that the war was for the restoration of the Union, and not to break up the States.

Q. Did I counsel any other mode in that speech, of resisting usurpations of arbitrary power, except by free discussion and the ballot box?

A. He did not.

Mr. Vallandigham: As I understand that portion of the specification which relates to the proposition from Richmond has been stricken out, I will ask no questions about it.

Q. Was any denunciation of the officers of the army indulged in by me, or any offensive epithets applied to them?

A. Well, occasionally, Mr. Vallandigham used the words, "The President and his minions," but I did not think he used it in other than the general acceptance of that term. He did not use it in connection with the army.

Mr. Vallandigham: I did not use it in connection with the officers of the army?

Mr. Cox—It was in connection with arbitrary arrests perhaps that he used it.

Q. Was it not in connection with army contractors and speculators?

The Judge Advocate objected to the question, and said the witness had distinctly stated that he did not think Mr. Vallandigham had applied it to the officers of the army.

Q. Do I understand you to say that the denunciations to which you refer were chiefly in reference to arbitrary arrests?

A. My recollection is that that was the connection in which it was used. He used strong epithets toward spies and informers, and did not seem to like them very much.

Mr. Vallandigham: As the Court has admitted that I did make a distinction between the Butler county case and the Kentucky spy, I will not refer to it now.

Q. Do you remember the connection in which words to this effect were used at the close of the speech: "in regard to the possibility of a dissolution of the Union" and of his own determination in regard to such a contingency, "and his declining to act as a priest"?

A. I cannot give the exact words, but I remember the metaphor, "that he would not be a priest to minister at the altar of disunion." It was as he wound up his speech. He was speaking about disunion, and his attachment to the Union.

Q. What counsel did I give the people on the subject of the Union at the close of my speech?

A. He invoked them under no circumstances to surrender the Union. I think he said something about leaving it to our posterity.

Q. Do you remember my rebuke of arbitrary court-martials, and was it in connection with the Butler county case?

A. Yes; I so understood it.

Q. What was the general character of my remarks on that subject?

A. He denounced the applause of Jeff. Davis by that party, and said there was a mode by which this man could be tried.

Mr. Vallandigham asked whether the rebuke had not reference to and was spoken in connection with the Butler county case? He desired a distinct answer to this.

Mr. Cox: He was speaking of the Butler county case, and he pointed out a mode by which such a man could be tried.

Q. Was anything said in my speech in reference to the war except in condemnation of what I claimed to be the policy upon which it is now being waged, and as a policy which I insisted could not restore the Union, but must end finally in disunion?

A. I can only give my understanding. I do not know what inferences other people might draw from it. I understood his condemnation of the war to be launched at the perversion of its original purpose.

Mr. Vallandigham: I do not remember anything further just now. I have some other witnesses whom I desire to examine on this same point who are not yet here.

Judge Advocate: I have no questions to put to the witness.

To Mr. Vallandigham: Has not this witness suf-

ficiently developed the purpose and spirit of your speech?

Mr. Vallandigham: I have called but one witness, and I understand the Court has several more to corroborate what their first witness has testified.

Judge Advocate: The Court will not be influenced by the number of witnesses. The number had nothing to do with the case.

Mr. Vallandigham: I did not counsel any resistance in my speech, and there were three witnesses on the stand, one of whom was the presiding officer, and one a reporter, who is accustomed to reporting speeches, though he did not report on that occasion, whom I have telegraphed for, and expect here at four p. m.

The Judge Advocate suggested that Mr. Pendleton, who was now present, was at the meeting at Mount Vernon, and that he might be called to the stand.

Mr. Vallandigham: Mr. Pendleton has been engaged in this case, and I would prefer not to call him, as I have other witnesses. I also desire to show that the criticisms in my speech were not in reference to General Order, No. 38.

Judge Advocate: The witness has just said so.

Mr. Vallandigham: If the Court will admit that, then I will not call other witnesses.

Judge Advocate: I will admit that the language might not have been used especially toward General Order, No. 38; but it has been proved that such language was used in the Mount Vernon speeches in reference to military orders.

Mr. Vallandigham: I want to prove that it was not used in relation to General Order, No. 38.

Judge Advocate: I will admit that the language was not used in regard to General Order, No. 38, but generally to military orders.

Mr. Vallandigham said he desired time to prepare a defence covering this testimony, and would, according to the rules governing courts-martial, submit it in writing.

The Judge Advocate said he might cover one hundred or two hundred pages of foolscap in reviewing the case, and this would take time. He (the Judge Advocate) did not propose to say anything on the evidence, but would leave it with the Court. Mr. Vallandigham might say what he desired in defence verbally, and it could be reported in short hand, and thus save time.

Mr. Vallandigham preferred to have the record correct, as it would have to go before another tribunal.

The Court then took a recess to half past four o'clock.

The Court reconvened at five p. m.

The Judge Advocate stated that the witnesses for the accused, who were expected, namely: Lickey Harper, J. F. Irwin, and Frank H. Hurd, had not arrived, and that he had agreed with the accused to admit, as it would avoid a continuance, that if they were present and under oath, they would testify substantially the same as Mr. Cox had done.

Thereupon Mr. Vallandigham said he had no more testimony to offer, and the case closed.

The Judge Advocate now announced that the testimony was all in.

At the request of Mr. Vallandigham, the testimony of Mr. Cox was read over.

Mr. Vallandigham: Gentlemen of the Court, very briefly and respectfully I offer the following protest:

MR. VALLANDIGHAM'S PROTEST.

Arrested without due "process of law," without warrant from any judicial officer, and now in a military prison, I have been served with a "charge and specification," as in a court-martial or military commission.

I am not in either "the land or naval forces of the United States, nor in the militia in the actual service of the United States," and therefore am not triable for any cause by any such court, but am subject, by the express terms of the Constitution, to arrest only by due process of law, judicial warrant, regularly issued upon affidavit and by some officer or court of competent jurisdiction for the trial of citizens, and am now

entitled to be tried on an indictment or presentment of a grand jury of such court, to speedy and public trial by an impartial jury of the State of Ohio, to be confronted with witnesses against me, to have compulsory process for witnesses in my behalf, the assistance of counsel for my defence, and evidence and argument according to the common laws and the ways of judicial courts. And all these I here demand as my right as a citizen of the United States, and under the Constitution of the United States.

But the alleged "offence" itself is not known to the Constitution of the United States, nor to any law thereof. It is words spoken to the people of Ohio in an open and public political meeting, lawfully and peacefully assembled under the Constitution and upon full notice. It is words of criticism of the public policy of the public servants of the people, by which policy it was alleged that the welfare of the country was not promoted. It was an appeal to the people to change that policy, not by force, but by free elections and the ballot box. It is not pretended that I counselled disobedience to the Constitution or resistance to laws and lawful authority. I never have. Beyond this protest, I have nothing further to submit.

C. L. VALLANDIGHAM.

CINCINNATI, OHIO, *May 7th*, 1863.

Judge Advocate: I find nothing in the defence of the accused to call for remark, except that in regard to counsel and summoning of witnesses. He was permitted to have, and did have, counsel to consult with, and an opportunity was offered him to send for witnesses.

The Court was then cleared for deliberation, and after a session of three hours, their decision was made and submitted to General Burnside for approval.

SENTENCE.

The Commission, after mature deliberation on the evidence adduced, and the statement of the accused, find the accused, Clement L. Vallandigham, a citizen of the State of Ohio, as follows:

Of the specification (except the words "That propositions by which the Northern States could be won back, and the South guaranteed their rights under the Constitution, had been rejected the day before the battle of Fredericksburg," meaning thereby the President of the United States, and those under him in authority, and the words "asserting that he firmly believed, as he asserted six months ago, that the men in power are attempting to establish a despotism in this country, more cruel and more oppressive than ever existed before,") "Guilty."

And as to those words, "Not Guilty."

Of the charge, "Guilty."

And the Commission do therefore sentence him, the said Clement L. Vallandigham, a citizen of the State of Ohio, to be placed in close confinement in some fortress of the United States, to be designated by the commanding officer of this department, there to be kept during the continuance of the war.

II. The proceedings, finding and sentence in the foregoing case are approved and confirmed, and it is directed that the place of confinement of the prisoner, Clement L. Vallandigham, in accordance with said sentence, be Fort Warren, Boston harbor. By command of
Major-General BURNSIDE.

LEWIS RICHMOND, Assist. Adj.-Gen.

This sentence was not approved by the President, who changed it to one, sending Mr. Vallandigham beyond our military lines.

Previous to the finding of the Commission being made public, Mr. Vallandigham, through his counsel, George E. Pugh, applied to Judge Leavitt, of the United States Circuit Court, for a writ of habeas corpus. The hearing was postponed to the 11th of May, and the clerk directed to give notice of the same to Gen. Burnside. On that day the matter was argued at

great length by G. E. Pugh in favor of the motion, and by A. F. Perry, on behalf of Gen. Burnside, against it.

An attractive feature in the case was the presentation to the Court by Flamen Ball, Esq., the District Attorney, of a written statement from Gen. Burnside, in explanation and defence of his military administration :

HEADQUARTERS DEPARTMENT OF THE OHIO, }
CINCINNATI, OHIO, *May 11th*, 1863. }

To the Honorable the Circuit Court of the United States within and for the Southern District of Ohio :

The undersigned, commanding the Department of the Ohio, having received notice from the Clerk of said Court that an application for the allowance of a writ of habeas corpus will be made this morning before your honors on behalf of Clement L. Vallandigham, now a prisoner in my custody, asks leave to submit to the Court the following statement :

If I were to indulge in wholesale criticisms of the policy of the Government, it would demoralize the army under my command, and every friend of his country would call me a traitor. If the officers or soldiers were to indulge in such criticism, it would weaken the army to the extent of their influence; and if this criticism were universal in the army, it would cause it to be broken to pieces, the Government to be divided, our homes to be invaded, and anarchy to reign. My duty to my Government forbids me to indulge in such criticisms; officers and soldiers are not allowed to so indulge, and this course will be sustained by all honest men.

Now, I will go further. We are in a state of civil war. One of the States of this Department is at this moment invaded, and three others have been threatened. I command the Department, and it is my duty to my country and to this army to keep it in the best possible condition—to see that it is fed, clad, armed, and, as far as possible, to see that it is encouraged. If it is my duty and the duty of the troops to avoid saying anything that would weaken the army, by preventing a single recruit from joining the ranks, by bringing the laws of Congress into disrepute, or by causing dissatisfaction in the ranks, it is equally the duty of every citizen in the department to avoid the same evil. If it is my duty to prevent the propagation of this evil in the army, or in a portion of my Department, it is equally my duty in all portions of it; and it is my duty to use all the force in my power to stop it.

If I were to find a man from the enemy's country distributing in my camps speeches of their public men that tended to demoralize the troops, or to destroy their confidence in the constituted authorities of the Government, I would have them tried and hung if found guilty, and all the rules of modern warfare would sustain me. Why should such speeches from our own public men be allowed?

The press and public men, in a great emergency like the present, should avoid the use of party epithets and bitter invectives, and discourage the organization of secret political societies, which are always undignified and disgraceful to a free people; but now they are absolutely wrong and injurious; they create dissensions and discord, which just now amount to treason. The simple names of "patriot" and "traitor" are comprehensive enough.

As I before said, we are in a state of civil war, and an emergency is upon us which requires the operations of some power that moves more quickly than the civil. There never was a war carried on successfully without the exercise of that power.

It is said that the speeches which were condemned have been in the presence of large bodies of citizens, who, if they thought them wrong, would have then and there condemned them. That is no argument. These citizens do not realize the effect upon the army of our country, who are its defenders. They have never been

in the field; never faced the enemies of their country; never undergone the privations of our soldiers in the field; and, besides, they have been in the habit of hearing their public men speak, and as a general thing of approving of what they say; therefore, the greater responsibility rests upon the public men and upon the public press, and it behooves them to be careful as to what they say. They must not use license and plead that they are exercising liberty. In this department it cannot be done. I shall use all the power I have to break down such license, and I am sure I will be sustained in this course by all honest men. At all events I will have the consciousness before God of having done my duty to my country, and when I am swerved from the performance of that duty by any pressure, public or private, or by any prejudice, I will no longer be a man or a patriot.

I again assert, that every power I possess on earth, or that is given to me from above, will be used in defence of my Government, on all occasions, at all times, and in all places within this department. There is no party, no community, no State Government, no State Legislative body, no corporation, body of men that have the power to inaugurate a war policy that has the validity of law and power, but the constituted authorities of the Government of the United States; and I am determined to support their policy. If the people do not approve that policy, they can change the constitutional authorities of that Government at the proper time and by the proper method. Let them freely discuss the policy in a proper tone; but my duty requires me to stop license and intemperate discussion which tend to weaken the authority of the Government and army; whilst the latter is in the presence of the enemy it is cowardly so to weaken it. This license could not be used in our camps—the man would be torn in pieces who would attempt it. There is no fear of the people losing their liberties; we all know that to be the cry of demagogues, and none but the ignorant will listen to it; all intelligent men know that our people are too far advanced in the scale of religious civilization, education, and freedom to allow any power on earth to interfere with their liberties; but this same advancement in these great characteristics of our people teaches them to make all the necessary sacrifices for their country, when an emergency requires. They will support the constituted authorities of the Government, whether they agree with them or not. Indeed, the army itself is a part of the people, and is so thoroughly educated in the love of civil liberty, which is the best guarantee for the permanence of our republican institutions, that it would itself be the first to oppose any attempt to continue the exercise of military authority after the establishment of peace by the overthrow of the rebellion. No man on earth can lead our citizen soldiery to the establishment of a military despotism, and no man living would have the folly to attempt it. To do so would be to seal his own doom. On this point there can be no ground for apprehension on the part of the people.

It is said that we can have peace if we lay down our arms. All sensible men know this to be untrue. Were it so, ought we to be so cowardly as to lay them down until the authority of the Government is acknowledged?

I beg to call upon the fathers, mothers, brothers, sisters, sons, daughters, relatives, friends and neighbors of the soldiers in the field, to aid me in stopping this license and intemperate discussion, which are discouraging our armies, weakening the hands of the Government, and thereby strengthening the enemy. If we use our honest efforts God will bless us with a glorious peace and a united country. Men of every shade of opinion have the same vital interest in the suppression of this rebellion; for should we fail in the task the dread horrors of a ruined and distracted nation will fall alike on all, whether patriots or traitors.

These are substantially my reasons for issuing "General Order No. 38," my reasons for the determination to enforce it, and also my reason for the arrest of the Hon. C. L. Vallandigham for the supposed violation

of that order, for which he has been tried. The result of that trial is now in my hands.

In enforcing this order, I can be unanimously sustained by the people, or I can be opposed by the factious, bad men. In the former event quietness will prevail; in the latter event the responsibility and retribution will attach to the men who resist the authority and the neighborhoods that allow it.

All of which is respectfully submitted.

A. E. BURNSIDE, Maj.-Gen.,
Commanding Department of the Ohio.

The motion was denied by Judge Leavitt, who delivered a very lengthy decision, of which the following are extracts. After arguing at length, and with great ability, the more strictly legal and constitutional points involved in the case, he proceeds:

Now, the question which I am called upon to decide is, whether Gen. Burnside, as an agent of the Executive Department of the Government, had transgressed his authority in ordering the arrest of Mr. Vallandigham. If the theory of his counsel is sustainable, that there can be no legal arrest except by warrant based on an affidavit of probable cause, the conclusion would be clear that the arrest was illegal. But I do not think I am bound to regard the inquiry as occupying this narrow base. Gen. Burnside, by the order of the President, has been designated and appointed to take the military supervision of the Department of the Ohio, composed of the States of Kentucky, Ohio, Indiana, Illinois, and Michigan. The precise extent of his authority in this responsible position is not known to the Court.

It may, however, be properly assumed, as a fair presumption, that the President has clothed him with all the powers necessary to the efficient discharge of his duties, in the station to which he has been called. He is the representative and agent of the President, within the limits of his department. In time of war the President is not above the Constitution, but derives his power expressly from the provision of that instrument declaring that he shall be Commander-in-Chief of the Army and Navy. The Constitution does not specify the powers he may rightfully exercise in this character, nor are they defined by legislation. No one denies, however, that the President, in this character, is invested with very high powers, which it is well known have been exercised on various occasions during the present rebellion. A memorable instance of its exercise is seen in the Emancipation Proclamation, issued by the President as Commander-in-Chief, and which he justifies as a military necessity.

It is, perhaps, not easy to define what acts are properly within this designation, but they must, undoubtedly, be limited to such as are deemed essential to the protection and preservation of the Government and the Constitution, which the President has sworn to support and defend. And in deciding what he may rightfully do under this power, where there is no express legislative declaration, the President is guided solely by his own judgment and discretion, and is only amenable for an abuse of his authority by impeachment, prosecuted according to the requirements of the Constitution. The occasion which calls for the exercise of this power exists only from the necessity of the case; and when the necessity exists, there is a clear justification of the act.

If this view of the power of the President is correct, it undoubtedly implies the right to arrest persons, who, by their mischievous acts of disloyalty, impede or endanger the military operations of the Government. And, if the necessity exists, I see no reason why the power does not attach to the officer or General in command of a military department. The only reason why the appointment is made, is that the President cannot discharge the duties in person. He, therefore, constitutes an agent to rep-

resent him, clothed with the necessary power for the efficient supervision of the military interests of the Government throughout the department. And it is not necessary that martial law should be proclaimed or exist, to enable the General in command to perform the duties assigned to him. Nor is it necessary that it should have been in force to justify the arrest. The power vested by virtue of the authority was conferred by the appointment of the President. Under that appointment, Gen. Burnside assumed the command of this department.

In the exercise of his discretion, he issued the order—No. 38—which has been brought to the notice of the Court. I shall not comment on that order, or say any thing more in vindication of its expediency. I refer to it only because Gen. Burnside, in his manly and patriotic communication to the Court, has stated fully his motives and reasons for issuing it, and also that it was for its supposed violation that he ordered the arrest of Mr. Vallandigham. He has done this under his responsibility as the commanding General of this department, and in accordance with what he supposed to be the power vested in him by the appointment of the President. It was virtually the act of the Executive Department under the power vested in the President by the Constitution; and I am unable to perceive on what principle this judicial tribunal can be invoked to annul or reverse it. In the judgment of the commanding General, the emergency required it; and whether he acted wisely or discreetly, is not properly a subject for judicial review.

I am aware there are points made by the learned counsel representing Mr. Vallandigham, to which I have not adverted. I have had neither time nor strength for a more elaborate consideration of the questions involved in this application. For the reasons which I have attempted to set forth, I am led clearly to the conclusion that I cannot judicially pronounce the order of Gen. Burnside for the arrest of Mr. Vallandigham as a nullity, and must, therefore, hold that no sufficient ground has been exhibited for granting the writ applied for.

In pursuance of the sentence of the President, Mr. Vallandigham was sent south beyond our lines, of which occurrence the following account is given in a letter from Murfreesboro', under date of May 25th:

Last night, at a little past ten o'clock, Clement L. Vallandigham arrived at this place on an extra train of cars from Nashville, in charge of Capt. Murry, of the 13th Regular Infantry, with a small squad of men. It was two o'clock in the morning before Vallandigham was started on his journey. He rode in the same wagon that brought him up from the depot. Col. McKibben, Senior, Aid to the General Commanding; Lieut.-Col. Ducat, Inspector General of the Department; Major Wiles, Provost Marshal General; Capt. Goodwin, 37th Indiana, Assistant Provost Marshal General; Capt. Doolittle, of the 4th Regular Cavalry; and Lieut. Kelley, commanding two companies of cavalry, composing the general escort, accompanied the prisoner. The first signs of daylight were appearing in the east, when the cavalcade stopped at a house to wait for the full morning. Soon after we were again on the way, and just as the sun rose reached our extreme outposts, and signalled to the rebel videttes, a half mile ahead. Maj. Wiles and Col. McKibben started forward with a flag of truce, and were soon in communication with the rebel authorities. The latter having expressed a willingness to receive Mr. Vallandigham, the two officers returned.

Maj. Wiles and Capt. Goodwin accompanied the prisoner within the rebel lines, and about ten o'clock A. M., delivered him into the hands of a single private soldier of the 31st Alabama, Colonel Webb—Mr. Vallandigham making the following declaration:

"I am a citizen of Ohio, and of the United States. I am here within your lines by force, and against my will. I therefore surrender myself to you as a prisoner of war."

The bearing of Mr. Vallandigham, throughout the whole affair, was modest, sensible, and dignified.

At the next session of the Supreme Court of the United States an application was made by the Hon. George E. Pugh, counsel for Mr. Vallandigham, for a writ of *certiorari* to bring up the proceedings of the military commission before which he was tried for review in that court. The motion was subsequently denied, on the ground that no writ of *certiorari* could be issued by the Supreme Court to a military commission, the court not having jurisdiction over the proceedings of such a body.

The arrest, trial, and banishment of Mr. Vallandigham, as has been stated, occasioned much discussion both in public assemblies and in the papers of the day. Without an exception among the Democratic newspapers, the whole transaction was denounced as a violation of the rights of free speech, personal liberty, and trial by the constituted tribunals of the country. The papers in the support of the Administration took different views of the case; some maintained that the necessities of the case justified the measure, while others deprecated the act of Gen. Burnside and the military commission. The "Evening Post," of New York, says:

Nothing can be clearer or more explicit than this; nothing shows a more tender regard for the rights of the citizen, or a stronger determination on the part of the lawgiver to keep the military power subordinate to the civil power.

Under the provisions of these statutes Vallandigham is a prisoner of State, and the Secretary of War is bound to report him as such to the Circuit Judge of the district in which his supposed offences were committed, to be regularly tried by the civil tribunal. There is no escape from the plain demands of the law, even if there were a desire to do so, which we cannot suppose, and we expect to hear in a few days that the culprit has been handed over to the only legitimate authorities.

The Louisville "Journal" thus treats the case:

It is a great mistake, it is indeed an inexcusable mistake, to suppose that the all but universal feeling, which the arrest and trial of Vallandigham by the military power has awakened, arises in any degree from sympathy with his peculiar views; on the contrary, it arises in spite of a decided antipathy to those views, as is shown conclusively by the fact that the feeling is shared by such Republican champions as the New York "Tribune," the New York "Evening Post," the New York "Commercial Advertiser," the Albany "Statesman," the Boston "Advertiser," the Boston "Traveller," the Springfield "Republican," and, in short, by the ablest and most influential champions of the Republican party, backed, as the New York "Evening Post" avows, by at least three-fourths of the Republican party itself.

The feeling under notice arises clearly not in consequence of Vallandigham's peculiar views, but in spite of them; it arises in spite of them and in spite of many other things, from an irrepressible sense of the value and sacredness of the rights which have been violated in his person. In other words, it arises from a rooted and solemn conviction of the truth of the principle which the General Assembly of Ken-

tucky declared a few months ago, as follows: "That the General Assembly of Kentucky declares that the power which has recently been assumed by the President of the United States, whereby under the guise of military necessity, he has proclaimed and extended martial law over the State where war does not exist, and has suspended the writ of *habeas corpus*, is unwarranted by the constitution, and its tendency is to subordinate civil to military authority, and to subvert constitutional and free government." This declaration a few weeks afterward was adopted by the Union State Convention of Kentucky, and has since been adopted in like manner by the Democracy of Pennsylvania and of New York. The principle itself formed a conspicuous part of the platform on which the conservatives of the North won their great triumph at the ballot box last fall. It is a principle dear as life to the whole people. It is one they never will surrender—one they never can surrender without ceasing to be freemen. And the all but universal protest against the arrest and trial of Vallandigham by the military power is simply the expression of his vital devotion.

The peculiar views of Vallandigham have no necessary relation to the question. Such relation as they have but serves to place in yet stronger relief the affecting and inextinguishable devotion of the people to this great principle. "As in the celebrated case of John Wilkes, in the last century," to quote the language of Judge Parker in his letter to the New York meeting, "thousands, many thousands, who differ from the individual, will rally around him in defence of a great principle of constitutional liberty." This natural effect is one of the many witnesses that attest the culpable folly of the proceeding, tending, as the proceeding does, speaking hyperbolically to turn "a monkey" into a "god," as Dr. Johnson fiercely said of Wilkes. Judge Parker is right. "I earnestly hope," adds this eminent jurist and patriot, "that the national administration will be prompt to repudiate the act, and to forbid all arbitrary arrests hereafter in the Northern States. To fail to do so would go far to discourage the efforts now being made to strengthen the arm of the Government in the suppression of the rebellion." These are words of wisdom and of patriotism. They are the words of one whose loyalty is fervent and unspotted. We entreat the President to heed them. And because they signalize a mighty truth, and are supported by the bulk of the President's own party as well as by the solid body of the conservative opposition, we cannot doubt that he will heed them. It is impossible that the President can deliberately set at defiance the voice of the whole people thus unequivocally and impressively uttered in behalf of what he must own up to be the right. There is not at present on the face of the globe a monarch who would even dream of defying such monitions as President Lincoln is now receiving in this grave matter from the free and loyal people whose Chief Magistrate he is. Let him at once respect these monitions, if he would serve and not freshly imperil his country, to say nothing of his own future renown.

On the other hand, those holding that it was a necessity to proceed in this manner, say:

I think you are wrong about Vallandigham. His offence was essentially a military one, in this aspect, that it demoralized the army, prevented recruiting, encouraged desertion, incited men to resist the arrest of deserters, and tended to make trouble about the increase of the army by conscription, by inciting resistance to the execution of that law. These, mind you, are not problematical results of his course, but actual. Specific cases of all of them, except the last, are continually occurring, invariably among men who call themselves democrats and swear by Vallandigham. The only remedy was by sudden and short stoppage.

This could not possibly be effected by the civil law.

His offence is hardly known to civil law, and there would have been no end of trouble in getting him indicted. Then he would have been simply bound to stand his trial at some future day, and would have gone on talking his treason and sedition. And the bad effects before mentioned would have gone on growing in power and influence, and might have got too big to stop.

Moreover, special cases of ill-doing, resulting from and directly in accordance with his teachings, have constantly to be attended to. They cannot be overlooked. Should we punish them and let him go on inciting the commission of just such acts? abusing the courts that try them, and bringing their authority into disrepute.

You have no idea of the amount of open and bold disloyalty—not simply disloyalty by the Republican standard, but by that of any honest man—existing in Ohio, Indiana, and Illinois, among the Vallandigham party. It must be stopped and put down now—not six months hence—and military tribunals are the only ones that can do it. It must be put down if it should take a temporary military despotism out here to do it. It is that, or the loss of the cause. The course of these men prolongs the war and costs lives by thousands, and I tell you either they or the Government must go down, and that speedily.

The law of the case was reviewed in an article in the "National Intelligencer" of May 20th, as follows:

As much confusion seems to prevail with regard to the legal aspects of the arrest, trial, and conviction of Mr. Vallandigham, on the charge of giving aid and comfort to the enemy, we think it proper, in view of the interest attaching to this question, considered as one of law rather than military caprice, to place distinctly before our readers the points on which it turns.

The charge brought against Mr. Vallandigham was as follows:

Publicly expressing, in violation of General Order No. 38, from headquarters department of the Ohio, his sympathy for those in arms against the Government of the United States, declaring disloyal sentiments and opinions, with the object and purpose of weakening the power of the Government in its efforts to suppress an unlawful rebellion.

The specification adduced by the Judge Advocate in support of this charge, see *ante*.

It will thus be seen that the charge and the specification, even if entirely sustained by the evidence (as to which in this inquiry we raise no question), seek to convict Mr. Vallandigham, a citizen of Ohio, of "giving aid and comfort to the enemy."

Now this offence has, by the recent legislation of Congress, been made expressly cognizable by the courts of the United States. This will appear from "An act to suppress insurrection, to punish treason and rebellion, and confiscate the property of rebels, and for other purposes," approved July 17, 1862, and found in volume 12, chapter 195, page 589 of the Statutes at Large as printed by order of Congress, sections 2 and 3.

The tribunal to take cognizance of such cases and questions distinctly appears from the concluding section of this statute, as follows:

SEC. 14. *And be it further enacted*, That the courts of the United States shall have full power to institute proceedings, make orders and decrees, issue process, and do all other things to carry this act into effect.

This is conclusive as to the jurisdiction of the courts of the United States, and of them alone, over the offence alleged to have been committed by Mr. Vallandigham.

But the last Congress did not stop here. As if to shut the door against any such proceedings as those instituted by Gen. Burnside, it passed an act, approved March 3, 1863, expressly "relating to *habeas corpus* and regulating judicial proceedings in cer-

tain cases." The section of this act relevant to the case of Mr. Vallandigham may be found on page 755 of the volume of the Statutes at Large as just printed by order of Congress, sections 1, 2, and 3.

The reader can easily educe from these provisions the law of the question raised by the arrest made by Gen. Burnside. They will perceive that proceedings under the writ of *habeas corpus* are to be suspended by the courts whenever and wherever the privilege of this writ has been suspended by the President, which is not the case in the State of Ohio. Judge Leavitt, in refusing to grant the writ sued out in behalf of Mr. Vallandigham, stated that he had not seen this law, which was cited in court by Mr. Pugh, the attorney for Mr. Vallandigham.

And when a judge of the United States is ignorant of the legislation of Congress on this head, surely Gen. Burnside may be excused for not knowing that Congress, by the act of July 17, 1862, had expressly provided for the trial by the courts of the offence he alleges against Mr. Vallandigham. Nor is it any answer to say, as Gen. Burnside urges in his statement made to the judge, that "we are in a state of civil war, and an emergency is upon us which requires the operations of some power that moves more quickly than the civil," for it was precisely in view of such an "emergency" that Congress passed the act of July 17, 1862, already cited, and it was to exclude the possibility of the arbitrary detention of persons held "as prisoners of the United States by order or authority of the President of the United States, as a state or political prisoner, or otherwise than as prisoners of war," that Congress passed the act approved on the 3d of March last, and the sections of which, so far as they relate to this case, we have recited above. The intervention of a court-martial, illegally charged with the trial of a citizen, does not alter the nature of the imprisonment of Mr. Vallandigham, who, while deprived of his liberty, must be regarded in law as one "imprisoned by the order or authority of the President, acting through the Department of War."

Congress has by its recent legislation "anticipated" precisely such a case as that raised by the alleged conduct and language of Mr. Vallandigham, and has thus made provision for the "emergency." The only justification heretofore assigned for such extraordinary arrests in the heart of a loyal population no longer exists, for the "normal course" of proceedings is now plainly marked out by the law made and provided for the trial and punishment of all who give "aid and comfort to the enemy," and who are "citizens of States in which the administration of the laws has continued unimpaired in the federal courts."

In May, Brig.-Gen. Hascall in command in Indiana and Illinois, issued an order similar in substance to the order of Gen. Burnside, which subjected him to strictures in some of the papers, for which offence Gen. Hascall caused the arrest of the editors and the suppression of the paper. (*See FREEDOM OF THE PRESS and INDIANA.*) The extent to which the summary arrest of parties was carried may be gathered from the number in confinement in Cincinnati May 19th. It is said:

There are now confined in the military prison here two hundred and twenty political prisoners, all to be tried by the court-martial now holding daily sessions. Gen. Burnside has notified sundry weekly papers of this State to send him proofs of the matter they design publishing, before it appears in their issues; the reason assigned being the publication of articles against the Administration Order No. 38, &c.

Another correspondent, writing from Indianapolis, mentions two more papers which have

been suppressed by order of Brig.-Gen. Hascall, the South Bend "Forum" and the Columbia City "News."

From this it will be seen that the suppression of the public press kept pace with the military arrests.

Immediately following, the Hon. Nat. Wolfe, who was the Democratic candidate in the Louisville District, Ky., was arrested and put in confinement in consequence, as charged, of having uttered disloyal sentiments on the stump. He was kept under arrest until after the election.

On June 3d, Gen. Burnside issued General Order No. 90, from which the following extracts are made:

General Order No. 90.

HEADQUARTERS DEPARTMENT OF THE OHIO, }
CINCINNATI, OHIO, June 3, 1863. }

The general commanding directs that Gen. N. C. McLean, provost-marshal general, at once institute an investigation into the cases of all citizen prisoners now confined in this department, and in all such cases as do not clearly show premeditated disloyalty on the part of the accused, or when a desire is manifested to atone for past faults by future good conduct, the prisoners will be released on taking the oath of allegiance and giving bonds for a strict observance thereof. The general commanding is convinced that a large majority of the men arrested have been misled by dishonest and designing politicians, and he prefers to strike at the sources of the evil, and allow those who have been led astray to return to their loyalty and allegiance, if they have seen the folly and sin of opposing the Government. * * *

The general commanding desires to again call the attention of all officers, provost marshals, and others in authority, to the necessity of great care in the making of arrests, which should in all instances be founded on full affidavits, sustaining distinct charges, except when the exigencies of the case demand instant action. Carelessness in this respect is only less censurable than negligence in the detection and punishment of crime.

With the exercise of scrupulous care and sound discretion on the part of officers, and a candid consideration on the part of all citizens, of the relations of the people and the army to each other, as above set forth, the general commanding is full of hope that mutual coöperation in putting down the rebellion will become more hearty and effective, the necessity for arrests will be diminished, and the tendency to factious opposition to the Government, and hurtful criticism of its measures, be removed.

By command of Major-Gen. A. E. BURNSIDE.

LEWIS RICHMOND, A. A. G.

Official: W. P. ANDERSON, A. A. G.

On the 1st of July the Provost-Marshal General issued the following directions in reference to the duties of officers, to whom writs of *habeas corpus* might be directed to produce persons charged as deserters:

Circular No. 36.

WAR DEPARTMENT, }
PROVOST MARSHAL GENERAL'S OFFICE, }
WASHINGTON, D. C., July 1, 1863. }

The following opinion of Hon. William Whiting, Solicitor of the War Department, is published for the information and guidance of all officers of this Bureau:

ARREST OF DESERTERS—HABEAS CORPUS.

Opinion.—It is enacted in the 7th section of the Act approved March 3d, 1863, entitled "An act for

enrolling and calling out the national forces, and for other purposes," that it shall be the duty of the Provost Marshals appointed under this act, "to arrest all deserters, whether regulars, volunteers, militiamen, or persons called into the service under this or any other Act of Congress, wherever they may be found, and to send them to the nearest military commander or military post."

If a writ of *habeas corpus* shall be issued by a State Court and served upon a Provost Marshal while he holds under arrest a deserter, before he has had opportunity "to send him to the nearest military commander or military post," the Provost Marshal is not at liberty to disregard that process. It is the duty of the Marshal, or other person having custody of the prisoner, to make known to the Judge or court by a proper return, the authority by which he holds him in custody. But after this return is made, and the State Judge or Court judicially apprised that the party is in custody under the authority of the United States, they can proceed no further.

They then know that the prisoner is within the dominion and jurisdiction of another Government, and that neither the writ of *habeas corpus*, nor any other process issued under State authority, can pass over the line of division between the two sovereignties. He is then within the dominion and exclusive jurisdiction of the United States. If he has committed an offence against their laws, their tribunals alone can punish him. If he is wrongfully imprisoned, their judicial tribunals can release him and afford him redress. And although, as we have said, it is the duty of the Marshal, or other person holding him, to make known, by a proper return, the authority under which he retains him, it is, at the same time, imperatively his duty to obey the process of the United States, to hold the prisoner in custody under it, and to refuse obedience to the mandate or process of any other Government. And, consequently, it is his duty not to take the prisoner, nor suffer him to be taken, before a State Judge or Court upon a *habeas corpus* issued under State authority.

No State Judge or Court, after they are judicially informed that the party is imprisoned under the authority of the United States, has any right to interfere with him, or require him to be brought before them. And if the authority of a State, in the form of judicial process or otherwise, should attempt to control the Marshal or other authorized officer or agent of the United States, in any respect, in the custody of his prisoner, it would be his duty to resist it and to call to his aid any force that might be necessary to maintain the authority of law against illegal interference. "No judicial process, whatever form it may assume, can have any lawful authority outside of the limits of the jurisdiction of the Court or Judge by whom it is issued; and an attempt to enforce it beyond these boundaries is nothing less than lawless violence." The language above cited is that of Chief Justice Taney, in the decision of the Supreme Court of the United States, in the case of *Ableman vs. Booth*, 21 Howard's Reports.

If a writ of *habeas corpus* shall have been issued out from a State Court, and served upon the Provost Marshal while he holds the deserter under arrest, and before he has had time or opportunity to "send him to the nearest military commander or military post," it is the duty of the Marshal to make to the Court a respectful statement, in writing, as a return upon the writ, setting forth:

1st. That the respondent is Provost Marshal, duly appointed by the President of the United States, in accordance with the act aforesaid.

2d. That the person held was arrested by said Marshal as a deserter, in accordance with the provision of the seventh section of the act aforesaid. That it is the duty of the respondent to deliver over said deserter "to the nearest military commander or military post," and that the respondent intends to perform such duty as soon as possible.

3d. That the production of said deserter in Court would be inconsistent with, and in violation of, the duty of the respondent as Provost Marshal; and that the said deserter is now held under authority of the United States. For these reasons, and without intending any disrespect to the honorable Judge who issued process, he declines to produce said deserter, or to subject him to the process of the Court.

To the foregoing all other material facts may be added.

Such return having been made, the jurisdiction of the State Court over that case ceases. If the State Court shall proceed with the case and make any formal judgment in it, except that of dismissal, one of two courses may be taken:

1. The case may be carried up, by appeal, to the highest court of the State, and removed therefrom by writ of error to the Supreme Court; or,

2. The Judge may be personally dealt with in accordance with law, and with such instructions as may hereafter be issued in each case.

JAMES B. FRY,
Provost Marshal General.

In carrying out the principles upon which this circular was issued, Gen. Burnside published the following:

General Order No. 113.

HEADQUARTERS DEPARTMENT OF THE OHIO, }
CINCINNATI, OHIO, July 8, 1863. }

In accordance with the opinion of the Solicitor to the War Department, and with instructions of the Secretary of War, through the Judge Advocate General, based upon the decision of the United States Supreme Court, delivered by Chief Justice Taney, in the case of *Alderman vs. Booth*, the following directions are given for the conduct of the military officers of this Department in cases of *habeas corpus*, issued from State Courts for persons in the official custody or control of such military officers, whether as enlisted soldiers, arrested deserters, or arrested parties chargeable with offences to be tried before a Military Court.

I. Whenever such writ is served upon a military officer, in the case referred to, he shall make a respectful return in writing, setting forth: 1. That the respondent is a military officer, duly commissioned and appointed in accordance with the laws of the United States, and stating the nature of the duty to which he is assigned; 2. The reason of the custody of the person demanded, whether as enlisted soldier, deserter, or criminal arrested under military law; 3. That the production of said person in Court would be inconsistent with and in violation of his duty as a military officer, under the orders of his superiors; 4. That said person is now held under authority of the United States, and that for these reasons, and without intending any disrespect to the honorable Judge who issued the process, he declines to produce said person, or to subject him to the process of the Court. To this return a statement of all other material facts may be added.

II. When the return to the writ has been made in accordance with the foregoing instructions, the jurisdiction of the State Court over the case is held to have ceased, and the officer will proceed with his military duty as if no such writ had been issued.

III. If, after such return, the Judge should proceed in the case, either personally against the officer making the return, or in favor of the person held, and for the purpose of enforcing his release from custody, complete protection will be afforded by the nearest military authority, acting firmly but with all possible respect to the Court.

IV. Official information of every case arising under this order will be immediately forwarded, through the regular channels, to these headquarters.

V. It will be carefully noticed that the provisions

of this order do not apply to writs or processes issued out of the Federal Courts.

By order of Major-General BURNSIDE.

LEWIS RICHMOND,
Assistant Adjutant General.

A case soon arose before Judge Paddock in Cincinnati, in which the opinion of Mr. Whiting was subjected to the test of a judicial decision. The Judge in his opinion says:

Upon the 17th day of July, 1863, petitions were presented to the probate judge of this county by the parents of Henry Hicks and James Archibald, respectively, alleging that said parties were minors, and that the petitioners were entitled to the custody of their respective children; that said minors had enlisted in the volunteer service of the United States army, and were illegally detained in the military prison of this city by Lieutenant-Colonel Boone, and pray that writs of *habeas corpus* may issue for them.

Upon the same day the writ was allowed and issued to the sheriff of the county, returnable upon the 18th, at 10 o'clock A. M., at which time the hearing, at the request of counsel, was continued to the 25th inst. at the same hour.

The sheriff made the following return to the writ:

"I have served the within-named Colonel T. C. Boone with a copy of this writ personally, and have demanded the body of the within-named Henry Hicks from Colonel T. C. Boone, and he refuses to deliver him into my custody until further orders from the commanding general."

"WM. LONG, Sheriff Hamilton county.

"WM. H. GLASS, Deputy."

The same return was made in the case of Archibald.

Upon the 20th ult. the cause came on for hearing. H. L. Burnett, judge advocate of the Department of the Ohio appearing in behalf of Lieutenant-Colonel Boone, and filing for him an answer, setting up that he was Lieutenant-Colonel of the One Hundred and Fifteenth regiment O. V. I., and was in command of Kemper Barracks, a military prison in this city; that, on the 13th of July, Henry Hicks was delivered to him to be forwarded to his regiment to answer for desertion; that he has since held said Hicks as a deserter, in pursuance of official duties, &c.; that said Hicks had been arrested by order of the provost marshal of the Second Congressional district of Ohio as a deserter from the United States Army, where he owed service and allegiance.

The answer further sets up a circular from the War Department, and an order from headquarters Department of the Ohio, by which Lieutenant-Colonel Boone is to be governed, and attaches copies thereof.

For these reasons, and in obedience to the orders above named (the answer says), the respondent, as an officer of the United States army, cannot deliver up or produce in this court the body of the within-named Henry Hicks, and not from any disrespect to the court issuing the writ.

A motion for an attachment of Lieutenant-Colonel Boone, for contempt of the order of the court in resisting the sheriff in the execution of the writ, was thereupon made, and upon the hearing, the various questions arising in the cases were argued and submitted, and are now to be decided.

The answer of Lieutenant-Colonel Boone is prepared in pursuance of the instructions in the General Order No. 113, an official copy of which is attached.

This order, it will be seen, prescribes the kind of answer to be made by the military, and also names the stage of the proceedings when the State courts are to be regarded as ousted from and denied all further jurisdiction or power; enjoins that any further proceedings of the judge for the release of the party for whose benefit the writ is issued, or against the officer holding him, must be resisted by force.

If this right exists, it ought to be, and will be, yielded without objection by every good citizen; but of its existence there should be no doubt. The claim is a novel one, and interests every citizen, and is of such magnitude as to demand full and careful consideration.

If the right does not exist, that should be declared, and the claim abandoned.

The simple question is, whether the State Courts have concurrent jurisdiction with Federal Courts to discharge, on *habeas corpus*, persons held in military custody. The power of United States Courts so to do, is expressly reserved by the order. The right and propriety of discharging are not drawn in question; only it is declared that State Courts shall not exercise such right.

The question is not a new one, except in the manner in which it now arises. The adjudications are numerous in the highest Courts of the States.

The right and duty of the State to inquire into the illegal imprisonment of the citizen is among the earliest and most eminent of its attributes. No State that formed a part of the General Government ever, by grant or otherwise, divested itself of these.

On the contrary, the highest tribunals of all the States have asserted, from the earliest days of the formation of the General Government, their right and duty to inquire into and relieve from illegal restraint its citizens within its own territorial limits, regardless of the authority, or pretext of authority, by which the restraint may have been imposed.

The acts of Congress are the supreme law of the land; and yet Judge Story says: "The right of all courts, State and National, to declare unconstitutional laws void, seems settled beyond the reach of judicial controversy."—2 Story's Com., sect. 1852; 1 Kent, 494.

And so as to judgments rendered by the United States courts, *Williamson vs. Barry*, 8 Howard 540.

Let us next examine into the authorities determining the right of State Courts to inquire into and relieve from illegal restraint persons held under United States authority. The cases are numerous, and are to be found in the reports of all the States.

The case *ex parte Sergeant*, 8 Hall's Law Journal, occurred in April, 1809. Sergeant was held under attachment from United States District Court. A writ of *habeas corpus* issued to the United States Marshal returnable before the chief justice of the State of Pennsylvania, and the court, in holding that they had the power to discharge the prisoner, remarked that this "right flows from the nature of our Federal Constitution, which leaves to the several States absolute supremacy in all cases in which it is not ceded to the United States."

In the year 1815, the Supreme Court of New York enforced, by attachment for contempt, obedience to the writ of *habeas corpus* directed to Morgan Lewis, General of Division in the Army of the United States.

In the case of *Carleton*, 7 Cowen, 471, in 1827, the Supreme Court of New York were unanimous in discharging a minor who had enlisted in the United States army, alleging himself at the time to be over twenty-one years of age.

In 1813, in the *Lockington* case, Bright, Rep. 260, before the Supreme Court of Pennsylvania, this right of the State Courts to issue the writ was reaffirmed.

[The Court here cited the remarks of Chief Justice Tilghman.]

In New Jersey, in 1819, the question came before the Supreme Court in the case of *The State vs. Brearly*, 2 Southard, 555.

Southard, J., said: It will require, in me, a great struggle, both of feeling and judgment, before I shall be prepared to deny the jurisdiction of the State, and say that she has surrendered her independence on questions like this; that her highest judicial tribunal for such purposes is incapable of inquiring into the imprisonment of her citizens, no matter how gross or illegal it may be, provided it be by agents of the United States, and under color of their laws."

[The opinion of the court was also cited in the case of *The State vs. Dimmick*, 12 New Hampshire, 167, and the Commonwealth *vs. Harrison*, 11 Massachusetts, 63.]

The question was again before the Supreme Court of Pennsylvania in 1847. The Commonwealth *ex rel. Webster and Fox*, 7 Barr, 336.

Coulter, J., delivered the opinion of the Court, saying: "In Pennsylvania, the jurisdiction of the State judges and State Courts has not before been doubted; and from the case of the Commonwealth *vs. Murray*, 4 Binn. 487, down to the present time, numerous cases have occurred in which it has been exercised.

This is in accordance with the principles of the common law, by the provisions of which the writ of *habeas corpus* is the prerogative writ of the citizen—the safeguard of his person and the security of liberty. No matter how or where the chains of his captivity have been forged. The power of the judiciary of the State is adequate to crumble them to dust, if an individual is deprived of his liberty, contrary to the law of the land.

This was the case of enlistment of a minor, who had deserted, and he was discharged.

Such are some of the adjudications of the highest courts of the States, and more might be presented, affirming the right of State Courts to try the legality of imprisonment under color of authority for the United States.

The opinion of Chief Justice Kent in the *Ferguson* case, 9 Johns, stands almost alone; and the exception to this and other opinions was participated in by not one of the judges of the court who sat with him in the case, and has never yet, so far as I have examined, been assented to by a single State Court wherever the question has been presented. But it has been expressly denied and disclaimed.

In a case reported in the *Law Journal*, 438, in 1850, in the charge of Mr. Justice Nelson to the grand jury, in 1851, of the Circuit Court for the Southern District of New York, and by Mr. Justice McLean in *Norris vs. Newton*, 5 McLean, 92, the right was denied.

And yet Hurd, in summing a review of the action of the various courts, says: "In some of the inferior courts of the United States the power has been denied; but in most of them, when the question has arisen, the power to issue the writ has been conceded; but the jurisdiction under it has been claimed by them to be more circumscribed than the State Courts have held it to be.

It may be considered settled that State Courts may grant the writ in all cases of illegal confinement under the authority of the United States. Hurd on *Habeas corpus*, 166.

Now, at the formation of the General Government, this right remained, unless surrendered by the State, or unless "Congress has the power to, and has exercised it, to take it away." It existed inherently, and not by grant from Congress. There may be, and are, cases flowing from the relations and duties of the citizen toward the General Government, where the action of the State Court may be controlled.

The acts of Congress may impose additional duties, new obligations may be contracted, and new relations formed by the citizens.

So far as these are in conformity with the grants of power as written in the Constitution, they are, of course, valid and binding upon the citizens of the States. Whether they are so or not is the unquestioned right of every State Court to determine in a proper case. So likewise is it the right of the State to inquire whether its citizens are properly restrained by virtue of those laws, whose validity it has the right to pass upon and determine.

It is the right, then, to inquire whether the detention be lawful or not. And the detention may be lawful under and by virtue of laws National, State, or Municipal, or by treaties with Foreign Governments. If the detention be legal the right is exhausted, the

writ has served its purpose, and the applicant will be left in the jurisdiction where found; if illegal, he would be discharged, because there is no law for holding him.

The State cannot abandon the right, cannot abandon the citizen when in the custody, it may be, of some usurper of power, under color or claim of law. This would be disgrace, dishonor, faithlessness to the citizen whose support and service it commands.

In the cases at bar there is no contest between a State Court and a United States Court, or any other court. These parties, Hicks and Archibald, are not in the custody of any court or its officers, by virtue of any process or commitment; have never been tried, convicted, or sentenced. They are in the custody of Lieutenant-Colonel Boone, who is simply the keeper of the barracks; they are in the jurisdiction of no court—civil, criminal, military, State, or National—in existence.

Lieutenant-Colonel Boone holds them by virtue of no writ or process from any court or authority; they were arrested without any process, and without any proof or showing that they owe service to the United States.

Lieutenant-Colonel Boone is merely the custodian, and over him the United States have not exclusive jurisdiction.

It was claimed in the argument, that, upon the familiar principle that where the jurisdiction is concurrent, the court first acquiring must proceed, and the other is rested that the court-martial has the right to retain the custody, and proceed. There is no proof that the parties are in the jurisdiction of any court-martial—there is no showing of the existence of any such court—but a suggestion that such an one is or will be created, in some distant State not named, at some time in the future not mentioned.

The parties are not charged with having violated a criminal law of the United States, of which any civil court, State or United States, could try and punish them.

It is admitted that the writ of *habeas corpus* may be issued by the State Court, but that the court shall not exercise the power and authority implied and conferred by the right to issue it. The rule is that when authority is given to do a thing, all the power necessary is conferred.

But that which in these proceedings strikes me as startling and ill-boding is, that the military, under color and pretence of law, should claim the right and proceed to its exercise, to proclaim and order the limits within which the civil authorities shall be exercised, and beyond which it shall not go, without being met and overcome by force. Power is corrupting, and in these days when vast powers are concentrated and wielded, we must closely watch the progress of events.

The Constitutions of the United States and of the State of Ohio declare that "the military shall always be subordinate to the civil authority."

And yet, in these peaceful and loyal States, whose people have given so freely of their aid to the Government, the claim is now made of the right to modify and nullify the Constitutions and laws of them all—to modify and nullify the powers of every State Court—to modify and nullify the rights and immunities of every citizen of those States.

And in the argument it was claimed by the Judge Advocate that military officers could not obey the process of courts, because in so doing they might disobey their superiors in command.

And further, that a court that should proceed to enforce obedience to its writ of *habeas corpus*, in a case like the present, would be guilty of nullification, secession, and rebellion.

According to these doctrines, a military officer might violate every article of the criminal code, from murder down, and although the Constitution of the State says that "the military shall always be subordinate to the civil authority," the offender shall walk abroad untouched and unharmed.

It is an assertion that the military is high over all, and above all, and that the civil authority of the land and the people shall be subordinated and subjected—an assertion by those, too, who, coming from obscurity, will, when these troublous days are passed, sink to that obscurity again, away from that people they scorned and wronged—but will then fear.

The motion for an attachment against Lieutenant-Colonel Boone would be allowed.

Judge Flynn asked what the Court proposed to do in relation to Gen. Burnside, who was made a party.

Court remarked that on consideration it did not appear essential that he should be made a party. It was Colonel Boone who had the parties in custody, and had to elect whether he would obey this court or his superior officers. Gen. Burnside gave no special order in this case, but a general order, which had no reference to the action of this court especially.

Major R. M. Corwin asked that the entry might be deferred, as he desired to examine the answer of Colonel Boone before preparing an exception to the decision.

Major C. has resigned his position in the army, and was present now only at the request of the Judge Advocate, and by invitation of the Court.

The following is Gen. Burnside's return to the writ in the above case:

HEADQUARTERS DEPARTMENT OF THE OHIO, }
CINCINNATI, August 5, 1863.

I know of no such person as Henry Hicks, and he is certainly not in my custody, as I do not take charge of the imprisonment of any person.

If, as indicated by the sheriff, this man is a minor, and enlisted in the service against the consent of his parents, and the case is one which justly and honorably calls for a discharge, by making the fact known to these headquarters, the discharge will be at once granted without the expense of a lawsuit, or the chance of clashing between the State and United States authorities, which all just and loyal men should seek to avoid at a time like the present.

My instructions are distinct, to deliver up no prisoners upon writs issued from the State Courts, where they are held by authority of the General Government. These instructions are based upon a well-known decision of the Supreme Court of the United States, and I have issued an order embracing the leading features of that decision.

In conclusion, I beg leave to state to the honorable Court that it is far from my desire to come into collision with its authority, or to disregard any of its decrees; and I hope to be always found willing and anxious to obey any of its orders that are not in opposition to my instructions from the General Government; and I feel sure that the honorable Court has no disposition to give any such orders.

All which is respectfully submitted.

(Signed)

A. E. BURNSIDE,

Maj.-Gen. Com'g Department of the Ohio.

The result of this opinion was fully sustained by Judge Mullin of the 5th district of the Supreme Court of New York. In the case of an "infant" in whose behalf a writ had been sued out, Provost Marshal Eastman of the Jefferson and Lewis district made the return prescribed by the War Department and stood upon it, refusing to produce the prisoner. The latter's counsel moved for a writ of attachment for the arrest of the marshal. Judge Mullin instantly granted and ordered the sheriff to execute it. The sheriff soon appeared with the marshal in custody. Judge Mullin took the same course in a case at Watertown, N. Y., putting the provost marshal in the custody of the sheriff on an attachment.

But in a case before Judge Bacon of the Su-

preme Court of New York, who had allowed a writ of *habeas corpus* to produce the body of one Charles E. Hopson, and to which the provost-marshal had made the return prescribed in the orders from the Provost Marshal-General's office, upon which return an attachment was ordered to be issued, and a rule afterward entered to show cause why the return should not be deemed sufficient, the judge held the return to be sufficient, and sustained the correctness of Mr. Whiting's opinion. On this decision being removed to the general term of the district, the court were equally divided; Judges Bacon and Morgan decided that the court had no jurisdiction while the proclamation was in force, Judges Allen and Mullin that it had.

Judge Leonard, of the Supreme Court of New York, in a case in New York city, fully concurs in the conclusions of Judges Paddock and Mullin. A person named Barrett was held by Provost-Marshal Nugent as a deserter. It was claimed on behalf of Barrett that he was never legally enlisted, and therefore could not desert. A writ of *habeas corpus*, issued, which the provost-marshal declined to obey, on the ground that Barrett was only amenable to military law. Counsel then applied for an attachment against Nugent for not obeying the writ, and Judge Leonard decided the motion.

The judge in his opinion held that the military authority was subordinate to the civil; that the case of *Ableman vs. Booth* was essentially different from this, as Booth was in custody on process by a United States court, which Barrett was not; that this was a question not sought for by the court, and it must be decided according to law, not in view of expediency, and that this inquiry was not as to whether Barrett was a deserter or not, but an enquiry as to whether he was legally enlisted. The judge therefore concluded that Marshal Nugent must produce the body of Barrett.

In the order granted by Judge Leonard, in accordance with his opinion, the following language was used:

Ordered, That the person of the said Michael Barrett be produced by the respondent, Robert Nugent, in this court at 10 o'clock of the day next after the service of a copy of this order, or in default, that an attachment issue against the said Robert Nugent.

Judge Chapman, of the Supreme Court of Massachusetts, ordered the release of a person held by the provost-marshal, the marshal in that case making the return directed by the provost-marshal-general.

The question arising in all these cases was as to the jurisdiction of the State courts. The United States courts exercised the right to issue the writ in cases of persons held under the Enrolment Act as deserters, and of minors enlisting without any objection being urged to their jurisdiction, Judge Leavitt, of Cincinnati, discharging a minor, who, it was alleged, had enlisted without his parents' consent. Judge Hall, U. S. District Judge of the Northern District of New

York, discharged a minor named Jordan, who had enlisted, holding that the signing of the enlistment paper, and taking the oath which it contains, do not preclude the recruit or his parent from showing his true age, and if his age is shown to be less than eighteen years at the time of his enlistment, and that the parent had not consented thereto, he might be discharged from the service on *habeas corpus*. The denial of jurisdiction in the State courts had proceeded from military orders; but on the 15th of September the President issued the following proclamation:

By the President of the United States, a Proclamation: Whereas, the Constitution of the United States has ordained that the privilege of the writ of *habeas corpus* shall not be suspended unless when, in cases of rebellion or invasion, the public safety may require it, and whereas a rebellion was existing in March 3d, 1863, which rebellion is still existing, and whereas, by a statute which was approved on that day, it was enacted by the Senate and House of Representatives of the United States in Congress assembled, that during the present insurrection, the President of the United States, whenever, in his judgment, the public safety may require, is authorized to suspend the privilege of the writ of *habeas corpus* in any case throughout the United States or any part thereof; and whereas, in the judgment of the President, the public safety does require that the privilege of said writ shall now be suspended throughout the United States, in cases where, by the authority of the President of the United States, military, naval, and civil officers of the United States, or either of them, hold persons under their custody, either as prisoners of war, spies, or aiders or abettors of the enemy, or officers, soldiers, or seamen, enrolled, drafted, or mustered, or enlisted in, or belonging to the land or naval force of the United States, or as deserters therefrom, or otherwise amenable to military law, or to the rules or articles of war, or the rules and regulations prescribed for military or naval service by the authority of the President of the United States, or for resisting a draft, or for any other offence against the military or naval service.

Now, therefore, I Abraham Lincoln, President of the United States, do hereby proclaim and make known to all whom it may concern, that the privilege of the writ of *habeas corpus* is suspended throughout the United States in the several cases before mentioned, and that this suspension will continue throughout the duration of said rebellion, or until this proclamation shall, by a subsequent one to be issued by the President of the United States, be modified and revoked; and I do hereby require all magistrates and other civil officers within the United States, and all officers and others in the military and naval service of the United States, to take distinct notice of this suspension, and give it full effect, and that all citizens of the United States are to conduct and govern themselves accordingly, and in conformity with the Constitution of the United States, and the laws of Congress in such cases made and provided.

In testimony whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed, this 15th day of September, in the year of our Lord 1863, and of the Independence of the United States of America the 88th.

By the President,

A. LINCOLN.

WM. H. SEWARD, Secretary of State.

On the 17th of September the Provost-Marshal-General published this circular:

WASHINGTON, September 18th, 1863.

The Secretary of War has ordered the act of Congress relative to the suspension of the writ of *habeas corpus*, and the proclamation of the President based upon the same, to be published for the benefit of all concerned;

and that the following special instructions for persons in the military service of the United States be strictly observed, viz.:

The attention of every officer in the military service of the United States, is called to the proclamation of the President, issued on the 15th day of September, 1863, by which the privilege of the writ of *habeas corpus* is suspended.

If therefore a writ of *habeas corpus* should, in violation of the aforesaid proclamation, be sued out and served upon any officers in the military service of the United States, commanding him to produce, before any Court or Judge, any person who is held in his custody by the authority of the President of the United States, belonging to any one of the classes specified in the proclamation, it shall be the duty of such officer to make known by his certificate under oath, to whomsoever may issue or serve such writ of *habeas corpus*, that the person named in said writ is detained by him as a prisoner under the authority of the President of the United States. And such return having been made, if any person serving or attempting to serve such a writ, either by command of any Court or Judge or otherwise, and with or without process of law, shall attempt to arrest the officer making such return and holding in custody such person, the said officer is hereby commanded to refuse submission and obedience to such arrest, and if there should be any attempt to take such person from the custody of such officer, or arrest such officer, he shall resist such attempt, calling to his aid any force that may be necessary to maintain the authority of the United States, and render such resistance effectual.

JAMES B. FRY,
Provost-Marshal-General.

The courts were immediately called upon to decide whether the proclamation affected cases in which the writ had already been issued, and which were then pending. Several cases were in this position in the U. S. District Court of Pennsylvania, before Judge Cadwalader. In many of these cases postponements of the hearings had been allowed on the application of the Boards of Enrolment, and in one case the writ had been issued two weeks before, and the final hearing deferred on account of continuances granted on the Board of Enrolment's application. Judge Cadwalader, it appears, invited a full and free discussion, in order that he might have all the information possible before giving a decision.

One new case was presented which raised an important question. It is thus stated:

On Tuesday Gustavus Remak, Esq., counsel for a drafted man named John Yunker, prepared a petition in the usual form in his behalf for a writ of *habeas corpus*. Yunker, it seems, had been served in the sixth ward with a notice that he had been drafted, but as the notice had been directed to William, and not John, and as he alleged the name of John Yunker had not been drawn from the wheel, he appeared before the board claiming exemption. The board disallowed his claim, and, taking his notice, erased the name of William and inserted that of John.

The President's proclamation intervening, his counsel on Wednesday appeared, and, together with the petitioner, presented the following supplemental affidavit:

John Yunker, the petitioner named in the foregoing petition, being duly sworn according to law, doth further depose and say: I am not held under the command, nor am I in the custody of any military, naval, or civil officer of the United States, either as a prisoner of war, spy, aider or abettor of the enemy, or as an officer, soldier, or seaman enrolled, drafted, or mustered in or belonging to the land and naval forces of the United States, or as a deserter therefrom, or otherwise amenable to military law or the rules and articles of war, or the rules and regulations prescribed for military and naval service by authority of the President of the

United States, or for resisting a draft, or for any other offence against the military or naval service.

It will be noticed that the words of the President's proclamation are quoted in order to aver that the relator does not come within its terms. Judge Cadwalader granted a rule to show cause why the writ should not be granted, and this will bring up the whole question. In the course of the discussion Judge Cadwalader stated that the question was not whether there were hardships or whether a man had a remedy, but whether the remedy by a writ of *habeas corpus* was suspended. Congress could not, constitutionally, suspend all remedies which a man might have, but could they not suspend this particular form of remedy?

Mr. Remak stated that he should follow a line of argument in order to present the case thus:

1. Has Congress the power to delegate the authority of suspending the writ of *habeas corpus* to the President of the United States? or is not Congress bound, if the Constitution invests it with the right of suspension, to exercise that power?

2. If Congress have the power so to delegate that authority, can they do it for an indefinite period of time? Is not "during the present rebellion" an indefinite period?

3. The act of Congress, if valid, authorizes the suspension "of the privilege of the writ of *habeas corpus* in any case throughout the United States, whenever in his judgment the public safety may require it." This means that the President shall exercise his judgment in each individual case as it arises, but does not empower the President to suspend the writ in all cases that may occur in future, as he does in his proclamation. He must decide in each case.

4. The act of Congress does not contemplate that the writs shall be refused by the judges, but, on the contrary, states in what manner, when issued, the writs shall be suspended.

5. The President's proclamation does not embrace parties who are applying for the writ when not drafted, but claimed as drafted persons.

He contended that the power to suspend the privilege of the writ existed in Congress, and in Congress alone, as it is a legislative power; and this power would seem to be limited in the Constitution, first, as to the territory to be affected; second, as to the time during which it is to last; and, third, as to individuals engaged or charged with being engaged in the rebellion or invasion; that is to say, there being nothing to the contrary in the Constitution, it was not contemplated by the framers of the Constitution that Congress should ever suspend the writ except in parts of the United States. The place where the rebellion or invasion exists forms a material question. Mr. Remak's next point was that the proclamation was limited to the individual. It must be against some person charged with an offence, but it does not touch the civilian who is not charged or is not held by any magistrate or any officer, civil or military, but who is still in the enjoyment of his rights, except that he stands in the position of having been enrolled, as one who may be called upon to serve the United States, and who may or may not be exempt on account of age or disability. When he had concluded—

Judge Cadwalader said that, as at present advised, he would not hear the district attorney. It appeared to him that the words "either as" in the proclamation, governed all the words until we came to the words "or as," and hence that any person held "as" a soldier, enrolled or drafted, whether rightfully or not, came within the meaning of the act of Congress. There are none of these cases where the parties do not allege that they are held as "drafted" men, and hence they place themselves within the provisions of the act and the proclamation. My present opinion is that the proclamation applies to every man of whom the custody is held or claimed by military persons, so that they exert power over them as drafted men. As to those cases under the 14th section of the Conscription Act, there is no doubt that the proceedings are suspended. (These are the cases of appeals from the decision of the Board of Enrol-

ment.) In regard to the other cases, where the allegation is that the parties are not enrolled or drafted, he promised to give his decision the next morning.

By implication it would seem that Judge Cadwalader did not assent to the first point, and was of opinion that Congress had the right to delegate the power of suspending the writ to the President. A New York paper of September 17th says:

Considerable excitement has been occasioned in legal circles of this city and Brooklyn by the President's proclamation suspending the privilege of the writ of *habeas corpus* during the continuance of the war. For several days past the Judges of the State Courts have been applied to for writs to discharge recruits and young men who had enlisted without the consent of their parents, while under age. Frederick A. Waring, a young man from Brooklyn, was brought up before Judge Betts yesterday on a writ of *habeas corpus*. This morning Mr. Slossom, for the Government, interposed the proclamation of the President of the United States, suspending the privilege of the writ. Mr. Waring, the uncle of the relator, contended that as the young man was yesterday in the custody of the Judge, before the proclamation of the President was known judicially, therefore, the case must be proceeded with as if no such proclamation had been issued, suspending the privileges of the writ. The Judge differed in opinion with Mr. Waring, but held the matter under consideration.

In the Supreme Court, Judge Clerke had the cases of James Mehan and David C. Doremus, who claimed to have been illegally enlisted by Colonel Jenkins, brought up before him on writ of *habeas corpus* by adjournment. His Honor said that in view of the proclamation of the President of the United States suspending the writ of *habeas corpus*, the prisoners must be remanded and the writs discharged. The boys went off in custody of the sergeant and the guard.

In the case of John Baldinger, Judge Betts, of the U. S. District Court, said that the fact whether this man is improperly in custody or not is the very question which the Court is, by the proclamation, not allowed to inquire into.

The basis of the argument appears to be that the Government cannot compel an infant to serve. I do not concur in that view. Our form of government has as much right to call to the field every man capable of bearing arms as any absolute monarchy on the face of the earth. The return states that he is detained as a deserter. It is a high crime for any one to desert his colors. The question occurs where he shall be tried. If he was brought before any of the courts of the United States he could not be tried, and the only tribunal before which he can be heard is that of the Provost Marshal. I see nothing in this case to induce me to take it out of the jurisdiction in which it is properly placed by the proclamation, which is conclusive on all the courts, and I have no power to inquire into the case of any man who is a soldier and under the military authorities. I have no more authority to act under the writ than I would have to issue a writ. This writ is, therefore, dismissed and the relator is remanded to the military tribunals.

On Saturday morning, Oct. 26th, Judge Sprague gave a decision in the United States District Court, Boston, in the case of the five persons held for military service by General Devens, and who had asked for writs of *habeas corpus*, one claiming to be a felon, one an alien, and the three others minors. It was urged by the counsel for the defendants that the President's proclamation suspending the writ of

habeas corpus did not apply to such cases. The judge concluded his opinion by saying that the objections made by the counsel in these cases to the application of the proclamation cannot prevail, and he was precluded from further inquiry by the proclamation, and if any of the parties before him were entitled to relief they must seek it from the officers or the tribunals able by law to grant it. The prisoners were then remanded to the custody of Gen. Devens, to be taken back to the camp at Long Island.

A writ of *habeas corpus*, issued by Judge Shipman, of the U. S. Circuit Court, upon Provost marshal Pardee at New Haven for the body of George Howland, an alleged deserter from the Sixth Connecticut volunteers, was returnable the next day. A return was accordingly made, setting forth that the President's proclamation suspending the *habeas corpus*, having just been received, the marshal found it necessary to decline giving up the prisoner. The judge accepted the return, and suspended further proceedings in the case.

It was stated that the War Department had made a modification of the President's proclamation suspending the *habeas corpus* act, so that hereafter the civil courts would be allowed to take cognizance as heretofore of all cases for the discharge of minors improperly enlisted and illegally detained by the military authorities. No other change or modification was made in the proclamation during the year, so that at the end of 1863 the privileges of the writ were suspended as to all persons held by military authority except minors illegally enlisted.

HARCOURT, Admiral OCTAVIUS VERNON, an officer in the British navy, born December 26th, 1793, died at Swinton Park, Yorkshire, August 14th, 1863. He was a son of Dr. Edward Vernon, late Archbishop of York (who took the name of Harcourt, in 1831, on his coming to the estate of the last Earl Harcourt). He entered the navy in 1806 as midshipman of the "Tigre," under Captain B. Hallowell, in the expedition to Egypt and Alexandria, 1807; and saw much boat service on the Nile. He was present in the same ship at the blockade of Toulon, and destruction of the French line-of-battle-ships "Robuste" and "Lion," in 1809; and on the promotion of Captain Hallowell to his flag, followed him into the "Malta," and continued serving with him on the coast of Spain, and at the siege of Tarragona, until made a lieutenant in 1814. He was then appointed to the "Mulgrave," was transferred to the "Amelia," and, after the battle of Waterloo, was sent with a major of the Tuscan army to summon the town of Porto Ferrajo. In 1820 he was promoted to the rank of Commander, serving successively upon the "Drake," "Carnation," "Britomart," and "Primrose," the latter vessel on the West India station; from which he returned to England with a freight of more than a million dollars; and, after acting as aide-de-camp to the

lord high admiral during the visit of his royal highness to the seaports, was promoted to the rank of captain, July 7th, 1827. In 1834 he was appointed to the "North Star," and was for a time employed on a survey of the coast of Central America. He became rear-admiral in July, 1854. Upon his marriage, in 1838, he took up his residence at Swinton Park, and soon after became magistrate for the north and west districts of Yorkshire; and in 1848 was high-sheriff. He was a man of great benevolence of character, and a benefactor of the Church, having built and endowed one near Masham, and another in Devonshire. He built a number of alms-houses for the benefit of the poor, beside contributing largely to the different schools in and near Masham.

HATHERTON, Rt. Hon. EDWARD JOHN LITTLETON, Lord, born March 18th, 1791, died at Teddesley Park, May 4th, 1863. He was the only son of Moreton Walhouse, Esq., of Hatherton, but on the death of his great uncle, Sir Edward Littleton, Bart., he inherited the estates and assumed the name of Littleton. He was educated at Rugby, graduating at Brasenose College, Oxford, and had barely attained his majority when, in 1812, he succeeded to the representation of Staffordshire.

The business habits of Mr. Littleton, his tact and good judgment, soon gained him a high station in the Commons, and he was long considered one of the best authorities on the forms and procedure of Parliament. He succeeded his uncle in the chairmanship of the Staffordshire and Worcestershire Canal Company, an office he retained to his death. Mr. Littleton was a constant supporter of Catholic Emancipation, the advocacy of which measure for many years imperilled his seat. He was also one of the principal framers of the "wings" of the Catholic Relief Bill, as well as one of the promoters of the unsuccessful measure for the payment of the Catholic clergy. He was a supporter of Mr. Canning's short lived ministry, and on the accession of Lord Grey to the premiership, he immediately joined the whig party. Upon the passage of the measures of Reform, the Cabinet intrusted to him the difficult duty of planning the boundaries of the newly enfranchised towns and divisions of counties, and of extending the limits of the old parliamentary cities and boroughs, and with very few and immaterial modifications the suggested boundaries became the law of the land. On the dissolution of Parliament in 1835 he was again returned for South Stafford, and the same year was created a peer, by the title of Baron Hatherton, of Hatherton. In 1854 he was appointed Lord-lieutenant of Staffordshire. During the Crimean War he devoted himself to the organization of the militia of his county, and latterly to the formation of Volunteer Rifle Corps. His hospitality was profuse, and he annually entertained public men of all parties and men of letters, together with many distinguished

foreigners visiting England; and no man of his rank took a deeper interest in the welfare of the working classes.

HEAT. An important revolution has been going on within the last few years in the philosophy of physics, which must have the effect of changing our fundamental conceptions of the nature and relations of force. The publication in London of Prof. Tyndall's new and admirable work on "Heat as a Mode of Motion," must be regarded as an important result of the progress of thought in this direction, and the republication of this book in New York—as it is the first regular work upon this subject in America—by bringing forward the new views, and opening the general discussion, has a special interest at the present time.

Every reflecting student of physical science has no doubt been perplexed by the phrase "imponderable forms of matter," which is applied in our text books to heat, light, electricity, and magnetism. No one has proposed to rank chemical affinity in this category, or to consider the force which produces or resists motion as an *imponderable*. By this hypothesis agencies, which are closely allied, and unquestionably of a kindred nature, have been so completely separated as to involve the whole subject in absurdity, and prevent the progress of rational and consistent theory.

According to the old view, caloric is regarded as the substance of heat—as a subtle, imponderable matter which flows in and out of bodies, warming and cooling them according to its quantity. When heat disappears, the caloric is said to become "latent;" as different bodies require different quantities of heat to raise them through the same degree of temperature, they are said to have different "capacities" for containing or holding the caloric fluid; while if a body becomes heated by rubbing, it is because its latent heat is liberated by friction. So also with electricity. By friction of various bodies the equilibrium of the all-pervading "electric fluid" is supposed to be disturbed. When the glass plate of the electrical machine is rubbed by the cushion the effect is to draw up the "electric fluid" out of the earth, the "common reservoir," and when a circuit of wire becomes electrically active, it is because a "current" of the "electric fluid" is flowing round and round through the conductors. This old hypothesis has no doubt been of important service in its day. Before the time had come to perceive the true relations of these agencies, the best that could be done was to borrow the conception and language of fluids, and apply them to these subtle and mobile effects of force that had to be represented in some way. But the hypothesis was grossly material; caloric was regarded as matter, as truly and essentially as gold or iron. And as the fundamental modern conception of the chemical elements is that they cannot be transmuted one into the others, so the radical conception of the imponderables was that as each had an independent material

existence, they could not be transformed into each other. This hypothesis being the very reverse of the fact, its dogmas have long offered a barrier to the true course of physical investigation.

It is now established that the forces possess none of the attributes of matter—they are not entities—substantive things, endowed with peculiar, persistent individual properties, but they are modes of motion, or forms of movement in common matter, and are convertible one into another. It has long been known, for example, that heat, as in the case of the steam engine, produces mechanical force, while mechanical force, as in the case of friction, produces heat. But in what way is the effect related to the cause? The old hypothesis assumes the intervention of a fluid, which, so long as its agency is entertained, blinds us to the simplicity of the facts. The new explanation says that the conception of the fluid is superfluous—that heat actually *passes into* mechanical motion, and mechanical motion actually passes into heat, or that there is a *conversion* of one into another. So with all the other forces known as “imponderables;” they are mutually convertible into one another—a fact which has been described by Mr. Grove, under the phrase “correlation of forces.” In his able treatise upon this subject, which, we are glad to learn, is to be republished in this country, he gives a lucid account of the principle from which the following paragraphs are abridged.

The various affections of matter, which constitute the main objects of experimental physics—namely, heat, light, electricity, magnetism, chemical affinity, and motion, are all correlative, or have a reciprocal dependence. Neither, taken abstractly, can be said to be the essential cause of the others, but either may produce or be convertible into any of the others. Thus heat may mediate or immediately produce electricity, electricity may produce heat, and so of the rest, each merging itself as the force it produces becomes developed. The same must hold good of other forces, it being an irresistible inference from observed phenomena, that a force cannot originate otherwise than by the dissolution of some preëxisting force or forces.

The term correlation, strictly interpreted, means a necessary mental or reciprocal dependence of two ideas inseparable even in mental conception; thus the idea of height cannot exist without involving the idea of depth; the idea of parent cannot exist without involving the idea of offspring. The probability is that, if not all, the greater number of physical phenomena are correlative, and that without a duality of conception the mind cannot form an idea of them. Thus matter and force are correlates in the strictest sense of the word; the conception of the existence of the one, involves the conception of the existence of the other. The correlation of forces implies their reciprocal production; that any force capable of producing another may, in its turn, be produced by

it—nay more, can be itself resisted by the force it produces in proportion to the energy of such production, as action is ever accompanied and resisted by reaction. Thus the action of an electro-magnetic machine is reacted upon by the magneto-electricity developed by the action. With regard to the forces of electricity and magnetism in a dynamic state, we cannot electrify a substance without magnetizing it—we cannot magnetize without electrizing it. Each molecule, the instant it is affected by one of these forces, is affected by the other, but in transverse directions; the forces are inseparable and mutually dependent; correlative, but not identical.

In many cases where one physical force is excited, all the others are also set in action. Thus, when a substance, such as sulphuret of antimony, is electrified, at the instant of electrization, it becomes *magnetic* in directions at right angles to the lines of electrical force; at the same time it becomes *heated* to an extent greater or less according to the intensity of the electric force. If this intensity is exalted to a certain point, the sulphuret becomes luminous, or *light* is produced; it expands, consequently motion is produced; and it is decomposed, therefore chemical action is produced.

Motion, the most obvious, the most distinctly conceived of all the affections of matter will directly produce *heat* and *electricity*, and electricity, being produced by it, will produce *magnetism*. Light also is readily produced by motion; either directly, as when accompanying the heat of friction, or immediately by electricity resulting from motion. In the decompositions and compositions which the terminal wires proceeding from the conductors of an electrical machine develop when immersed in different chemical media, we get the production of *chemical affinity* by electricity, of which motion is the initial source.

If heat be now taken as the starting point, we shall find that the other modes of force may be readily produced by it. Motion is so generally, if it be not invariably, the immediate effect of heat, that we may almost, if not entirely, resolve heat into motion, and view it as a mechanically repulsive force tending to *move* the particles of all bodies, or to separate them from each other. This molecular motion we may readily change into the motion of masses, or motion in its most ordinary and palpable form. Heat, then, being a force capable of producing *motion*, and motion, as we have also seen, being capable of producing the other modes of force, it necessarily follows that heat is capable immediately of producing them. It will immediately produce electricity, as shown in the beautiful experiment of Seabeck. With regard to chemical affinity and magnetism, perhaps the only method by which, in strictness, the force of heat may be said to produce them, is through the medium of electricity; the thermo-electric current being capable of deflecting the magnet, of magnetizing iron, and exhibiting the other

magnetic effects; and also of forming and decomposing chemical compounds.

But investigation has gone still further. It is found that all these changes take place in rigorous accordance with the laws of quantity. As matter cannot be destroyed, neither is force capable of destruction; and as matter may be pursued through all its multitudinous changes without loss, the same principle is found to hold in regard to force. It has long been familiarly known that machines do not create force, but only communicate, distribute, and apply that which is imparted to them. In all cases the force expended is exactly measured by the resistance overcome. In the case of water-power, to lift a hammer of 100 pounds one foot high at least 100 pounds of water must fall through one foot; or, what is the same thing, 200 pounds must fall through half a foot, or 50 pounds through two feet. If a hammer weighing 1,000 pounds is employed with the same driving force, it will either be raised to only one-tenth the height, or, tenfold the time will be required to raise it the same height. Thus in machines a certain amount of power acting as *cause*, produces an exactly equal amount of change, as *effect*.

It is precisely the same when the molecular forces are involved—those forces which involve the agency of atoms. It is well understood that a certain amount of fuel is necessary to perform a given amount of work with a steam engine. This means, strictly, that definite quantities of the chemical action of combustion give rise to a fixed quantity of heat, and this to a determinate quantity of mechanical effect. Dr. Faraday made the important discovery of the definite chemical effect of the voltaic current. He found that an equivalent of an element consumed in a battery gives rise to a definite quantity of electricity which will produce exactly an equivalent of chemical decomposition. For example, the consumption of 32 grains of zinc in the battery excites a current which will set free from combination 1 grain of hydrogen, 104 of lead, 108 of silver, 39 of potassium, and 31.6 of copper. But these are the combining numbers of those elements, and thus is established a remarkable equivalency between chemical and electrical forces.

That a certain amount of heat produces a definite quantity of mechanical force has been long known; but only lately has the question been inverted: how much heat is produced by a certain amount of mechanical force? The answer to this question gives rise to the science of thermodynamics. All friction, collision, and condensation, whether of solids, fluids, or gases, produce heat. But to ascertain at what rate mechanical force produces heat it requires certain standards of comparison known as the units of heat and force. The English unit of heat is one pound of water, raised through 1° F. The unit of force is one avoirdupois pound falling through one foot of space. By a great

number of experiments, Dr. Joule of Manchester, Eng., demonstrated the mechanical equivalent of heat—that is, how many units of force are equal to a unit of heat. He agitated water, mercury, and oil successively in suitable vessels, by means of paddles driven by falling weights, and determined the exact amount of heat produced, and the force spent. By varied and repeated operations, conducted with consummate skill and great patience, he found that the same expenditure of power produced the same absolute amount of heat, whatever materials were used; and that a pound weight falling through 1 foot, and then arrested, would produce a unit of heat, that is sufficient to raise 1 lb. of water 1° F. The vast significance of this fact to science is obvious; every movement that takes place throughout the universe, whether of molecules or masses, has its fixed thermal value—it represents and may be converted into a definite amount of heat.

The imponderables, then, have passed away, with the epicycles of the old astronomers and the phlogiston of the old alchemists—monuments of the past progress of thought—and we have in their stead pure forces which are all varying *modes of motion* of ordinary matter. Science assumes the atomic constitution of matter; that there are interspaces between the atoms, and that these atoms are capable of various motions, and are probably in a state of constant movement. They may rapidly oscillate backward and forward, or whirl upon their axes, or even revolve through orbits, like what we may term the larger *atoms* of the solar system. Perhaps they execute several of these movements at the same time as do the planets. They are also believed to be endowed with polarities, and that their motions are subject to a polar control. Each molecular force is regarded as a mode of motion among the atoms; and as these motions may pass into each other the forces are convertible. Heat is that mode of motion among atoms by which they are caused to move further apart, producing expansion of the mass, or heating it. As the motion declines the body contracts and cools. Heat is produced by friction or collision because the mechanical motion which is arrested and disappears is changed to the molecular motion of the mass; while the mechanical motion produced by heat, as in the case of the steam-engine, is simply the consequence of the translation of atomic movement into massive motion. No force can be annihilated, and what the atoms lose, the mass gains.

Caloric, the electric fluid, and luminous corpuscles are denied; yet science still holds to the conception of a universal ether. Some writers, prominent among whom is Mr. Grove, protest against this as an inadmissible assumption. They say we can neither make nor prove the existence of a perfect vacuum, and, therefore, are not entitled to deny that matter is universal. There may be, and there probably is, matter, in some form, however attenuated,

everywhere; and, so long as there is a universal material vehicle for motion, the conception of a hypothetical ether is superfluous. But it is replied that, by the term ether, is meant this universal material, something capable of motion, and assumed to possess certain definite properties. Some such conception is necessary at the present time, in order to express those systems of movement in which the various forces consist.

As thermometric heat, or the heat of conduction, is a motion of the constituent atoms of bodies, so radiant heat, or that which darts forward rapidly in straight lines, is a movement of the ether. Light is no longer the shooting of corpuscular particles; it is a certain rate of undulation of the ethereal medium—it is motion. The different colors result from different rates of undulation. The various actinic, or chemical rays, are due to the same cause, and thus there is seen to be a close correlation between the radiant forces; they are all but *modes of motion*. The vibrations of the atoms may impart motion to the ether as it occurs in the radiation of every heated body; and, conversely, the undulations of the ether may be spent in setting the particles of bodies in motion, and thus bodies are warmed by radiation.

The most recent and important step in the progress of thermotic science has been made by Prof. Tyndall, and consists of an analysis of the relations of radiant heat to gaseous bodies, and especially to water vapor. We condense from the new edition of Youmans' Chemistry, in which the recent views are fully developed, a statement of the principles involved in this subject. An opaque body destroys the luminous waves which fall upon it; while a transparent one permits them to glide through between the atoms without interference. But there are bodies which destroy some of the waves and allow others to pass. If a piece of red glass be placed between the prism and the spectrum it stops the blue rays and transmits only the red—that is, it cuts down the more minute waves and gives passage only to the larger. If blue glass be used there is a reverse effect, the red rays being extinguished and the blue alone transmitted. Both glasses are transparent, yet, if placed together in the path of the rays, they are as opaque as a plate of iron, each destroying what the other transmits.

This is also the case with the heat rays; they are of different kinds like the colors of light, and are arrested and transmitted differently by different substances. Rock salt is the most perfect diathermic body; that is, it allows all the heat rays, those from the sun and from the hand to pass through with equal freedom. Glass and a thin film of water will absorb or arrest the dark or obscure radiations, while they will pass luminous heat or those radiations which come from a luminous source. It is well known that the sunbeam is a bundle of heterogeneous radiations, and that the prism

spreads them out into a spectrum, thermal at one end, chemical at the other, and luminous in the centre. The same thing holds true of all sources of heat, luminous and obscure—they emit rays of different qualities. When the mixed rays from any source are passed through a plate, a certain portion of them is stopped, and another portion transmitted. But if the rays that are passed are made to fall upon a second similar plate, a much larger portion will be transmitted than went through the first—the first plate *sifted* the ray, and the purified beam is better fitted to penetrate another similar plate. This principle explains the fact that glass readily transmits solar heat, while it stops the heat from a red-hot cannon ball in large quantities. The rays of the sun in coming through the atmosphere are strained of those rays which would be stopped by glass, so that the altered beam passes our windows without loss.

Tyndall's apparatus for investigating the influence of gases upon radiant heat, consisted of a long glass tube three inches in diameter, closed air tight at either end by caps of pure rock salt, and connected with apparatus so as to be exhausted and filled with various gases at pleasure. At one end of the tube was placed his source of heat, a blackened canister of hot water, and at the other end a thermo-electric pile—the most delicate instrument for measuring or detecting heat. By this machine, controlled so carefully as to secure the utmost precaution against error, Tyndall exposed various gaseous bodies to the dark thermal radiations. Purified air was found to arrest none or an exceedingly minute proportion of the rays; while pure oxygen, hydrogen, and nitrogen behave in a similar manner, being almost neutral. But when compound gases were introduced, there was a remarkable effect: olefiant gas, which is just as transparent as air, arrests 80 p. c. of the rays of heat. Pure transparent ammonia is still more impenetrable and stops the heat as light would be stopped if the cylinder were filled with ink. The same effect is produced if only a small proportion of these gases is mingled with the air of the cylinder.

In this manner, invisible gases become the means of sounding the atomic constitution of bodies. While heat rays pass through common oxygen without being intercepted, ozone, which is but another form of oxygen, arrests a large proportion of it like compound gases; we therefore infer that its atoms are arranged in groups or complex molecules. When aqueous vapor was introduced into the tube, it was found to be highly opaque to the dark radiations. Where the atmospheric gases arrest one ray of obscure heat, the small proportion of watery vapor contained in the air strikes down sixty or seventy rays. The consequences of this fact are in every way of the highest importance in the economy of nature. Luminous heat from the sun penetrates the air, and falling upon the

earth, is changed into obscure heat which is intercepted by the watery vapor of the atmosphere, and cannot therefore be radiated back again into space. The atmospheric vapor is therefore the means of maintaining the earth's temperature, and if it were withdrawn from the air, the loss of terrestrial heat would soon render the earth uninhabitable. In all those localities where the atmosphere is dry, the nightly loss of radiant heat is so great, that even in the burning desert of Sahara there is nocturnal freezing.

The aqueous vapor contained in the air exists mostly in its lower strata near the ground. The upper portions of the atmosphere are comparatively dry. Hence, high mountains being raised above the zone of watery vapor, are unprotected, and their heat consequently streams away into space with such rapidity that the temperature sinks to a low degree. As the winds dash against the frigid mountain peaks, their moisture is rapidly condensed and frozen into snow—hence the everlasting snow of these lofty land summits. In these circumstances, where the snow falls incessantly in large quantities, it is condensed into ice, and slowly creeps down the valleys in the form of vast rivers of ice known as *glaciers*. We thus see how the relations of radiant heat to aqueous vapor afford an explanation of the magnificent phenomena of snow peaks and glacial action. The ultimate cause of all these effects is of course that solar heat which originally changed the water into the vaporous form. The heat thus absorbed must again escape in condensation, while the grand function of the mountains appears as that of condensers. Each fragment of glacial ice is to be regarded as the product of the heat spent in first evaporating its water, and in this point of view the glaciers represent an amount of heat equal to five times their weight of melted cast iron. In connection with these important discoveries of the opacity of gases to radiant heat, Prof. T. Sterry Hunt has called attention to the effect which a large proportion of carbonic acid in the earth's ancient atmosphere must have had in preserving the high temperature of the earth.

The consummate series of investigations by which these results were reached, is admirably described by Dr. Tyndall, in his late work on heat, in which the new views of the nature of heat itself are applied with great skill and ingenuity to many of the phenomena of nature.

The history of the dynamical theory of heat is deeply interesting, as throwing a striking light on that action of the human mind which leads to great discoveries of the laws of nature. It illustrates, in a remarkable manner, that great truths are growths of time, and that discoveries oftener belong to epochs than to individuals. As far back as the time of Bacon, we find statements concerning heat which contradicted the common view, and which are susceptible of easy interpretation, in harmony with the recently established views. In the twen-

tieth aphorism of the second book of the *Novum Organon*, its illustrious author remarks: "Now from this our first vintage, it follows that the form, or true definition of heat (heat, that is in relation to the universe, not simply in relation to man), is in a few words as follows: Heat is a motion, expansive, restrained, and acting in its strife upon the smaller particles of bodies, but the expansion is thus modified: while it expands all ways, it has at the same time an inclination upward. And the struggle in the particles is modified also; it is not sluggish, but hurried, and with violence." Again, the philosopher Locke remarks: "Heat is a very brisk agitation of the insensible parts of an object, which produces in us that sensation from which we denominate the object, but so that what in our sensations is heat, in the object is nothing but motion." But the first experimental step in this direction of thought, and perhaps the grandest step taken by any single mind, was made by an American, Benjamin Thompson, afterward known as Count Rumford. He went to Europe in the time of the revolution, and devoting himself to scientific investigations, became the founder of the Royal Institution of England. He exploded the notion of caloric, demonstrated experimentally the conversion of mechanical force into heat, and arrived at quantitative results, which, considering the roughness of his experiments are remarkably near the established facts. He revolved a brass cannon against a steel borer by horse power, for two and a half hours, and generated heat enough to raise $18\frac{1}{2}$ lbs. of water from 60° to 212° . In his paper read before the Royal Society, in 1798, he observes: "From the results of these computations, it appears that the quantity of heat produced equally in a continuous stream, if I may use the expression, by the friction of the blunt steel bar against the bottom of the hollow metallic cylinder, was greater than that produced in the combustion of nine wax candles, each $\frac{1}{4}$ of an inch in diameter, all burning together with clear bright flames." Rumford explicitly announced the view now held of the nature of heat and wrote as follows, the italics being his own: "What is heat? Is there any such thing as an *igneous fluid*? Is there anything that with propriety can be called caloric? We have seen that a very considerable quantity of heat may be excited by the friction of two metallic surfaces, and given off in a constant stream or flux in *all directions*. Without interruption or intermission, and without any signs of *diminution or exhaustion*. In reasoning upon this circumstance, we must not forget *that most remarkable circumstance*, that the source of the heat generated by friction in these experiments, appeared to be *inexhaustible*. It is hardly necessary to add that anything, which any insulated body or system of bodies can continue to furnish without limitation, cannot possibly be a *material substance*; and it appears to me to be extremely difficult, if not quite impossible, to

form any distinct idea of anything capable of being excited, and communicated in these experiments except it be MOTION."

Sir Humphrey Davy, the associate of Rumford, in the Royal Institution, adopted these views concerning heat. He instituted some delicate experiments by which they were strikingly confirmed. One of these consisted in rubbing two pieces of ice together in a vacuum, at a temperature below the freezing point. The heat of friction melted the ice. The old explanation of the fact was that the friction *liberated* the latent *caloric* of the ice. To this, Davy replied: "If I by friction liquefy ice, I produce a substance which contains a greater absolute amount of heat than the ice; and in this case it cannot with any show of reason be affirmed, that I merely render sensible the heat hidden in the ice, for that quantity is only a small fraction of the heat contained in the water." Davy also propounded the hypothesis of atomic vibrations or oscillations, as the cause of thermal phenomena. This cannot be better stated than in his own words: "It seems possible to account for all the phenomena of heat, if it be supposed that in solids the particles are in a constant state of vibratory motion, the particles of the hottest bodies moving with the greatest velocity, and through the greatest space; that in fluids and elastic fluids, besides the vibratory motion, which must be conceived greatest in the last, the particles have a motion round their own axes with different velocity, the particles of elastic fluids moving with the greatest quickness, and that in ethereal substances the particles move round their own axes, and separate from each other, penetrating in right lines through space. Temperature may be conceived to depend upon the velocity of vibrations; increase of capacity in the motion being performed in greater space; and the diminution of temperature during the conversion of solids into fluids or gases, may be explained on the idea of the loss of vibratory motion, in consequence of the revolution of particles round their axes, at the moment when the body becomes fluid or æriform, or from the loss of rapidity of vibration in consequence of the motion of the particles through space."

The researches of Davy upon this subject may be regarded as continuing those of Count Rumford. In 1812 he wrote: "The immediate cause of the phenomena of heat, then, is motion, and the laws of its communication are precisely the same as the laws of the communication of motion." Seguin in 1819 published a work entitled *De l'Influence des Chemins de Fer*, in which he shows that the old theory leads to the absurd conclusion, that a limited quantity of heat can produce an unlimited quantity of chemical action. He says: "It appears to me more natural to suppose that a certain quantity of caloric disappears in the very act of the production of the force or mechanical power, and reciprocally the mechanical

force which disappears during the lowering of the temperature of a gas is the measure and the representation of the elimination of heat."

The time had now arrived for the reception of these views by many minds, and accordingly we find that, during the next ten years, eminent scientific men in England, France, Germany, Denmark, and America, devoted themselves with assiduity to their theoretical and experimental development. In 1850 Joule's law was established, which placed the subject upon an immovable experimental basis. While, during the same year, Dr. Carpenter formally extended the research so as to include the *vital* forces. His paper on the correlation of the physical and vital forces, was published in the philosophical transactions for that year. From that time, the views have been gradually accepted by scientific men, until they may now be regarded as generally established. Science has thus changed her standpoint, and all phenomena are presented in a new light. The most important results alike to science, philosophy, and education, may be expected to follow this revolution of scientific thought.

HILDRETH, SAMUEL PRESCOTT, M. D., an American historian and physicist, born in Methuen, Massachusetts, Sept. 30th, 1783, died at Marietta, Ohio, July 24th, 1863. His boyhood was passed on his father's farm, until he was fifteen years old, his primary education being received at a common school. From thence he was sent to Phillips Academy, Andover, and the Franklin Academy, in the North Parish. He studied medicine with Dr. Thomas Kittridge, a noted surgeon of Andover, and received a diploma from the Medical Society of Massachusetts in Feb., 1805. He commenced the practice of his profession in New Hampshire, but, in 1806, having made up his mind to settle in Ohio, journeyed thither on horseback, and after spending about two months in Marietta, located himself at Belpre, where, in 1807, he married Miss Cook (formerly of New Bedford, Mass.). He was very successful in practice; but, in 1808, removed to Marietta, where the duties of his profession were less arduous, and where he remained to the close of his life. In 1810 and 1811 he served in the Ohio Legislature as a supporter of the administrations of Jefferson and Madison; but on the formation of the republican party, in 1854, he connected himself with it. For a period of nearly forty years he was a contributor to "Silliman's Journal of Science," his articles embracing a wide range of scientific subjects, but more especially devoted to meteorology, geology, and palæontology. In 1837 he was a member of the Geological Survey, and delivered the annual address at Cleveland, before the Medical Society, of which he was then president, giving a history of the diseases and climate of Southeastern Ohio, from its settlement, which was published by the Society. The same year he published a history of the settlement of Belleville, Western Vir-

ginia, in the "Hesperian," a magazine published in Cincinnati. In 1848 he prepared his "Pioneer History," an account of the first examinations of the Ohio valley, and early settlement of the Northwest Territory, which, with his "Lives of the Early Settlers of Ohio," were published under the auspices of the Ohio Historical Society; both works of great value. In 1830 he commenced the collection of a cabinet of natural history, and in the course of eight years had gathered more than 4,000 specimens, arranged, classified, and catalogued, and all this without interfering with the duties of his profession. He collected also more than 5,000 shells, some of which he exchanged for books of a scientific nature, thus enabling him in time to form a large and valuable scientific library, which, previous to his death, he donated, together with his cabinet, to Marietta College. He was in the enjoyment of good health and remarkably active in all his movements until a fortnight preceding his death.

HOLSTON RIVER. This is the largest branch of the Tennessee river. It is formed by the junction of the north and south forks which rise among the Alleghany Mountains of Virginia, and unite at Kingsport, Sullivan county, Tennessee. Flowing thence and passing Knoxville, in East Tennessee, it unites with the Clinch river, at Kingston. The length of the main stream is estimated at two hundred miles. It is navigable by small steamboats to Knoxville, and during the winter they can ascend to Kingsport.

HOPE, GEORGE WILLIAM, M. P., born at Blackheath in 1808, died at Suffness, Haddingtonshire, October 18th, 1863. He was a son of the Hon. Alexander Hope, was educated at Christ Church, Oxford, and called to the bar at Lincoln's Inn, in 1831. The death of an elder brother, however, altered his position, and removed him from the ranks of practising barristers. Soon after, his attention was turned to politics, and in 1837 he was elected for Weymouth. In 1842 he was returned for Southampton, and became Under Secretary for the Colonies, an appointment which he held until the retirement of Lord Stanley, the Colonial Secretary, in December, 1845. In 1859 he again came forward, and was chosen for New Windsor as a supporter of the Derby Administration. He retained his seat until his death.

HOPE, Admiral Sir HENRY, K. C. B., born in 1787, died at Holly Hill, Hampshire, September 23d, 1863. He entered the navy in the spring of 1798, as midshipman, became lieutenant in 1804, and captain in 1808. He served in the Mediterranean on board the "Kent," and was afterward transferred to the "Swiftsure," and was on that ship when she was taken a prize by a portion of the French squadron which had escaped from Toulon. In 1815, he was in command of the "Endymion," forty gun frigate, and distinguished himself in the engagement with the American ship "Presi-

dent," which he took as a prize to Spithead, and was presented by the admiralty with a gold medal, and the nomination of a Companion of the Order of the Bath. He was successively advanced to the rank of rear-admiral, vice-admiral, and admiral, and was also aide-camp to William IV., and to her Majesty. In July, 1855, he was nominated a Knight Commander of the Order of the Bath. He left personal property to the amount of £70,000, nearly one half of which he bequeathed to various religious and charitable societies.

HUBBARD, JOSEPH STILLMAN, an American astronomer, born at New Haven, Conn., in 1823, died in that city August 16th, 1863. He graduated with high honor at Yale College, in 1843, giving evidence of extraordinary mathematical ability, and in the spring of 1844 was appointed an assistant to the late distinguished astronomer, Sears C. Walker, in the High School Observatory, Philadelphia. In the autumn of the same year he was employed by Captain (now Major-General) Fremont to reduce his Rocky "Mountain Observations," and was invited to accompany him on his next expedition. Declining this offer, he was, at the instance of Col. Fremont and Senator Benton, appointed by Hon. George Bancroft, then Secretary of the Navy, a professor of mathematics in the U. S. Navy, and assigned to duty in the Naval Observatory, then just established at Washington. This post he filled with remarkable zeal and fidelity to the time of his death. The printed volumes of the Washington Observations are full of the evidences of his skill as an observer and a computer. Professor Hubbard was a frequent and valued contributor to the "Astronomical Journal." His investigations on Biela's comet, and on the great comet of 1843, are recorded in that journal in a series of elaborate papers. He also contributed papers on the orbit of Egeria, and many other topics. The article "Telescope," in the New American Cyclopædia, a paper of great labor and research, was also from his pen. His labors of love in the cause of benevolence and religion were not less zealous than in the paths of science.

HUNT, Major EDWARD B., an officer of U. S. volunteers, born in Livingston county, N. Y., in 1822, died at the Brooklyn Marine Hospital, Oct., 2d, 1863. He was appointed to the Military Academy from his native State in 1841, graduated second in the class of 1845, was appointed second lieutenant in the corps of engineers, and was assigned to duty as assistant to the Board of Engineers for Atlantic Coast Defence. After serving in this capacity a year, he was called to fill the important position of principal assistant professor of civil and military engineering at the Military Academy, West Point, where he remained until 1849, when he was employed as assistant-engineer upon Fort Warren, Boston harbor, Mass. From 1851 to 1855 he was the assistant of Prof. Bache, in the Coast Survey Bureau. From

1855 to 1857 he was engaged in the engineering operations in Newport harbor, R. I., and constructed and repaired many important light-house structures on the coast. In 1857 he was ordered to Key West, where, for five years, he assisted in the construction of fortifications and other defensive works on that island, receiving his captaincy while serving there, July 1st, 1859. It was chiefly through his instrumentality that the forts of Southern Florida were withheld from the Confederates after the war actually commenced. In 1862 he was appointed chief-engineer of the 5th army corps, commanded by Major-General Banks, and from this duty was relieved and placed on special service under the Navy Department, in order to superintend the construction of his submarine battery, an invention of his own, which he was sanguine would successfully defeat any naval attacks which might be made by the most powerful fleets upon our harbors. While engaged in making some experiments with this battery, a shell prematurely discharged, immediately after which he descended into the caisson, and, in attempting to ascend, being probably overcome by the gas, fell backward, striking his head and causing concussion of the brain, from which he died the following day. Major Hunt was a brother of ex-Governor Washington Hunt of New York, and was a man of great ability and scientific attainments, and a frequent and valued contributor to the transactions of the American Association for the Advancement of Science, and to various literary and scientific works of the country. He was a man of sincere patriotism, and thoroughly conscientious in the discharge of his duties as an officer and as a man.

HYGIENE IN THE ARMY. The regular army of the United States, before the commencement of the present war, seldom numbering in its ranks more than 12,000 or 13,000 men, and with a medical and hospital service corresponding to its limited numbers, had little need of special rules of hygiene, or the elaboration of any extensive system of regulating the health and physical comfort of its forces. But when a volunteer army of more than half a million of men was suddenly called into existence, men, too, to whom camp life was an entirely new experience, who had for the most part little or no knowledge of the art of cookery, or of the thousand causes of disease which lurked in their new mode of life, in the climate, exposure, over exertion, unsuitable or insufficient food, clothing, &c., it became evident that it required fully as much medical skill and care to prevent disease as to effect a cure when it had made its appearance. The medical department of the Government, aided in this matter most effectually by the Sanitary Commission, found it necessary to give special instruction to the army surgeons, whether engaged in examining recruits or in service on the field or in the hospitals, in matters relating to the hygienic condition of the force; and

during the past year, in addition to monographs on particular branches of the subject by subordinate medical officers of the army, the accomplished surgeon-general has, by the most indefatigable industry, found or made leisure to prepare an admirable treatise on "Hygiene in the Military Service."

The first step in the way of prevention of disease in the army must be taken in the *examination of recruits*. The ignorance or incompetence of the examining surgeons in the first two years of the war, and sometimes it is to be found baser motives, led to great abuses in this respect. "Thousands of incapacitated men," says Surgeon-General Hammond, "were, in the early stages of the war, allowed to enter the army, to be discharged after a few weeks' service, most of which had been passed in the hospital. Many did not march five miles before breaking down, and not a few never shouldered a musket during the whole time of their service. * * * * Cases of chronic ulcers, varicose veins, epilepsy, and other conditions unfitting men for a military life, came frequently under my notice. The recruits were either not inspected at all by a medical officer, or else the examination was so loosely conducted as to amount to a farce. I know of several regiments in which the medical inspection was performed by the surgeon walking down the line and looking at the men as they stood in the ranks." There has been great improvement in these examinations since the autumn of 1862, but even now too many men unfit for the service are smuggled into it, through the lack of vigilance on the part of the inspector. The enlistment of weak, malformed, or sickly soldiers is a great crime against the service. The soldier, to be capable of serving his country effectively in the field, requires not only sound health but the ability to endure fatigue, hardships, exposure, and vicissitudes of climate with impunity. To admit into the ranks a soldier who does not possess this ability, inflicts upon the army not only the probable loss of his services, very often at a time when they are most needed, but, if he is consigned to a hospital, requires the care of others for his nursing, who might otherwise be employed in the national defence. The minimum *age* at which volunteers are received (eighteen years, and in many cases by the connivance of examining officers, below that age) is too young for serviceable soldiers. These young recruits break down under the severe marches and privations of the camp, and are more liable to those terrible scourges of the army, diarrhoea and dysentery, as well as to a fatal termination of wounds than those who enter the army at twenty or over. The *height* of the recruit (our minimum limit is five feet three inches, and there is no maximum, as there should be), the capacity of the chest, vigor of the system, and general aptitude for the soldier's profession, are all points of great importance, and must be carefully examined by

the surgeon before deciding to accept a volunteer. The diseases, defects, or deformities which afford cause for rejection of recruits have been fully laid down in the books of instruction for the examining surgeons, and do not come properly within the range of our inquiries. It is, however, to carelessness and neglect in the inspection of those who have offered to enter the service that a large portion of the sickness of the new troops is due, and from this cause more than any other has it happened, more than once, that with very large numbers on the rolls, the effective force of our armies has often been very small.

But the soldier once received into the army, there are many causes which tend to impair his health, and prevent that sound hygienic condition necessary to make him effective and serviceable. These causes may be classed under one or the other of two heads—those inherent in the organism of the soldier, and those external to that organism and acting upon it only from without. In the first class may be enumerated *Race*, which exerts a powerful influence; the men of one race being far more subject to some diseases, and enjoying a greater immunity from others, than those of another. To a limited extent this is true even of nationalities, the Celt, the Teuton or the Scandinavian having a constitutional predisposition to some forms of disease from which the Anglo-Saxon is free, and *vice versa*. In the different races of men this difference becomes strongly marked. The volunteer army of the United States is principally composed of the European or Caucasian race, some regiments being largely Teutonic, others mainly Celtic, and others, the great majority, of that conglomerate of different nationalities, the native-born American. Within a year past, however, another element has been added to the army, in the numerous regiments of African descent. The experiment has not yet progressed quite far enough to enable us to compare the hygienic characteristics of the two races very fully, but these facts have been ascertained: the negro troops are more subject to phthisis, scrofulous affections, and tetanus, and their wounds do not heal so readily as those of the whites, but they are far less liable to malarious diseases, nervous affections, or the influence of the syphilitic poison than the white troops. The mortality from disease among them has been thus far proportionally much below that in the white regiments in the departments of Tennessee, the Gulf, and the South. There are three or four regiments of Indians and half-breeds on the western frontier, but they are not sufficiently numerous to offer the opportunity of a fair comparison. *Age, temperament, hereditary tendencies, habit in the mode of life, morbid and vicious habits*, and the *natural constitution* are also among the agencies inherent to the organism which influence the hygienic condition of the soldier, all of which must be taken into account by the regimental surgeon who would keep the body of soldiers

under his charge in the highest effective condition. To the watchfulness of some surgeons over these agencies, as well as those presently to be mentioned, is due the superior condition in which their regiments are always found.

But, aside from these inherent tendencies to impair the health of an army, come another class equally formidable, to assail vigor and effectiveness from without.

Of these external agencies the most important are the atmospheric condition, temperature, light, heat, electricity, water, soil, and locality of camp, bivouac, or barracks, the climate, and the necessary acclimation where that climate is essentially different from the one in which the soldier has previously resided, the habitation, in its plan, space, ventilation, etc., whether that habitation be a camp, barrack, or hospital; the food of the soldier in all its relations, quantity and varieties, accessory food, including condiments, spirits, tea, coffee, and tobacco, and the clothing of the army in its relations to health.

On some of these agencies a few words of explanation may be desirable. The *atmosphere* is an agency for the promotion or transmission of disease when loaded with moisture, especially when the temperature is low, producing at such times rheumatism, neuralgia, and often pulmonary disease. A hot and moist or a hot and dry condition of the atmosphere is also unfavorable to health. The atmosphere is also a medium of imparting disease, when it is corrupted by noxious gases, when it is saturated with the effluvia thrown off by perspiration, as in over-crowded rooms, tents, etc.; when it is impregnated with the spores of fungi, or whatever it may be, which we denominate *malaria*; and, perhaps, when it contains an excess or deficiency of ozone. The promotion of health in these various atmospheric conditions in the army requires the use of the rubber blanket, the protection of tents where possible, a sufficiency of good clothing, the strict avoidance and prohibition of over-crowding, whether in tent, barrack, or hospital, the careful selection of camping ground on high and dry locations, to windward of marshes or malarious positions, and, if possible, with water between the camp and the marsh; the building of fires, wherever there are not military reasons to prevent; the flooring of tents, and the raising of the floors of barracks some distance above the ground. The administration of quinine or cinchonine in small doses daily to the men when exposed to malaria, is also an important prophylactic against the intermittent and remittent fevers which would otherwise prostrate so many of them.

The *temperature* exerts a powerful influence upon the health of the army. When provided with proper clothing and food, the temperature has rarely been so low as to effect serious injury upon persons in health. In a few instances, however, men in cavalry expeditions, or in transit from one point to another, where

they had become very wet and were subsequently subjected to the cold in a season of immeasurable severity, have suffered from frozen extremities. With the sick or wounded when exposed the sudden accession of a low, moist temperature often proves fatal, idiopathic and traumatic tetanus supervening, and causing speedy death. Apoplexy, bronchitis, pneumonia, diarrhea, and rheumatism are often induced by it; clear, bracing, moderately cold weather is highly conducive to health. The amount of sickness is less than one half during the winter months of the summer ratio. In the army of the Potomac, in 1862, March was the healthiest month, and July the sickliest; in the army of Western Virginia, May was the healthiest and October the sickliest. In South Carolina, March was the healthiest; in Florida, December, while in July the ratio of sickness was more than five times as great. In Kansas the health of the troops was best in May, and worst in September. High temperatures are prolific in disease, unless great caution is exercised. Sunstroke is very prevalent, and to prevent it the troops should wear the Zouave turban, or a wet folded cloth in their cap. Diseases of the liver, diarrhea, dysentery, and fevers also prevail in the hot season, and the constant care of the surgeon is requisite to ward them off.

Water is a very active agent both in promoting and in preventing disease in camps, barracks, and garrisons. In its use for drinking and cooking purposes it is absolutely essential to health that it should be at least moderately pure, and yet it seldom is so. The water for the use of armies in the field is supplied usually from rivers or streams, from springs, or from pools or ponds, very rarely from wells or from cisterns, in which rainwater has been collected. In barracks or hospitals, cisterns, wells or reservoirs are the usual sources of supply. Rainwater, though containing some impurities acquired from the atmosphere, or from the roofs, etc., from which it is collected, contains fewer hurtful substances in solution or admixture than water obtained from any other source. River water usually contains earthy and sometimes mineral substances, and when drawn from the vicinity of a large town has also more or less animal matter in solution. Spring water and well water also very generally contain lime, magnesia, and other mineral salts in solution, while water from pools, marshes or stagnant ponds, is largely charged with confervæ and infusoria, and is thus more injurious in its effects than any other, producing typhoid and paludal fevers, and other diseases of a grave character. The presence of earthy or mineral substances very generally induces diarrhea, dysentery, and sometimes serious ulceration of the bowels. To prevent these evil results from the use of impure water, the surgeon of each regiment should require all water drank or used for cooking to be filtered by some one of the numer-

ous simple processes in use in the army, and at permanent camps, barracks, and hospitals great care should be taken to have all the water used in the purest possible condition. The use of water in bathing and thorough ablution by the soldiers is a matter so important that it should be insisted upon wherever it is possible to obtain sufficient water for the purpose, but the time of taking the bath, the condition of the men when taking it, and the temperature, should be carefully attended to by the surgeon. Dr. Calvin Cutter, surgeon of one of the Massachusetts regiments, and for some time brigade surgeon, kept the men in his command in perfect health during the intensely hot summer of 1863, in the Department of the Tennessee, by the strict enforcement of cleanliness and frequent bathing, the careful selection of positions for the camps, and the avoidance of unnecessary exposure to the sun. Similar care would have been rewarded, in most regiments or brigades in the field, with similar success.

The influence of *soil* and *locality* upon the health of an army is also very important. Some soils retain the heat of the sun much longer than others; this is especially the case with sandy soils as compared with those of a clayey character, or those composed of decomposed vegetable matter. The latter, on the other hand, retain moisture with great tenacity, and hence are unfitted for healthful camping grounds. A clayey soil, overlaid with gravel, is, of all others, the worst for the site of a camp, and should never be chosen when it is possible to obtain any other. Dry, sandy positions sloping to water, to secure good drainage, with wood at no great distance, yet not overshadowing the camp, and where the sun can have access to the ground and dry up the moisture speedily, are preferable to all others. The locality should not be in a valley if it can be avoided, but rather on a hill-slope—not on the top of a lofty height, since the soldiers would be exhausted in the transportation of fuel, etc.; not on a plain unless the plain is extensive and dry.

An army going, as the army of the United States have done, to a *climate* warmer than that in which they had previously resided, find a necessity, if health is to be maintained, for care in diet and habits, and should as far as possible adopt the customs and food of the people of the new climate, to secure that acclimation without which the change will be likely to prove fatal to large numbers. The food in a hot climate should be to a greater extent composed of fruits and amylaceous substances. Meat and spirituous liquors should be sparingly used in health, and coffee or tea substituted for the latter. The clothing should be adapted to the climate, and violent exercise avoided in that portion of the day when the heat is most intense. The use of anti-scorbutics and sub-acids, to avoid scurvy, is indispensable.

The *habitations* of the soldiers greatly in-

fluence their hygienic condition. These may be considered under three heads: *camps*, in the field, consisting of tents or huts; *barracks* for those in garrisons or camps of instruction, and *hospitals* for the sick or wounded. In camp, there are several descriptions of tent used, the principal of which are the Wedge tent, now falling into disuse from its inconvenience; the Sibley tent, conoid in form with a movable cowl at the top, so arranged as to be easily shifted according to the direction of the wind, or a modification of it made by fastening three poles together at one end, the other ends being separated so as to form a large tripod; and the Bell tent, so named from its form, and which is ventilated by a window cut in one side near the top, which can be closed by a canvas flap. These tents are in use by the men; the Sibley is intended for fifteen infantry soldiers, or thirteen mounted men, too large a number for effective ventilation or comfort. The officers' tent is square, and has a canvas wall four feet high, which can be raised all around. It has also a fly or movable canvas flap on each side of the roof, which aids in preventing the heat of the sun or the rain from entering. The hospital tent is larger and higher, being 15 feet square and 12 feet high, with a wall $4\frac{1}{2}$ feet high, and has a heavy fly. The ends are open, and it is so arranged that two or more can be joined together, forming a continuous ward. On the march the troops sometimes use the small shelter tent or *tent d'abri*, composed of canvas sheets and jointed sticks, of which each one of the four soldiers who are to occupy it carries his portion. These afford a slight protection from rains and heavy dews at night, but most of the soldiers prefer sleeping in the open air. Where a camp is somewhat permanent, the soldiers often build *huts*. These are generally large enough to contain 20 men, and should, but do not always, have a ridge ventilation. There is a great tendency to overcrowding in the camps, by placing them too closely on the plot selected for a camp. The army regulations, based on the number of men in the old Wedge tent, prescribed a density of population equal to 86,448 to the square mile, a far greater number than are crowded into the same space in either London or New York. With the Sibley tent, the application of this rule would have led to a density nearly three times greater than this. The evil effects of such overcrowding were soon exhibited in the increase of sickness in the camps, and the space occupied has been greatly enlarged by the commanding generals. The police regulations of the camp must be strictly enforced, or there is invariably a serious increase of illness. Every tent or hut must have a trench around it, the streets and open spaces must be carefully swept every day, and all garbage and filth carried off, the latrines placed to leeward of the camp, and a foot of fresh earth thrown on them daily, fires built in the open spaces, as often as military necessity will admit, tents struck and moved to another

position, and the earth on which they stood allowed to sun, and the sides of the tents raised to admit fresh air. With the observance of these precautions, a camp life is favorable rather than prejudicial to health.

The attention to ventilation, the avoidance of overcrowding, and the careful observance of cleanliness, so requisite in camp, are still more necessary in barracks, and in addition to these, there should be strict regard given to bathing and ablution by every inmate. Most of the barracks have ample provision for this, and it should be enforced, if necessary, as a matter of discipline.

While great attention has been paid to the hygienic condition of the camps and barracks, a work in which the Medical Inspectors of the Sanitary Commission have rendered valuable service to the army and to the medical department, that department has performed a Herculean labor in the erection and fitting up of 233 general hospitals, in different parts of the country, beside a very considerable number of post and garrison hospitals. These hospitals are generally temporary structures, intended to last, without material repairs, for ten years, but in their vast extent, their admirable plans, and their completeness of outfit, they have never been approached by those of any other nation. At the commencement of the war, the War Department had no hospitals, save a few post and garrison establishments of antiquated design, and whose aggregate capacity was less than that of a single one of the magnificent structures since erected. In the battles of the spring of 1862, though new hospitals were erected with the utmost rapidity, consistent with their thorough adaptation to the wants of the patients, they were inadequate to accommodate the tens of thousands of the sick and wounded who needed care, and the Government was compelled to solicit the admission of its patient sufferers into the civil hospitals in the large cities. In this way many were provided for in Baltimore, Philadelphia, New York, Boston, Pittsburg, Cincinnati, St. Louis, and Louisville. The pushing forward of the new hospitals to completion, as well as the erection of others, meantime occupied the energies of the Quartermaster-General and the Surgeon-General, both men of extraordinary executive ability, and in the autumn of 1862, they were able to announce their readiness to accommodate in their own hospitals all their sick and wounded. In the construction and administration of those hospitals the Surgeon-General laid down these principles to be observed:

1st. That they should be capable of being well ventilated.

2d. That each should be sufficiently capacious for the number of inmates it was to contain.

3d. That they should admit of good drainage.

4th. That they should be provided with a sufficient number of windows.

5th. That the kitchen, laundry, and other offices of administration, should be separated from the wards, well arranged, and of ample size.

6th. That efficient water-closets, ablution, and bathing accommodations should be provided.

7th. That they should be amply supplied with water and gas, or other means of illumination.

8th. That the furniture of all kinds should be of suitable quality.

9th. That the officers and attendants should have their proper respective duties assigned to them, and that they should be in number sufficient for the wants of the sick.

10th. That proper rules should be established for the government of the hospital, for the diet of the inmates, and for preserving order and an efficient state of police.

The idea of a hospital, conceived by most non-professional readers, is that of a huge barrack-looking building or buildings, three or four stories in height, gloomy in appearance, and into whose cavernous walls many a poor unfortunate enters, but very few return to the life and bustle of the outer world. This typical hospital is as far as possible from the conception of Surgeon-General Hammond, or the able medical directors and surgeons who have been his coadjutors in planning and superintending the construction of the General Hospitals of the Army. They started with certain fundamental ideas of construction, which have been carried through all their hospitals. The first of these was ridge ventilation, or the supplying a way of egress for the foul air of the ward by an opening of from ten inches to three feet at the ridge or apex of the roof, protected from the admission of rain, snow, or violent winds by a false roof, raised four inches above the true one, and projecting over it on each side about two feet. A perforated iron plate near the floor and behind each bed admits the fresh air, which passes thus upwards, and forces the foul air through the roof opening. This forms the summer ventilation. In winter the fresh air is admitted around the stove from below, and passing between the stove and an outer casing of zinc, which surrounds it, is distributed through the room; while a large, square wooden tube open at the bottom, and extending to the roof, receives and encloses the pipe of the stove to its termination above the ridge, and thus becomes the ventilator of that portion of the ward.

Another new feature in the construction of these hospitals was the entire separation of the wards from the administrative portion of the hospital, and the making of each ward a single one story pavilion, removed so far from every other ward or building, that it could have the benefit of the sun, and the free circulation of pure air on both sides of it, throughout the day, while at the same time one end of each ward opened from a corridor which would serve as a covered hall for exercise to the convalescing patients, and through which there was communication with the administrative buildings. The pavilions were to have their long diameter, where possible, a north and south line. An-

other point insisted upon was that no patient should have less than 1,000 (except under very peculiar circumstances not less than 1,200) cubic feet of space, and the air of this, by the system of ventilation, constantly changing.

The pavilions were to be raised at least one foot, generally two, above the ground; the floors to be coated with a mixture of beeswax and oil, to prevent any liquid from soaking into them; the baths and water closets to be at the extreme end of the pavilions, and form an angle with them, and to be connected with such a system of sewerage as would convey all offensive matters and odors away instantly. A ward or pavilion was not to contain more than fifty-two beds, and these were to be placed in pairs with three feet space between the two, and each pair to be placed between the windows; the two beds occupying an average space of fifteen feet in the length of the ward, and of seven and a half feet in width, and a passage way of ten feet to extend through the middle of the ward for its whole length, thus making the width of each ward twenty-five feet, and its length, if it contains fifty-two beds, about two hundred and twenty feet; the additional twenty-five feet being occupied with water closets, scullery, &c., at one end, and wardmasters', nurses' rooms, and mess room at the other. In the practical application of these principles, it has been found better not to have the wards quite so long, and they generally contain only thirty-six or forty-eight beds (some only twenty-four); or, if there are fifty-two, they occupy somewhat less than fifteen feet to the pair. The first large hospital built upon the principles presented by the surgeon-general, was the West Philadelphia Hospital, situated at the intersection of Forty-fourth and Spruce streets, half a mile outside of the limits of the city of Philadelphia. We subjoin an engraving (fig. 1) of the general plan. The corridors are each 860 feet long, 14 feet wide, and 13 feet high, and serve as mess rooms for the pavilion. There are 34 pavilions, *b b b*, each 24 feet wide, and 13 feet high at the eaves; they are now of unequal length, ranging from 150 to 250 feet. Between the corridors is the administrative building, *a*. There are three kitchens, *c c c*; two laundries, *d d*; a chapel, *e*; store rooms, *f f*; a mess room for special occasions, *g*; two buildings for officers' quarters, *h h*; boiler room, *i*; residence of surgeon in charge, *k*; water tanks, *l*; barber shop and printing office, *m* and *n*; boiler and tank, *o*; smoking rooms, *p p*; reading and lecture room, *q*; knapsack room, *r*; guard room, *s*; stable, *t*; guard, *u*. The pavilions are 21 feet apart, which is too close by at least ten feet. The building is of wood, lathed and plastered on the outside. Its cost, aside from furniture, exceeded \$200,000. It has 3,124 beds. The number of medical officers is fifty-two, beside eighteen medical cadets, and of cooks, nurses, and other attendants, four hundred and sixty-four. There are also three chaplains.

A still finer example of a great military hospital, the largest in the world, is the Mower General Hospital, at Chestnut Hill, Philadelphia. This vast establishment consists of 50 pavilions, each 175 feet long, 20 wide, exclusive of the water closet and scullery which

(FIG. 1.)

GROUND-PLAN OF WEST PHILADELPHIA HOSPITAL.

project from the pavilion, 14 feet high to the eaves, and 19 feet to the ridge. These pavilions project in radii from a corridor of flattened ellipsoidal form, 16 feet wide, and 2,400 feet long, enclosing an area of 541,466 square feet. Across the shorter diameter of the ellip-

soid, as well as around its circumference is a railroad for moving food, fuel, furniture, carrying the patients to their wards, &c. The administrative portion of the building is in the central plot. The pavilions are twenty feet apart at the corridor, and forty feet at the distant extremities, and the circulation of air around them is thus secured. The sides of the corridor are almost entirely composed of glass sashes, which,

in summer, are entirely removed. During inclement weather they are closed, and the corridor is furnished with fifty large stoves, and used as an exercise hall, for those patients who are able to leave their ward. To each ward, at the end nearest the corridor, a mess room is attached, sufficiently large for the use of those patients who are able to leave their beds. The following plan (fig. 2) shows the arrangement of

(FIG. 2.)

a ward pavilion in detail: *a* is the ward room, occupying 150 feet in length of the pavilion, and twenty feet wide, containing fifty-two beds; *b*, the mess room; *c*, scullery; *d*, bath room; *e*, water closet; *f*, ablution room; *g*, wardmaster's room. The pavilions are four or five feet narrower than they should be, and when the beds are all full there are but 960 cubic feet of air to each patient; but as this is constantly changed by the admirable ventilation, it is nearly sufficient. The number of beds is 3,320. There is a force of 622 officers, attendants, guard, &c., attached to the hospital. The cost of the buildings was over \$250,000. The McClellan Hospital, situated in the neighborhood of Philadelphia, though smaller (1,040 beds), is, perhaps, more nearly perfect than any other yet erected. The corridor is of a flattened ovoidal form, from the ends of which the pavilions project. These pavilions are wider, larger, and farther apart than at the Mower Hospital. The administrative building is in the centre and connected with the corridor by two straight passage ways. In the ground-plan (fig. 3), *a* is the main corridor; *b b b*, wards; *c*, administrative building, two stories high; *d*, kitchen; *e*, laundry; *f*, clothing and guard rooms; *g*, engine room; *h*, stable; *i*, provision and knapsack store room; *k*, quarters of medical officers in charge.

We give below ground-plans of two other military hospitals of large size, each arranging the pavilions in a different way, but all observing the same principles. The first is the Hammond General Hospital, at Point Lookout (fig. 4), in which sixteen pavilions project from a circular corridor. The administrative building is the wide structure at the upper side of the circle, and the kitchen, laundry, guard room, dead house, &c., are in the centre. The pavilions here are 40 feet apart at the corridor, and 75

feet at the farther end. They are 145 feet long, 25 feet wide, and 14 feet high to the eaves, and 18 to the ridge. The ventilation is perfect. Each patient has 1,116 cubic feet of space. The second, the Lincoln General Hospital, at Washington city (fig. 5), has its pavilions placed *en echelon*, along a corridor, forming two sides of an acute-angled triangle. The administrative building is at the apex, and the kitchen, &c., inclosed within the angle. This hospital accommodates 1,200 patients. By this arrangement a thorough ventilation of each ward is secured, while all the wards have the same direction and receive the rays of the sun at the same time—a matter of considerable importance.

In the West, large hospitals on some one of these, or similar plans, have been erected at St. Louis, Louisville, Nashville, Madison, Evansville, and New Albany, Indiana; and others are building at Madison, Wisconsin; Davenport, Iowa; and other points.

For field hospitals, the hospital tent is undoubtedly preferable to any building. Where a camp is somewhat permanent, the improved Crimean tent with double walls, ridge ventilation, and the admission of pure air near the floor, answers a good purpose. In both, special attention should be paid to ventilation, and over-crowding carefully avoided.

In the lighting and warming of hospitals, special care is now taken to avoid vitiating the air by the gases produced by combustion. Where it is possible, illuminating gas is used, but the vitiated air, and carbonic acid gas, are conducted off by chimneys in such a way as to increase the ventilation of the ward. If gas cannot be obtained, the vegetable oils or paraffine, spermaceti, or wax candles are preferable to any other modes of illumination. Coal or petroleum oils, camphene and burning fluid, ir-

(FIG. 3.)

ritate the lungs, and affect the respiration. The animal oils give off carbon, carbonic acid, and carburetted hydrogen in too large quantity to be desirable. The heating of the hospital wards should be connected as far as possible with the ventilation. The usual method is by stoves, though in some, hot water is introduced with advantage. Ruttan's system would seem to possess advantages over any other plan of warming and ventilation, but, so far as we are aware, has not been introduced. The temperature in cold weather is carefully watched, and

is not allowed to vary much from 64° to 66° Fahrenheit.

The *alimentation* of the soldier is one of the most important items in the hygienic condition of the army. Great attention has been paid by the medical and commissary officers of the Government, to the arrangement and character of the ration, in order to furnish such combinations of food, and of such quality, as should be best adapted to maintain the health and strength of the soldier in its greatest perfection. The rations of most of the European armies are de-

(FIG. 4.)

GROUND-PLAN OF HAMMOND GENERAL HOSPITAL, POINT LOOKOUT.

fective in these respects. The quantity of meat is generally too low, and in some, the supply of fresh meat and vegetables, and of coffee and sugar, is altogether inadequate. The fearful prevalence of typhus fevers, and of scurvy and other cachectic diseases, in the British and French armies in the Crimean war, was unquestionably owing to the poor quality and scanty quantity of the rations. The British soldier receives at home stations sixteen ounces of bread, and twelve ounces of flesh meat uncooked; on foreign stations, sixteen ounces of bread, or twelve ounces of biscuit, and sixteen ounces of meat, fresh or salt. This is charged

to him at three and a half pence per day abroad, or four and a half pence per day at home. (Coffee, sugar, pepper, potatoes, salt, or whatever else he may need, he must purchase from his own funds, where and how he can. In a few of the foreign stations, as at Hong Kong and the Cape of Good Hope, rice, sugar, coffee, and salt, in insufficient quantities, are issued as component parts of the ration. In the United States army, the ration is wholly independent of the pay, and consists of the following articles: bread or flour, 1 lb. 6 oz.; fresh and salt beef, 1 lb. 4 oz., or pork or bacon, 12 oz.; potatoes, 1 lb. three times a week; rice, $1\frac{6}{10}$ oz.;

coffee, $1 \frac{6}{10}$ oz.; or tea, $\frac{24}{100}$ of an oz.; sugar, a gill; salt, $\frac{16}{100}$ of a gill; in addition to the $2 \frac{4}{10}$ oz.; beans, $\frac{64}{100}$ of a gill; vinegar, $\frac{32}{100}$ of above, 1 lb. of sperm candles, or $1 \frac{1}{4}$ lbs. of ad-

(FIG. 5.)

LINCOLN HOSPITAL, WASHINGTON CITY.

amantine candles, or $1 \frac{1}{2}$ lbs. of tallow candles, and 4 lbs. of soap, are issued to each hundred rations. Pepper has also been recently added to the ration, and extra issues of pickles, fruits,

sauerkraut, and other vegetables are made, whenever the medical officers consider them necessary for the health of the troops. Whenever it is practicable for the troops to bake their own bread, flour is issued, and as the amount of bread thus produced would be excessive for a ration, the surplus flour is resold to Government at cost, and a company fund formed, which is used for the purchase of such additional articles of food or comfort as may be desired. In time of peace, company gardens are cultivated at every military post, and furnish an abundant supply of fresh vegetables.

The ration is somewhat in excess of the wants of the soldiers, and it is a very general custom in the army for the companies to sell back a portion of it which is unconsumed, to the commissary, and from the company fund thus formed, obtain milk, fruits, or other luxuries.

It is evidence of the sufficiency and good quality of this ration, that with the exceptions presently to be mentioned, there has been little or no tendency to scurvy in the army, and no indications of insufficient alimentation. In the case of the army in the Department of the South, in Folly and Morris Islands in the summer of 1863, there was for some time difficulty in obtaining a full supply of some articles comprised in the ration, especially the fresh meat and vegetables, and the quality of the biscuit was poor, partly probably from the sea voyage; the men were meanwhile exposed to extraordinary fatigue, and severe labor, and though few cases of clearly defined scurvy appeared, there were cachectic symptoms in connection with the disease which prevailed. To the extraordinary and humane efforts of the Sanitary Commission, in providing ice, lemons, oranges, lime juice, potatoes, onions, and other anti-scorbutics in large quantities, and furnishing them freely to the men, is unquestionably due the preservation of that army from scurvy, in its worst forms. Gen. Grant's army, during the siege of Vicksburg, was in a similar condition of danger; the salt beef and hard tack, which, for a time, constituted their principal food, from the difficulty of transportation, proving insufficient to maintain the men in sound health under the severe labors of the siege. Here again the hospital visitors of the Sanitary Commission discovered the danger of scurvy; and potatoes, onions, sauerkraut, &c., were sent forward in immense quantities, and with the best possible effect. There was a similar danger for a time at Chattanooga, after the battle of Chickamauga, and at Knoxville during the siege, the men subsisting for some weeks on half rations; but with the removal of the obstructions to transportation, and the returning abundance, the cause for alarm passed away. In the Confederate army scurvy and cachectic diseases have prevailed in several instances with great malignity, and the insufficiency of the rations has been indicated painfully in the low grade of febrile action, which has prevailed in their camps.

The last topic which we shall mention as ex-

erting an influence upon the hygienic condition of the army, is the *clothing* of the soldier. This is a matter of importance in relation to its sufficiency in protecting from cold, in guarding the body against excessive heat, in permitting the free use of the limbs, and in rendering the man a more or less conspicuous mark for the fire of the enemy. The sudden changes and rapid transition from cold to heat, and from heat to cold in the climate of the United States, render woollen clothing preferable to any other for army use, though for a short time in the summer, in the Southern departments, cotton, duck or jeans might be used with advantage. The color of the clothing, experience has fully settled, should be light blue, or gray, and for the purpose of being less distinctly seen by the sharpshooters of the enemy, red, which had at the beginning of the war been adopted by some regiments, proves more objectionable than any other color. The *kepi* or small cap is preferable to most other forms of headgear, though the soft hat is not without some advantages, and the *tarboosh* or turban of the Zouaves is valuable as a protection from the direct rays of the sun. The neck, if covered at all, should only have the lightest and loosest of coverings. The trousers should be loose and full, and the shoes broad and long enough for easy walking. Gaiters of linen, woollen, or leather, are advantageous, supporting the leg and preventing varicose veins.

It is owing to the care and persistence with which these various hygienic measures have been urged upon the army, and the great pains which have been taken to instruct and train the army surgeons, and nurses in the hospitals for their duties, that the army of the United States, composed almost wholly of volunteers, whose whole mode of life has been changed by their new vocations, the greater part of them entirely ignorant of the laws of health, with surgeons who had, for the most part, no previous training in military medicine or surgery, and many of whom were utterly unfitted for their duties, has maintained a lower sick rate, as well as a lower rate of mortality than any other army in modern times. This result has been reached too, while the regions in which the army has been stationed have in general been exceedingly unhealthy to the unacclimated, quite as insalubrious as any part of Spain, Portugal, or the Crimea. The attainment of so gratifying a result is due in a great degree to the U. S. Sanitary Commission, which, by its careful, regular and special medical inspections of every army corps, and all the hospitals, has promptly detected any violations of hygienic laws, and taken measures to correct them; has published brief medical and surgical tracts from the pens of the ablest military physicians in this country and Europe, and placed copies in the hands of every army assistant surgeon and medical cadet in the army; has trained many of the best nurses for camp, field, and hospital; has provided anti-

scorbutics in vast quantities where they were needed, and by its ministrations to the sick and wounded, and its stores of cordials, medicines, delicacies, and clothing, has powerfully aided in restoring the disabled to service. The assistance thus rendered to the medical department of the Government, with which the Commission has ever acted in perfect harmony, has saved many thousands of lives, and rendered the army far more effective, than it otherwise could have been.

A brief comparison of the medical statistics of the British army in the Peninsular war, in the war with Russia, and in times of peace, with those of the army of the United States during the present war, will show conclusively the beneficial results of the strict attention paid to hygiene in the latter.

The average annual mortality in the British army during the Peninsular war was 165 men out of every thousand. Of these 113 died by disease or accident, and 52 by wounds received in action. From 1803 to 1812 the average annual death rate of the entire British army abroad, was 80 per 1,000;—71 by disease or accident, and 9 by wounds in action. This, it should be remembered, was in a veteran army composed, not of raw recruits, but of men hardened to exposure by years of service, a class of men far less liable to illness than raw recruits, just from the farm, the store, or the workshop. In July, August, and September, 1854, the British army in the Crimea lost at the rate of 293 men per thousand, per annum. During the next three months, October, November, and December, the loss was at the annual rate of 511 to every thousand, 443 of which was by disease. In January, 1855, the mortality was at the rate of 1,174 to every 1,000—equal to the entire destruction of the army in ten months, and 1,143, or 97 per cent. of this loss was by disease. During the first three months of that year the death rate was 912 out of every thousand, and 98 per cent. of it from disease.

During the entire campaign of $2\frac{1}{2}$ years, April, 1854, to June, 1856, the annual death rate was 232 per 1,000, of whom 202 were from disease, and only 30 from wounds received in action. In other words, during the campaign

of $2\frac{1}{2}$ years, 582 of every thousand men died from disease or wounds and 505 of every thousand from disease.

According to the Register General's report for the year 1861, the mortality among the home troops of Great Britain in that year was 91.24 in every thousand, in a time of peace, and among the troops abroad, the mortality from sickness averaged 100 in every thousand.

In the armies of the United States from April 15th, 1861, to May 18th, 1862, the entire death rate was 53 per 1,000, per annum, of which only forty-four per cent. or less than one-half was from disease or accident. During the year and eight months which have since ensued, the loss from wounds in battle has been very large, and during a portion of the time there has been a large percentage of sickness from typhoid fever, diarrhea, dysentery, small pox, &c., but the death rate has not reached the ratio of the first year. On the 30th of June, 1863, there were in the general hospitals 91 men for each 1,000 of the army, and in field hospitals, 44 out of every thousand, making in all 135 of each 1,000 sick or wounded, of whom 110 were cases of sickness, and 25 of wounds or casualties. This far surpasses the British army even in time of peace. In 1861, the British troops in China had, in southern China, 283 out of every 1,000 constantly sick, and in northern China 205 out of 1,000. Among the Home troops, the admissions into hospital were 1,025 of 1,000 mean strength, and 545 of every 1,000 were constantly sick. The careful weeding out of incompetent surgeons and inefficient nurses, the material improvement in the ambulance service, and the admirable construction of the new hospitals, in respect to temperature and ventilation, have during the past year exerted a powerful influence, notwithstanding the terribly destructive battles of the year, in diminishing the mortality, and promoting the recovery of the sick in the army, and though the recurrence of great battles must necessarily increase the death rate, there is reason to believe, that with the resources of medical art, and of a boundless philanthropy, it will continue to be smaller than in any great war of ancient or modern times.

I

ILLINOIS. A short session of the Legislature of Illinois was held during the year, which attracted some attention by the manner in which it was brought to a close. A resolution for fixing a day for final adjournment passed the Senate, and was sent to the House for concurrence. In the House it was amended by the insertion of another day. In this amendment the Senate refused to concur. Under this state of facts, Gov. Yates sent the following message to the Lower House:

STATE OF ILLINOIS, EXECUTIVE DEPARTMENT.

To the General Assembly of the State of Illinois:

Whereas, on the 8th day of June, 1863, the Senate adopted a joint resolution to adjourn, *sine die*, on said day, at 6 o'clock P. M., which resolution, upon being submitted to the House of Representatives on the same day, was by them amended by substituting the 22d day of June, and the hour of 10 o'clock A. M., which amendment the Senate thereupon refused to concur in;

Whereas, the Constitution of the State contains the following provision, to wit:

SEC. 13. Art. 4. In case of disagreement between the

two Houses with respect to the time of adjournment, the Governor shall have power to adjourn the General Assembly to such time as he thinks proper, provided it be not a period beyond the next constitutional meeting of the same.

Whereas, I fully believe that the interests of the State will be best subserved by a speedy adjournment, the past history of the present Assembly holding out no reasonable hope of beneficial results to the citizens of the State, or the army in the field, for its further continuance;

Now, therefore, in view of the existing disagreement between the two houses in respect to the time of adjournment, and by virtue of the power vested in me by the Constitution aforesaid, I, Richard Yates, Governor of the State of Illinois, do hereby adjourn the General Assembly, now in session, to the Saturday next preceding the first Monday in January, A.D. 1865.

Given at Springfield, this 10th day of June, A.D. 1863.
RICHARD YATES, Governor.

After the reading of this message, the minority or Administration party withdrew from the House, thus leaving the majority, or Opposition, without a quorum. Being rendered powerless for the further transaction of business, the majority entered upon the records a protest against the action of the governor, and informally left their seats. Gov. Yates was elected in November, 1860, for a term of four years. The Assembly, and one half the Senate, thus adjourned, were elected in November, 1862.

The Supreme Court of the State consists of a chief justice and two judges, and the matter came before that body in four cases, designated "mandamus cases, as follows:"

Four cases, in various forms, were pending, the object of which was to obtain a decision establishing the legal existence of a corporation called "the Wabash Railroad Company;" and they were prosecuted by those in the interest of the supposed corporation.

Whether the supposed corporation had a legal existence depended upon whether a bill of the last session of the Legislature to incorporate it had become a law; and this, in one view of the case, depended upon another fact, namely: whether that session continued ten days, Sundays excepted, after the 10th day of June, when the bill went to the Governor for his action thereon. The records upon which the parties submitted the case admitted, in effect, the following facts:

That on the 10th of June the Governor issued his proclamation adjourning the session—that thereupon there ceased to be a quorum in either house. That on the 10th and 11th the pay-rolls of the session were made out under the supervision of the two houses, certified to by the respective Speakers of Senate and House, transmitted to the Auditor for payment of the members, and that the members generally went before the Auditor, receipted the pay roll, received their pay and departed for their homes. That from the 11th to the 23d of June, the halls of the two houses were vacant and locked, the members having departed to their homes without any indication of intention to return, or to resume legislation, and that on the 23d two senators met in the Senate hall, and three representatives in the hall of the House, and assumed legislative powers by, among other things, meeting and on the morning of the 24th adjourning the session to January, 1864.

Under the Constitution, a less number than a quorum—two thirds—may adjourn from day to day and compel the attendance of absentees, but a quorum only can exercise the powers of a General Assembly.

A memorandum of the decisions was made by

the judges and properly filed, which was as follows:

The People on the relation of Keyes vs. The Auditor of Public Accounts and the People on the relation of Hurless vs. The Secretary of State.—A peremptory mandamus in the above case is refused, Judges Walker and Breese holding that the proclamation of the Governor, acquiesced in by the General Assembly, terminated the session on the 10th day of June. Separate opinions will be filed early in January next.

December 11th, 1863.

For the action of the Assembly, by a vote of 47 to 13, relative to the order of Gen. Burnside, suppressing the Chicago "Times" newspaper, see FREEDOM OF THE PRESS.

At this session, the Legislature elected W. A. Richardson a senator in Congress. The vote was: for W. A. Richardson, 66; Richard Yates, 37.

The number of State banks is twenty-five, the securities of which are: Illinois, 6 per cent., \$974,660; United States 5's, \$8,000; North Carolina 6's, \$2,000; total, \$984,600. Circulation, September, 1863, \$833,146. Six National Banks were established in 1863, viz.: 1 at Cairo, capital, \$50,000; 1 at Chicago, capital, \$250,000; 1 at Monmouth, capital, \$50,000; 1 at Danville, capital, \$50,000; 1 at La Salle, capital, \$50,000; 1 at Rock Island, capital, \$100,000; total, \$550,000.

The number of public schools in the State at the close of 1862 was 9,811, the number of scholars 516,037, and the number of persons in the State between five and twenty-one years of age, 613,014. The amount paid for teachers' wages was \$1,315,686. The amount of the school fund was \$4,973,842. The number of students in the Normal University was 291. There is a State institution for deaf mutes at Jacksonville, having about 240 pupils; also an insane hospital at the same place, having 302 patients; also an institution for the blind, having 64 pupils.

The number of men furnished by the State to the army up to the beginning of 1863, was as follows: infantry, 119,404; cavalry, 16,917; artillery, 3,999; total, 140,320. No draft for men was made during the year, and the quota of the State was completed by volunteers. The liberality of the State in furnishing men and providing for them has been great.

A novel plan was adopted for the supply of the city of Chicago with water. It consisted in constructing a tunnel some distance under the bed of Lake Michigan for some miles from the shore, by which pure water could be obtained. The plan contemplates the sinking of octagonal cribs eighty feet in diameter, with central spaces, say thirty feet in diameter, leaving an average of twenty-five feet thickness to the crib around the shaft. In the central space, protected by the crib from the action of the waves, it proposed to sink iron cylinders nine feet in diameter, by the pneumatic process. The outmost shaft would be constructed with reference to its becoming the inlet for the water. The others might be removed to such a depth as not to interfere with navigation.

It is proposed to construct the cribs in still water, plank their bottoms and sides watertight for several feet up, fill them with as much stone as they can safely carry, tow them to their places, and sink them by letting water into their bottoms, and then to fill them up as promptly as possible to their tops, with stone previously provided. Cribs of this shape and size it is thought would be stronger, and better calculated to resist the action of storms, than cribs of the same width and construction placed in a stright line. The shafts are to be air-tight iron cylinders, jointed together in sections of six to ten feet, and nine feet in diameter. The estimated cost of excavation and masonry for the tunnel is \$143,000, or \$13.54 per lineal foot; and for the tunnel complete, \$307,552.

The investigations are based upon facts acquired by boring for an artesian well on the lake shore, where it was found that about twenty feet below the surface a clay formation commences, which continues upward of one hundred feet further. Wherever the investigation has been made, the bottom of the lake, where the water is more than twenty feet deep, is found to be clay.

In conducting the investigations two large scows, with all the necessary apparatus on board, were towed to the proper locality, and there secured by four anchors. In the space between the boats, a two-inch gas pipe is lowered, and rests upon the surface of the earth, the top being two or three feet above the surface of the water. The auger is then passed down through the pipe, and worked by two men: the pipe being held in place by others. Both the outside pipe and the auger are lengthened, as circumstances may require, by the addition of joints or sections, which are readily screwed on. The pipe and auger are drawn out and lowered, by means of a derrick about 25 feet high, with rope and tackle. Up to the present time three localities have been examined. The first three fourths of a mile from shore. Here the water was 23 feet deep, with a bed of four inches of sand. They penetrated 30 feet deep, and found nothing but blue clay. The second locality was $1\frac{1}{2}$ miles out. Here the water was 31 feet deep, with about the same depth of sand. The auger sunk 30 feet with the same result. The third, and the last locality is about $2\frac{1}{4}$ miles due east from the water works. Here the water was 36 feet deep, clear and cool. The earth was penetrated 30 feet below its surface. The surface is covered a foot in depth with a mixture of sand and soft, marshy clay. After penetrating six or eight feet, the clay becomes thick, and is harder the deeper it is penetrated. It is of a bluish slate color, of very fine grain, with little or no grit, and would probably make excellent brick. It is apparently fine enough for pottery ware. The clay is of about the same character the entire depth, wherever the borings have been made.

ILLUMINATION. The following, as among the more important results developed during

the year past, in respect to the nature of materials for illumination, and the modes of their preparation and use, are deserving of notice:

Approximate Chemical Constitution of Bitumens, Solid and Liquid.—From an article entitled "Contributions to the Chemical and Geological History of Bitumens, and of Pyroschists or Bituminous Shales" ("Amer. Jour. of Science," March, 1863), by Prof. T. S. Hunt, we extract the following, in relation to the chemistry of bitumens:

The solid bitumens (asphaltum, etc.), in appearance often resembling some forms of bituminous coal, are distinguished from the latter by their being almost or entirely fusible, and by their solubility in benzole and bisulphide of carbon. Their chemical composition varies much, being representable by formulæ ranging from $C_{24} H_{22} O_{0.3}$ —that of an elastic bitumen from Derbyshire (Johnston), to $C_{24} H_{14.6} O_2$ —that of an asphalt from near Naples (Regnault). Five analyses of bituminous coal made by the latter chemist, yield from $C_{24} H_8 O_{0.3}$ to $C_{24} H_{10} O_{3.3}$; while the mean composition of several analyses of coal, by Johnston, was $C_{24} H_9$, with from O_2 to O_4 . The asphalts are thus seen to approach in composition the bituminous coals.

In the conversion of woody fibre into the successive stages of peat, lignite, and bituminous coal, the abstraction of variable proportions of water (HO), carbonic acid (CO_2), and marsh gas ($C_2 H_4$), may give rise either to hydrocarbons like $C_{24} H_8$, which represents idrialine (a hydrocarbon with minimum of H), and the basis of most bituminous coals; or like $C_{24} H_{16}$, which is the approximate formula of the hydrocarbons of many asphalts; or like $C_{24} H_{24}$, which approximately represents crude petroleum (apart, of course, from water that may be intermixed with it). Anthracite, which is nearly pure carbon, and petroleum, which is (among natural bodies) carbon with a maximum of hydrogen, stand as the two extremes in the process of coal-formation.

Chemical Constitution of American Petroleum.—M. Schorlemmer has examined the refined but still composite coal oil known as *kerosene*, obtained by distillation of cannel coal at low temperatures. He finds it to contain a series of homologous hydrocarbons, their general formula being $C_n H_n + 2$, and which may be regarded as the hydrides of alcohol radicals. The oil, which boils below $120^\circ C$., contains the four hydrides—

$C_{10} H_{12}$	= hydride of amyl,	boiling at $39^\circ C$.
$C_{12} H_{14}$	= " hexyl,	" $65^\circ C$.
$C_{14} H_{16}$	= " heptyl	" $98^\circ C$.
$C_{16} H_{18}$	= " octyl.	" $119^\circ C$.

Precisely the same products were found by the analyst in American rock oil, or petroleum. He states that in this both benzole and toluole exist, but that these are present in larger proportion in cannel-coal tar. He purified the oils by strong nitric acid, which leaves the greater part unattacked, but removes the ben-

zole and toluole; then, after washing, drying over caustic potash, and distilling with sodium, the four hydrides above given were obtained, as from coal tar.

MM. Pelouze and Cahours have also examined the American petroleum; and they, too, find that it consists essentially of compounds which are homologous with marsh gas, the lowest term of the series obtained by them being the hydride of butyl, C_4H_{10} , which passes into the state of vapor at a little above $0^\circ C.$, while the highest term yet studied is $C_{30}H_{62}$. From these hydrides the authors have obtained the corresponding chlorides, and, in many cases, the alcohols. They consider it probable that paraffin is a mixture of still higher terms in the series. But their results contradict those of M. Schorlemmer, in relation to benzole and toluole, the presence of which in petroleum they explicitly deny.

In the "Scientific American" (New Series), vol. viii, p. 171, an abstract is given of a process recently patented by Mr. W. W. Tindall, of Liverpool, for the deodorizing of petroleum, and other mineral oils; and in the same journal, vol. ix, p. 133, an account of Prof. E. V. Gardner's new method of refining the same oils. The number of readers, however, to whom the details of these processes would prove of interest, is extremely small.

Supposed Sources of Petroleum in certain Oil-bearing Strata.—Mr. T. S. Ridgeway, geologist and mining engineer, having surveyed the oil district of Oil Creek, Penn., states, as a result of this examination, his conviction that the petroleum of this district is not produced from the coal fields, since in that case it would have had to flow up hill into the oil basin. He says: "Petroleum found in bituminous coal-basins no doubt originates from beds of coal; * * but it is my opinion that the petroleum of the Oil Creek valley is the result of the decomposition of marine plants."

Prof. Hunt, in the communication above mentioned, states that it is in the Lower Devonian (Corniferous) limestone that, in this country, the greatest amount of petroleum occurs; and he considers that, although the Higher Devonian sandstones in New York and Pennsylvania are often impregnated with the oil, so that these, along with higher strata, supply the oil-springs of those States, yet the real source of the oil in these strata may be in the Lower Devonian,—this, as he thinks, being undoubtedly the case in regard to the petroleum of Western Canada.

In certain townships on the northern shore of Lake Erie, coralline beds and those in which certain shells appear, are found filled or impregnated with petroleum. Speaking especially in reference to the township of Bertie, opposite Buffalo, Prof. Hunt says: "The facts observed at this locality appear to show that the petroleum, or the substance which has given rise to it, was deposited in the beds in which it is now found, at the formation of the rock. We may

suppose in these oil-bearing beds an accumulation of organic matters, whose decomposition, in the midst of a marine calcareous deposit, has resulted in their complete transformation into petroleum, which has found a lodgment in the cavities of the shells and corals immediately near. Its absence from the unfilled cells of corals, in the adjacent and interstratified beds, forbids the idea of the introduction of the oil either by distillation or by infiltration. The same observations apply to the petroleum of the Trenton limestone; and if it shall hereafter be shown that the source of petroleum (as distinguished from asphalt) in other regions is to be found in marine fossiliferous limestones; a step will have been made toward a knowledge of the chemical conditions necessary to its formation."

Transportation of Petroleum, or other Liquids.—Mr. S. J. Seely of Brooklyn, N. Y., has patented a railway car for the purposes just indicated. The body of the car is of corrugated or other sheet iron, and, in order to secure the greatest strength of the materials, is made in the form of a cylinder. Thus, the car-body is in effect a large cylindrical tank, on wheels, and into which the liquids to be transported are directly introduced. Opening from the bottom of the cylinder, are a series of pipes, furnished with cocks and flexible branch pipes, so as to allow of drawing off the contained liquid into several barrels or other vessels at once; while the arrangement of pipes is ordinarily protected by their being enclosed within boxes, through doors in which access can be had to the former when occasion requires.

Comparison of Illuminants in reference to Lighting Power, Cost, and Products.—In a lecture before the Royal Institution, February, 1863, Prof. E. Frankland presented the results of certain comparisons of various illuminating materials largely in use in England. He stated that, for economy, brilliancy, and intensity of light, the kerosene (in England called "paraffin") and rock oils take the first place. The following are, in brief, the results of the comparisons referred to:

I. ILLUMINATING EQUIVALENTS.—Kerosene oil, 1 gallon, equivalent to 1.26 galls. American petroleum; to 18.6 lbs. paraffin (solid) candles; to 22.9 lbs. sperm candles; to 27.6 lbs. wax candles; to 29.5 lbs. composite candles; and to 39 lbs. tallow candles.

II. COMPARATIVE COST.—To produce an amount of light equal to that of 20 sperm candles, burning each at the rate of 120 grs. per hour, for 10 hours, the cost of various materials consumed was as follows: wax, 7s. 2½d.; spermaceti, 6s. 8d.; paraffin candles, 3s. 10d.; tallow, 2s. 8d.; sperm oil, 1s. 10d.; rock oil, 7½d.; kerosene oil, 6d.; ordinary coal gas, 4½d.; cannel gas, 3d.

III. CARBONIC ACID AND HEAT—generated per hour by various illuminating agents, each burned in such quantity as to give the light of 20 sperm candles:

Substances.	Carbonic acid in cubic feet.	Heat, parts.
Tallow.....	10.1.....	100
Wax; spermaceti.....	8.3.....	82
Paraffin candles.....	6.7.....	66
Coal gas.....	5.0.....	47
Cannel gas.....	4.0.....	32
Kerosene; rock oil.....	3.0.....	29

The great liability, however, of kerosene and other similar and highly carbonaceous oils to escape in part unconsumed into the air of rooms, in which such materials are burned, constitutes one serious objection to their general use; since through pre-occupation of mind in those using it, or through carelessness, this result, with serious contamination of the air, must often occur. In this connection it should be remarked that, the highly dangerous disease known as "spotted fever" (cerebro-spinal meningitis), which has appeared at intervals in different parts of the country, having recently broken out in very fatal form at Long Branch, N. J., Dr. Sayre, one of a committee of physicians who visited the place and examined the cases of fever, names as among the predisposing causes to it the habit in many families of burning kerosene through the night in bedrooms, with the lampwick put down. Consequences of this practice, to state them somewhat more fully than Dr. Sayre has done, must be the vitiation of the air of the room, not only with unconsumed oil-vapors, but with the gas produced by combustion, and often also with some smoke or soot.

Burners for Kerosene Lamps.—The forms of burners and chimneys for kerosene and coal-oil lamps are already very various; and they are generally so familiarly known that on this head little in the way of novelty is to be expected. It has been desirable to have, especially for chandelier, hall, and bracket lamps, if not for all others, where the use of a chimney is necessary, some arrangement by which the wick can be trimmed and lighted without disturbing the chimney or shade. Mr. Homer Wright, of Pittsburg, Pa., has accomplished this end by the invention of a burner with a door in one side, a projection from the inner side of the door and hinged to the front of the wick tube, causing, when the door is opened, by means of a slot arrangement, the wick tube to be at the same time lowered and inclined so that its upper end protrudes through the opening, when it can be trimmed or lighted, and as simply returned to its place.

The inconveniences and expense of glass chimneys for kerosene lamps have led to many attempts to produce for such lamps cheap and simple burners without chimneys. The principle of these is generally that of simply extending upward the brass or other metallic tube arrangement which ordinarily surrounds the burner, or forms the cap of the lamp, the burner being carried up to a proportional height, so that the base of the flame shall be but little below the level of the summit of the tube; the latter being at the same time freely perforated or mainly open below, and some-

times also at the sides near the flame, so as to secure an indraught and current of air: the tube of the burner thus becomes itself a short chimney, but mainly placed below, instead of around and above the flame. Among the best known of these, and the most effective, are the so-called "Savage" burner (patented 1862); the "star" burner (J. Edgar—1863); and the burner of the "Scoville Manufacturing Company" (patent applied for). Of dealers questioned on this point, one declared that the "star" burner gave the largest clear flame, without risk of vapor or smoke; another gave preference in the same particulars to the "Savage" burner. But all agreed that these burners are in use very inferior for their purposes to the glass chimneys; that with them a large free flame cannot be obtained, without its smoking and throwing off unburned oil-vapors into the room.

Apparatus for Testing the Explosive Points of Coal Oils.—The subjects of the danger of explosion in the burning of coal or rock oils, including kerosene, and of the need of a standard vaporizing point, oils ranging below which shall not be allowed for sale, were considered at some length under ILLUMINATION, in the preceding volume. The need of some convenient and tolerably accurate test of the explosive point of these oils is obvious.

At first, most dealers simply placed a small quantity of oil in a saucer or other open vessel, dipping in it a thermometer bulb, applying heat, and then by repeated application of a lighted match or taper finding the temperature at which explosion would take place. But, besides the rapid escape or even blowing away of the vapor from over the liquid in this mode, it has other imperfections; and it almost necessarily gives the exploding point higher than it really is—thus deceiving the purchaser.

At least three forms of apparatus for testing more accurately the exploding point of oils have, within the past two years, been invented in this country, the last two of which appear to be those now chiefly in use. The invention of Mr. John Tagliabue, of New York, consists of a small upright, hollow, cylindrical support, having an opening in the side and below, for introducing a gas-burner, or alcohol lamp; while within the support, above, is a small water-bath, set within which again is a cup open at top to receive the oil to be tested; into the oil at one side, by a convenient clasp, the bulb of a small thermometer is inserted, while just above the oil a taper is supported—this is to be lighted when the experiment is commenced. The oil being placed in the open cup, and very slowly heated by the lamp—removing the latter at times, if the temperature rise too fast, so as to receive for a while the heat only from the water-bath and metals—the temperature at which the oil throws off a vapor that mixed with air explodes is considered to be determined by a slight explosion or "puff," which usually extinguishes the taper. Heating a few degrees

higher, and applying a fresh lighted taper or match, the temperature is found at which the vapor of the oil will take fire and burn steadily, or at which, as is commonly said, the oil burns. As to the explosive point, however, this apparatus would appear in a degree liable to the objections to be made against the open saucer; as by an unnoticed current of air the vapor could be for a time carried off, and—some dealers have stated—so that the oil can thus be made to show an apparent explosive point twenty degrees higher than the real one—a great injustice, of course, to the purchaser.

The accompanying drawings (figs. 1 and 2) represent a "Coal Oil Pyrometer" for the uses just considered, and which, though stated in the "Technologiste" (Dec., 1862) to have been invented by Messrs. H. J. Smith and W. Jones, of Phila., and constructed by Mr. Giuseppe Tagliabue, of New York, the latter declares to be his own invention (patented, Nov., 1862). The close similarity of this instrument, in many of its parts, to the preceding, renders a complete description of it unnecessary. In it, also, appear the hollow cylindrical support, water-bath, included reservoir for the oil, lamp, and thermometer. The last named has here, however, a fixed position, with its bulb within the oil to be tested, while over the oil-reservoir can be closed (as in fig. 2), or

Fig. 1.

Fig. 2.

opened (as in fig. 1), a cover turning on a pivot. This cover has two small orifices (one marked *d*), and a larger one which opens into a small cylindrical box, with a door (*c*) in the side. The oil being introduced, the cover closed, and the small orifices also closed

by caps sliding over them, and heat being applied, vapor presently begins to arise from the oil; but in this condition of the instrument the atmosphere does not readily enter it, and the vapor tends to be confined. The application of heat should be made slowly, and with the precautions before named. When the supposed explosive point of the vapor is nearly reached, upon opening the small orifices in the cover the upper chamber at once becomes filled with a mixture of the vapor and air, and a lighted taper being introduced through the door (*c*), if the point of free vaporizing of the oil has been reached, a slight explosion or "puff" within this chamber will indicate the fact. By sliding off the cover, and heating, the point at which the vapor takes fire on the surface of the oil—this being usually (as found with this instrument) some 8° to 10° or more above the explosive point—is readily found.

The instruments thus far named are small, not expensive, and easy of use. It is declared by some that, even with that last named, an oil can be made to show too high an explosive point; but it is doubtless true that, with either of them, by a proper understanding and care, and repeating, if needs be, a fair and useful test of the explosive point of oils liable to contain naphtha can be obtained. Prof. John Torrey, of New York, declares Mr. G. Tagliabue's instrument superior (in accuracy, implied) to those in which the cup is open or uncovered. Still it must be kept in mind that these tests show the explosiveness and comparative safety of oils only, and cannot be relied on to indicate the proportions of light and of heavy oils, and so, the endurance and value of an oil for lighting.

Regnault's Apparatus for Fractional distillation of Coal Oils, Petroleum, etc.—M. W. Regnault has very recently invented an apparatus intended to serve the purpose indicated at the close of the preceding section; that, namely, of determining analytically the percentage of the component oils—having different densities and boiling points—which are contained in a given coal or rock oil, or in any derivative from one of these, the separation being effected by means of fractional distillation. Essentially, the apparatus consists of an upright cylindrical copper retort—capacity about 300 cubic centimètres—with a lamp-stand and lamp underneath for heating, and at its upper part communicating by a tube with the interior hollow brass cylinder of a condensing arrangement (also upright); this cylinder being enclosed within a considerably larger one, while into the lower part of the space between the two a stream of cold water is, by means of a funnel and tube, continually allowed to flow; the heated water, meanwhile, escaping through another tube at its top. The condenser is prolonged into a small tube at top, and also at bottom; and the whole being supported by an iron tripod, a row of glass cylinders, say five in number,

graduated to cubic centimètres, are introduced beneath the condenser, these being on a movable support, so as to be slid in succession under it, in order to catch the oils carried over at different temperatures. The temperatures are shown by a thermometer (Centigrade) which has its bulb inserted through a tubulure, within the retort, but above the surface of the oil introduced.

In using this instrument, 100 cubic centimètres of the oil to be tested are introduced by means of a pipette through the tubulure into the retort; the thermometer is adjusted, and heat applied. Let it now be supposed that the first of the five graduated glass vessels is placed so as to receive the oil recondensed from the vapors which distil over from the time of the first application of heat until the thermometer (C.) shows $100^{\circ}=212^{\circ}\text{F.}$; this portion will, of course, contain the lightest of the components of the oil tested. At the moment the mercury passes 100° the second glass vessel is slid under the tube of the condenser, and kept there (say) until the thermometer marks $120^{\circ}=248^{\circ}\text{F.}$ In this manner the five vessels may be made to receive successively the oils which distil over, first below 100° , and then within every 20° of increased temperature, from 100° up to $180^{\circ}=356^{\circ}\text{F.}$ It is evident that any other desired even ranges of temperature may be taken; making the first change, say, at $44^{\circ}\text{C.}=113^{\circ}\text{F.}$, or thereabouts, so as to separate and determine, first, the proportion of oils present which are so volatile as to be unsafe components of an oil for ordinary illuminating purposes. Now, in any case, if the flow of cold water be uniformly kept up through the condensing apparatus, and if it be sufficient, all the vapors distilled over will be condensed, and the several portions of oil being furthermore, as caught, of equal or nearly equal temperatures, a comparison can directly be made between them; and just 100 cubic centimètres of oil, having been introduced into the retort, the quantities in the several graduated vessels—supposing them to have the same temperatures as the oil when originally introduced—will show the exact percentage of oils, having their vaporizing points between the degrees successively taken, which were contained in the mixed oil at the first.

Even this method does not, it will be seen, give a strict chemical analysis of the oils tested, but only a proximate analysis, by means of the comparative volatility of the component oils. In a discussion upon this instrument, before the Polytechnic Association of New York (Feb. 25th, 1864), the question having been raised whether petroleum is a mixture of liquids that can be accurately separated at different boiling points, Dr. Parmelee (dentist) remarked that, making use himself of about 2,000 gallons of benzine a week, of *sp. gr.* of from 70° to 80° Beaumé, he had found it very difficult to free this entirely from naphtha by heat. Petroleum dealers, he stated, have no other means

of estimating the different qualities of oil than the heat test. Still there is no (?) dividing line between the oils—they can be obtained at almost any specific gravity, between certain limits.

The apparatus, which cannot fail to be of great value to those who deal largely in coal or rock oils, or their liquid products, is now to be had in New York.

Acetylene.—In his lecture already referred to, Dr. Frankland mentioned the fact of the discovery by M. Berthelot, within the past ten years, of a new component in coal-gas, to which he had given the name of *acetylene*, and for the production of which, unlike that of the other gaseous hydrocarbons, an intense heat is requisite. The object had been, hitherto, to produce coal-gas at a low temperature; but now the question was how far the production of this acetylene on a large scale could be carried on. This question is still in embryo; but if successful results are obtained, the influence on the future manufacture of gas must be great. The lecturer exhibited the light of the new gas, as set free by adding to acetylide of copper dilute chlorhydric acid; and although the gas was burned—as its excessive proportion of carbon rendered necessary—in only a very small jet, still the intense brilliancy of the light it afforded was decisively apparent.

In his introductory address before the British Association, 1863, the president, Sir William Armstrong, referred to the subject of acetylene. He mentioned the observation of Dr. Odling, to the effect that the new gas may be produced by mixing carbonic oxide with an equal volume of light carburetted hydrogen, and exposing the mixture in a porcelain tube to an intense heat; and the still more recent observation of Mr. Siemens, who has discovered that this gas is formed in the highly heated regenerators of his furnaces. The lecturer declared that there is now every reason to believe the new gas will become practically available for illuminating purposes.

Artificial Fuel and Gas Material.—Before a meeting (Nov. 19th, 1863) of members of the Franklin Institute, Phila., Prof. A. L. Fleury exhibited samples of a fuel and gas material, or basis, the invention of Mr. Wm. Gerhardt, of that city. A solid material, which is at once fire-proof and porous, is made into bricks, balls, or other desired shape; and these are next made to imbibe gas tar, coal oil, or other similar hydrocarbon, until saturated, and are then dried. They can then be used as fuel, or distilled for illuminating gas. No ash results, and the porosity is retained; so that the masses can be used again in the same manner. This is proposed as a method of securing a fuel free from sulphur, for the manufacture of steel, iron, glass, etc.; and it is said that it can be made to furnish a fuel cheaper than is coal, at the prices now ruling.

Methods of Gas Manufacture.—In the CYCLOPEDIA for 1862 were mentioned certain processes for carburetting more highly lighting

gases which may be deficient in carbon, and also for charging air with hydrocarbons, so as to produce a mixture suitable for burning as a gas. Certain general principles relating to gas-manufacture, and especially in regard to the production of illuminating gases from oils or like materials, were also stated. Some new methods of accomplishing these results have been brought out, and a very considerable degree of attention has been given to methods of purifying lighting gases. In the notices to be presented of some of these, it is not intended to enter largely into details.

Griffin's "Homestead Gas Light."—This method of producing a lighting gas is that of carburetting common air, by forcing it, by means of clock-work and bellows, through naphtha contained in a small air-tight reservoir: from this the gas flows directly into the pipes leading to the burners. The pipes filled, the clock-work ceases to move, until consumption of the gas begins to relieve the pressure in the pipes; its motion then recommences, and the generation of the gas is—up to a certain limit—more rapid as the number of burners in use is greater. It is stated that the naphtha vapors do not condense by cold in the pipes; but it would appear that at a certain reduction of temperature condensation must occur. The entire apparatus is small, and is intended for use in private dwellings, &c. The invention is that of Mr. Jonathan Griffin, of W. Meriden, Ct.

Buckland's Method of Carburetting Gases.—Mr. W. H. Buckland, England, has patented a method of carburetting air or an illuminating gas, by causing either to pass over the surface of, or through, woven fabrics, or fibrous or spongy materials; these being, as occasion requires, saturated with the liquid hydrocarbon employed, and so exposing this in a finely divided state to the gas to be carburetted.

Parrish's Improvement in Illuminating Gases from Oils, &c.—In the "Scientific American," of July 25th, 1863, is given an account of a patent gas-mixer, the invention of Mr. Wm. D. Parrish, of Philadelphia, and the object of which is to reduce, by intermixture with air, the heavy and rich permanent gas, obtained by destructive distillation of petroleum, tar, or other similar hydrocarbons, before admitting this into the pipes leading to the gas-burners. It is well known that the gas referred to, and commonly called "oil gas," contains too large a percentage of carbon to burn, in jets of the size required for lighting purposes, without smoking. Besides, certain forms of oil-gas apparatus are likely to furnish a gas not at all times of uniform density and quality. Mr. Parrish's gas-mixer is designed to remedy both these defects. It requires no change in the works, being simply so attached as to receive the purified gas as delivered by the outlet pipe. It consists of two large "wet meters," placed near each other, the one measuring and registering the quantity of gas, the other that of a desired proportion of common air, which it takes

through a tube at one side, the gas and air being directly discharged from the meters into a common receptacle, and there intermixed; while, by means of a connection by wheel-work and a shaft between the meters, the propelling force of the gas in one of them is made to give motion to the fans within the other, so as forcibly to draw in the air; and by having (say) three sets of wheels, of unequal sizes, upon shafts within the gas-meter, the throwing of one or the other of these into gear allows of three variations in the percentage of air intermixed with the gas; and so of any greater number. Danger of an explosive mixture is avoided by not allowing the proportion of air to exceed 50 per cent. The instruments have been introduced in some places in connection with oil-gas works, public or private. One of them has been in use for about a year in the gas works of the St. Nicholas Hotel, New York, by which nearly 3,000 burners are supplied. In these works, the "refuse" or "dead oil" of petroleum—the residue after distillation from the latter of naphtha, kerosene, and the lubricating oils—is the material from which the gas is generated, and the proportions now adopted for the mixed gas are, of oil gas 60, and of air 40 per cent.

Purification of Illuminating Gases.—Dr. Frankland, in the lecture above mentioned, referred to the then recent experiments of the Rev. Mr. Bowditch, of Wakefield, England, and in which the latter had shown that the bisulphide-of-carbon vapor and the sulphur-organic compounds in coal gas could be got rid of in course of the ordinary process of purifying, after heating the gas containing such impurities with hydrate of lime, to 400° F. Ordinary gas, he stated, contained from 10 or 20 up to 40 grs. per 100 cubic feet of the sulphur-compounds; but the Bowditch process reduced the quantity to, at most, 2 or 3 grs. per 1,000 cubic feet. It still remained to be seen, however, whether the process could be advantageously applied in practice.

Mr. J. C. G. Howitz, gas engineer at Copenhagen, Denmark, is the inventor of a method of purifying gas by iron ore, and which has been successfully introduced into many gas works in that country. The hydrated peroxide of iron in a powdered or granular condition is made to take the place of lime, in what are called the "dry lime" purifiers: ammonium and sulphuretted hydrogen contained in the gas are, during its passage through this, decomposed, formation of sulphide of iron being among the results. This will take place while the gas is yet hot, so that the condenser may be dispensed with; and the purifiers being large enough, even the scrubbing or cleaning with water is not required; the accumulation of naphthaline is as a result diminished, and the gas is said to gain in illuminating power. By suitable treatment the purifying material, when spent, can be restored to a condition fitting it for re-use, *i. e.*, as it is said, "revivified;" and in

the meantime, a considerable quantity of sulphate of ammonia being secured, the sale of this is said quite to cover the expense of purification, if it does not even afford a profit. In this way the cost of the gas manufacture is reduced.

Mr. Geo. Anderson states, in the "Gas-Light Journal," that having used and re-used a quantity of oxide of iron until it could no longer be revived in the open air, he charged retorts with a portion of it to expel by heat the sulphur it had taken up, and then filling a purifier with the oxide, mixed with sawdust, he found not only that its purifying powers were restored, but also that it could now be revived on exposure to the air, as before, and repeatedly used. Thereupon, erecting a kiln, he restored his whole stock; and he had, at the time of writing, continued this course with success for about 18 months. In the process, the material is kept at a dull red heat for ten or twelve hours. He regarded it as becoming, by that time, anhydrous: if so, the fact would conflict with the opinion previously held, that when the oxide of iron once became anhydrous, it was useless for the purification of gas.

Messrs. Baggs and Simpson, of London, have patented a process having the objects, *first*, of depriving coal-gas of the ingredients which render it injurious to animal and vegetable life; and *secondly*, of manufacturing from the ingredients thus removed certain products having a commercial value. The gas to be purified is made to come in contact with metallic compounds of suitable nature, by blowing or otherwise; the impurities being separated by decomposition or appropriation. The patentees mainly employ for this purpose metallic oxides and salts, the latter either neutral, super-salts, or sub-salts, which have a strong affinity or attraction for sulphur, carbonic acid, &c., and which are themselves susceptible of renovation or recovery after use. The oxides and salts of copper, lead, magnesia, and some other bases are found suitable for these purposes.

Mr. Geo. Smedley states that having observed that an ammoniacal liquid filtered through animal charcoal had lost nearly the whole of its ammonia, he was led to try the effect of the same material upon coal-gas. Filling one tray in each purifier with the animal charcoal, he applied on the following days, to the gas passed through this, the turmeric test, and found that the ammonia had disappeared. By use of a small purifier, similarly charged, he afterward found that the carbon intercepted not only ammonia, but also sulphuretted hydrogen; though it took up but a small percentage of carbonic acid. He is led to believe that gas so purified also retains a larger percentage of hydrocarbons than that which is purified either by lime or by oxide of iron.

INDEMNITY. Indemnity was claimed in the courts, in two aspects, viz.: by Government officials, of indemnity from all liability for their acts done under military or official direction; and a claim by those whose property

had been taken by such direction to be indemnified for their losses sustained thereby.

The first class was subdivided into cases where the direction under which the claimants acted was pleaded as a justification of their action, and cases where the provisions of the act known as the Indemnity Act were relied upon to shield the claimants from liability. In most of the cases arising under the first subdivision, resort was ultimately had to the protection afforded by the act of Congress. One case, however, went to judgment in the Supreme Court of Indiana, in which the court decided that the plea of justification was not sustained. It was the case of *Griffin vs. Wilcox*, and will be found more fully referred to in the present volume. (*See MARTIAL LAW*).

The Indemnity Act referred to is entitled "an act relating to *Habeas Corpus*, and regulating judicial proceedings in certain cases," and provides generally that any order of the President, or under his authority, made at any time during the rebellion, shall be a defence to any action civil or criminal, for any act done or omitted to be done, by virtue of such order, and providing a method for removing causes from the State courts to those of the United States. (*See ante*, page 324.)

General George W. Jones, Minn., late U. S. Minister to Central America, on his return home was arrested and confined in Fort Lafayette, by order, as alleged, of Secretary Seward. After his release he commenced an action in the Supreme Court of the State of New York against Mr. Seward for false imprisonment. Application was made to Judge Clerke of that court to remove the cause to the Circuit Court of the United States, under the provisions of the Indemnity Act. The motion was denied by Judge Clerke, October 19th, as follows:

This is an action in which the plaintiff claims damages for an alleged false imprisonment. The defendant asks for an order of this court to remove the action and all proceedings therein to the next Circuit Court of the United States, to be held in and for the southern district of New York. The defendant states in his petition for this order that the action is brought for acts alleged to have been done by him as Secretary of State for the United States of America, under authority derived by him from the President of the United States; in causing and procuring the plaintiff to be arrested and imprisoned, or for some other wrong alleged to have been done to the plaintiff, under such authority, during the present rebellion of the so-called Confederate States against the Government of the United States of America; and that it therefore comes within the act of Congress, passed March 3d, 1863, entitled "an act relating to *habeas corpus* and regulating judicial proceedings in certain cases," providing, in the fifth section, that if any suit has been or shall be commenced against any officer, civil or military, or any other person, for any arrest, imprisonment, trespass, or wrong done, or any act omitted to be done, during the present rebellion, by virtue or under color of any authority derived from, or exercised by or under, the President of the United States or any act of Congress, the defendant may remove such action into the Circuit Court of the United States for the district where the suit is brought, on complying with certain requirements stated in the act.

Of course this act, as far as it directs the transfer of

cases from the State to Federal jurisdiction, if it has any constitutional foundation, is founded upon the third article of the Constitution of the United States, defining the extent of the judicial power delegated by the States to the Federal Government, and particularly upon that part of section 1 of said article, which says that "the judicial power shall extend to all cases in law and equity, arising under this Constitution," etc. The defendant in this application maintains that the defence which he intends to set up in this action arises under the Constitution of the United States—the question to be determined being whether the President of the United States, during a rebellion or insurrection, can arrest or imprison, or authorize another to arrest or imprison, any person not subject to military law, without any order, writ, precept, or process, of some court of competent jurisdiction. Now, we assume that this question, if a question at all would arise under the Constitution of the United States—that is, whether the President possesses this power, either in his civil capacity or as Commander-in-Chief of the army and navy of the United States—can be solved only by consulting and interpreting that instrument. But to entitle the defendant to this order, and to give the courts of the United States jurisdiction of this action, there must be some appearance or color of substance in it. It must have some speciousness, some seeming of plausibility, and must not be palpably devoid of any ground of doubt. Can it, then, be a question presenting any appearance of substance or color of doubt, whether the Constitution of the United States of America has invested its chief executive officer with power to arrest or imprison, or to authorize another to arrest or imprison, any person not subject to military law, at any time or under any exigency, without some order or precept, or process of some civil court of competent jurisdiction?

It cannot, of course, be pretended by the most ardent advocate of this high presidential prerogative that the Constitution confers it in set terms. There is assuredly nothing in that instrument which can be tortured into the conferring of such a power on the President in his civil capacity; and this, it appears to me, plainly disposes of the question; for it would be asserting the grossest contradiction and strangest anomaly to say that absolute and unlimited power, equal to any exercised by czar or sultan, can be implied from a constitution which avowedly gives no power to any department of the Government that is not specially set forth, except simply the consequent right to employ all legal means necessary to the execution of the power.

The judge then proceeded to review at considerable length the arguments of counsel, and continued:

It is, however, maintained, if the President does not possess this power in his civil capacity, that he does possess it in his military capacity, as Commander-in-Chief of the army and navy of the United States. A commander of an army has, of course, within the sphere of his military operations against an enemy, all power necessary to insure their success. General Rosecrans had a right, I have no doubt, the other day to destroy all property which caused any obstacles to his operations against Bragg, and if he discovered any plots to mar those operations or give intelligence to the enemy, or to afford them any kind of aid or comfort, he would be right to try the offenders, whether civilians or soldiers, by a court-martial. But his power does not extend beyond his lines.

He concluded a very able and elaborate opinion by stating:

The President, therefore, whether in his civil capacity or as Commander-in-Chief of the army and navy of the United States, has unquestionably no power to authorize the act of which the plaintiff complains. The ground upon which this application is made has no color of right. It cannot, in my

opinion, be entertained as a question in any State or United States court. The only questions in this action worthy of consideration, and which can be entertained, do not arise under the Constitution of the United States, but are fitly within the jurisdiction of this court. The motion is denied, without costs.

An appeal was taken by the defendant to the General Term, where the order at Special Term was reversed. The opinion of the court was delivered by Judges Leonard and Sutherland. Judge Clerke, however, maintained his former opinion:

LEONARD J.—The question is not whether the fourth section of the act of Congress, passed March 3d, 1863, affords a valid defence to the action. The true question is this: is it in the power of Congress to give the Circuit Court jurisdiction of the case?

The Constitution extends the judicial power of the Union to all cases in law and equity arising under the Constitution, laws, and treaties of the United States.

The defence, in this case, arises under the act of Congress, and the validity of that act, considered in the light afforded by the Constitution, will be one of the principal subjects to be determined at the trial. It has been decided that a case arises within the meaning of the Constitution as well when the defendant seeks protection under a law of Congress, as when a plaintiff comes into court, to demand some right conferred by law.

It has been objected that the original jurisdiction of all actions may be drawn into the Federal Courts, by similar enactments of Congress, and that the case arises within the meaning of the Constitution only after a trial and judgment in this court, when the action can be transferred by writ of error or appeal, and brought before the Federal Courts for review. The power of transferring causes to the United States Circuit in a similar manner, where the question involved was of an appellate and not original jurisdiction, has long been sustained. Chief Justice Marshall says, in the case of *Osborn vs. The Bank of the United States* (9 Wheaton, 821): "We perceive no ground on which the proposition can be maintained, that Congress is incapable of giving the Circuit Courts original jurisdiction, in any case to which the appellate jurisdiction extends."

Congress has enacted that the defendant may interpose in his defence the orders, &c., of the President, and has directed the transfer of cases involving such a defence, in the manner prescribed, into the Circuit Court.

According to the statements of the defendant such a case has arisen. We have nothing to do with the validity of the law as a defence to the action. It is sufficient for the State Court that the defence involves the construction and effect of a law of Congress. The case has then arisen when the Courts of the United States may have jurisdiction, if Congress so directs. If the law does not afford a constitutional or valid defence, it cannot now be doubted that the learned justices of the United States Courts will so declare it, when the jurisdiction of such cases will remain in the State Courts, as before the enactment of the law. It is not our duty to assert the independence of our State sovereignty and jurisdiction; for the final construction and effect of all acts of Congress may be brought before the U. S. Courts by the express provision of the Constitution. The manner of taking the cause to those Courts is of consequence. The Supreme Court of the Union must be relied on to prevent its jurisdiction from being unlawfully extended by Congress. I am of the opinion, therefore, that Congress has the power to direct the transfer of such cases.

In my opinion this application was unnecessary in order to vest the U. S. Circuit Court with the possession of the action, but the discussion has not been lost, inasmuch as it will be now settled that this court will not, in this judicial district, take further cognizance of cases which have been transferred under this act of

Congress. It is very proper that an order be entered transferring the cause to the U. S. Circuit, as it affords the evidence in the court of the disposition made of it.

In arriving at my conclusions I have consulted Story's Com. on the Constitution, chap. 38, §§ 903, 906, &c., &c.; 1 Wheat., *Martin vs. Hunter*; 6 Wheat., *Cohen vs. The State of Virginia*; 9 Wheat., *Osborn vs. The Bank of United States*.

As a rule of practice I think the court should not approve any sureties unless the amount of the bond is equal to the sum in which the defendant in the action has been held to bail, if bail has been required in the State Court. This fact should be made to appear to the satisfaction of the judge to whom the bond is presented for approval.

SUTHERLAND, J.—The question is not as to the constitutionality of the fourth section of the act, declaring that the order or authority of the President, during the rebellion, shall be a defence in all courts, to any action for any arrest, imprisonment, or act done, or omitted to be done, under or by color of the President's order, or of any law of Congress; but the question is as to the constitutionality of the fifth section of the act, authorizing the defendant in any such action to remove the same from the State Court to the Circuit of the United States for the district where the suit is brought for trial, on complying with certain requirements specified in the section; that is, on entering his appearance, filing his petition stating the facts, offering good and sufficient surety, &c.

The question presented by this appeal is not as to the constitutional power of the President to order the arrest, imprisonment, &c., or as to the constitutional power of Congress to authorize the President to order the arrest, imprisonment, &c.; but the question presented by the appeal is, as to the constitutional power of Congress to give the Circuit Courts of the United States primary or original, and (as to the State Courts) exclusive jurisdiction, of the trial of actions for such arrests, imprisonments, &c.

In determining the question as to the constitutionality of the 5th section of the act, we must assume, I think, that the trial of this action will involve the determination of the question as to the constitutionality of the 4th section; that Congress in passing the act considered that the trials of the actions to be removed to the Circuit Courts of the United States under it would involve the determination of the question as to the constitutionality of the 4th section, whether tried in the State or United States Courts; and that Congress intended by the 5th section to take from the State Courts and give to the Circuit Courts of the United States the right and power to determine that question. Had Congress the constitutional power to do this? That is the question.

If Congress had the power, then the order appealed from, denying the defendant's motion to remove the action and all proceedings therein to the Circuit Court of the United States, for the Southern District of New York, should be reversed, and I think an order made directing such removal; if Congress had not the power, then the order appealed from should be affirmed.

If no steps had been taken for the removal of the action from this court, and the action should be tried in this court, and the question as to the constitutionality of the fourth section of the act should be decided adversely to the defendant by the Court of Appeals of this State, the Supreme Court of the United States would have final and conclusive appellate jurisdiction of the question (Const. U. S. Art. 3; § 25 of the Judiciary Act; 1 Statutes at Large, 85; *Cohen vs. Virginia* (6 Wheaton), 264; *Miller vs. Nicholls*, 4 Wheaton, 311).

Cannot Congress give the Circuit Court of the United States original jurisdiction in any case to which this appellate jurisdiction extends?

In *Osborn vs. United States Bank*, 9 Wheaton, cited by Judge Leonard, Chief Justice Marshall said he could perceive no ground for saying that Congress could not.

In that case one of the questions was, whether Congress could constitutionally confer on the Bank the

right to sue and be sued "in every Circuit Court of the United States."

It was held that such a suit was a case arising under a law of the United States, consequently that it was within the judicial power of the United States, and Congress could not confer upon the Circuit Court jurisdiction over it.

See also Curtiss's Com. on the Jurisdiction, &c., of the Courts of the United States, sections 12 and 13; the latter section, containing a quotation from another portion (p. 865) of the opinion of Chief Justice Marshall in *Osborn vs. The Bank of the United States*, is apparently quite pertinent to the question in this case.

I concur, then, in the conclusion of Judge Leonard, that Congress had the power to direct the transfer to the Circuit Court of the United States.

Probably an order of this court directing such transfer is not absolutely necessary, but to make one would be in accordance with usage in like cases; and besides such an order would be the best evidence of the determination of this court, that it no longer had jurisdiction of this action.

It appearing that the defendant has complied with the requirements of the act for such transfer, the order appealed from should be reversed, and an order made by this court for the removal of the action and all proceedings therein to the Circuit Court of the United States.

CLERKE, J.—I see nothing whatever in the arguments of my brethren, or in those of other judges on the same subject, to induce me to secede from the position which I have attempted to maintain at Special Term. They have all alike, in my very humble judgment, unaccountably overlooked the only point claiming consideration on this great constitutional subject.

According to the doctrine upheld by my brethren, we can scarcely conceive of any act committed by any officer of the General Government under color of any authority derived from or under the President, which may not constitute a genuine, veritable case arising under the Constitution of the United States, and which, therefore, may not rightly come within the cognizance of their judicial power. It is only necessary to claim that it was committed under color of that authority, and was, therefore, justified by the Constitution, however monstrous and appalling the act may be, to make it, according to this doctrine, a case arising under that Constitution.

For of course, according to the terms of the claim, the claimant appeals through this remarkable statute to the Constitution for his justification, and however palpably frivolous such a claim may be—however manifest may be the conviction that the Constitution no more sanctions such an act than it sanctions the burning of the Capitol, the dispersion of Congress, and the shooting and imprisonment or exile of the men of whom it is composed, yet it is claimed to present a question, and therefore a case arising under the great charter of constitutional liberty in America, the perpetrator of the outrage making that a question which is unquestionably no question, and the judicial power of the State is ousted of its legitimate jurisdiction.

Thus this extraordinary statute prescribes not only that the character, but the mere assertion of the wrong doer shall determine jurisdiction, and that the subject matter, which has been always held, except in cases affecting ambassadors, other diplomatic ministers and consuls, as alone the criterion of jurisdiction, shall be excluded from consideration. Surely if this can be done by Congress, the Government of the United States of America is not, as all men have heretofore supposed, incontestably a Government of limited powers and duties, and is, if not one of unlimited powers and duties, nevertheless of very accommodating expansibility. This a novel and strange theory of development in America.

But it is asserted, as the appellate power of the Supreme Court of the United States extends in certain cases to State tribunals, that this case would, after judgment, reach the Federal jurisdiction, and that, therefore, it may as well be transferred to the United

States Circuit Court before judgment. Even if the Supreme Court of the United States would entertain such a case on appeal, this is no controlling reason why it should, necessarily, be transferred to the United States Circuit Court for adjudication in the first instance. For, the only question to be determined by us on this motion is whether Congress has the power to transfer cases of this description to the Circuit Court of the United States, not whether, ultimately, it may reach the appellate jurisdiction of the United States Supreme Court.

The act of Congress, passed in 1789, "to establish the judicial courts of the United States," no doubt provides that a final judgment or decree in any suit in the highest court of law or equity of a State, where is drawn in question the validity of a statute of the United States, and the decision is against its validity, may be reexamined and revised or affirmed in the Supreme Court of the United States. But, if it is too clear for controversy that the statute is an outrage on the Constitution, if it is palpably usurpation, if it is plain to the most unlettered citizen, that the statute is an attempt to subvert all the securities which the founders of the Government have provided for the preservation of personal liberty, and to invest one man with unlimited dictatorial power, and, therefore, that the appeal was palpably frivolous, I presume the court would hear no argument on such an appeal, and would, forthwith, affirm the judgment or dismiss the writ.

Would they, for instance, hearken to an appeal involving the validity of an Act of Congress giving the President, or any other member of the Government, power by *coup d'état*, to extinguish the legislative branch, as Cromwell did the Long Parliament, and substitute a Barebones Legislature in its place. Surely not; if they, too, were not struck down, and were not (if said debasement can be imagined) by force, by fear, or by corrupt appliances or selfish aspirations robbed of independence. So that the consideration whether the act is not palpably void, must present itself on appeal as it now presents itself to us on this motion; and, if it is palpably void, I repeat it would not be treated on appeal as worthy of being for a moment entertained.

I still consider the defence in this case just as destitute of color as the case which I have imagined. Whether, under the pretext of authority from the President of the United States, any one citizen, at his mere will and pleasure, without any intervention of the judicial tribunals, can incarcerate another citizen not subject to military law, in a loathsome dungeon, for many months, or for a day or an hour, cannot, under any circumstances in which the nation may be placed, be treated as a question constituting a case arising under the Constitution; and any statute which declares the contrary is palpably void. The order at Special Term should be affirmed with costs.

A case arose in Pennsylvania, which, during its progress, illustrated both of the phases which this question of indemnity has assumed. In August, 1861, the "Jeffersonian," a weekly paper published at West Chester, Pennsylvania, was seized by United States Marshal Milward and his assistants, under an order from United States District Attorney Coffey. The paper was suppressed, and the office closed, and it so remained suppressed and closed until the October following, when, in consequence of the district attorney declining to proceed further with the information which he had filed, charging William H. Hodgson, the proprietor of the paper, with aiding and abetting the rebellion, the publication of the paper was resumed. Subsequently Mr. Hodgson instituted a suit against Mr. Milward, the marshal, and William Schuyler and John Jenkins, his deputies, to recover damages for losses sustained by reason

of such seizure. The case in February came on trial before Chief Justice Lowrie, of the Supreme Court of Pennsylvania, at Philadelphia; the plaintiff being represented by Wm. B. Reed and George W. Biddle. From Judge Lowrie's charge to the jury we extract as follows:

The next important element in this cause is the alleged fact that the act complained of was authorized by the President of the United States, and was executed by important Federal officers. But this element loses all its legal importance when we consider that all public functionaries in this land are under law, and that none, from the highest to the lowest, are above it. They, as well as we, are under the Constitution and laws of the United States, and sworn to support, protect, and defend them, or take them as their rule of civil and official conduct, and they and we are to be judged by them in our civil and official conduct in all appropriate cases. The acts of the President and of his subordinates are, therefore, without right, unless they are authorized by some article of the Constitution, or of the laws made under it, and consistent with it. He can make no law that can vest in him any new authority, or that can protect those who obey his authorized orders. He would not claim that he could.

The Federal and State Constitutions place the Government under just such restrictions as these: It tells the Government how it shall proceed in defending society and the social organism against all the forms of violence, disorder, and danger to which society is exposed. It puts all its functionaries under law, so that they shall not invade the order of society, by taking their own forms and modes of protecting it. When they act without law, they must justify themselves before the law, by showing an emergency that demands their act. If it be not so, they are above law, and not under it. If they may irresponsibly declare the existence of the emergency, and also the acts which it demands of them, then, as to them, we have neither Constitution nor laws.

Our Constitution was framed when the remembrance of the excitements, suspicions, divisions, disloyalty, and treasons of the Revolution were yet fresh in the minds of our statesmen, and under the light of all its experience, and they left no gap in it to be supplied by the fears or suspicions of excited times. It is still a sufficient rule of practice for our Government, and it, better than anything else, embodies the settled and sober thought of this people. When we depart from it we expose ourselves to the rule of force, and to incalculable divisions of opinion, of counsels, and of action. * * *

Do the defendants show a warrant issued in proper form by competent authority, that shelters them from responsibility for the act done? What the law requires in order to justify such an act is written in the Constitution, article 4 of the amendments: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrant shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the person or things to be seized." A similar law is written in all our State Constitutions, and it is simply the written expression of the unwritten or customary law of the people, known to everybody, descended through a long line of ancestry and of popular disturbances, and recognized by everybody in times when a quiet reason holds the control of the passions.

Another law is to be connected with this one, in order that it may be seen how such warrants are to issue. It also is written in the Constitution, where it vests all judicial power in the courts established by law, and requires that no man shall be deprived of life, liberty, or property, except by due process of law. This makes the courts the only authority whence any process can issue for the trials of rights or wrongs. Warrants properly issued by them are a shield to the officer who

exercises them. Warrants issued by others have no further authority than is contained in the emergency on which they are founded. If the circumstances—the pressing nature of the emergency—justify the act, they justify the warrant, but not otherwise. It is not usual to call such orders warrants, and they are not properly so called. They are merely orders of a superior to a subordinate officer to do a special duty which usually he ought to do without such order.

When a great conflagration or a violent mob is raging, or a vessel is attempting to transgress the revenue laws or the laws of war, and to escape, there is no time for warrants, and the necessary work must be done without them. But then it is always done under responsibility to law through the courts of justice. If the occasion and the law of the land justify what is done, then the want of a warrant is excused.

We understand now the case we have before us. The defendants had no such warrant as is required by the Constitution. It was an order of "request," not issued by any judicial officer, and was not founded on the oath of any one, and there is no pretence that any such violent outrage on social order had been committed, and no such pressing and urgent emergency existed as to justify the seizure without warrant, and therefore no justification is made out.

There is nothing in the act of Congress of the 6th of August, 1861, that justifies it. It requires the President, in certain cases, to cause certain property "to be seized, confiscated, and condemned;" but this means by due process of law. It is not to be done by the President himself, but by due process of law, by the proper functionaries, and he is to see that they do their duty. These defendants undertook to do this act without warrant, and without any proper occasion shown to us, and therefore they are mere trespassers. They are trespassers from the beginning to the end; and the first step in the matter being unjustified, no subsequent and unsuccessful proceeding under the act of 1861 can shelter them from liability for compensation. They would have been liable for a malicious prosecution without probable cause, if the act had been under a writ apparently valid. The plaintiff is entitled to full compensation for all he has lost by this act.

Is the plaintiff entitled to exemplary damages? Yes, in so far as their act was inspired by mere wantonness; but exemplary or punitive damages are usually allowed rather for the moral than for the legal wrong that accompanies such acts. For the legal wrong, compensation is the measure of redress. For the moral malice with which it is done, the violence and outrage attending it, for this you are authorized to allow exemplary damages; such as are reasonable under all the circumstances. You must judge how far the defendants are guilty of any moral wrong, beyond the legal wrong in the act complained of. * * *

If the law of the land is the sober and abiding thought of the whole people, that lives through all disorders and excitements, and survives and judges them all—the great ocean undercurrent of thought to which waves, and storms, and tempests do not reach—then what I have said is the law still. I know of no other law for this case. This is the law and the plaintiff is entitled to damages—compensative if the defendants acted in good faith and under a mere mistake of authority; and exemplary if there was any bad faith, recklessness, and oppression intended in their acts.

The jury returned a verdict in favor of plaintiff for \$512.

Judgment having thus been rendered for the plaintiff, a motion was made to remove the cause to the United States Circuit Court, in accordance with the provisions of the Indemnity Act. Judge Strong, of the Supreme Court of Pa., in granting the motion says:

Clearly the right to remove does not depend upon the extent of progress which the cause has made in the State Court when the removal is at-

tempted. To my mind it is plain that Congress intended, at the instance of a defendant, to transfer from the State to the Circuit Court any suit or prosecution of the nature described, at any stage of its progress. No matter in what condition it may have been when the act of Congress was passed, if commenced before, and an appearance had been entered, a petition for its removal was authorized at the next session of the court, or, if judgment had been obtained, an appeal was allowed during the term at which it was signed, or a writ of error within six months after its rendition. Such is the letter of the act, as well as its clear spirit, and, like every other act, it must be construed so as to carry out its spirit.

It was also urged in the argument that the case sought to be removed did not belong to the class of cases for which provision was made by the act of Congress of March 3d, 1863. Judge Strong said, in reply to this objection:

The record in this case shows that they acted under an order or warrant from the district attorney, which requested them to seize the property for confiscation and condemnation, according to the provisions of the act of August 6th, 1861; and the warrant also asserted authority from the President of the United States. It was signed by the district attorney as such, and it was directed to William Millward, Marshal. If this was not color of authority, both of an act of Congress and of the President's order, what would be? Color is an apparent or *prima facie* right. It may have no substance, but if there be an appearance of right or authority, it is colorable. This authority, real or colorable, the defendants pleaded at the trial, and its efficacy is one of the main points in controversy. I am not called upon to express any opinion upon the question whether the act of the defendants was, in fact, authorized by the President of the United States. There is evidence on our record that it was, but it is sufficient that when the act of which the plaintiffs complain was done, there was in the hands of the defendants an apparent authority from the President, and that the seizure was made under the asserted warrant of an act of Congress, asserted by the district attorney, whose duty it was, under the act, to attend to the seizure and condemnation of the property which it was the intention of Congress should be confiscated. I am clearly of opinion that the case is one of those embraced in the provisions of the act of Congress of March 3d, 1863.

In regard to the constitutionality of the act, which was brought in question, the judge said:

I do not perceive that this act is a clear violation of the Constitution. The third article of the Federal Constitution declares that the judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States and treaties. Then, if the cases provided for in the act of Congress of March 3d, 1863, are such as arise under the Constitution, or under the laws of the United States, or under treaties, jurisdiction over them may be lawfully conferred upon the Federal courts, as it was in another class of cases, by the 12th section of the Judiciary Act of 1789. If, then, the judicial power of the Federal Government, as conferred by the Constitution, extends to the adjudication of such cases, the right of Congress to provide for the removal of them from the State to the Federal courts is not to be doubted. It is a right which was exercised in the Judiciary Act of 1789, and it has been acted under ever since, without being called in question.

The order for removal was allowed.

The case being certified into the Circuit Court of the U. S., a motion was made before Judge Grier to remit the record on the allegation that the case did not come within the provisions of the act. The judge denied the motion, delivering the following opinion:

Circuit Court United States, Eastern District of Pennsylvania — William H. Hodgson vs. William Millward, et al. This case has been removed into this court under the provisions of the 5th section of the act of the 3d of March, 1863 (12th Stat. at Large, 756).

It is now moved to remit the record, on the allegation that the case is not within the provisions of that act. Although the certificate of the judge who ordered the removal of the case may not be conclusive on this court, if we should be of opinion that we cannot entertain jurisdiction of the parties or of the cause, yet it lies on the party who alleges that fact to make it clearly appear that we see no reason to doubt the correctness of the decision of the learned judge who has certified this case, and fully concur in the opinion delivered by him.

It would be superfluous to repeat the arguments so well stated by that learned judge. It is clear that the defence of the defendants (if they have any) depends wholly on the construction of the Constitution of the United States, and of acts of Congress. The courts of the United States have, therefore, jurisdiction of the subject matter without regard to the citizenship of the parties.

The act of Congress already mentioned, which authorizes the removal of such cases to this court, is not alleged to be unconstitutional, nor that the party has not pursued the mode pointed out by the act in a case where there has been a final judgment, and which, of course, was still pending in that court.

The objection that the record shows that the trespass with which the defendants are charged was not committed by virtue of any order of the President, or under his authority, or under color of any act of Congress, cannot now be urged, as it constitutes the very question to be tried and determined by the court when the case shall be heard before a jury. Assuming the allegation to be true that the President may have had authority conferred upon him to issue such orders, and that the order issued by the United States attorney was irregular or void, yet these are the very questions which the defendants have a privilege, conferred by statute, of a trial and decision in the Courts of the United States.

The order or warrant under which the defendants justify, purported to have been issued by virtue of authority derived from the President. This was "color" of authority, whether the substance existed or not. The argument that color being an accident, cannot exist without substance, may be metaphysically correct, but has too much subtlety for practical application in the construction of statutes. We do not think it necessary to give a definition of "color of authority" to suit all cases. For the purposes of this case it is enough to say, that an officer acting in good faith under a warrant purporting to come from his superior, whom he is bound to obey, is acting under "color of authority," whether his superior transgresses his power, or the warrant be irregular, or not. This is the question to be tried under proper pleadings and evidence before a jury.

If the State Court should assume to refuse to certify the case into this court, because, in their opinion, the superior officer had not authority, or the warrant was irregular and void, they would deny to the party the privilege conferred on him by the act, and treat its provisions with contempt.

This case was, therefore, properly certified into this court, and must be tried in the same manner as if brought here by appeal, or as if it had been brought in said court by original process.

Motion denied.

Another class of cases, arising under the second division named, were claims presented for compensation for property taken for military uses.

The case of William S. Grant *vs.* the United States was decided by the Court of Claims in the beginning of 1864. The claim in this case was for private property destroyed and abandoned in Arizona on the 15th of July, 1861, by

order of Capt. J. N. Moore, commanding United States troops in the vicinity of Tucson. Grant was a contractor with the Government for furnishing commissary and quartermasters' supplies for the forts and military posts in Arizona, and in furtherance of his contract had expended large sums of money in the repair and erection of flouring mills, dwelling-houses, store-houses, shops, and corrals. He had personal property also of considerable value, consisting in part of flour, wheat, corn, barley, beans, merchandise, furniture, &c. In the mills and store-houses of Grant were valuable supplies belonging to the Government.

The people of Tucson were lawless adventurers and intensely hostile to the Government of the United States. Lieut. Lord speaks of the citizens of the Territory as "traitors of the deepest dye"—"that they openly talked secession long before the war commenced, especially those in the vicinity of Tucson. Capt. Chapin, in his deposition, says: "Tucson was full of gamblers and murderers. Large numbers of white people were Southerners in feeling and ready to take up arms for the Southern cause. Exceptions to this rule were rare." A Confederate flag was flying at Tucson, and when the property was burnt the people assembled in large numbers armed, and with such threatening demonstrations as induced Lieut. Lord to prepare for an expected attack on his train. Fort Breckinridge had been burnt and abandoned on the 10th of July, and Capt. Moore had received information by express that Fort Buchanan was also to be abandoned and destroyed. He also had information that Texan rebel forces held Fort Union, and were determined to occupy the territory, and cut off the United States troops within it.

With this information, and the state of things as he knew them to exist at Tucson, Capt. Moore directed Lieut. Lord, commanding a company of dragoons, to destroy such Government stores as he could not transport, together with such private property of Grant as might be of value to the public enemy or to the disloyal people of Tucson. On receiving information that Fort Buchanan was to be abandoned, he took an escort and reached that fort in advance of the main body. In his report to the War Department he says: "On learning the urgency of the case, I sent the enclosed written order to Lieut. Lord, in command of troops *en route* from Fort Breckinridge; his report in the case I forward."

Judge Wilmot read the opinion of the court, Judge Loring dissenting. Judge Wilmot said:

We do not doubt from this evidence, taken in connection with the active participation of Lieut. Lord in the destruction of the property, himself setting fire to the large mill, and giving orders to his men to fire the other buildings and property, that he acted under and in accordance with the express orders of Capt. Moore. Lord notified Mr. Grant half an hour before the fire was set, of his intention to burn all his buildings and property, and requested him to secure at once such valuables and papers as he wished to preserve.

Is the Government legally and equitably bound to

indemnify Mr. Grant for the loss of his property under such circumstances? Was there apparent to the commanding officer such a necessity as justified its destruction? Was it taken for public use? A proper application of legal principles to the facts of the case will give a solution of these inquiries.

Every civilized State recognizes its obligation to make compensation for private property taken under pressure of State necessity and for the public good. The State is the transcendental proprietary of all the property, real and personal, of its citizens and subjects. This transcendental right, the eminent domain of the State, in all countries where rights are regulated by law, is so exercised as to work no wrong, to inflict no private injury without giving to the party aggrieved ample redress. This doctrine was not engrafted on the public law to give license to despotic and arbitrary sovereigns. It has its foundation in the organization of societies and States, and is as essential to a republic as to the most absolute despotism. It is of the very essence of sovereignty, and without it a State could not perform its first and highest duty, its own preservation. Vital as is this high prerogative of States, it must be exercised in subordination to the clear principles of justice and right. Whenever from necessity or policy a State appropriates to public use the private property of any individual it is obliged by a law as imperative as that in virtue of which it makes the appropriation, to give to the party aggrieved redress commensurate with the injury he has sustained. Upon any other principle the social compact would work mischief and wrong. The State would have the right to impoverish the citizen it was established to protect; to trample on these rights of property, security for which was one of the great objects of its creation.

Every elementary writer of authority sustains the views here taken of the duty and obligation of States.

It may safely be assumed, as the settled and fundamental law of Christian and civilized States, that governments are bound to make just indemnity to the citizen or subject, whenever private property is taken for the public good, convenience, or safety.

The limitation imposed upon the Government of the United States, in the exercise of its right of eminent domain, by the fifth article of the amendments of the Constitution, is a solemn recognition of this settled and fundamental law of States, and binds the Government to the observance of the principles of justice and right, in its dealings with the citizen, with the force of organic law. In this article it is declared that "private property shall not be taken for public use without just compensation."

Was the property for which compensation is now claimed taken in virtue of the right of eminent domain? or was it an exercise of right, under the law of overruling necessity? or was the property destroyed without right? and must the claimant look to the personal responsibility of those directly concerned in its destruction? Eminent domain is a civil right, and rests upon property. It springs from the social compact, and is inherent in the sovereignty charged with the duties of civil government. The right arising out of extreme necessity is a natural right, older than States, and is in full force when society and property are unknown. It is the law of the savage as well as the most enlightened, and attaches to every individual under whatever conditions he may be placed. It is the right of self-defence, of self-preservation, and has no connection whatever with the supereminent right of the State. The one may be fettered by constitutional limitations; the other is beyond the reach of constitutions. Both may be said to depend upon necessity for their lawful exercise; but the one is a State, the other an individual necessity. The necessity in the one case admits of degrees, and is frequently no more than the public convenience, utility, or good; in the other the right can be exercised only in the last degree, when the necessity is imperative and overruling. It admits of no choice of remedies and of no delay, and from the nature of the right is beyond and transcends the sovereign authority. This subject underwent a most

thorough and careful consideration in the courts of New Jersey and New York, in a number of cases growing out of the great fire in the city of New York in the winter of 1835.—*Hale vs. Lawrence*, 3d Zabriskie, pp. 728-9. *Russell vs. the Mayor, &c.*, 2d Dennio, pp. 486, 7; 12, Co. 12; Id. 63.

Upon the authority of the cases cited, and others that might be adduced, as well as on the principles which distinguish a case of public necessity, utility, or good, from the overruling necessity which regulates the law of individuals, we are of opinion that the rightful taking of private property, for use or destruction, when the public exigency demands it, by a military officer commanding any part of the public force, is an exercise of the right of eminent domain; and that such a case is not governed by the law applicable to individuals. The fundamental law provides that "private property shall not be taken for public use without just compensation." Is this provision of the Constitution answered when compensation is made for property taken under legislative authority, and denied when taken by military officers acting rightfully, under the proper functions of their office? We think not. The obligation to make compensation is coextensive with the right of the State to take private property for public use; and whenever it is taken by competent authority, the obligation of the State cannot be evaded.

We next come to consider of the necessity under which this property was destroyed. It is necessity alone that gives the right to take private property for use or destruction. The danger must be threatening—such as demands immediate action, and when delay would work public injury. Unless the necessity is such as to justify the officer, he is a trespasser, and there is no liability on the part of the Government. It is impossible to lay down with precision the degree of necessity or imminence of the danger that will furnish such justification. Each case must stand on its own facts. The necessity must be urgent, but it need not be overwhelming—the danger must apparently be near and impending, but it need not be actually present, threatening instant injury to the public interests. The officer must decide when the necessity has arisen that demands him to take private property for the public safety or good. If, however, the danger, as he ought to have seen, was remote, the necessity not pressing, courts will hold him personally responsible to the party aggrieved. In deciding upon the conduct of the officer we must look at all the circumstances of danger by which he was surrounded, and to such information as he had, entitled to credit. It may be that there was no real danger, that his information was false, and that he acted under a supposed state of facts that did not exist. This would not affect his conduct, so as to charge him personally, or relieve the State from responsibility. Had he good grounds for the belief that the facts were as they appeared to him? Would a cool, prudent, discreet man have felt the necessity as urgent and the danger impending? If so, the officer is justified, and the party who has suffered loss must look to the Government alone for redress.

We hold in this case that the property was destroyed by the rightful order of the commanding officer, and upon an urgent and pressing necessity, and to prevent it from falling into the hands of the public enemy, and those hostile to the United States; that it was a taking for public use; and that the Government is bound under the Constitution to make just compensation to the owner. The legal duty to make compensation raises an implied promise to do so, and here is found the jurisdiction of this court to entertain this proceeding.

It is one of the strange phenomena of the times that, amid all the rejoicings which succeeded the victory at Gettysburg, no one seemed to reflect that the event which had insured the safety of the Government and country had rendered a large body of people almost destitute. There were not even wanting writers who sought to give piquancy to their letters

by misrepresenting the conduct of the people of Gettysburg during the fiery ordeal through which they had passed, and by depreciating a hospitality to visitors which consisted in dividing with strangers the little which the merciless invaders had left. It is true that justice, sure, although tardy, has finally been done to the people of Gettysburg and the surrounding country, in these respects. The sufferers are beginning to turn their attention to the National Government as the source of relief. The question how far a loyal citizen of a rebel or disloyal State, of the Government of which he is in legal theory a component part, and for the conduct of which he is in some sense responsible, is entitled to national compensation for property destroyed by the rebellion in such a State, presents a very grave, legal, and constitutional question. At all events it is not the same question which is raised by the application of the people of Pennsylvania, Ohio, and Indiana, for losses inflicted by an inter-State invasion.

The Governments of the States might be held responsible to satisfy the losses caused by insurrectionary violence among their own citizens, and they have the means to meet this responsibility in the power to confiscate the property of the guilty. But it is the province of the General Government to protect the loyal States against inter-State invasion, and to satisfy the losses caused by such invasion, when it cannot be prevented.

INDIA, BRITISH. The area and population of the British possessions in India are: Area, 933,722 English square miles; population, 134,634,244. The English population in India, including the army, 85,000 strong, is 125,379.

The revenue, public expenditure, &c., in the year ending April 30th, 1862, were as follows:

REVENUE.

Land Revenue including tributes and contributions from Native States, &c.	£22,711,717
Assessed Taxes	2,054,696
Customs	2,876,139
Salt	4,563,031
Opium	6,259,269
Stamps	1,693,217
Mint	380,735
Post Office	402,135
Electric Telegraph	73,452
Law and Justice, and Police	511,513
Marine	155,723
Public Works	588,858
Miscellaneous, Civil and Military	463,500
Interest	956,219
Total	£43,829,472

EXPENDITURE.

Repayments, Allowances, Refunds and Drawbacks	£ 341,588
Charges of collection and payments in realization of the Revenue, including cost of salt and Opium	5,526,724
Allowances and assignments under Treaties and Engagements	1,640,466
Allowances to District and Village Officers	599,682
Charges in India, including interest on Debt, and the value of stores received from England	29,137,946
Charges in England, excluding the value of stores supplied to India	5,209,264
Guaranteed interest on the capital of railway and other companies, in India and in England, deducting net traffic receipts	1,425,080
Total	£43,880,100

The number of native Christians in India is still comparatively small, but steadily increasing. The following table exhibits the state of the Roman Catholic missions in India, according to the latest account:

Apostolic Vicariates.	Catholics.	Apostolic Vicariates.	Catholics.
Madras	46,480	Quilon	45,000
Bombay	25,000	Mysore	17,300
Eastern Bengal	13,000	Coombatore	17,200
Western Bengal	15,000	Agra	25,000
Madura	140,000	Patna	3,400
Hyderabad	6,000	Ava and Pegu	53,200
Vizagapatam	7,130	Malayan Peninsula	5,400
Mangalore	34,880	Jaffna	52,237
Verapoly	229,006	Coleombo	90,900

Altogether the number of Roman Catholics in British India was estimated at about 900,000, but these did not include a large number of schismatics (of Portuguese extraction), who refused to recognize the jurisdiction of the Vicars Apostolic, and only that of the Archbishop of Goa. As this Goa schism was supposed to come to an end in 1863, by a convention between Rome and the Court of Portugal, these Indian schismatics would be reconciled to the Roman Church, and swell its numbers to about 1,000,000. Included in this number are about 150,000 Syrian Christians, who have acknowledged the authority of the Pope. There was a report in 1862, that a majority of them had repudiated the connection with the Roman Church, and entered into ecclesiastical communion with the Jacobites of Syria, but by Roman Catholic writers the whole population is still claimed for the Roman Church.

The most complete account of the progress of Protestant missions has been given in a work by Rev. Joseph Mullens, D. D., of Calcutta, entitled, "A Brief Review of Ten Years' Missionary Labor in India" (London, 1863). According to this writer, the native Protestants in India and Ceylon were, in 1862, 112,491, and, in 1862, 153,816. But besides these there were, at the latter period, 59,366 converts connected with the Burmese missions. In 1852 the native Christians of the Burmese missions were most of them beyond the limits of the Anglo-Indian dominion, but by 1862 the frontier had been so pushed forward as to include them within the limits of the empire. Adding them to the number previously stated, the aggregate becomes 213,182.

Education and literature are likewise making rapid progress among the natives. The number of books published by a single society—the Vernacular Literature Society—has risen from 12,841 in the year 1825, to 121,669 in 1861. The following list shows the number issued in various languages in 1861: English, 46,783; Anglo-Asiatic, 3,147; Sanscrit, 588; Bengali, 62,935; Hindoo, 5,171; Oorya, 35; Arabic, 4; Persian, 120; Urdu, 2,868; Santal, 16; Cossyah, 2. The Society has 61 agents occupied in selling its books. If to this be added the 253,170 books issued in 1861-'62 by the Christian Vernacular Society, the issues of the Tract, Bible and Religious Societies at the three Presidencies, and those of the Northwest

Book Agency, we shall have some idea of the extent of native Indian literature. There are 25 mission presses in India, Ceylon, and Burmah; the whole Bible has been translated into 14 languages, the New Testament into 19, and separate books into 26. In ten years 1,634,040 copies of the Bible and 8,604,033 of Christian tracts and books, exclusive of all secular and educational works, have been circulated.

The attendance of native students at the universities is steadily increasing. At the Calcutta University the number of candidates for entrance has steadily risen from 244 in the first examination to 1,307 in 1861. The number of candidates for the first examination has increased from 13, in 1858, to 60. Of the 1,307 candidates for entrance, 43 were Mohammedans and 75 Christians, and of the candidates for the first examination, 5 were Mohammedans and 7 Christians, the rest being Hindoos. Of the former 59 were examined in Latin, 20 in Sanscrit, 7 in Persian, 114 in Urdu, 6 in Hindoo, 12 in Oorya, and the rest in Bengali; of the latter, 6 were examined in Latin, 7 in Sanscrit, 1 in Persian, 13 in Urdu, and the rest in Bengali. The number of candidates for entrance into the Madras University has risen from 46, in 1857, to 272 in 1862, of whom 112 are Brahmins, 71 Hindoos of other castes, 29 native Christians, 27 Europeans, 24 East Indians and 9 Mohammedans. The Christian element is absolutely larger than in Calcutta, while the total number of candidates is five times less. The Mohammedans are equally backward in both.

The Victoria College at Agra numbers among its pupils 314 Hindoos, 25 Mohammedans and 12 Christians; all, with the exception of 30, paying school fees varying from four annas to three rupees per month. The matriculation fee is one rupee. There are 35 classes, viz.: 18 English, 1 Arabic, 4 Persian, 7 Urdu, 1 Sanscrit and 4 Hindoo.

Although the Christians form only a small proportion of the aggregate population, the influence of Christianity is rapidly extending over the whole country. Both Hindooism and Mohammedanism are on the decline. A number of prominent Hindoo inhabitants of Bengal addressed a memorial to the governor general of India praying for an abrogation by law of the rite of polygamy. The native papers are freely criticizing the evil social customs among Hindoos and Mohammedans, and societies are forming for their abolition. A novel meeting was lately held in Madras by educated Hindoos, on the subject of the management of idolatrous endowments. The Government of India had, not long ago, severed the last links of their connection with pagan and Mussulman lands for superstitious purposes, by directing that all such should be handed over to the worshippers most interested in their administration. Alarmed at this, "the Hindoo inhabitants of Madras" designed to petition for a modification of the Act; but the main object

was to save the funds of Hindoo temples and monasteries from the mal-administration of those whom they singularly enough call church wardens (*dhurma kurtas*), by asking Government to put the funds under committees at the headquarters of each county, and not of each village. The former, being educated, will, it is supposed, prevent misappropriation and all the evils of what they call "sectarian" disputes. The confessions of the speakers were frequent and pathetic: that the temples are falling into ruins; that the holy idol services are neglected or badly attended; that the priests are immoral in their lives and peculate the funds.

From a report to the Secretary of State for India, made by the Government Director of the Indian Railway Companies, on railways in India, for the years 1862 and 1863, it appears that satisfactory progress is being made in the extension of their lines. On December 31st, 1862, 747 miles had been added to the 1,609½ which were open for traffic on the 1st of January, 1862. Since the beginning of 1863, 184 miles have been finished, making a total of 2,528 miles upon which passengers and goods are now being conveyed. The greatest distance traversed in a direct line without interruption is on the East Indian Railway from Calcutta to Benares, a length of 540 miles; the next greatest is the trans-peninsula line from Madras to Beypore, which is 405 miles; and the next from Bombay to Sholapare, across the Bhore Ghât, a length of 295 miles. Several works of great importance and magnitude occur on the lines which have been recently opened. The ascent by the Great Indian Peninsula Railway of the Bhore Ghât, between Bombay and Poonah, comprises some of the most formidable of these. In a distance of fifteen miles the railway climbs a height of 1,831 feet, the difficulties in its course being overcome by such a series of cuttings, tunnels, viaducts, and embankments as is hardly to be found within the same space in any other work in the world, and is only rivalled in India by those on the sister incline over the Thull Ghât. In addition to the work done to enable 930 miles of new line to be opened, fair progress has been made on the unopened lines, and it was expected that in the course of the year 1863 between 600 and 700 miles more will be ready for traffic.

Great progress is also made in the construction of electric telegraphs. The number of miles of telegraphic lines and stations open at the close of the official year, 1861 to 1862, was 11,430 miles and 144 stations. The greatest extent of telegraph is in Bengal, where there are 1,749 miles of telegraph and twenty-three offices. The Punjab and Northwest provinces come next with 1,575 miles and twenty offices. Central India is third, with 1,275 miles and eleven offices, and Bombay fourth, with 1,238 miles of telegraph and twenty-one offices. The receipts for private messages in Bengal

during 1861-'62 were Rs. 1,61,955-14 (a rupee is about 46 cents), and in Bombay Rs. 1,50,971-3-5.

The amount spent in the construction of telegraph lines in India from 1850-'51 to 1860-'61 inclusive is, Rs. 46,05,935-8-5 $\frac{3}{4}$, exclusive of cost of stores from Europe. Stores, freight, instruction of assistants, passage money, &c., amounted to £385,400 3s. 2d. for the same period. Recently a new company also, called the Oriental Telegraph Company, has been organizing, under the superintendence of Sir Charles Bright and Mr. Latimer Clark, with a system of telegraph similar in its constitution to the Electric and International Company of England.

Immediately upon the completion of the Persian Gulf submarine cable (early in 1864), Sir Charles Bright and Mr. Latimer Clark will be ready to enter upon the operations of the Oriental Telegraph Company, commencing their Indian line from Kurrachee, and working toward Bombay and Calcutta.

The only coalfield of any considerable extent in India known at present is that of Ranigunj or Damooda, near Burdwan in Bengal, covering an area of about five hundred square miles. There are some fifty collieries in this field, producing yearly on an average about 300,000 tons of coal. The description produced is a variety of non-coking bituminous coal; but one great objection to that worked in the Damooda field is the presence of iron pyrites, and its constant liability to spontaneous combustion, which renders it particularly unfitted for steamships. The broadest seam yet discovered is at Kasta, where the bed is thirty-five feet thick. Next in importance to the Ranigunj field are the Nerbudda coal deposits. They are supposed to extend over an area of fully three hundred square miles; but their distance at present from any available market makes them but of little practical use. As, however, iron ore is found to exist in the same locality, the coal will prove serviceable for smelting purposes, and will thus enhance the value of the iron mines. The best coal is found at a spot called Mopani, where the beds have an average thickness of from seven to eight feet. A company has already been formed for working these coal and iron deposits, and without doubt, as the railway progresses toward that part of India, the Nerbudda coalfields will afford an ample supply, at a fair profit, to the important line which in two or three years may be completed as far as Jubbulpore. No workable coal has been found in the Punjab or Northwestern provinces; a few patches of lignite only have been met with. In Scinde a small mine was opened in the Lynah Valley in 1856, by the railway company there; but, owing to its irregularity and probable want of sufficient age, it was abandoned. Neither in the Bombay nor Madras Presidencies, nor in the Nizam's dominions, is coal known to exist; and the few black shales

met with on the Godavery, which are incapable of combustion, cannot be said to come under the denomination of coal. The entire quantity supplied annually by the Ranigunj, Rewah, Nerbudda, and other Indian coalfields, does not exceed 400,000 tons. The Bombay Presidency is now, it is said, undergoing for the first time a geological examination on a systematic scale; but the strata known to prevail over the greater part of its surface preclude the idea of any good or workable coal being found.

The history of India, during the year 1863, is, on the whole, uneventful. The country advanced through the impulse given by an event which diverted to its people much of the wealth formerly invested in American cotton, but the internal administration was marked by no corresponding progress, and the result was a commercial crisis unprecedented in intensity. The brief administration of Lord Elgin was ended by his death, on Nov. 20th, after a duration of only 20 months. Some of the English papers complained that his administration had been marked by an almost unbroken subserviency to the Indian Secretary of War, and that the growing independence of the several provinces directly subject to the English rule would have become most dangerous to England, if a governor-general like Sir John Lawrence had not been appointed at the close of the year.

Sir Charles Trevelyan was sworn in as Financial Member of Council on 13th January. Those who had feared to see a repetition of the policy which resulted in his recall from Madras were surprised to find that, while doing full justice to his predecessors, Mr. Laing and Mr. Wilson, he merely carried out the financial reforms which they had begun. His budget speech showed that the surplus of Mr. Laing's last year, 1862-'63, was the largest India is likely to see for a long time—£936,925. The surplus of the current financial year he estimated at somewhat less, or £815,775, and disposed of the whole except a margin of £480,775, by reducing the duties on wine, beer and iron, and taking one per cent. off the four per cent. income tax.

During the last three months of the year the money market of both India and England suffered from a scarcity of silver caused by the absorption of very large sums by the Indian peasantry in return for their cotton. The first result of the high prices paid by England was seen in a superabundance of capital at the three Presidency cities. In Bombay, especially, enormous fortunes were made, chiefly by Asiatics, some of whom used their wealth nobly in works of benevolence, and a general mania for the establishment of joint-stock companies with limited liability, spread through society. But soon this abundant capital was drained into the interior to pay the already comfortable peasantry for their new cotton crop; it reached them instead of resting with their agents and money-lenders as usual, and it was hoarded or

converted into ornaments in due course. The Banks of France and England felt the drain, and the rates of discount and exchange took sudden leaps. In India, business during the whole of December was virtually suspended for want of a currency, several speculators failed, new joint-stock companies were forced to postpone their calls, and the best document bills were unsaleable, for want of silver and not of credit, at 2s. 3d. per rupee. The circulation of the paper currency, which had been obstructed beyond Allahabad by Sir C. Wood's unwillingness to use the State Banks as an agency, was only £5,160,000 at the close of November, and some two and a half millions of the four allowed to be invested were so employed.

With regard to the semi-independent princes, Lord Elgin persevered in the policy which Lord Dalhousie began and Lord Canning continued, to consolidate with due legality the relations of the feudatory chiefs to England, so as to form a loyal Indian aristocracy. The Maharajah of Mysore was however informed that England would never consent to waive her treaty rights, and forget her duty to the people by subjecting them to the misrule of his priests and parasites, and the administration of that territory was made uniform with the rest of India.

Early in the year Col. Haughton, as special commissioner, succeeded in putting down the revolt which had disturbed the villages of the Cossya hills on the Assam frontier. The district was made over to the new constabulary, a grant was given to the Welsh Mission there to educate the savages, a little progress was made with roads, and Major Agnew succeeded in ascending the Berhampooter to Suddya, in a small steamer. But otherwise, Assam continued to be neglected, being administered by young military officers, utterly insufficient in number for its vast extent and growing resources. The Government of India sent the Hon. Ashley Eden with a large party of native soldiers, a photographer and surveyor, on a political mission to Boohtan, the people of which had made raids into British territory with impunity since the days of Warren Hastings.

On the Northwest frontier an outburst of Hindostanee fanatics and fugitive rebel sepoys, such as England had punished in 1858, and overlooked in 1862, forced Lord Elgin to action. Before leaving Simla, on his Himalayan tour, he gave orders to Sir N. Chamberlain to march, with a native force only, into the Eusufzaie country, some fifty miles northeast of Peshawur, and chastise the Judoon and Othmanzuie tribes that had given protection to the fanatics, who were to be annihilated or driven farther into the hills. But, unfortunately, General Chamberlain could not at once muster a sufficient number of native soldiers, the commander-in-chief's desire to make a grand campaign with Europeans causing serious delay; the political information, in the absence

of Major James, Commissioner of Peshawur, was incorrect, and when, finally, a large force of Europeans and natives advanced up the Umbeyla defile, nine miles long, they found the whole of the Boneir branch of the Eusufzaies prepared to resist an invasion of their territory. From 8th October till 15th December the English force was kept, amid great hardships, at the crest of this defile, and the loss of the English in officers and men was heavy. But large reinforcements were sent up, and Major James arrived in time to take political charge. The severe defeats they had met with, combined with Major James's tactics, induced the Boneirees to surrender, in spite of the opposition of their Swat brethren, and they even sent a contingent of two thousand men which helped to burn down the Hindostanee stronghold of Mulka, after which the English force retired. With special reference to the difficulties on the frontier, Sir John Lawrence was despatched from England in hot haste as viceroy.

The financial condition of the Government was improved through judicious management, and the revenue exceeds the annual expenditure. In 1862-'3 the surplus amounted to £1,280,596, and for the year 1863-'4 it is estimated at £480,775, although a considerable reduction of taxes has taken place. This surplus of income is due to the imposition of new taxes. The exports of merchandise during the last twenty years exhibit a rapidly increasing ratio, as follows: 1841-'2, £13,885,218; 1851-'2, £19,879,254; 1861-'2, £34,894,767.

Within the last twenty-five years several articles of great commercial value have been added to the exports from India, of which the principal are oil seeds, jute, wool, coffee and tea. The value of these articles exported in 1862 was as follows: oil seeds, £1,197; jute, £537,610; wool, £400,342; coffee, £462,380; tea, £192,242. The most remarkable, as it promises to be the most valuable, of all the new articles of export from India, is tea. In 1834 it was definitely ascertained by a Government commission that the tea plant was indigenous in Upper Assam, and plants, seeds, and skilled cultivators and manufacturers were obtained from China, to promote the cultivation of this important herb. The Government entered with energy and enthusiasm into the enterprise, and established tea gardens and manufactories, which, after a while, were turned over to a joint stock tea company, called the Assam Tea Company, on very liberal terms. The affairs of the company were mismanaged, however, and its capital of £200,000 sunk; but in 1852, a dividend of 2½ per cent. was realized, and from that date its prosperity was established, and last year the dividend paid was 12 per cent.

The final success of this company encouraged capitalists to embark in the tea growing business, and there are now in Assam 160 plantations, estimated to yield, in 1862, 1,788,787 lbs. of tea. In the adjacent province

of Cachar, where, also, the tea plant has been found growing wild, upward of 68,149 acres have been leased to tea planters, and the estimated crop for 1862 was 336,800 lbs. But it is not alone in Assam and contiguous provinces that tea is grown. About the time that operations were begun in Assam the Government established experimental gardens on the skirts of the Himalayas, in the Northwestern provinces, where a very superior quality of tea is now produced largely. In 1862, 78 tea plantations were in operation in this region, of which 37 were in the hands of Europeans, and the rest were worked by natives. During the year, 89 tons of tea seed and 2,400,000 seedlings were distributed gratis to private planters from the Government factories, and yet the supply fell far short of the demand. Later unofficial reports represent the tea culture to be much more extensive than the above official figures indicate. In all the districts mentioned the business is rapidly increasing.

The cultivation of coffee has advanced with rapid strides in the highlands of Southern India. The native planters number three or four thousand, and these numbers are fast increasing.

In the growth of cotton, which is one of the natural productions of India, the country is making rapid strides, stimulated by the great demand and high prices caused by the failure of the supply from the United States. In 1862 no less than 1,072,000 bales were exported, and the supplies of 1863 and 1864 were estimated at 1,200,000 bales and 1,500,000 bales, respectively. The British Government has bestowed more expense and effort in stimulating the cultivation of this staple than upon any other product of its Indian possessions. So earnest is it in the endeavor to extend cotton growing, that a Government manufactory is employed constructing cotton gins, which are turned out at the rate of eight a day, and sold at the prime cost, or £30 each, and the demand for them is so great that more than a thousand applicants cannot be supplied, and native mechanics are getting £60 to £70 for an imitation of the machine.

The British Government has also introduced into India the chinchona or Peruvian bark tree of South America, and its cultivation is proceeding with signal success.

Another important step toward the development of the agricultural resources of the country, is the construction of canals and weirs for irrigating extensive regions where the rain-fall is insufficient for purposes of cultivation. These works are vast in extent and benefit. The Ganges canal, one of the principal, has no less than 898½ miles of main channel, with 1,852 miles of distributing water courses, besides many hundred miles of minor channels. It irrigates an area of 1,471,500 acres, and its beneficent waters will protect from the risk of famine a tract of country containing a population of 6,500,000 souls. It is estimated that in the

famine of 1860-'1, 339,243,840 lbs. of grain were grown by the irrigation which it afforded. Other canals are from 100 to 500 miles in length, and render fertile vast tracts of land that would otherwise remain almost barren wastes. In the Presidency of Madras nearly all the great rivers have been intersected by weirs, which retain for irrigation the floods of fructifying waters that would else flow out to sea. The increased production is reckoned by millions of pounds in value.

INDIANA. The State of Indiana was twice invaded during the year by small forces of the enemy. The first force which entered the State consisted of a portion of the 2d Kentucky cavalry, Capt. Hines. On the night of June 16th they crossed the Ohio river at Flint Rock, near Leavenworth, by fording it. They went to Leavenworth, Corydon, and Paoli. After plundering the stores and citizens at these places, they began to be hard pressed by the local militia, and escaped across the river with difficulty and some loss. The second invasion was made by a force under command of Gen. Morgan.

The excitement occasioned by this invasion surpassed any previous one. In about sixty hours ten regiments of infantry, four companies of cavalry, and two batteries of artillery, were organized at Indianapolis and on the move. The services of over forty thousand men were tendered to the authorities. (*See ARMY OPERATIONS.*)

The total number of troops which had been furnished to the Union army to the 1st of September, was 93,895 three years' men. The quota of the State under the several calls of 1861 and 1862 was 65,394. The excess of the State, therefore, was at that time 28,501. According to the enrolment of the State there were of the first class 134,163 men, one fifth of whom were called for by the draft, which amounted to 26,832, thus giving the State still an excess of 1,669 at that date. After the call for troops in October liberal bounties were offered to volunteers of \$50 to \$200 in addition to the Federal bounty. About five persons were appointed in each county where recruiting was actively done, to secure volunteers, and many soldiers returned to unite their efforts. Thus troops were more promptly and speedily raised than probably in any other State. The quota to be raised under the call in October was 18,597.

A difficulty occurred in the Legislature of the State some days previous to the time for the close of the session, which suspended entirely the proceedings of that body. It consisted in the withdrawal of a portion of the members of the House, by which no quorum to do business was left. The occasion of this withdrawal of members was reported to be an apprehension on their part that the majority of the House, who were designated as democrats, "would pass a bill which deprived the governor of that full control of the State militia,

which had been conferred upon him." This militia bill, it appears, conferred the right upon those enrolled under it to elect their own company and regimental officers, and reserved to the General Assembly the right to say in what manner brigadier and major generals should be appointed. With regard to the latter appointments, it was claimed by the majority to be the "constitutional" right of the Assembly to say how they should be made; but by those who withdrew, it was claimed that the power to make the appointment was conferred by the Constitution of the State on the governor. The consequence was that the Legislature adjourned without passing any bills appropriating money to meet expenditures. The State owes a foreign debt contracted previous to the present war, the aggregate annual interest on which is \$320,000, payable semi-annually, on the 1st of January and July, in the city of New York, to such persons as may hold her bonds. As the time approached for the payment of the interest due in July, it was manifest that the Auditor and Treasurer of the State would not have the funds in New York for the purpose, although the money was in the State Treasury. The grounds urged for their position may be briefly stated.

In 1846 (the State having failed to pay the interest upon the public debt for some years) a compromise was made with her creditors, by which they released one half of the indebtedness for new obligations, and for the other the Wabash and Erie Canal and the lands unsold which had been appropriated by the General Government for its construction, and the State pledged its faith for the punctual payment of the interest on the new bonds. In 1859 the Legislature enacted a law prohibiting the Auditor and Treasurer of State from withdrawing any money from the treasury, unless in pursuance of appropriations made by law. The General Assembly of that year provided for the payment of the interest upon the State debt for the succeeding two years, in the general appropriation bill. In 1861 the Legislature passed what is known as the embezzlement law, providing heavy penalties for any violation of the law establishing a treasury system, which had been enacted two years previous, and also provided for the payment of the interest upon the public debt for the two succeeding years in the general appropriation bill.

The Constitution requires that no law shall be enacted unless a quorum of each House shall be present, which is made to consist of two thirds of the members of each branch of the Legislature. The Constitution restricts the sessions to sixty-one days, and all laws must be enacted within fifty-nine days. Thirteen days previous to the expiration of the constitutional term of the Legislature and before the appropriation bills necessary to sustain the State Government and provide for the payment of the obligations of her creditors, a suf-

ficient number of the members of the lower House, to break a quorum, withdrew as above stated, and thus suspended the legislation.

As the time approached to place the funds in New York to meet the interest, Gov. Morton requested the Auditor and Treasurer of State to assume the responsibility of withdrawing money from the treasury for that purpose, and argued that the laws compromising the State debt were in effect a continuous appropriation which authorized them to do so. They did not place such a construction upon those acts. To test this question, the President of the Sinking Fund applied for a mandate directing the Auditor to draw his warrant upon the treasury to pay the interest. Judge Finch, of the Indianapolis circuit, first allowed the mandate. From this decision an appeal was taken to the Supreme Court. The judge then changed his decision and refused to allow a mandate, and from this decision an appeal was taken to the court of last resort. The object of these suits was to decide the law in the case. The Supreme Court, after an investigation of the questions at issue, decided that the State officers had no authority to pay the interest unless in pursuance of specific legislative appropriations.

The house of Winslow, Lanier & Co., New York, offered to pay the interest on certain conditions, which was declined by the State agent, and it remained unpaid to the close of the year.

The sessions of the Legislature being held once in two years, the reports of the State officers relative to internal affairs are made up and presented at the commencement of each session.

On the 25th of April, Gen. M. S. Hascall in command of the district of Indiana, in the Department of the Ohio, issued an order the better to enforce General Order No. 38, issued by Maj.-Gen. Burnside. (*See HABEAS CORPUS.*) It led to the following correspondence:

HEADQUARTERS, DISTRICT OF INDIANA, }
INDIANAPOLIS, May 5th, 1863. }

EDITORS JOURNAL: I have received the following letter from Hon. Joseph K. Edgerton, member of Congress from the Tenth Congressional District, and, as it refers to matters which interest others as well as himself, and as there are some who claim that they do not understand fully the meaning of General Order No. 9, recently issued from these headquarters, I publish his letter, together with my reply, for the information of all concerned:

FORT WAYNE, (IND.), May 2d, 1863.

SIR: I have read with the interest due to it your General Order No. 9, dated 25th ultimo. In this order you say that you have no partisan feelings or interests you intend to advance, but desire to confer freely and fully with the prominent men of all political parties, and invoke their hearty co-operation in all measures calculated to restore harmony and good feeling in the State. This sentiment is patriotic. It seems to recognize the fact that opposing political parties may still be permitted to exist, and yet co-operate to restore harmony and good feelings in the State. In a corresponding spirit, I, as a citizen, though not perhaps a "prominent" one, in the sense of your order, desire to confer freely with you, by way of inquiry, as to the meaning of a part of your order, which I do not fully understand. You will, of course, admit that if the people are to obey your order, it is important they should know the exact scope and design.

Will you do me the favor to inform me what you mean in

your injunction to "all newspapers and public speakers," by the term "for endeavoring to bring the war policy of the Government into disrepute;" and further, what you mean by the phrase "actively opposed to the war policy of the Administration," or what you use as a synonymous expression, "opposed to the Government"?

Awaiting your reply, I am, respectfully,
Your obedient servant,

JOSEPH K. EDGERTON.

M. S. HASCALL, Brigadier-General.

It will perhaps be well enough, in order to a full understanding of this matter, to reproduce that paragraph of No. 9, which is claimed to contain ambiguous matter. It reads as follows:

11. The commanding general is charged with the duty of carrying into effect the provisions of General Order No. 38, recently issued by Maj.-Gen. Burnside. He purposes doing so. Unmistakable evidence reached him that the provisions of this order have been, and are being, violated in various parts of the State. This is unfortunately done, in many instances, by well meaning men who are led astray by newspapers and public speakers. The latter will therefore be held to the most rigid accountability. There is no use in trying to dry the stream while its fountains are allowed to flow. All newspapers and public speakers that counsel or encourage resistance to the Conscription Act, or any other law of Congress passed as a war measure, or that endeavor to bring the war policy of the Government into disrepute, will be considered as having violated the order above alluded to, and treated accordingly. The country will have to be saved or lost during the time that this Administration remains in power, and therefore he who is factiously and actively opposed to the war policy of the Administration is as much opposed to his Government.

It seems to me that, taken as a whole, no one need misunderstand anything in this paragraph unless he chooses to do so.

What I mean by the expression "or endeavor to bring the war policy of the Government into disrepute" is this: Certain measures have been determined upon by the Congress of the United States and the Executive, such as the internal revenue and tax bills (necessary for the support of the Government in time of war), the Confiscation Act, the Conscription Act, the act authorizing the Executive to use negroes in every way possible to cripple the enemy and assist us, the proclamation of emancipation in certain rebellious districts, and other measures having an immediate bearing on the war; and these I call the war policy of the Government or Administration. These measures, most of them, have been concluded upon after very mature deliberation and discussion, and after more than a year's experience in actual warfare. Possibly they are not the wisest and best that could have been enacted. That, however, is a matter which does not now concern either of us. Enough for us to know that they have been agreed upon by the only rightful and proper authorities known to our Government, and that they are likely to remain in force until time and experience shall suggest some modification, and this though you and I should talk ourselves hoarse in opposition. The only practical effect, then, of allowing newspapers and public speakers to inveigh against these measures is to divide and distract our own people, and thus give material "aid and comfort" to our enemies.

In this connection allow me to call your attention, and that of the whole State, to the following extract of a letter written by Hon. Reverdy Johnson to certain citizens of Baltimore, who had invited him to address them:

The sole ministers of peace at present are our gallant officers, soldiers, and sailors. Let these be used as they may be, and the end will soon be accomplished; and let us, in pressing on the foe, not halt to criticize the conduct of the Government. Let us, on the contrary, give it a hearty, zealous support, while the peril is upon us, reserving for a period of restored peace whatever of censure we have to pass on the conduct of the men who are administering it.

If such be the sentiments of Senator Johnson, a Southern man, it ought to be no hardship for you and me and all the citizens of Indiana to live up to the requirements of General Order No. 9. Again, I give it as my opinion that this rebellion will have to be either estab-

lished or crushed between this time and the 4th day of March, 1865, or during this Administration, and that, therefore, he who is factiously and actively opposed to the war policy of the Administration is as much opposed to this Government. If my premises are correct the conclusion follows. I never yet have seen any one who thought this war could endure two years longer. If there are any such it must be those who intend to throw everything in the way of this Administration in order that the war may be prolonged by some possibility, and another Administration get the credit of settling it. As I value the lives of our hundreds of thousands of gallant soldiers in the field; as I regard the feelings, bereavements, and sufferings of their anxious families and friends at home, and as I regard the true interests of our State and nation, I am going to see to it that in Indiana, at least, such men have no abiding-place.

It is a more serious thing than many are wont to suppose to divide and distract our country and prolong the war. In putting a stop to such practices I shall hold the leaders responsible. As well might I establish a number of small-pox hospitals in the heart of this city, and then punish the people for becoming infected with that loathsome disease, as to allow newspapers and public speakers to belch forth their disloyal and treasonable doctrines, and blame the people for becoming contaminated therewith. Such things will not do in these times. To kill the serpent speedily it must be hit in the head. General Order No. 9 has been approved by Gen. Burnside, and the force placed at my disposal to enforce it. I shall do so in every case where a palpable violation comes to my knowledge.

Hoping I have made myself understood, and thanking you for your frank and manly letter, I am yours, with great respect,

MILO S. HASCALL,
Brig.-Gen. Vols., Commanding District.

To Hon. JOSEPH K. EDGERTON, M. C.

Some resistance was made to the officers engaged in making the enrolment under the act of Congress, and to the officers and soldiers engaged in arresting deserters from the army, in which some lives were lost.

No election was held in the State during the year except for county and other local officers.

A case involving the question of the military power of the Federal Government within the States was decided by the Supreme Court of the State. (See MARTIAL LAW.)

INDIUM. F. Reich and Th. Richter are led to believe that they have found, in two Freiburg ores, composed chiefly of arsenical pyrites, blende, and some galena, together with silica, manganese, copper and a small portion of tin and cadmium, a new metal. Having roasted the ores to remove the arsenic and sulphur, mixed the residue with hydrochloric acid, evaporated, and distilled, they obtained an impure chloride of zinc; examining this with the spectroscope for thallium, no green line appeared, but a before unknown blue line was noted. Conjecturing a new metal, the authors succeeded in isolating, as they believe, such a one in minute quantity, in form of a mixture of the metal itself, its chloride and hydrated oxide. Submitting this mass moistened with hydrochloric acid to the spectroscope, a brilliant and sharp blue line was seen, more refrangible than the blue line of strontium, and beyond this another and fainter blue line, not quite reaching the place of the calcium blue line. The lines lie in the so-called indigo space; the

authors have given to the new metal the name of *Indium*. They assert that the new element is not precipitated by sulphuretted hydrogen from an acid solution of the chloride, but is so by ammonia, falling as a hydrated oxide; that its chloride is extremely deliquescent; and that the oxide on charcoal with soda gives lead-gray metallic beads, which are very soft and also ductile.

INGLIS, Judge WILLIAM, born in Baltimore December 29th, 1804, died in New York city, May 29th, 1863. He was of Scottish descent, his parents having emigrated to this country in the early part of the present century. Soon after his birth, his family removed to Petersburg, Virginia, and subsequently to New York, where his father entered into mercantile business and realized a handsome competence. In 1821 the subject of our sketch graduated at Columbia College, and entered the law office of George W. Strong, Esq., with whom he finished his legal studies. In 1825 he was admitted an attorney of the Supreme Court, and commenced the practice of his profession, which soon became very extensive. He was a member of the Young Men's Whig Society, took an active part in all their deliberations, and in 1828 drew up the address of the Society; and was a member of the Whig Convention that nominated Mr. Seward for Governor of the State. In 1839 he was made judge of the Court of Common Pleas, and by his conduct and decisions upon many important cases, while on the bench, he gave very general satisfaction both to the bar and to the public. He had a keen perception of right and wrong, and his decisions were invariably marked by a sound and discriminating judgment which always commanded the respect of the profession. In 1845 after the expiration of his judicial term, he attempted to resume his profession, but his health being somewhat affected, he was obliged to suspend all business for a period of some years, when he again rallied and resumed it; but his constitution was permanently weakened, and he finally sank under the effects of his disease.

IONIAN ISLES. (See GREECE.)

IOWA. The election for State officers was held in Iowa on the second Tuesday in November. The candidates for Governor were William M. Stone, Administration, and J. M. Tuttle, Opposition. The Opposition Convention, which assembled July 8th, nominated Maturin L. Fisher as their candidate for Governor. He subsequently declined, and Gen. Tuttle was nominated by the State Central Committee of that party. Both candidates were in favor of a vigorous prosecution of the war, and of sustaining the Government in all measures for that object, and of making peace only on the unconditional submission of the enemy. The convention which nominated Col. Stone adopted the following resolution:

That we fully and heartily endorse the policy of the Administration, and we will to the utmost continue to

sustain the Government in suppressing the rebellion, and to effect that object we pledge our fortunes and our lives.

Gen. Tuttle, in his letter accepting the nomination, said:

For the present, let us all unite heartily in support of the Government. If the Administration adopts measures for the prosecution of the war that do not coincide with our peculiar views, let us make no factious opposition to them, but yield to the constituted authority. Mr. Lincoln is the legally elected executive of this Government, and during his presidential term we can have no other. The fact that we did not vote for him renders us under no less obligation to support the Government under his administration than if we had been his most ardent supporters.

The election resulted in the choice of Mr. Stone for Governor. The vote of the soldiers was: Stone, 16,791; Tuttle, 2,904. Total, 19,695. The whole number of votes cast for Governor, including the army vote, was 142,314; of which Stone received 86,107, and Tuttle 56,132; scattering, 75. The majority for Col. Stone was 29,975. The Legislature was divided as follows:

	Senate.	House.
Administration.....	42.....	87
Opposition.....	2.....	5

An act had been passed by the Legislature, granting to soldiers the privilege of voting at their encampments, for State officers. For the purpose of taking this vote, the Governor appointed a number of commissioners to proceed to the different camps in other States and hold the election. This measure induced the Opposition Central Committee to address letters to Gens. Grant, Rosecrans, and Schofield, in command of the Western armies, making the following inquiries:

First—Whether the Iowa officers and men of your command will be permitted to hold an untrammelled election under said law; and if so—

Secondly—Whether a member of this committee or any competent agent of their selection will be furnished by you with the same safe conduct and facilities which may be granted to the Governor's "Commissioners," for the purposes of distributing ballots to the officers and men, and exercising the legal right of challenge, as to any vote offered at such elections, which may be supposed to be illegal, and of promoting by other lawful means the fair and impartial holding and return of said elections?

The reply of Gen. Grant was as follows:

HEADQUARTERS, DEPARTMENT OF THE TENNESSEE, }
VICKSBURG, MISS., August 4th, 1863. }

L. G. BYINGTON.

SIR: Your letter of the 6th of July, asking if citizens of the State of Iowa will be allowed to visit this army, and distribute tickets when the election is held for soldiers to vote, &c., is just received. In reply, I will state, that loyal citizens of Northern States will be allowed to visit the troops from their State, at any time. Electioneering, or any course calculated to arouse discordant feeling, will be prohibited. The volunteer soldiers of this army will be allowed to hold an election, if the law gives them the right to vote; and no power shall prevent them from voting the ticket of their choice.

I have the honor to be, very respectfully, your obedient servant,
U. S. GRANT, Major-General.

A case involving the constitutionality of this act of the Legislature was brought before the

court of the 8th Judicial District of the State, Judge Isbell. The court said:

We see no force in any of the objections to the constitutionality of the act except this, whether our constitution requires a personal presence of the voter within the county of his residence, for the last sixty days, in order to vote. We think the whole question narrowed down to this, and the only clause of the Constitution bearing upon it, except by remote inference, is that contained in Art. 2, sec. 1, which provides that "every white male citizen of the United States, of the age of twenty-one years, who shall have been a resident of this State six months next preceding the election, and of the county in which he claims his vote sixty days, shall be entitled to vote at all elections which now or hereafter may be authorized by law." That the affirmative description of a voter contained in this clause implies a negative as to all not coming within it we have no doubt. Otherwise the Legislature could have struck out the word "white" without a submission to the people. We must not confound the voter with the person of the voter. A voter as defined by the clause represents a complex idea made up of several less complex. The word combines the idea of a white person—a male—a citizen of the United States—a resident of the State of Iowa for six months next preceding the election, and a resident of the county, in which he claims his vote, for sixty days. Is not the claiming the vote in the county of his residence as essential to the perfect idea of a voter as that he be white? True, the incidents of citizenship, residence in the county, and the claiming his vote therein, do not inhere in the person of the voter, as do those of age, sex, and color. But do they not equally inhere in the voter by force of the constitutional description? While the primary or leading object of the section may be to define who shall enjoy the right of suffrage, instead of where he shall exercise the right, it is to our mind clear that in describing the voter, an incident is attached to him, which as necessarily limits the place of the enjoyment of the right to the county of his residence (that is, requiring him to claim his vote there), as though it had been the primary object of the section to determine where the right should be exercised. If this is so, it is of little consequence whether the end is attained by attaching such incident to the description of the voter, or whether it be effected by a separate title, headed, "Where the right of suffrage shall be exercised," and a separate section declaring, "Any person entitled to vote shall claim his vote in the county of his residence for the last sixty days." We conclude that the limiting the field for the exercise of the right to the county in which it is claimed is a material feature of the description of a voter by the clause. We can but believe the clause here mentioned is an actual personal claim, in contradistinction to an ideal, or (if such a thing is possible) legal claim. Believing the clause requires a voter to claim his vote in the county of his residence, we must hold such as were cast outside illegal, and, therefore, reject them.

An appeal was taken from this decision to the Supreme Court, and with two other cases came before that body. The court held that:

The Constitution, as applied to the legislative department of the Government, is a restriction, and not a grant of power, and it is competent for the Legislature to prescribe the qualifications of electors, and the time, place, and manner of exercising the elective franchise, when not expressly prohibited from so doing, or when the prohibition is not implied from some express prohibition of the Constitution.

Sect. 1, Art. 2, of the Constitution of 1857, defines only the qualifications of an elector, and does not prescribe the place of exercising the elective franchise, as a test of qualification. The power to fix the place and manner of its exercise is left with the Legislature.

The provisions of an act approved September 11th, 1862, entitled "an Act to amend Title 4, of the Revision of 1860, so as to enable the qualified Electors of the

State in the military Service to vote at certain Elections," are not inconsistent with Section 1, Article 2, of the Constitution of 1857, for the reason that they permit such electors to cast their votes at polls opened and conducted beyond the limits of the county and State, of which they claim to be residents.

The revenues and expenses of the State for the past two years, embracing the war and defence fund, were as follows:

RECEIPTS.

1861.	
Nov. 4.	Balance in the Treasury, of
	State revenue.....
	\$28,039.13
" "	Balance in the Treasury, of
	war and defence fund....
	24,629.93
" "	Balance of both funds in
	Treasury.....
	\$52,669.06
Amount received on account of State	
revenue, during the two years...	866,816.62
Amount received on account of the	
war and defence fund during the	
two years.....	527,352.15-1,446,837.63

DISBURSEMENTS.

Amount paid out for redemption of	
warrants and interest and appor-	
tionment of railroad tax on ac-	
count of State revenue.....	\$695,097.51
Amount paid out for redemption of	
warrants and interest on account	
of war and defence fund.....	710,986.22-1,406,083.73
Leaving balance in Treasury of State	
revenue, Nov. 2d, 1863.....	\$40,754.10

The war and defence funds were derived as follows, to November 1st, 1863:

From sale of State bonds.....	\$277,320.00
" collection of Federal tax.....	302,282.03
" U. S. war expenses refunded..	100,000.90
" all other sources.....	9,018.12
Total receipts.....	\$688,621.05
Excess of warrants issued over amount	
of receipts.....	184,109.13
	\$872,730.18

Warrants have been issued and charged to this fund as follows:

Amt. issued prior to Nov. 4th 1861...	\$233,565.43
" " from Nov. 4th, 1861, to	
Nov. 1st, 1863.....	639,163.85
Total warrants issued.....	\$872,729.28

The State debt, in December, 1862, was \$1,122,296. The number of national banks organized in Iowa in 1863, was seven, with a capital of \$400,000.

The valuation and taxes of the State of Iowa were as follows:

Acres of land.....	28,336,345.	Value.....	\$111,653,109
Town property.....		"	22,992,259
Personal "		"	32,463,106
Total valuation.....			\$167,108,974
State tax, 2 mills.....			334,218

During the year two regiments of infantry and one of cavalry completed their organization, which had been commenced previously, and in addition, twenty-four regiments of infantry, five regiments of cavalry, and one battery, had enlisted for three years.

IRON AND STEEL. Among the most recent statements of facts and principles of interest in connection with the subjects of the working of iron and steel, the composition of the forms given to these in the processes of manufacture, their qualities, their applications, and the modes of protecting structures and articles

composed of iron from oxidation, we find the following especially worthy of record.

Manufacture of Iron and Steel from the Cinders of Furnaces.—Prof. A. L. Fleury, of Troy, N. Y., read before the Franklin Institute, Aug. 20th, 1863, a paper on the subject indicated in the title. Hitherto, thousands of tons of cinders, drawn from the puddling and reheating furnaces, have been thrown away as useless, or have been mixed with iron ores in blast furnaces, to increase the yield—not to improve the quality—of the iron. Analysis shows that these cinders contain from 25 to 50 per cent. of metallic iron, combined and intermixed with sulphur, silica, lime, and alumina. From this material, which had hitherto proved intractable, Prof. Fleury has succeeded in extracting good cast, as well as wrought iron, and even in producing a good cast steel. The two chief difficulties to be overcome, were: 1, that the combination of the iron—metallic and in oxides—with the other materials of the cinders, is such as mainly to withstand the application of heat, even the high heat in a steel crucible; 2, that upon reworking the cinder with lime, either alone or mixed with charcoal and clay, the sulphur, silicium and phosphorus remain in combination with the iron, and the latter is “red-short,” or “red” and “cold-short.”

These difficulties Prof. Fleury has been able to overcome by availing himself of the fact that, when unslacked burnt lime is caused to undergo hydration (slacking) in contact with or while intermixed through sand, the lime will, where in contact with the sand, combine with silica, and to this end will even decompose silicates. Accordingly, having ground the cinders to be treated fine, and mixed with them a proper percentage of powdered burnt but unslacked lime, he then wet the mass through with water, and exposed it in the air to dry. In his first trials, the dry mixture having been heated in a common puddling furnace, and treated in the same mode as pig iron, yielded 50 per cent. [see statement in the succeeding paragraph] of wrought iron, but which, from remaining traces of sulphur, was somewhat red-short. Later, he succeeded in removing this, by previously dissolving in the water to be used for slacking a small percentage of a chlorine salt. The author stated that this process—for which he had patents both in this country and Europe—is also applicable to the working of silicious ores, and can be performed in the puddling, cupola, or blast furnace. The cost of preparation and materials for the process is slight; and, properly worked, the result is invariably a good quality of iron.

At a meeting of the Polytechnic Association, of New York, March 31st, 1864, Prof. Fleury, after speaking in regard to certain other processes of manufacture of steel and iron, stated, in reference to that above described, that he had made more than a hundred experiments for the purpose of ascertaining the best mode of abstracting the metal; and that he had

found a feasible plan to be that of blowing the cinders into the furnace, along with the air-blast. By this method, he had obtained 50 per cent. of the iron in them.

The Bessemer Process for Steel and Iron.—For converting the purer varieties of pig iron into bar iron and steel, this method, it is stated, is among European ironmasters constantly increasing in favor. In a recent communication to the “*Berggeist*,” Prof. Tunner states that thousands of cwt. of Bessemer steel and iron are now annually produced in England and Sweden; that the steel is already an article of commerce in Germany; and that large works for this method are in course of erection in France.

The loss in converting pig iron into steel by this method, is 12 to 15 per cent.; in making bar iron, 18 to 22 per cent. In 5 to 10 minutes, 15 to 20 cwt. of pig iron are converted into steel or bar iron, with very little cost of fuel, and without hand labor. The pressure of blast used is from $\frac{1}{2}$ to $1\frac{1}{2}$ atmospheres, and the amount is 800 to 1,200 cubic feet of cold air of the ordinary atmospheric density. When the proper raw material is used, the steel and iron resulting equal in quality the best of cast steel and of forge iron. The failure of the earlier experiments is now said to be due to the employment in them of an inferior iron. Only good charcoal iron is now adopted for conversion by this method.* In some new iron works, it has been attempted to improve English pig iron—carried to the point of conversion—by the addition of melted Swedish pig iron; and for a like purpose, manganese compounds have been used. The separation, however, of the deleterious materials associated in pig iron with carbon, would appear to remain still an unsolved problem. A high temperature is also indispensable; and this can be attained when large quantities of iron are converted at a single operation: as incidental advantages, the cost is diminished, and the product is more uniform. In Sweden, the minimum charge is 15 cwt.; and with 60 to 100 cwt. the result would be more favorable. That so much larger quantities of the material can be operated upon at one charge is, indeed, one great advantage of the process. For producing the proper temperature, the relative amount of blast to the iron should be carefully regulated: with too little blast, the process is slow, and heat is lost by radiation; with too much, the heat is too largely carried off by the air, and the desired decomposition in the iron is not effected. But in order that the whole mass of molten iron shall be thoroughly penetrated and set in agitation, the pressure of the blast must at least exceed that of the column of iron in the furnace.

Mr. Tunner lays great stress on the employment of a high pressure with hot blast. He believes the conversion would proceed with great regularity and completeness, and that many of the practical difficulties would be overcome, if the blast were heated to 200°—

300° C., or perhaps even to 500°–600° C. Further, to produce a given variety of steel or iron, the process of conversion must be interrupted when the refining has reached the desired point. This may be determined by observing the character of the gases and sparks which escape from the furnace, much as in hearth refining.

Prof. Roscoe has recently stated that, during a certain phase of the Bessemer process, the flame arising from the molten metal exhibits a complicated but highly characteristic spectrum, including the sodium, lithium and potassium lines. It is proposed, accordingly, to apply the spectroscope to the examination of the gases evolved from the melted steel, in order to determine the point at which the required effect is produced, and so to arrest the operation at the right moment. The accounts we have met with do not state, however, the form or character of the spectrum which is regarded as affording the desired test.

The cost for furnace repairs, in the Bessemer process, is less than was anticipated; but the waste product—20 to 30 per cent., when the iron is made into bars—demands consideration, no use having yet been found for this impure product. But, compared with the puddling process, that of Bessemer is yet merely in its infancy. Upon the subject of this process, Prof. G. J. Brush remarks: "A wide field is open for the application of Bessemer's process in this country, where pure iron ores, fully equal in quality to those of Sweden and Norway, occur in such abundance."

Desulphuration of Iron.—Prof. Richter, of Leoben, Austria, has studied the various means of depriving iron of sulphur. One of the best, hitherto, he regarded as being that of the addition of binoxide of manganese; but this being infusible, there is doubt whether it can be thoroughly incorporated with the iron; and the latter may also be deteriorated by impurities which the commercial oxide is liable to impart to it. The fact of the powerful oxidizing action of litharge (protoxide of lead) suggested to the author the employment of this material; and upon trial of it he found that it not only removed the sulphur in the puddling process, but that it oxidized also the phosphorus contained in the iron. The experiments were made near Wolfsberg, in Carinthia, with 7 cwt. of pig iron, which contained so much sulphur that it was impossible to convert it into bar; to this mass were also added 3 lbs. of sulphide of iron, and $\frac{1}{2}$ lb. of phosphide of iron. After complete fusion of the whole, 3 lbs. of litharge were introduced, and the fusion continued. The success was complete; the puddled bar proved neither hot nor cold-short, and could be forged into iron for scythes; whilst a similar quantity of cast iron, puddled without litharge, crumbled to pieces under the hammer. The author supposes that in some instances metallic lead may be preferable to litharge.

Phosphorus in Cast Iron.—Capt. H. Caron, director of the French Imperial Laboratory, in a note presented to the Academy of Sciences, states that the many attempts he has made to eliminate the phosphorus from cast iron have thus far been unsuccessful; and he has even established that the iron absorbs a great part of whatever phosphorus it may find around it at the moment of its formation, especially if the slags be silicious. Having several times treated ores free from phosphorus with charcoal to which phosphate of lime and silica had been added, he had always found in the iron almost the whole of the phosphorus which the phosphate could yield. Thus, in reducing a carbonate of iron from Benndorff in a crucible lined with charcoal mixed with phosphate of lime, the quantity of the latter being so calculated as (theoretically) to introduce $\frac{1}{4}$ per cent. of phosphorus into the cast iron, the results of six experiments gave the actual quantity of phosphorus taken up by the latter at from .92 to .82 of 1 per cent.

No way, then, appearing to exist for removing phosphorus from cast iron, and the two materials always combining when they meet (in fusion), it becomes important to remove from the process all sources of the hurtful metalloïd; and one important point, too often overlooked, is that of the chemical composition of the fuel employed. Almost every wood contains phosphorus; and to such extent that its charcoal will impart to an ore free from this element at least .2 per cent. In this proportion phosphorus is not hurtful; but when it rises to about .7 per cent., its injurious properties begin to be manifest. Hence, fuel should be used which cannot yield to the cast iron this proportion of the element. Now, different woods contain different proportions of phosphorus, depending both on the soil and on their species. For example, the oak from *La Roque-les-Arts*, whose ashes contain but .008 of phosphoric acid, could not be replaced by the hornbeam of the Somme and the Nieve, whose ashes contain from .09 to .1 of that compound. The two woods yielding about the same amount of ashes, it is evident that the oak which could introduce only about .12 per cent. of phosphorus into the iron, would be preferable to the hornbeam, which might introduce at least 1 per cent.—*Technologiste*, Oct., 1863.

Action of Manganese in the Working of Iron for Steel.—Capt. Caron has also communicated to the French Academy of Sciences the results of a series of important experiments, made with a view to ascertain the part actually played by manganese in the manufacture of steel. Manganese does not carry off the phosphorus of the iron; but in presence of manganese the sulphur will disappear, even without refining; and in the process of refining, silicon is also in great part removed. He states that the results of practice confirm these conclusions: for the minerals—previously cited by

him in the details of his experiments—which yielded the best steel, had frequently contained sulphur, but never phosphorus; and even if they had contained coppery pyrites, the cast iron derived from them was free from sulphur.

Although, as has been well demonstrated by Karsten, manganese is not to be regarded as a “steel-ifying” body, yet it has incontestably the property of rendering steel better, and above all, more durable: this power, it is now not difficult to explain. When to a gray cast iron, of which the carbon is chiefly in a free condition, there is added a sufficient quantity of metallic manganese, the result is a white cast iron, in which the carbon is almost entirely in a state of combination. The effect is similar in case of steel; a very small portion of manganese suffices to retain the carbon in the state of combination, and to impart to the metal the conditions characterizing steel of good quality. But steel should never contain more than the half of 1 per cent. of its weight in manganese; as beyond this limit, it becomes hard and brittle, and loses a great part of its tenacity. Manganese has moreover the property of rendering steels weldable which otherwise are not so.

It is not uncommon with iron masters, in order to improve the quality of their products, to mix together ordinary and manganesian cast irons, and then to refine the mixture. The author's experiments went to show that in such cases the purifying effect is in direct proportion to the amount of manganese contained; so that, with this view, it becomes important so to reduce manganesian ores as to retain the largest possible quantity of this metal in the cast iron. Thus, though the spathic iron ore of Siegen contains 15 to 20 parts of manganese to 100 of iron, yet the cast iron derived from this mineral retains scarcely more than 6 or 7 per cent. If it were practicable, by changing the management of the furnaces, or the nature or proportions of the fluxes, to increase this proportion to 10 per cent., it is certain that cast iron of greater commercial value would be the result.—*Technologiste*, June, 1863.

Mr. Robert Mushet states, in the London “Engineer,” his opinion that the employment of the oxide of manganese has [in England] revolutionized the process of steel making. As first applied by Mr. J. M. Heath, of Sheffield, in the way of mixing a small quantity of the oxide with the carbon and iron in the smelting-pots, the mode has come to be known as “Heath's process”; but the writer stated that the suggestion of the use of manganese was made by his own father to Mr. Heath. “To this great invention,” he writes, “the Sheffield manufacturers now owe four fifths of all their wealth and prosperity.” In his opinion, “the process of Heath does not alloy manganese with steel; the manganese simply acts as a flux, and is never metallized at all. The affinity of manganese for oxygen is most powerful; and even

under the most favorable circumstances, closely combined with carbon, it is exceedingly difficult to metallize oxides of manganese.”

Tungsten, and Titanium, in Cast Iron and Steel.—Mr. Mushet, in continuing to devise new methods for the improvement of cast iron and steel, has patented a series of processes including the use of a great variety of mixtures—1, of cast iron with such materials as bin-oxide of manganese, powdered red hematite, powdered tungsten, and chromium, or chromate of iron; 2, of steel, or of both a certain form of steel and of iron, or of one or two other forms of cast iron, with one of the previous mixtures. For example, he forms a mixture (designated as No. 1) of $5\frac{1}{2}$ to $7\frac{3}{4}$ lbs. of gray cast iron from red hematites, with about from $3\frac{1}{2}$ to 12 oz. of bin-oxide of manganese, and about 17 oz. of tungsten, the whole in powder; and this mixture is then used to improve the quality of steel, by adding in the puddling process the quantity just given to every 45 lbs. of the steel or iron operated on; as, to Swedish bar, ordinary cast iron, puddled steel, &c., about 1 per cent. of the weight of such material in charcoal, being also in some cases added.

Mr. Mushet proposes also to produce a superior titanium iron, and suitable for making steels and irons of the first class, by adding in the furnace to each charge of red hematites 10 to 20 per cent. of an ilmenite rich in titan-ic acid and oxide of iron, and as free as possible from earthy matter, pyrites, tin, cobalt, arsenic, or copper; or in more economical working, owing to the refractory nature of the ilmenite, from 5 to 10 per cent. of this mineral.

In fine, it may be said that this latter process consists in securing a triple metallic combination or alloy of iron, titanium, and manganese, containing also carbon, by means of melting together, by heating with coal, coke, or charcoal, a combination of ilmenite and of spathic iron or other manganesian iron ore, containing a large proportion of oxide of manganese—in a manner to bring the whole to a metallic form. He then adds some of this triple alloy, holding carbon, to cast steel or homogeneous iron, in whatever manner produced, in order to ameliorate the quality of the steel produced; or finally, previous to such addition, he decarbonizes in part or wholly the alloy; and he claims that the small quantity of silicium contained in this in no way deteriorates the quality of the steel or iron so made.—*Technologiste*, Dec., 1862.

A series of experiments has been carried out by Capt. Caron, under the direction of the French minister of war, in order to ascertain the effect upon the hardness and capability of resistance of bronze, cast iron, and steel, produced by addition to these respectively of a small percentage of the metal tungsten. The report concludes with a statement to the effect that probably no advantage is to be derived from adding tungsten to bronze, while it de-

clines to speak favorably of the like addition to cast iron; but it recommends the employment of this metal in case of the manufacture of steel, as giving to the latter qualities which enhance its value. We have not met with a statement of the percentage of tungsten recommended; but the additional cost is said not to exceed about 70 cents per cwt.—*Ibid.*

The experiments of M. le Guen, made at the military post of Brest, give a conclusion at variance with that part of the report just referred to, which relates to cast iron. He is led to conclude that cast iron, composed of old and new iron in proportions which give great strength, is made yet stronger by the addition of less than two per cent. of tungsten. In one case, after two fusions, the resistance to fracture was increased by more than one third. The superiority was maintained after several fusions; and the cast iron so treated was rendered tougher and more elastic. The addition of the tungsten was easy, as it merely required pulverizing, without previous reduction.—*Technologiste*, June, 1863.

Mr. Edward Riley, F.C.S., finds that in certain sorts of iron titanium is abundant; and as this metal is found in clay, he thinks its presence in the former due to employment of clay iron ore. In two analyses of Norwegian ore, he found 36.88 and 40.80 per cent. of titanic acid present. In Belfast iron ore, dried at 280° F., he found 3 per cent. of this mineral. He believed that titanium, like manganese, exerted some beneficial influence on the manufacture of iron and steel: possibly, the titanium, by its affinity for carbon and nitrogen, acted as a carrier of cyanogen to the steel.

Chemical Composition of Cast Iron.—M. Rammelsberg, in a communication to the Academy of Sciences of Berlin, gives the results of his recent analysis of the cast iron of Müsen. He found this to contain 5.8 per cent. of combined carbon, and also graphite—the latter presenting itself in lumps. Silicium was also present, and, apparently, titanium. The graphite from the iron, after being washed in ether and alcohol, and dried, presented the aspect of pure graphite. The author concludes that it is correct to regard specular iron as a combination of iron and carbon; but that Karsten is wrong in supposing this the form which contains the largest proportion of carbon. Without having its external characters altered, such iron may contain variable quantities of carbon. Those irons which have most carbon in them also contain most silicium.

The Effect of Tempering on Steel.—Karsten had remarked that, in acting upon *untempered* steel by acids, there is retained as residue a graphitic material which, when *tempered* steel is substituted in the process, does not appear; the graphitic material he considered to be a definite combination of six atoms of carbon with one of iron. Capt. Caron has lately taken up this subject, of the carbon in steel, with especial reference to the influence exerted

upon the latter by hammering, and by tempering.

In the many experiments made by Caron with a view to this question, he has never found Karsten's definite carbide of iron, or graphite; but he observed that the supposed carbide of iron varied in composition, not only with the quality of the steels and the nature of the solvents employed, but further, even with the form and the dimensions of the piece of steel analyzed. He was thus led to infer that the supposed carbide of iron is probably no more than a *mixture* of the carbon and metal, and in which the latter happens to be mechanically protected by the carbon against the solvent action of the acid used. He accordingly selected pieces of steel which had passed through the process of cementation, but were in three different conditions; namely, 1, untempered; 2, do., but hammered; 3, tempered. To each of these, placed in separate vessels, was added a like quantity of concentrated chlorhydric acid; and they were then together subjected to heat in a stove. It was readily perceived that the graphitic matter was not in equal quantity in the three vessels; and that, in the one holding the tempered steel, it was well-nigh wanting. Separating—by a course of treatment detailed in the article we quote from,—and analyzing the graphitic material afforded by the three samples of steel, the following were the results obtained. The three conditions of steel, in quantities of 100 grammes of the metal of each dissolved, yielded—for the untempered, 1.624 grammes of residue; for the hammered, 1.243 grammes; and for the tempered, 0.240. And the analyses of these showed:

	Untempered; grammes.	Hammered; grammes.	Tempered; grammes.
Carbon	0.825	0.560	traces.
Iron.....	0.557	0.445	traces.
Silicium.....	0.242	0.238	0.240
	1.624	1.243	0.240

Here, the effect produced in a complete manner by tempering, is found to be in part realized by hammering: and the qualities which constitute steel appear to be enhanced at the same time that the proportion of the carbon in intimate combination with the iron is augmented. At the same time that hammering improves steel, it diminishes the proportion of carbon that acids can separate from the latter; and these apparently related results are both seen to be manifested, and in much higher degree, in steel that has been subjected to tempering. But the effect of heat is directly the opposite, both upon steel and cast iron; the effect of annealing either of these, for some hours or days, being continually to increase the proportion of the carbon that acids will set free from the metal, at the same time that the strength and quality of the latter are impaired. M. Caron concludes that the affinity of carbon—by itself—for iron, is feeble; but that this affinity

may be powerfully modified by introducing into the steel certain elements foreign, or apparently so, to its constitution. (See *Action of Manganese, &c.*, above.)

Having shown, now, that the effect produced in a complete manner by the tempering of steel is in part realized by hammering, this effect being a (mechanical) combination of carbon with the iron, M. Caron is led to explain the phenomenon of tempering by the supposition that in cooling rapidly a piece of steel, the metal is in reality submitted to an almost instantaneous compression, and which has a very considerable analogy with the shock produced by the blow of a hammer. This supposition, also, experiment appeared decidedly to confirm. A bar of steel of known measurement, tempered by suddenly cooling from a red heat, was found reduced in all its dimensions below those which it had at such heat, though these were still greater than those it had before the single tempering; in case of repeated temperings, the length soon becomes less than that of the original bar, and goes on diminishing, though in such case the other dimensions usually enlarge at the same time, and in proportions such that the density may be reduced. M. Caron concludes that, while heat has the effect to considerably dilate the metal, and to give to the molecules of iron and carbon the requisite mobility to allow of their being brought into union, the rapid cooling in the process of tempering has then the effect to bring the unlike molecules so quickly one upon the other, that the action is like that of the shock of a hammer, and the consequence to occasion the intimate combination of the two which takes place. But the action of tempering is more effectual, in that the contraction of the metal really takes place in all directions at once; while, in hammering, the action is exerted only in a single direction. And, what is still more important, the heat due to hammering in part destroys the effect that would result from the blows; but in tempering no such counter-action is possible, since while the shock is being imparted to the metal the latter has also grown cold.

Finally, the author has experimented in the way of tempering steel in a great variety of liquids, such as mercury, oil, water charged with different salts or acids, water covered with oil, or holding mucilages or sirups in solution, &c.; and he has found that the hardness, temper and other effects due to the process appear always to be induced in a degree which is inversely proportional to the square of the time occupied in the cooling of the metal.—*Technologiste*, March, 1863.

Strength of Wrought Iron and Steel.—Mr. David Kirkaldy, of Glasgow, Scotland, has recently published a volume embodying the results of his experiments made upon many hundreds of bars, plates, bolts, angle irons, &c., and the subject has also been discussed upon the reading of a paper embracing these

results, before the Scottish Engineers' Association.

Mr. Kirkaldy has been led to conclude that the breaking strain alone of iron or steel does *not* furnish a true indication of its quality; that a *high* breaking strain may be due to the iron's being of superior quality, dense, fine, and moderately soft, or simply to its being very hard and unyielding; and a *low* breaking strain, either to looseness and coarseness in the texture, or to extreme softness, although in this case accompanied by very close and fine quality. In an age in which iron is becoming so extensively used, as in the present, in the construction of machinery, engines, buildings, bridges, ships, &c., it becomes in the highest degree important that the qualities of this material should be thoroughly understood; and especially, that the best modes of determining its strength should be ascertained. The author concludes that the true test of strength for practical purposes, both of iron and steel,—obtained, however, only by the actual breaking of a bar,—is to be found in a consideration, *jointly*, of the area of section of the bar given at the place of fracture, with the breaking strain. In other words, the ratio of strength of two bars is not, as heretofore supposed, a simple one depending on comparison of the breaking strain simply of the two; it is a compound ratio, into which, besides the comparison of breaking strains, there must enter also the inverse ratio of the areas of fracture. Thus, if two bars part at the same degree of strain, that which before breaking has been drawn to the smaller section at the place of fracture will, for practical and safe loads, prove the stronger. The author accordingly introduces a new standard or unit of measure for the tensile strength of bars, plates, bolts, &c.; namely, "the breaking strain per square inch of the fractured area of the specimen, instead of the breaking strain per square inch of the original area." As a corollary, he submits that the working strain, or safe load, should be proportioned to the indication of the former test, and not to that of the latter and heretofore usual one.

Mr. Kirkaldy gives the breaking strain of steel lower than Barlow had done; but the pieces he experimented on were not in so favorable form for exhibiting strength, as were those tested by the latter. In case of wrought iron, of 188 rolled bars the mean strength was $25\frac{1}{2}$ tons per square inch section; of 72 bars of angle iron, $24\frac{1}{2}$ tons; of 167 plates, lengthwise, 50,737 lbs., and of 160 plates, crosswise, 46,171 lbs.,—mean of both, $21\frac{1}{2}$ tons per square inch. The breaking strain is generally assumed to be about 25 tons for bars, and 20 tons for plates; but a wide difference of opinion exists as to the proper working strain, *i. e.*, the load which shall be safe in practice. This has been variously stated at from *a third* to *a tenth*. The circumstance of the *quality* of the iron, as affecting the working strength, has been in the past too much overlooked. The new experi-

ments reveal the somewhat startling fact that, frequently, kinds of iron which the mere test of breaking strain would decide to be inferior, actually yield for working loads a better result than certain others which would be regarded as superior to them. Though the softness of the material has the effect of lessening the amount of the *breaking* strain, it has the very opposite effect as regards the *working* strain; and this for two reasons—first, that the softer iron is the less liable to snap; second, that fine or soft iron, being uniform in quality, can for this reason also be more depended on in practice. Hence, the load which this description of iron can suspend with safety, may approach much more nearly the limit of its breaking strain than can generally be attempted with the harder, or in any case with the coarser sorts. The author does not pretend to say what the ratio of safe load should be; but he maintains that some kinds of iron experimented on by him will sustain with safety more than double the load that others can be trusted with; and this, especially, in cases in which the load is unsteady, and the structure exposed to concussions, as in a ship, or to vibratory action, as in a railway bridge.

That iron or steel which is subjected to an exceedingly great number of concussions, or vibratory or tensile strains, and which for a long time it apparently bears without injury, will as a consequence of such action finally break, is well known; and equally well, the fact that when under such circumstances breaking does occur, the metal at the place of fracture presents a highly granular or else a crystalline texture. The theory has accordingly become quite prevalent, that the texture described is gradually induced in the iron, the latter in this way becoming weakened, until it breaks. On this point, however, and as the result of his experiments, Mr. Kirkaldy states that when iron is fractured *suddenly*, the crystalline appearance is invariably presented, even, it would seem, if the bar or plate be at the time in the condition of good fibrous metal; and that, when the fracture occurs *slowly*, the appearance is invariably (*sic*) fibrous. He states that in the fibrous fractures the threads are drawn out, and are viewed externally; while in the crystalline fractures the threads are snapped across in clusters, and are viewed internally or sectionally. From this view, it would follow that the same bar or plate may be fractured in one part in such way as to appear fibrous, and in another part immediately afterward in such way as to appear granular or crystalline.

Among the other conclusions announced by Mr. Kirkaldy, many simply reaffirm, or but slightly modify, principles already generally accepted in regard to the working and strength of iron; while still others of his propositions, for which space cannot here be given, are quite novel. He finds that galvanizing of ordinary plates produces no sensible effect on their

strength; and that iron and steel are rendered stronger by cold rolling, and by wire-drawing. Steel is weakened if cooled from a high heat by plunging in water, but strengthened by being in the like case cooled in oil; and the more highly the steel is heated (without, of course, running risk of its being burned), the greater, upon cooling it by plunging in oil, is the increase in its strength.

In the discussion following this paper, Mr. W. Simons remarked that, in accordance with the results of the experiments made, the longitudinal fibre of iron used in shipbuilding must hereafter be placed in the direction of the most constant strain—a principle not hitherto regarded in such construction. Mr. B. Conner mentioned that, in experiments lately made at Sheffield, it was observed that the steel which bore the least tension the best withstood concussion. Prof. W. J. M. Rankine stated that ungalvanized iron is really a shade stronger than the galvanized, but that the latter is the more extensible; so that, in case of galvanized wire-rope, what is lost in absolute tenacity is made up in extensibility, the rope being through this quality better able to resist a shock.

An article of considerable length upon the subject of the "*Relations between the Safe Load and the Ultimate Strength of Iron*," from the pen of the eminent engineer, Zerah Colburn, and which is valuable, as affording a condensed summary of the results secured by the most careful and trustworthy experimenters up to a recent period, in relation to the subject named, with a consideration of their applications in practice, appeared in the London "*Artisan*," for April, 1863, and will be found reproduced in the "*Journal of the Franklin Institute*," Sept. and Nov., 1863.

In this article, speaking of Mr. Kirkaldy's experimental results, then recently published, and especially in regard to his proposed new standard of tensile strength, Mr. Colburn says: "The reduction of diameter of a bar at the point of fracture serves to give a practical man a good idea of the quality of the iron, but it does not admit of an expression of the mechanical work done in producing fracture, as do the combined breaking weight and linear extension. In tearing a bar in two, also, we have to consider the permanent stretch communicated to all parts of the bar alike, and the additional stretch at and near the point of fracture. That part of the stretching which extends uniformly throughout the whole bar would, we may suppose, be exactly proportional to the length of the bar, while that part of the stretch which takes place close to the point of fracture would, we may also suppose, be a fixed quantity, whatever might be the length of the bar. Mr. Kirkaldy's specimens of iron and steel varied from 2.4 to 8.2 inches only in length; and with these the ultimate elongation at fracture varied from nearly nothing to 27 per cent. of the original length, whereas longer bars would have shown a proportionally less elongation.

The samples which hardly elongated at all, were of puddled-steel ship plates. One sample, which bore 63,098 lbs. per square inch of the original area, stretched before breaking but the $\frac{1}{20}$ th part of an inch in a length of 7.6 inches, or less than $\frac{7}{100}$ ths of 1 per cent. of the length. Adopting Mr. Mallet's co-efficient, the structural value of such a material would be almost nothing. In fact, Mr. Kirkaldy found the puddled-steel plates throughout to have much less extensibility than cast-steel plates, while the former also were of very irregular breaking strength."

Additional Facts respecting the Relation of Vibratory Action, and Texture, to the Strength of Iron.—Prof. Wm. Fairbairn read before the Royal Society, Feb. 4th, a paper detailing certain experiments made by him in regard to the effects of impact, vibratory action, and long-continued change of load, upon wrought-iron girders, and with a view to determine the strength and form of iron tubular bridges, and the extent of strain to which girders may safely be subjected. The arrangement he employed was designed to imitate as nearly as possible the strain to which bridges are subjected by the passage of heavy trains, and also beams by lowering the load quickly upon them, and by producing a considerable amount of vibration. His test girder was a wrought-iron plate beam, 20 ft. long. Upon it, by means of a mill driven by water power, a weight was allowed to fall, day and night, at intervals such as to produce about 80 concussions a minute. From the results of these experiments, the conclusions are drawn, that wrought-iron girders are not safe when subjected to violent disturbances equivalent to one third the weight that would break them; but that, when these are equivalent to one fourth the breaking weight or blow, the tenacity remains unimpaired.

An abstract of this paper having been read before the Polytechnic Association of New York, March 17th, 1864, and a member having stated that (as hitherto quite generally held) vibratory motions tend to disintegrate wrought iron by inducing in it a crystalline texture, Mr. Fisher alluded to the opinion of the late Mr. I. K. Brunel, to the effect that the peculiar molecular arrangement of the iron in such cases is not a result of the previous tremulous motions, but is produced *by the blow* causing the fracture—a view which, at first, perhaps, appearing to be the same with that of Mr. Kirkaldy, is in reality quite different; since the latter does not allow that a granular or crystalline texture *can* be produced in fibrous iron, but only that the iron can have its fibres so broken as to simulate such a texture.

Mr. T. D. Stetson thought Fairbairn's experiments and results chiefly valuable as an attempt to show at what precise degree (concussive) strains begin to be destructive. He was willing to believe that the rapidity of the act might greatly affect the appearance of the fractured surfaces; but any doctrine in this direction

would be productive of evil if carried to the extreme of supposing that there were not great actual differences in the structure of metals. He instanced as common the cases of axles which, after breaking, showed that some of the bars of which they had been formed were far more fibrous than others piled in the same axle. The great mass of cast iron which some years ago, at the Novelty Works, in this city, became cooled before it could be poured, was when cold broken open in the slowest manner by very tapering wedges; but its interior was found to be in large crystals, while its exterior showed a fine texture. These results he inferred to be due to the facts that the outside of the mass was cooled rapidly, and the inside very slowly. The manner of breaking could not, in this case, have affected the molecular arrangement.

Applications of Steel.—At a late meeting of the South Wales Institution of Civil Engineers, Mr. Parry stated that steel rails laid down on the Midland Railway nearly 6 years ago, and over which trains have since passed 700 times daily, are to this hour uninjured. These rails were made by Mr. Mushet's process.

Rails of steel made by the Bessemer process have been laid down—in 1862, it would appear—on the London and North-western line. These were laid parallel with others of the very best iron; and although, it is stated, the latter had to be on several occasions renewed, the former still showed very little appearance of wear. The result, showing apparently a decisive advantage of steel over iron rails, had led the directors to arrange for the production, at Crewe, of 10,000 tons per annum of the new style of rail.

Experiments have been made in Prussia to ascertain the capabilities and advantages of cast-steel steam boilers. Two cylindrical egg-end boilers, one of steel, the other of wrought iron, were brought into comparison, and, after working 6 months, examined. They were 30 feet long and 4 feet in diameter. The steel boiler plate was $\frac{1}{4}$ th inch in thickness; and the boiler tried by the hydraulic test to a pressure of 195 lbs. to the square inch, showed neither alteration in shape nor leakage. After working six months, the cast-steel plates were found quite unaffected, and, as compared with the other boiler, had moreover a remarkably small amount of incrustation. This boiler had also generated about $\frac{1}{4}$ th more steam than the other. Another examination was recently made of boilers which had been in use 18 months. The steel boiler was found in excellent condition; and with about the same expenditure of fuel, it had evaporated 11.66 cubic feet of water per hour, against 9.37 cubic feet per hour by the common boiler.

Steel-wire ropes are now gradually displacing those of iron wire, for hoisting minerals from mines. The iron-wire ropes, in order to possess a given strength, must be much thicker, and accordingly much heavier, than those of steel.

Steel drills for shaft sinking, it is also stated, are taking the place of the old iron drills, steeled.

A trial is now being made of steel stamp heads for crushing ores—the fragments of the cast-iron ones heretofore in use, not unfrequently becoming mixed with the ores, and in this way often causing trouble.

Mr. Charles Bathoe states that, in India, glaziers never use a diamond to cut glass, but do all their glass-cutting with a hardened steel point. He has himself hardened steel so that it was as brittle as glass, by plunging it at nearly a white heat into iced water.

Coloring, Bronzing, and Preserving Iron and Steel.—Mr. H. A. Bonneville, England, has patented a method of accomplishing the purposes indicated, and which consists, in brief, in effecting the following results, namely: First creating at the surface of the iron or steel an adherent coat of peroxide of iron, he then, secondly, under the influence of water at an elevated temperature, transforms this into the black oxide, which contains a less proportion of oxygen; thirdly, he renews the operation until the adherent black coat is of sufficient thickness; fourthly, he immerses the articles in a bath of lukewarm water, for the purpose of removing any acidulated or saline particles that from the previous processes may remain adhering to the coat of oxide; and, lastly, dresses this coat by rubbing it with olive oil.

Protection of Iron from Rusting.—The reader will find a statement of certain methods that have been proposed or adopted for accomplishing the important end here indicated, in the section entitled "Preserving the Bottoms of Armored Vessels," under the head of "NAVY, UNITED STATES," in this CYCLOPÆDIA for the preceding year; and incidental mention of one or more such methods also, under the head of "CHEMISTRY," in the same volume, and in the present. The object of the process in the section preceding this, it will be seen, is that of producing (in a mode different from painting) a coat which shall afford a good color as well as protection.

In two articles appearing in the "Scientific American," of October 31st and November 7th, 1863, a summary is given of some of the more important (chiefly English and French) processes patented or brought into use since the year 1739, but principally since about the year 1840, for protecting from oxidation surfaces of iron which may be exposed to the action of salt water, or to rains, or the action of damp air, the earth, &c. Much of the information thus given is condensed from a longer article which had appeared in Mitchell's "Steam Shipping Journal;" and it is made to include (in the article for November 7th) a brief notice of processes for preserving timber. Among the methods of more recent date named for the protection of iron in different situations from rusting, are these: in 1860—that of Mr. M. Allen, for the application of gas-house tar to

the inside of boilers, and to ships; that of Mr. R. Smith, for a mixture of pitch, tar, resin, and asafœtida, in turpentine, to the bottoms of vessels; and that of Mr. G. Hallet, for a paint composed of oxide of antimony and linseed oil; and in 1861, that of Mr. John Snider, of this country, for a composition of finely-powdered amorphous graphite with linseed oil and beeswax, for coating ships' bottoms; and that of Messrs. Hallet and Stenhouse, for a mixture of native oxides of antimony with red lead, as a paint for iron.

At a meeting of the Institute of Naval Architects, held during the past year in London, Prof. W. J. Hay, of the Naval College at Portsmouth, described a composition for which he had obtained a patent in 1861, though he had been making trials of it since 1857, and which is said to be very effectual for its purposes. In preparing this, a sub-oxide of copper is roasted until it has absorbed sufficient oxygen to convert it into black oxide; it is then reduced to powder, and boiled in linseed oil, until the mixture assumes a puce color. This mixture should be moderately thick or consistent, when applied. The armor-clad frigate *Warrior*, it was stated, was coated with this paint; and further, that when this vessel was docked after having been nine months in service, no signs of oxidation were observable in the plating, and the bottom of the vessel was comparatively clean.

In the "Jour. of the Society of Arts," No. 559, appears an account of a process patented by Prof. J. P. Jouvin, chief medical officer of the French navy, and claiming to be a mode of "preserving iron-plated and other vessels, and metallic articles, from oxidation, and preventing ships' bottoms from fouling,"—the article appearing also in the "Jour. of the Franklin Institute," Dec., 1863,—the method itself being said, however, to be essentially a revival of that of zinc protectors patented by Mr. John Revere, in 1830.

In Jouvin's plan, the inner surface of ships' sides and bottoms, perfectly scoured, are lined with sheets or laminae of zinc, applied directly against the sheet iron, and there held fast between the latter and the frames. The difficulty of applying such a lining in ships already afloat, has led to the substitution for these of a double coat of a paint of powdered metallic zinc, applied, after scouring as before, all over from the keel up to a little above the water line: the paint, owing to the fatty matter it contains, being a less decided electric protector than the metal, the area of the protecting surface is increased. In case of iron ships in course of construction, both the powdered zinc and the sheets are applied, the former first upon the frame, &c., when first set up, and also upon the inner skin, beneath the included timbers of the hull. Holes are left in the plates for the rivets—to be put in hot; and when the riveting is completed, the spaces including the rivet-heads are covered with the paint. The

protecting bands of zinc; properly fixed from the keel up to the water line, need cover only from two thirds at maximum, to one tenth at minimum, of the surface to be protected, the intervals being covered with the zinc paint. In iron-plated vessels, the paint is applied upon the wooden hull, or the sheets between it and the plates, the latter first being well painted also on the inner side.

To protect the exterior of the hull under water from the deposit of marine shells and plants, Prof. Jouvin applies a mixture of turpeth mineral (sub-sulphate of mercury), Prussian blue, and red lead, in boiled linseed oil, from the contact of the two first-named of which salts with the alkaline chlorides of sea-water he declares the powerfully poisonous cyanide of mercury to result. This paint is applied over two previous coatings of that of metallic zinc, the hull having been first well scoured. To preserve sheet-iron tanks, marine boilers, steam engines, and other similar constructions from oxidation, the inventor either applies on them externally zinc sheets, or coats them with a double layer of the zinc paint. To preserve the parts of cables and chains, situated within wells, and liable to rapid oxidation, a band of zinc is fastened on each ring or link by screws. The paint also may be applied to iron articles in general, as a substitute for red paint, and wherever the latter is now used.

A mode of applying copper sheathing upon iron or iron-clad ships, which has been mentioned, is that of planking with wood to a little above the water line, countersinking the bolt-heads, covering the whole with a coating of asphalt and then with felt, to secure electrical insulation, and then sheathing over all with copper. Copper sheathing which fouls may be protected by painting with Jouvin's poisonous compound, above described.

A new and peculiar method of protecting iron ships has lately been patented in England. The covering applied on the metal, and which is known as "Brown's vitreous sheathing," consists of a coating of glass fused with small plates of iron, the whole intended perfectly to prevent the contact of sea-water with the iron, and at the same time to possess a certain degree of flexibility.

Mr. F. Crace Calvert recommends that, for the preservation of the material of iron-plated and other ships, all the iron used in shipbuilding should be galvanized. In some experiments performed by him in the years 1862 and '63, in the way of immersing in distilled and also in sea water, pieces of wood, some coated with iron only, and others with galvanized iron, the corrosion and loss of the galvanized iron plates in both the soft and the salt water was very small compared with that affecting those of ungalvanized iron. He believes that the galvanizing of the bolts and other iron used about wooden ships will greatly lessen the decay of the wood itself, with which the iron is in contact. And in order to

determine the force of adhesion of the zinc coat applied in galvanizing to iron, he caused large galvanized bolts to be driven with a sledge hammer into solid blocks of oak, and also screws to be forced into similar blocks: upon then opening the blocks so as to release the bolts and screws, the latter were found to be not in the slightest degree uncoated.

In course of a discussion, during the summer of 1863, before the Society of Arts, London, Mr. C. F. Varley said, in reference to galvanized iron, that all attempts to use this for roofs in large towns have failed, from the circumstance that some component of the smoke attacks and corrodes the galvanized metal; while tinned iron does not resist the action of smoke so well even as zinc. All the experiments he had seen for coppering iron, failed, unless done in a manner too expensive for general use. He thought that what is required is a covering of iron with lead, or lead and antimony, so as to combine the stiffness and cheapness of iron with the durability of lead. Col. T. P. Schaffner stated that in some countries it is practicable to cover houses with tinned iron; and that in America this is largely used instead of lead. In St. Petersburg and Moscow, iron is mostly used, but it requires frequent painting. In the telegraph service, he has tried many experiments for the preservation of the wires, as by galvanizing, and the use of linseed and other oils; and though he had boiled the wires in linseed oil, with good results, they would still decay. Mr. Varley, sen., stated that if iron is heated and passed through oil, the pores become filled, and the metal lasts a long time. Mr. Revely mentioned that iron heated and covered with asphaltum had resisted a moist atmosphere for fifteen years. He had found the natural asphaltum best for this purpose, and had not succeeded so well with the liquid bitumens. In case of all other protecting materials, he had found that rusting would begin underneath them. Mr. John Braithwaite stated that the means of preventing oxidation adopted by his father, and followed by himself during the past fifty years, was that of painting the iron with red lead. White lead is of no value for such purpose. He had inspected a well, 200 ft. deep, in which were rods connected with an engine, and placed there by himself forty-five years ago: these rods were at the first painted with pure red lead, and upon taking them up after the lapse of that time, he found their weight precisely the same as when they were put down.

ITALY, a kingdom in Southern Italy, which now comprises the whole territory inhabited by Italians, with the exceptions of the Papal States, which form an independent State, Venetia, which belongs to Austria, Corsica, which belongs to France, and the canton of Tessin, which belongs to Switzerland.

The king of Italy is Victor Emanuel II., born March 14th, 1820, the eldest son of King Charles Albert, of Sardinia. He succeeded to the

throne of Sardinia on the abdication of his father, March 23d, 1849. By the Treaty of Villafranca, July 11th, 1859, and the Peace of Zurich, Nov. 10th, 1859, he obtained Lombardy, part of the Papal States, and the Duchies of Parma and Modena, while the Grand Duchy of Tuscany was annexed by decree of March 22d, 1860, and the Marches, Umbria (likewise part of the Papal States), and the Two Sicilies were added to the kingdom Dec. 17th, 1860. On March 17th, Victor Emanuel was proclaimed, by vote of the Italian Parliament, King of Italy. He was married on April 12th, 1842, to Archduchess Adelaide of Austria, who died January 20th, 1855. His children are: 1. Princess Clotilde, born March 2d, 1843; married on Jan. 30th, 1859, to Prince Napoleon, cousin of the Emperor of the French. 2. Prince Humbert, heir apparent and Prince of Piedmont, born March 14th, 1844. 3. Prince Amadeus, Duke of Aosta, born May 30th, 1845. 4. Prince Otho, Duke of Montferrat, born July 11th, 1846. 5. Princess Pia, born Oct. 16th, 1847; married Oct. 6th, 1862, to King Louis I., of Portugal.

The civil list of the king (*dotazione della corona*) has been settled at 16,250,000 lire.* The cousin of the king, Prince Albert Victor, Duke of Genoa, has also a State allowance (*appannaggio*) of 300,000 lire, and Prince Eugene Carignano an allowance of 200,000 lire. To the latter sum are added 100,000 lire, under the name of "*spese di rappresentanza*," making the "*appannaggio*" of Prince Eugene the same as that of Prince Albert Victor. The large private domains of the reigning family were given up to the State in 1848.

The constitution of Italy is substantially the same as the fundamental statute (*statuto fondamentale*), granted on March 4th, 1848, by King Charles Albert, to the people of Sardinia. The executive power belongs exclusively to the king, who exercises it through responsible ministers. The legislative authority is shared by the king with a Parliament, which consists of the Senate and a Chamber of Deputies. The Senate is composed of the princes of the royal house (when of age), and other members, who must be above forty years and are appointed by the king for life. The deputies (in 1862, 443) are elected by the majority of citizens, who are twenty-one years of age, and pay taxes to the amount of 40 lire. A deputy must be thirty years old, and at his election at least one third of the inscribed electors must appear at the polls. No member of the Parliament receives any salary or other compensation. The duration of the Parliaments is five years. In each chamber the presence of an absolute majority is necessary for the transaction of business. The ministers may attend, but can vote only if they are members. The king may dissolve the lower chamber, but in that case must order a new election, and convoke the new chamber

within four months. The Parliament meets annually.

Italy has an area of 98,075 English square miles, and, according to the census of Jan. 1st, 1862, a population of 21,776,953. It is divided into 59 provinces, each of which is administered by a prefect. The name and population of each province are contained in the following table:

PROVINCES.	Square Kilometres.*	Population.
Alexandrie.....	5,055	645,607
Ancône.....	1,916	254,849

The Italian Ministry was composed, in Dec., 1863, as follows:

1. President of the Council and Minister of Finance: Chev. Mario Minghetti, born at Rome in 1815.

2. Ministry of Grace, Justice and Ecclesiastical Affairs: Pisanelli, born at Naples in 1815; appointed Dec. 8th, 1862.

3. Ministry of Foreign Affairs: Count Vis-

* One lira equals a franc (18 cents 6 mills).

* One square mile=54.9 square kilometres.

conti Venosta, born at Milan; appointed March 16th, 1863.

4. Ministry of Public Instruction: Count Em-eric Amari, born at Palermo, in 1810; appointed Dec. 8th, 1862.

5. Ministry of the Interior: Chev. Ubaldino Peruzzi, born in Tuscany in 1821; appointed Dec. 8th, 1862.

6. Ministry of Public Works: General Louis Frederic Menabrea, born at Chambéry, Savoy; appointed Dec. 8th, 1862.

7. Ministry of War: General Alexander Della Rovere, born at Turin; appointed Dec. 8th, 1862.

8. Ministry of the Navy: General Amedeus Cugia; appointed January 17th, 1863.

9. Ministry of Agriculture, Industry and Commerce: John Manne, born in Naples, in 1820; appointed Dec. 8th, 1862.

Eight of the Italian cities had, on Jan. 1st, more than 100,000 inhabitants, namely: Naples, 447,065; Turin, 204,715; Milan, 196,109; Palermo, 194,463; Genoa, 127,986; Florence, 114,363; Bologna, 109,395; Messina, 103,324.

Nine others had between 50,000 and 100,000, namely: Leghorn, 96,471; Catania, 68,810; Ferrara, 67,988; Lucca, 65,435; Ravenna, 57,303; Alexandria, 56,545; Modena, 55,512; Pisa, 51,057; Reggio (in Emilia), 50,371.

The "Catholic, Apostolical and Roman" religion is declared by the fundamental statute to be the religion of the State, but other forms of public worship are tolerated. The Roman Catholic hierarchy consists of 45 archbishops, and 198 bishops. They are appointed by the Pope, but the royal consent is necessary to their installation. Monastic establishments were formerly very numerous in all parts of Italy, but most of them have been suppressed by royal decrees, and a great portion of their property is devoted to the cause of public education.

Italy has 19 universities, of which 6, namely, Bologna, Naples, Pavia, Palermo, Pisa and Turin, are of the first class, having a complete course of higher instruction. The others have only the partial course of some faculties. Ferrara, Camerino, and Macerata are free universities. The number of students at each university was, in the year 1860 to 1861, as follows:

Bologna.....	454	Naples.....	2,800
Cagliari.....	139	Palermo.....	603
Camerino.....	71	Parma.....	354
Catania.....	471	Pavia.....	1,475
Ferrara.....	124	Perugia.....	86
Genoa.....	290	Pisa.....	653
Macerata.....	102	Sassari.....	78
Messina.....	96	Sienna.....	193
Modena.....	439	Turin.....	1,291
		Urbino.....	67

At the beginning of 1862, there were in the kingdom 7,180 communities, out of 7,720, which had elementary schools for boys; 4,466 had schools for boys and girls; 19,106 persons were engaged in giving primary instruction, namely: 12,475 male and 6,631 female teachers. The number of gymnasia (colleges) is 221. The polytechnic institutes are a creation of the new government in nearly all the provinces

which have been united with the former kingdom of Sardinia. At present the State supports 24 polytechnic institutions, of which 8 are of the 1st class (Turin, Milan, Naples, Genoa, Florence, Bologna, Ancona, Palermo), 5 of the 2d class, and 11 of the third class; besides, there were 24 institutions of this kind which have been established by communities or private persons. The number of naval schools is 25. Agriculture is taught at the School of Agriculture and Forestry at Turin. There are also three agricultural institutes (Florence, Parma, Malfi), 1 school of drainage (Casale), 11 agricultural schools.

On the mainland of Italy there were, on the 1st of January, 1862, 2,229 kilometres of railroad in operation, and 1,987 kilometres in the course of construction, and upon the islands 40 kilometres in the course of construction. Some of the railroads have been constructed by the State, and run by private parties; in the latter case the State guarantees a certain amount of interest.

The following is a copy of the official budget for the year 1863:

INCOME.

General Directions.	Ministries.
Francs.	Francs.
Salt Tax.....	Justice.....
Direct Taxes.....	Foreign Affairs....
Domains.....	Interior.....
Railroads.....	Public Instruction
Telegraphs.....	Agriculture, In-
Post Office.....	dus-try and Com-
Treasury.....	merce.....
Total	614,811,652
Of these are extraordinary revenues.....	65,456,408

EXPENDITURE.

Departments.	Departments.
Francs.	Francs.
Finances.....	Public Works....
Justice & Ecclesias-	War.....
tical Affairs ...	Marine.....
Foreign Affairs...	Agriculture, Com-
Interior.....	merce and Indus-
Public Works.....	try.....
Total	935,387,425
Of these are extraordinary receipts.....	172,044,129
Deficit	820,575,773

The public debt on January 1st, 1863, was as follows:

RENTES.	Entered Rentes.	Amorlization, Premiums, Various Expenditures.	Nominal value.
	Francs.	Francs.	Francs.
Consolidated 5 per cents..	125,706,031		2,514,120,617
" 3 " "	6,421,623		214,054,107
Miscellaneous.....	17,532,141	12,042,333	3,749,762,255
Total.....	149,659,795	12,042,333	6,477,936,979

By law of Jan. 11th, and royal decree of March 17th, 1863, the consolidated 5 per cent. rentes were increased as follows: Nominal capital, 714,320,000 francs; Rentes, 34,716,000.

The total amount of the public debt of the various provinces of the kingdom, in the year 1860, amounted to:

STATES.	Francs.	STATES.	Francs.
Sardinia	63,836,257	Tuscany	5,867,734
Naples	26,003,633	Modena	811,644
Lombardy	7,531,186	Parma	610,454
Sicily	7,650,000	Bologna	121,500
Total			112,430,443

The effective army was computed for the year 1864, as follows:

STAFF.	Officers.	Total.
8 regiments of grenadiers.....	210	210
72 " infantry.....	8,000	240,000
7 " bersaglieri (sharpshooters)	910	26,000
4 " cavalry of the line.....		
20 " light cavalry.....	903	22,000
2 " guides.....		
11 " artillery and staff.....	1,066	30,300
2 " sappers and staff.....	480	6,800
3 " train and staff.....	256	8,500
14 " gendarmes	533	19,500
Administration	175	6,000
Garrisons, veterans, schools, etc.....	2,800	17,000
Total	15,333	376,310

The Italian army is, at present, in the course of reorganization. On a peace footing, it is in future to consist of 157 generals, 15,377 officers of all ranks, and 227,250 sub-officers, corporals and soldiers. Counting in the employés of the military administration, the total number is to be 245,526 men. In time of war the infantry force is to be 274,000 men, the bersaglieri 30,555 men, the cavalry 24,721 men and 15,332 horses.

The navy, in December, 1863, was composed as follows:

SCREW STEAMERS.

	Horse Power.	Guns.
1 ship of the line.....	450	64
8 frigates, 1st class.....	from 450 to 600	400
1 frigate, 2d class	500	36
3 frigates, 3d class.....	from 300 to 500	64
1 iron clad frigate, 1st class....	800	36
2 " " 2d class.....	700	52
2 " " 3d class.....	40	40
14 gunboats.....	from 20 to 600	44
11 transports.....	from 100 to 400	20
43 Screw Steamers		756

SIDE WHEEL STEAMERS.

	Horse Power.	Guns.
3 corvettes, 1st class.....	from 300 to 400	32
12 corvettes, 2d class.....	from 200 to 350	60
10 mail transports.....	from 100 to 350	28
12 transports	from 60 to 350	14
37 Side Wheel Steamers.		184

Aggregate of steam vessels, 80, having 20,960 horse power, and carrying 890 guns.

SAILING VESSELS.

	Guns.		Guns.
2 frigates, 1st class..	72	4 corvettes.....	40
1 " 2d "	20	3 brigs.....	30
2 corvettes, 1st class	24	5 lighters.....	12
	17		193

Beside, there were in the course of construction 3 iron-clad frigates, 1st class; 4 iron-clad frigates, 2d class, and 1 ram.

The personnel of the navy consists of 2 admirals, 3 vice-admirals, 10 rear admirals, 58 captains of ships of the line and frigates, 60 1st

class lieutenants, 90 2d class lieutenants, 150 under lieutenants; total, 580 officers; 11,193 sailors, machinists, etc.; 660 mechanics. The marine troops consisted of 2 regiments of marine infantry, with 192 officers and 5,688 soldiers.

The commerce of Italy with the principal countries of Europe, in 1860, was as follows:

	Importation.	Exportation.
	Francs.	Francs.
Great Britain.....	167,751,650	62,008,025
France	175,849,603	143,015,725
Austria	46,805,540	30,146,853
Switzerland.....	33,525,834	56,707,059
Netherlands	22,911,090	3,831,985
Belgium.....	24,032,000	2,109,000
Sweden.....	863,561	924,285
Russia.....	15,047,652	20,364,516
Total.....	476,791,930	319,107,443

The movement of commerce in the chief ports of Italy was, in 1860, as follows:

	Importation.	Exportation.
	Francs.	Francs.
Genoa	239,704,143	119,212,935
Port of Sardinia.....	16,506,970	17,739,418
Leghorn	156,825,132	90,000,000
Ancona	7,003,000	8,100,500
Catania	2,424,750	6,952,800
Messina		17,262,050
Palermo	26,971,000	43,712,000
Neapolitan Ports.....	74,860,000	56,085,000

The following table exhibits the movement of shipping in 1860:

FLAG.	Entered.		Cleared.	
	Ships.	Tonnage.	Ships.	Tonnage.
Sailing Vessels } Italian.....	71,191	3,299,957	70,951	3,198,940
} Foreign	8,635	1,037,602	8,099	1,011,356
Steamers } Italian Flag..	3,228	544,573	3,314	467,160
	2,753	975,473	2,693	977,366
Total.....	85,907	5,857,605	85,057	5,654,822

The merchant navy, on Dec. 31st, 1861, consisted of:

1,172 vessels, of 300 tons and upward, each—together,	357,118
15,226 vessels of less than 300 tons, together.....	312,393
50 vessels, together.....	16,887

16,448 sailing vessels and steamers.

686,403

At the beginning of the year 1863, the brigandage in the Neapolitan provinces was still very active. A committee, appointed by the Chamber of Deputies for examining this subject, traversed the disaffected provinces, offering a full pardon to all the insurgents who would submit. At the end of February a detachment of 16 soldiers was surprised by 60 men of the band of Chiavone, and completely exterminated. The democratic deputies (the "Left") of the Chamber of Deputies proposed the formation of corps of volunteers to disperse the brigands; but this plan, combated by the ministry, was not adopted by the Chamber. The presence of Gen. Lamarmora in the infested districts, in April, was followed by good results. The insurgents were driven from the mountains of Castellamare, Sorrento, Amalfi, and about 200 were captured. But, in June, the devastations by the brigands began anew

on a large scale. The province of Benevento, in particular, became the headquarters of the gangs of Chiavone and Caruso. This time the French troops in the Papal States interfered in favor of the Italian Government, and many of the brigands were seized at Rome, Civita Vecchia and other places of the Papal States, and either imprisoned or handed over to the Italian Government. On July 10th, the prefect of Genoa, Gualterio, seized five insurgent chiefs on board the French vessel *Aunis*; but this act the Italian Government soon disavowed as a violation of a convention concluded between the two countries in 1862, and the five prisoners were conducted to France. Subsequently, however (September 10th), upon a demand made by Italy for their extradition, the brigands were surrendered by France.

The report of the committee of the Chamber of Deputies on Neapolitan brigandage, charged the Papal Government with giving the greatest possible support to the brigands. It said:

The provinces of Frosinone and of Velletri are those where, for the most part, the brigand bands are formed; none of the peasants in these two provinces form part of them—they consist of foreign adventurers, or of bad characters, and men in the lowest state of misery, who have come from the Neapolitan provinces. The brigands of Tristany's band are generally dressed in a species of military uniform; and those who play the part of officers wear the distinctive badges of their different ranks. The Papal police have no eyes to see these preparations for war, and allow them to be carried out tranquilly, without offering the least opposition. At the end of the summer season of the year 1861, the band headed by Chiavone, which, so frequently defeated, had been just as frequently renewed and reunited, acquired considerable proportion. It set out in eight companies of 50 men each, and designated its chiefs by names taken from military ranks; among its members, especially amongst its self-styled leaders, were Spanish, French, Swiss, and Irish adventurers, and the Belgian Trazeignies. This band encamped with impunity near the frontier of Sora, between Santa Francesca and Casamari; it had even its outposts and its videttes, nor did it ever meet with any hindrance until the day when, after having resolved, on the 11th November, 1861, to cross the frontier, it received from our troops a merited chastisement in the combats of Isoletta and of St. Giovanni Incarico. As often as the brigands cross the frontier they are met by our troops and defeated; but then they have always been at full liberty to recover and reorganize themselves by recrossing into the Roman territory. At the Campo di Fiori, and at the Piazza Montanora, in Rome, there are persons who notoriously give a bounty to all the recruits they can find for the brigand bands. They choose and find their recruits among the peasants of the Abruzzo Aquilano, who have fled from the fear of conscription, or for crimes. The Papal Government assists them with arms and money, and, in order not to be discovered, it employs every species of artifice. On one occasion, for example, it supplied several hundreds of military greatcoats, and in order to carry out its purpose, the Minister of War advertised a sale, by public auction, of these greatcoats. A French priest made his appearance at the auction as the mock purchaser. No sooner had he got them than he consigned them punctually to the brigands for whom they were destined. The Bourbon committees of Alatri, Frosinone, Ceccano, Velletri, and Pratica are unceasingly engaged in the work of helping the brigands. In the Bourbon committee of Frosinone there are, of persons connected with the Papal Government, a judge, a chancellor of the episcopal court, two canons, and

the curate. In that of Ceccano, there is a person in Cardinal Antonelli's own household; in that of Alatri, there are several canons; in that of Pratica, there is the archpriest, who sometimes accompanies the brigands on their raids. At the abbey of the order of the Passionists, in Ceccano, there resides a Papal gendarme, in active service, and two gendarmes living on their pensions, who act as the regular guides to the robbers. Nor does Tristany take the least trouble to mask their designs. He openly assumes the title of "Field-Marshal commanding the royal troops of the Two Sicilies."

According to the report, the war against brigandage from May 1st, 1861, to the end of March, 1863, caused the loss of 21 officers and 286 soldiers of the Italian army, "a painful sacrifice," as the report observes, "when the character of the victims is compared with that of the murderers. As to the brigands, the number of killed, arrested, and voluntarily surrendered, exceed 7,000. The report, after admitting the necessity of a special and provisional law, divides it into two parts, one preventive and the other repressive, and declares against the purely arbitrary system hitherto followed by the military executions. The report calls for the creation of tribunals, to apply to the brigands taken in arms the enactments of the military code in time of war, such jurisdiction to cease with the brigandage itself.

On September 8th, the brigand chiefs Crocco, Ninco Nanco, Carusa, and Fortora presented themselves at Kionero to the commandant of the Italian troops, requesting a safe conduct for 250 other brigands who had promised to give in their submission to the Government. The chiefs left Kionero for Lagopesole with cries of "Viva Victor Emmanuel," and displaying the national flag.

On December 22d, the Chamber of Deputies adopted a motion by 159 against 51 votes, to the effect that the law upon the suppression of brigandage should be postponed to the end of February, 1864.

On the following day the "Official Gazette" of Turin published a decree pronouncing the postponement of the law to the time indicated by the Chamber of Deputies.

The efforts of the Italian Government to bring about a reconciliation with the Court of Rome were unsuccessful. In order to avoid as much as possible any conflicts with the church, a circular, of March 25th, recognized the right of clergymen to omit the name of the sovereign from public prayers, provided they did not substitute for it those of the former rulers. The Government also declared itself against a motion made in the Chamber of Deputies by a liberal priest, Father Passaglia, to require all priests to take an oath of loyalty to the king and the constitution. In opposition to this motion, the Government advocated liberty of conscience, and the principle of a free church in a free state, and the Chambers concurred in the views of the Government.

On November 13th, the Committee of the Chamber of Deputies appointed to examine the treaty of commerce and navigation with France,

brought up a report proposing its adoption. The report was adopted, on November 28th, by 157 against 49 votes. On December 1st, the commercial treaty concluded between Italy and Great Britain came into force. A treaty of commerce between Italy and Holland was signed at the same time.

On November 19th, the "Official Gazette" of Turin published a royal decree proclaiming an amnesty. It annuls the penal punishments awarded in the Neapolitan provinces for all crimes excepting those connected with brigandage and ordinary offences. The amnesty extends to all offences against the press laws, and all persons who have evaded the conscription, or acted in contravention of the laws relating to the National Guard. The report preceding the decree states that the enthusiastic reception and other manifestations which the king met with during his journey proved how deeply the unity of Italy is rooted in the mind of the population. Having nothing more to fear from the efforts of enemies, the ministers deemed it their duty to second the generous idea conceived in the heart of the king.

Some severe measures which the Government adopted in Sicily, in order to prevent disturbances and carry out the conscription laws, induced Garibaldi and several other deputies

of the "Left" to send in their resignation (December 21st). Garibaldi explains his reasons for taking this step in the following letter addressed to his constituents:

CAPEERA, December 21st.

To my Constituents at Naples:

When I saw 229 deputies of the Italian Parliament confirm by their vote the sale of the Italian soil, I had the presentiment that I should not long remain in the Assembly of those men who blindly tore asunder the limbs of the country which they were called to reconstitute. However, the counsels of friends, the hope of reparatory events, and an unshaken sentiment of devotion toward my constituents kept me at the post. But now, when I see succeeding to the sale of Nice the shame of Sicily, which I should be proud to call my second country by adoption, I feel myself, electors, compelled to restore to you a commission which enchains my conscience and makes me indirectly the accomplice of the faults of others. It is not only the affection which I owe to Sicily, the courageous initiator of so many revolutions, but the thought that they have wounded in her the right and honor in compromising the safety of all Italy, which has led me to take this resolution. There is, however, nothing in this which will prevent me from finding myself with the people in arms on the road to Rome and Venice.

Adieu.—Yours, G. GARIBALDI.

The majority of the "Left," however, preferred not to quit their posts, but to remain in the Chamber, and a manifesto, explaining the motives which determined their course of action, received twenty-nine signatures.

J

JACKSON, once a thriving town and the capital of the State of Mississippi, is situated on the right bank of the Pearl river at the terminus of the Vicksburg and Jackson railroad, on the line of the New Orleans and Cairo railroad. It is forty-five miles east of Vicksburg. Its site is level and its plan regular. It contained a handsome State House, costing over half a million dollars, a Governor's Mansion, the State Lunatic Asylum, the Penitentiary, several churches, &c. It was captured by the forces under Gen. Grant on the 14th of May, and immediately abandoned by him to march upon Vicksburg. It was again occupied in July by Gen. Sherman and almost entirely destroyed.

JACKSON, THOMAS JONATHAN, a general in the Confederate army, born in Clarksburg, Harrison co., Va., January 21st, 1824, died at Guinea's Station, on the Richmond and Fredericksburg railroad, May 10th, 1863. The death of his father, in 1827, left him dependent upon an uncle, by whom he was brought up to a farmer's life. As a boy he was noted for gravity and sobriety of manners, and at 16 years of age is said to have been elected constable of Lewis county. Though indicating no special aptitude or taste for a military career, he obtained in 1842 the appointment of cadet at West Point, where he was graduated in 1846, 17th in a class of 59, which numbered among its members Generals McClellan, Stoneman, Foster, Couch, Reno, and others distinguished

on both sides in the present war. At the academy he was far from being a brilliant pupil, mastering his studies with extreme difficulty, but learning thoroughly whatever he attempted. His disposition was retiring and taciturn, and at this, as well as at other periods of his life, he was afflicted with various forms of hypochondria, imagining that he had consumption, incipient paralysis, and other maladies.

He was immediately brevetted 2d lieutenant in the 1st artillery, and accompanied Magruder's battery to Mexico, serving first under Gen. Taylor and subsequently under Gen. Scott. During the victorious campaign of the latter in the valley of Mexico, he was promoted to a first lieutenancy, and for gallant conduct at Contreras, Churubusco, and Chapultepec, was successively brevetted captain and major. Returning home in impaired health, he resigned his commission in 1852, and was soon after appointed professor of mathematics in the Military Institute of Virginia, where he remained until the outbreak of the civil war. He performed his professional duties with conscientious fidelity, but in matters of discipline was too much of a martinet to become popular with the pupils of the school, who were accustomed to ridicule his peculiarities of manner and appearance, and his strict observance of a religious life. Thus the spring of 1861 found him scarcely known beyond the walls of the Institute, and not esteemed there as a soldier of more than ordinary

promise. He embraced the cause of secession with enthusiasm, was commissioned a colonel by Gov. Letcher of Virginia, and on the 3d of May appointed commander of the "Army of Observation" at Harper's Ferry, which a few weeks later he resigned to Gen. Joseph E. Johnston, retaining command of the infantry.

For several weeks he was employed in frequent manœuvres between Winchester and Harper's Ferry, encountering the Federal Gen. Patterson's advance at Falling Waters on July 2d; and on the 18th his brigade, consisting of five Virginia regiments carefully disciplined by himself, was hurried off to Manassas, almost under the eye of Patterson, to reinforce Beauregard. He bore a distinguished part in the battle of Bull Run, where, in the language of the Confederate General Bee, "Jackson stood like a stone wall;" and ever after that eventful day he was popularly known as "Stonewall" Jackson, and the troops commanded by him on the occasion as the "Stonewall Brigade." He remained with his brigade in the neighborhood of Centreville until October, having previously been commissioned a brigadier-general, and was then promoted to be a major-general and assigned to the command of the troops at Winchester, where he remained until early in the succeeding March, retiring only on the approach of the Union forces under Gen. Banks.

A reconnoissance made on the 18th and 19th of this month by Gen. Shields, commanding a division of Gen. Banks's corps, discovered Jackson posted in a strong position south of Winchester, and in immediate communication with powerful supports, for which reason the Union forces were concentrated near Winchester. On the 22d, Banks, with half of his corps, marched for Centreville to join the army of McClellan, and this fact having been communicated to Jackson by his scouts, the Confederate cavalry was ordered to drive the Union pickets back toward Kernstown, a small village, three miles south of Winchester, while the main body of the Confederates was pushed forward with secrecy and rapidity. Here on the morning of the 23d, Jackson, deceived evidently as to the strength of the Union army, made a vigorous attack upon Shields's left wing. Failing to make an impression there, he massed his troops for an assault upon the right, where Shields, in anticipation of such a movement, had concentrated a large force. One of the fiercest contests of the war ensued, but by unflinching energy the Unionists succeeded in driving the Confederates from a strong position behind a stone wall, and the latter at once yielded the field to their opponents, leaving behind 2 guns and other trophies. The swelling of the Shenandoah by rains having prevented the arrival of his supports, Jackson was compelled to retreat up the valley, disputing step by step the pursuit of Banks and Shields, until he reached the neighborhood of Harrisonburg, about 60 miles south of Winchester. From this point

he was summoned with his command to Richmond, where the Confederates were collecting all their available strength, in anticipation of the advance of McClellan up the peninsula. But having suggested that he could better defend Richmond on the Shenandoah than on the Chickahominy he was allowed to remain where he was.

With a view of dislodging Jackson from this position two columns of Union troops were directed to operate in concert, one under Banks in the Shenandoah valley, and another under Fremont in the Mountain department, to the west. Both were weak in numbers, and by the beginning of May the corps of Banks had been reduced, by the withdrawal of Shields's division, to less than 7,000 men. Jackson, however, by concentrating with Generals Edward Johnson and Ewell, had increased his force to upward of 20,000. In conformity with the Union plans, Gen. Milroy, of Fremont's column, early in May marched with a small force eastward toward Buffalo Gap, for the purpose of threatening Staunton. Jackson at once moved to meet him, encountered the Union forces at McDowell on the 8th, and drove them back to Franklin, on the west side of the mountains, thus effectually preventing a junction between Fremont and Banks. Then rapidly retracing his steps, he collected all his available troops and turned upon Banks, who had been constrained by the depletion of his corps to fall back some distance from Harrisonburg.

On the 23d of May a portion of Jackson's army which had made a detour toward Front Royal on the Manassas Gap railroad, surprised the small Union force under Col. Kenly, stationed there, and captured nearly the whole command. Banks, who was then at Strasburg, was not slow to perceive his critical position, with an enemy on his front and flank, and on the night of the 23d commenced a rapid retreat toward Winchester, sending his train in advance. The force which had moved upon Front Royal also pushed on to intercept him at Middletown, while Jackson with his main body followed vigorously in his rear, expecting by this movement to capture Banks's train, if not to put his whole army *hors de combat*. At Middletown the Union train was driven back upon the main body, whereupon Banks, ordering his troops to the head of the column, repulsed the enemy in his front, and succeeded, after hard fighting, which was continued at intervals along the line of march, in reaching Winchester. But Jackson was too close upon his rear to admit of his making a stand there, and almost immediately the retreat was renewed and not again ended until the Union troops reached the Potomac on the 26th, the Confederates pressing them continually on either flank and on their rear. A brigade under Gen. Gordon, left behind at Winchester to enable the main body and the train to get well forward, maintained for some time an unequal fight with Jackson, but was finally compelled to fall back.

Thus in less than three weeks Jackson had not only baffled the efforts of Fremont and Banks to capture him, but had driven the latter completely out of Virginia. A more important advantage gained by him for the Confederate cause was the diversion of McDowell's corps, then preparing to march upon Richmond, from its contemplated junction with McClellan, which in the opinion of the latter general would have sealed the fate of the Confederate capital. Jackson remained in the vicinity of the Potomac, between Williamsport and Harper's Ferry, until the 30th of May, when prudential motives counselled him to move southward. The excitement which his dashing raid created throughout the Northern States had caused a considerable accumulation of troops at Harper's Ferry, while Fremont on one flank and McDowell on the other were in motion to cut off his retreat. Accordingly, on the night of the 30th, after a fruitless attempt to carry the Federal position at Harper's Ferry, he hurried off toward Winchester, whence on the succeeding day his retreat was continued up the valley. On the afternoon of the 31st, Fremont's advance, which had hastened by forced marches over difficult mountain roads from Franklin, encountered the rear guard of Jackson near Strasburg, and a smart skirmish ensued, which was terminated by darkness without material advantage to either side.

Jackson's retreat now equalled in rapidity that of Banks a week previous. He had however the advantage of having got his main body and train well forward, and his rear guard, covered by Ashby's cavalry, by delaying the march of Fremont, enabled the Confederates to pass safely through Strasburg. Part of the division of Shields, sent westward by McDowell to intercept Jackson, reached Front Royal, 12 miles from Strasburg, about the same time, so that the escape of the latter between both parties of his pursuers seemed almost miraculous. On the afternoon of June 1st, Fremont entered Strasburg only to find Jackson far in advance of him. Shields's advance guard now joined Fremont's force, while his main army passed up the valley along the south fork of the Shenandoah, Jackson and Fremont being on the north fork. It was thus the object of Jackson, though in superior force to Fremont, to avoid fighting a pitched battle, as the delay which would thereby be caused in his movements, might enable Shields to flank him on the east. For seven days the pursuit was pressed with vigor by Fremont, Jackson having in some instances barely time to burn the bridges behind him, and being obliged to leave by the way much of his plunder and material; and on the 8th the two armies came into collision at Cross Keys, 7 miles beyond Harrisonburg. A severe but indecisive engagement followed, terminating at nightfall, and under cover of the darkness Jackson pressed forward to secure the passage of the Shenandoah at Port Republic.

Shields had meanwhile made a parallel march with the retreating and pursuing armies, and his advance under Col. Carroll reached Port Republic on the 8th, while Jackson was fighting the battle of Cross Keys. Had the bridge over the Shenandoah been destroyed at this juncture, and had Carroll then pressed on to Waynesboro and rendered the Virginia Central railroad impassable at that point, the position of Jackson would have been critical. But the latter, well aware of this plan to intercept him, again baffled his enemies by the celerity of his movements, and before Carroll had made preparations to destroy the bridge, drove him back toward his supports. The Confederate army then pushed silently and swiftly across the river, upon the banks of which Fremont arrived on the morning of the 9th, only to find the bridge in flames and his prey again snatched from his grasp. Gen. Tyler meanwhile came up to the assistance of Carroll, but being in insignificant force, was soon put to rout by Jackson, who proceeded by easy marches to Richmond. Pursuit was impossible by the Federal troops, and Jackson was needed for more important duties in the army of Lee. Thenceforth he held no independent command, but his management of the brief but exciting campaign of the Shenandoah had sufficed to make his name famous both in Europe and America; and his admirers claim that in no subsequent campaigns, when acting under the directions of a superior, did he exhibit such energy, decisiveness and command of resources. His raid was of great benefit to the Confederate cause, and in no remote degree produced a series of disasters to the Federal arms, which for a time turned the scale against them.

On June 25th Jackson arrived at Ashland, about 16 miles north of Richmond, whence, in accordance with Lee's plan of a flank movement on McClellan's right wing, he was directed to move to Cold Harbor and attack the rear of Fitz John Porter's corps, which alone occupied the left bank of the Chickahominy. During the 26th and 27th he was occupied with getting into position, and late on the afternoon of the latter day, his troops falling with irresistible fury on the exhausted forces of Porter, who had been contending for hours against superior numbers at Gaines's Mill, drove them toward the Chickahominy and gave the victory to the Confederates. On the 29th he moved across the Chickahominy, engaged McClellan's rear guard on the succeeding day at Frazier's farm, and on July 1st shared in the signal defeat of the Confederates at Malvern Hills, where his corps lost several thousand in killed and wounded. A pause then ensued in the military operations before Richmond, both sides being too shattered to desire to renew the contest immediately. But about the middle of July the movements of the army of Virginia under Gen. Pope induced Lee to send a force to cover Gordonsville, and Jackson with his old corps, and Ewell's division, were selected for this duty.

For several weeks he remained at Gordonsville. But learning on Aug. 7th that Pope's advance was at Culpepper Court House, he marched rapidly in that direction with his whole force, hoping to cut it off before the arrival of reinforcements. On the 9th was fought the severely contested battle of Cedar Mountain, between Jackson and Banks, in which the latter was forced back about a mile toward his supports. But Jackson almost immediately retired across the Rapidan toward Orange Court House, to await the arrival of the main body of the Confederates, which was pressing forward under Lee to the invasion of Maryland. McClellan was also by this time in motion down the peninsula, and it became an object of paramount importance with Lee to overwhelm the small force under Pope before any portion of the army of the Potomac could join it. About the 18th Lee effected a junction with Jackson, and on the next day the united Confederate army moved toward the Rapidan, Jackson keeping to the left with a view of flanking Pope. On the 20th the Rapidan was crossed, and for several days the Confederates harassed Pope by frequent attempts to cross the Rappahannock, which, it subsequently appeared, were intended to mask a flanking movement under Jackson toward Thoroughfare Gap in the Bull Run mountains, and thence to Manassas in the Federal rear.

On the 24th and 25th Jackson made rapid progress northward, moving by unfrequented roads, taking no unnecessary baggage or rations, and subsisting his men on roasted corn and whatever else the country might produce. On the 26th he passed safely through Thoroughfare Gap, and fell suddenly upon the small Union force at Manassas, capturing prisoners, cannon, and a large amount of stores. Learning this, Pope moved with his whole force to the rear, and stationed McDowell at Thoroughfare Gap to prevent the arrival of reinforcements for Jackson. The situation of the latter becoming somewhat critical, he evacuated Manassas on the 28th, and moved through Centreville toward Gainesville, to be in the neighborhood of his supports. Here, on the succeeding day, he was brought to bay by the united Federal forces, and had there been a proper concert of action between Pope and his generals, it seems impossible but that he should have been crushed before the arrival of Lee. As it was, he was pushed back toward the Bull Run mountains, with fearful loss, but unbroken and defiant, and the golden opportunity was lost to the Federals. Longstreet had meanwhile forced his way through Thoroughfare Gap, followed, on the night of the 29th, by Lee, and on the 30th the Confederates confronted their foe with a united army and in greatly superior numbers. Jackson had a full share in the bloody battle of that day, and after the retreat of Pope across Bull Run, led his corps to the north of Centreville, with a view of turning the Federal right and severing their connec-

tions with Washington. Pope anticipated this movement by falling back a few miles to Germantown, where, on the evening of Sept. 1st, a sharp action was fought, resulting in the repulse of the Confederates.

Lee was now ready for the invasion of Maryland, and Jackson was again pushed forward, as he had been during the whole campaign, to be the pioneer of the movement. On the 4th of September he occupied Leesburg, on the 5th he crossed the Potomac near the Point of Rocks, and on the morning of the 6th his advance entered Frederick, where, with a view of winning over the inhabitants to the Confederate cause, a proclamation was issued, promising them relief from the tyranny by which they were oppressed, and similar benefits. As a further means of conciliation, strict measures were taken to protect private property, and on Sunday, the 7th, Jackson, true to his devotional habits, publicly attended Divine service at the Presbyterian and German Reformed churches. The expected sympathy of the Marylanders, however, proved a delusion; recruiting for the Confederate army made little or no progress, and the approach of the Federal army under McClellan rendered it necessary for Lee, whose whole force was now concentrated at Frederic, to move in the direction of the upper fords of the Potomac, by which, in case of defeat, he might retire into Virginia.

One of the prime objects of the campaign was the capture of Harper's Ferry, then garrisoned by a considerable force of Federals, and containing large amounts of artillery and munitions of war. Accordingly detachments were sent to occupy Maryland Heights, in Maryland, and Loudon Heights, on the right bank of the Shenandoah, both of which command the place, while Jackson marched up the Potomac to Williamsport, and, crossing thence into Virginia, moved down to the rear of Bolivar Heights, the only point of Harper's Ferry which the Federals had fortified. The latter, though thus invested on three sides, might easily have maintained the post but for the unaccountable abandonment, by Colonel Ford, of Maryland Heights, the occupation of which by the Confederates on the 13th and 14th decided the fate of the garrison. A furious cannonade from Maryland and Loudon Heights was opened on the 14th, while Jackson pressed the garrison in the rear. The attack was renewed on the morning of the 15th, and resulted, in a few hours, in the unconditional surrender of the place, with 11,000 troops and all the material of war.

Meanwhile the battle of South Mountain had been fought, and Lee, retreating before McClellan, was taking position behind Antietam Creek. Foiled by the vigor and celerity of Jackson in his effort to relieve Harper's Ferry, the Federal general concentrated his forces to give battle to Lee and drive him out of Maryland. No time, therefore, was to be lost by Jackson in forming a junction with his commander; and leaving

Gen. A. P. Hill with his division to hold Harper's Ferry and finish paroling the prisoners, he crossed the Potomac at the Sheperdstown ferry on the 16th, and the same evening took post on the Confederate left wing on the historic field of Antietam. The hardest fighting of the succeeding day devolved upon him, and though the obstinate valor of the Federal troops availed to push him back some distance, the ground was gained at a cost of life never exceeded during the war. On the night of the 18th the Confederates quietly retreated into Virginia, and for several days Jackson was employed in destroying the Baltimore and Ohio railroad track from near Harper's Ferry to the North Mountain, a distance of 30 miles. Scarcely had he accomplished this work when he was called upon to repel a reconnoitring party of Federals, who crossed the Potomac near Shepherdstown and were driven back with serious loss.

During October and November Jackson remained in the valley of Virginia, Lee having meanwhile occupied and fortified Marye's Heights, in the rear of Fredericksburg, in front of which Burnside lay, on the left bank of the Rappahannock. In the first week of December he was summoned thither by Lee, and upon his arrival took command of the right wing of the Confederate army, which he held during the eventful battle of the 13th. Though here, as at Antietam, the weakest point in the line was given him to defend, and though at one time he was in imminent danger of being flanked by Franklin, he held his ground till darkness ended the battle, at which time no important advantage had been gained in that quarter by the Federals. He even designed a night attack by massing his artillery in front and supporting the pieces with infantry, but was obliged, in consequence of a severe fire from the Federal batteries on the opposite side of the river, to abandon the project.

For several months Jackson remained at his headquarters, ten miles below Fredericksburg, employed chiefly in preparing the official reports of his battles. He still held command of the right wing, and for services in the battle of December 13th had been promoted to be a lieutenant-general. With the exception of cavalry expeditions and occasional reconnoissances, no operations were undertaken by Gen. Hooker from the time of assuming command of the Federal army, January 26th, until the latter part of April. On the 26th of that month, however, he commenced the execution of a plan which he had been long maturing, and which contemplated a flank movement by one portion of his army some distance above Fredericksburg, while another portion crossed the Rappahannock below the town, and menaced it from that quarter. By a skilful ruse Jackson's corps was detained in its old position below Fredericksburg, while the bulk of the Federal army crossed the Rappahannock and the Rapidan at various fords above, and on the evening of April 30th was concentrated to the number of

four corps at Chancellorsville, about 12 miles west of Fredericksburg. The position of Hooker enabling him to threaten both Fredericksburg and Gordonsville, was strengthened during the ensuing day by the erection of breastworks and abatis. Lee was not slow to fathom the design of the Federal general, and leaving a single division to guard the heights he had so long occupied, he moved westward on the 29th of April, and threw up earthworks midway between Chancellorsville and Fredericksburg to arrest the progress of Hooker toward the latter place. During May 1st he reconnoitered the Federal lines, and finding them impregnable in the neighborhood of Chancellorsville by reason of the earthworks and abatis, he determined upon a flank movement upon Hooker's right, and selected Jackson to execute it.

The latter accepted the task with alacrity, and early on the morning of the 2d his corps commenced its march, moving toward the road leading to Germanna ford on the Rapidan, so as to strike the rear of the Federal right wing, occupied by the eleventh corps under Gen. Howard. No suspicion seems to have entered the mind of any of the Federal generals that such a movement was in progress, the Confederate attack, if made at all, being expected in front of Chancellorsville, and no precautions had been taken to fortify this part of the line. Suddenly, at about six o'clock in the evening, Jackson fell like a thunderbolt upon the unprepared Federals, who were cooking supper, or engaged in various camp duties. Formation or order was impossible in the face of the impetuous charge of the Confederates, and in an almost incredibly short time the greater part of the eleventh corps was routed and fleeing in a confused mass toward the Federal centre, which was, by this unforeseen disaster, pressed back upon Chancellorsville. By great exertion the fugitives were rallied behind other troops, and the advance of Jackson stayed. The latter, however, had no thought of pausing in his career, and having given orders to Gen. A. P. Hill to press forward in pursuit, reserving his fire unless cavalry approached from the direction of the enemy, he rode with his staff and escort to the front. It was now nearly nine o'clock, and quite dark, and in deference to the wishes of his staff, who thought he was exposing himself needlessly to the Federal skirmishers, Jackson turned his horse to ride back toward his own lines. In the growing obscurity, the cavalcade was mistaken for Federal cavalry, and a South Carolina regiment, in literal conformity with the orders recently issued, fired a sudden volley into it, by which Jackson was wounded in both arms, and several of his staff killed outright. He fell from his horse, exclaiming, "All my wounds are by my own men," and almost immediately a Federal column, attracted by the firing, charged over the very spot where he lay, his staff scattering in all directions at their approach. The Federals were in turn repulsed, and in the midst of a terrific artillery

fire, which swept down the Confederates by hundreds, he was placed on a litter and carried to the rear, receiving in the confusion of the moment severe contusions in his arms and sides.

His left arm was amputated on that same evening, and two days later he was removed to Guinea's station, on the Richmond and Fredericksburg railroad. For several days he continued to improve, but on the 7th, while preparations were making to remove him to Richmond, symptoms of pneumonia appeared. On the evening of that day all pain left him, and with its cessation he began rapidly to sink. He died quietly on Sunday afternoon, the 10th, exclaiming, when told by his wife of his approaching end, "Very good, very good; it is all right!" and was honored with a public funeral in Richmond on the 12th, amidst unmistakable manifestations of sorrow. Throughout the seceded States he was not less profoundly mourned, the public regret being intensified by the reflection that their great general, like the eagle killed by arrows tipped with its own plumage, had fallen under the volleys of his chosen and devoted soldiery.

The character of Jackson was developed only during the two brief but momentous years which succeeded the outbreak of the war. Had secession never taken place he might have lived and died the obscure and eccentric professor which the spring of 1861 found him. In private life, in fact, he was, like others distinguished in his profession, a comparatively dull and uninteresting man, noticeable chiefly for the depth and earnestness of his religious convictions; and few could have predicted that under so quiet an exterior he concealed an impetuous bravery rivalling that of Ney and Lannes, and an energy, ripened judgment, and command of resources to which those generals could lay no claim. Of his capacity to undertake a large independent command no test was ever made, his celebrated campaign in the Shenandoah valley having been conducted with an army not exceeding 25,000 men. But as the lieutenant of another, executing important movements of an army wing, and anticipating almost intuitively the plans of his superior, he proved himself a genius of the first order; and one can readily appreciate the significance of Lee's remark, when learning the misfortune which had befallen his favorite general: "He is better off than I am. He lost his left arm, but I have lost my right." During his residence at Lexington he became a member of the Presbyterian Church, and at his death was a deacon in that denomination. Embracing, to its fullest extent, the doctrine of predestination, he was regarded by many as a fatalist, and his religious fervor seemed to rise with the progress of the war, approaching sometimes the verge of fanaticism. He attended service regularly on Sundays, never omitted his daily devotions, encouraged prayer meetings and revivals among his troops, and in reports and despatches an-

nouncing successes in the field, invariably ascribed the victory to divine interposition. To extreme simplicity of manners and dress, he united a transparent honesty of character, and a genuine humanity, which, in the midst of a civil war of unexampled fury, caused him to be respected alike by friends and foes. In person Jackson was of middle height and soldierly bearing, and his features, when not lightened up by eyes of singular brilliancy and expression, were in no respect remarkable.

JAPAN, an empire in Eastern Asia. Its real sovereign is the mikado, the ecclesiastical or spiritual emperor who resides at Miako, in the principality of Kioto, and whose personal name is only known to the imperial princes. By his order and in his name, the Government is actually carried on by a tycoon, or temporal emperor, whose residence is at Yeddo. The name of the present tycoon is Mina Motto I.

The revenue of the mikado is partly derived from the city of Miako and its vicinity, and partly from the costly presents of the tycoon. The latter derives from the crown domains about \$12,000,000 annually; in addition, the daimios (semi-independent princes) have to pay him subsidies. The receipts of twenty-five of the latter are estimated at from 1½ to 5½ millions, and those of twenty others at about 1¼ million dollars; the aggregate income of all the daimios at about 150 millions.

Japan consists of Japan proper and the dependent islands, and is said to comprise in all no less than 3,850 islands. The total area of the empire is estimated by Engelhardt at 7,065, and by Siebold at 6,615 geographical square miles. The estimates of the population vary from 35 to 40 millions.

The ports which the Japanese have promised to open to the treaty Powers are the following: Hioga, south of Miako; Kanagawa (Yokohama), in the bay of Yeddo; Niegato (northeastern coast of Nippon); Hakodadi (on the island of Yesso); and Nagasaki (Kiusiu). The commercial treaties were concluded: 1, with the United States of America, on March 31st, 1854; 2, with Great Britain, on Oct. 14th, 1854; 3, with Russia, Jan. 26th, 1855; 4, with the Netherlands, Nov. 9th, 1855; 5, with Portugal, Aug. 3d, 1860; 6, with Prussia, Jan. 25th, 1861.

The tycoon is not, as was formerly supposed, the sovereign ruler of the land, in so far as secular matters are concerned. He is in rank only the fourth prince of the empire, and was the fifth until the present incumbent was raised a degree by intermarriage with the imperial house. At Miako there are two beside the emperor that outrank him—members of the imperial court. The sole head of this Government is the emperor. No change in the organic law of Japan can take place without his consent. All rank and authority are conferred by him, except those of the hereditary princes. Even they may forfeit their titles and immunities by acts of hostility against the mikado (literally, the sublime porte) or emperor.

The office of tycoon, though confined to one of three families, is in no respect that of a sovereign. Originally and theoretically the tycoon was but the generalissimo commanding all the military force of the country, under the direction of the emperor. He possesses hereditary domains in various parts of the country, and receives the revenue from them; but the daimios do the same. He is by virtue of his office superior in certain respects to the other hereditary princes, particularly in holding the military forces under his control. He has no power to make treaties without the imperial sanction. But for the assumption of this power, whereby he has enriched himself, while at the same time he does not admit others to a share in the profits of a foreign trade, he would have been at present, as he was in fact until lately, merely the captain-general of Japan. With all the advantages accruing from the new relations with foreign Powers, he still is the tycoon, and not the emperor, nor even a coördinate ruler with the emperor. Yeddo is not the capital of the country, as the common expression for going to Miako, even from Yeddo, shows. The Japanese go down to Yeddo, and up to Miako. The tycoon is after all but a servant of the emperor, and in the estimation of the Japanese, there is an impassable gulf between the two.

The trade of Japan with foreign countries has greatly increased since the opening of the ports. In one port alone, that of Kanagawa, the English trade increased from the value of £70,000 in 1862, to that of £112,000 in 1863. A despatch from the British chargé d'affaires, in Japan, dated September 11th, 1863, states that the value of the export trade in British vessels had increased within six months from £253,337 to £561,120, although, as the writer of the despatch observes, "during those same six months the succession of events which have transpired of an alarming and exciting character, was calculated altogether to paralyze and arrest any trading operations." For the first time raw cotton has been exported to the amount of 795,207 lbs. What may be the capabilities of the country in respect to cotton growing is uncertain. It is a point upon which no information whatever is given by the different writers who describe the country from personal observation. Trade has hitherto been much despised. "A millionaire merchant, if one exists in Japan," says the writer we have already quoted, "is obliged to prostrate himself in the dust before the lowest two-sworded retainer of a daimio, if he happens to meet one on the road. Wealth bestows no social position. The most prosperous trader dares not appear on horseback in the streets of Yeddo; if he did, he would be instantly dragged from the saddle, and ignominiously rolled in the mud."

The only portion of the current history of Japan which is of interest for Americans and Europeans, is the history of the relations of the Japanese Government to the civilized nations,

with which, in late years, commercial treaties have been concluded. This opening of communication with foreign nations met with a violent opposition on the part of many of the daimios, and there has ever since been an unceasing feud between a party friendly to the foreigners and an anti-foreign party. The tycoon was at the head of the former; the mikado, or spiritual emperor, has openly espoused the cause of the other party, and seems to have used this occasion for recovering a more active and direct influence upon the administration of the State than his predecessors have exercised.

In January, 1862, the Minister of Foreign Affairs, Ando Tousimano Kami, suspected of being favorable to the Europeans, was attacked in Yeddo, in open daylight; Ando defended himself bravely, killed one of his assailants and put the others to flight. He deemed it best, however, to leave the Council of Ministers, and was replaced by one supposed to be hostile to the foreigners. At the end of March a Japanese embassy left Yokohama to visit those European courts with which Japan has established commercial intercourse, and to obtain from them permission that the opening of the ports of Yeddo and Osaca be postponed to a period more favorable to the pacific intentions of the tycoon.

The anti-foreign daimios established a league and went to Kioto, to lodge before the mikado a complaint that the tycoon, "an unfaithful servant of the legitimate emperor," had violated the constitution of Japan by concluding treaties with foreigners (May 26th, 1862). The mikado summoned the tycoon to defend himself. The tycoon charged with this mission one of his ministers, who, rather than accept the commission, committed suicide (*hari-kari*). Another functionary went to Kioto, but was so affected by his reception as likewise to commit suicide. The tycoon then (July, 1862) promised to go to Kioto himself.

While these negotiations were going on, two English marines, belonging to the guard of Col. Neale, chargé d'affaires of the Queen of England, were assassinated at the English legation at Yeddo, by a Japanese officer, who immediately after committed suicide (June 25th, 1862). Col. Neale withdrew from Yeddo to Yokohama. In September, 1862, four English subjects, Richardson, Clarke, Marshall and Madame Borradaile, were attacked on the high road which leads from Yokohama to Yeddo, by the escort of a high Japanese functionary, a relation of the Prince of Satsuma. Mr. Richardson was killed; his companions escaped, but two of them were severely wounded.

Toward the close of the year 1862, the Japanese embassy returned to Yeddo, having visited Paris, London, Berlin, the Hague, St. Petersburg and Lisbon. They had achieved their object, having obtained the consent of those European governments that the opening of the ports of Yeddo and Yokohama might be put off.

At the beginning of the year 1863, a British fleet, under the command of Admiral Kuper, arrived in the bay of Yeddo, not far from the capital of the tycoon, in order to support by force, if necessary, the demand which Colonel Neale was to make for a reparation of the crimes committed against British subjects. Col. Neale was instructed to demand the execution of the murderers of Mr. Lenox Richardson; also, that the Government of Yeddo should formally express a regret at not having prevented the crime of which Mr. Richardson had been the innocent victim, and pay a sum of £100,000 as the expenses of the expedition to Japan, and £35,000 for the persons or heirs of persons who had been wounded or killed at the English legation in Yeddo, and on the high road from Yokohama to Yeddo. The commander of the French squadron in the Japanese seas, Admiral Jaurès, in accordance with the instructions received from his Government, was to join Admiral Kuper in supporting the demands to be made by Colonel Neale. The Government of Yeddo tried to dodge a definite reply to the English demands. They asked for a delay until the return of the tycoon from the interview with the mikado; they pretended that the tycoon had no authority over the murderers of Mr. Richardson, as they were the subjects of the Prince of Satsuma, and finally they maintained that the tycoon, while defending the foreigners in his vicinity, had neither the right nor the power to protect them against the hatred of the national party.

Col. Neale twice granted the demanded delay, but being at length convinced that the Japanese Government did not act toward him in good faith, he left the matter in the hands of Admiral Kuper, who made at once the necessary preparations, and announced to the Government of Yeddo that, unless within a specified time they would comply with the demands of the British Government, he would have recourse to coercive measures. This language had in so far the desired result, that the Government of Yeddo consented to place in the hands of Col. Neale a sum of 2,500,000 francs.

The relations of the minister of the United States, Mr. Pruyn, to the Government of the tycoon were for a long time more friendly than those of other treaty Powers. Mr. Pruyn remained at Yeddo, when all the other ambassadors had left, and more than once the Japanese Government invoked his interposition in the progress of their negotiations with England and France. Still he was desired, as well as the other ministers, to withdraw from Yeddo and remove to Yokohama. On May 24th, the buildings occupied by the American legation in Yeddo were totally destroyed by fire, and Mr. Pruyn succeeded, with difficulty, in saving the books and archives of the legation. Mr. Pruyn received at once several visits of condolence from various governors of foreign affairs by order of the Gorogio (council of state), at all of which it seemed to be taken for granted that he would at once leave for

Yokohama. He was assured, however, of protection while in Yeddo. Mr. Pruyn declined to leave, and demanded that other quarters should be assigned to him. On May 31st, he was informed by one of the governors of foreign affairs, that a conspiracy to attack the American legation that night had been discovered; that ample provision for his protection had been made, but that his withdrawal to Yokohama would relieve the Government from great anxiety. Mr. Pruyn, whose intention had been to leave on the next morning, now consented to leave immediately.

The mikado, in the meantime, ordered the tycoon to expel the barbarians, and accordingly the ambassadors of all the treaty powers were informed, on June 24th, that the opened ports were to be closed, and the foreigners to be removed, as the Japanese could have no intercourse with them. Mr. Pruyn replied to this intimation, that he would insist on the maintenance of the treaty, and that the citizens of the United States would remain in Japan, protected by the U. S. naval forces. In a letter, addressed to Mr. Seward, dated Yokohama, June 27th, Mr. Pruyn expressed his opinion that the public mind in Japan would not be quieted until the treaties could be ratified by the mikado, and proposed to that end a naval demonstration upon Osacca (20 miles from Kioto), backed, if necessary, by a land force to move upon Kioto.

On the 26th of June, the American merchant steamer Pembroke was attacked in the Straits of Simonosaki, which separate the island of Kiusiu and Nippon, by a Japanese armed bark and the brig Laurie, both belonging to the Prince of Nagato. It being quite dark, the steamer fortunately escaped. Mr. Pruyn at once informed the Japanese Government that full satisfaction and indemnity would be demanded for this outrage. He at the same time sent to the scene of the outrage the U. S. steamer Wyoming, which, on July 16th, after a brief engagement blew up the Japanese steamer, sunk the brig, and silenced six land batteries, with the loss of four killed and seven wounded.

On the 8th of July, the French steam-gunboat Keshchang, of four guns, had been fired into by the same ships, and by batteries on shore, and reached Nagasaki almost in a sinking condition. When this intelligence reached Yokohama, Admiral Jaurès, with the *Semiramis*, a steam frigate of 35 guns, and the *Tancrède*, of four guns, was at once despatched to punish the outrage. When just out of the harbor, he spoke the Dutch steamship *Medusa*, of 16 guns, which had been fired into on the 11th in the same straits, and received from her captain charts, showing the position of the vessels and the batteries. On the 20th of July, Admiral Jaurès reached the straits, landed a force of 150 men, under the cover of his guns, seized and destroyed one of the batteries, blew up a powder magazine and daimio's

residence near the entrance, and burned the small village of Amidagume, in which several thousand horse and foot soldiers were stationed, who made but a feeble resistance.

On July 25th, a meeting of the representatives of the United States, France, Great Britain, and the Netherlands, was held at Yokohama, and it was unanimously agreed that the inland sea, now closed to commerce by the outrageous acts of the Prince of Nagato, should be reopened by the combined naval forces of the above governments.

Mr. Seward, under date of September 1st, instructed Minister Pruyn to demand of the Government of the tycoon a compliance with treaty stipulations; the prompt payment of a sum sufficient to indemnify all the losses which were sustained by himself and other members of the legation on the occasion of the firing of his official residence; to demand that diligent efforts be made to discover the incendiaries and bring them to condign punishment; to demand proper and adequate guarantees for his safe return to Yeddo, and the permanent reestablishment of the legation there without delay. He said: "Insist on the full observance of the treaties between the United States and Japan in all the particulars which have not been heretofore waived or postponed by this Government, and demand reasonable indemnity, to be fixed by yourself, for the injuries which have been sustained by American citizens from any acts of violence committed against them by Japanese subjects; and further demand that diligent efforts be made by the tycoon's Government to bring the aggressors to justice, and to inflict upon them such punishment as will be calculated to prevent further outrages of the same kind."

Mr. Pruyn is authorized to employ the naval force at his command to protect himself, the legation, and others of our countrymen, under any circumstances which may occur; and he will inform the Government of the tycoon that the United States will, as they shall find occasion, send additional forces to maintain the foregoing demands.

Under date of Oct. 3d, 1863, Mr. Seward wrote to Mr. Pruyn: "Having been advised by your despatch of the 8th of August, which came from San Francisco by telegraph, that the tycoon has returned to Yeddo, and that your relations with his Government are much improved, I deem it inexpedient to restrain your discretion at present by special instructions, but cheerfully wait the development of events which must have occurred since that communication was sent."

As all the efforts of Colonel Neale to obtain satisfaction from the Prince of Satsuma for the murder of Richardson failed, Admiral Kuper proceeded with his fleet to Kagosima, which is in Kiusiu, the most southern of the four islands which constitute the Japanese empire. There Prince of Satsuma has a castle and strong fortifications which the British admiral intended to attack. The expedition consisted of seven ves-

sels, while other seven remained in the harbor of Yokohama. The vessels forming the expedition reached their destination on the 12th of August. As the Japanese showed no disposition to avert hostilities, Admiral Kuper prepared for action. The following details of the memorable naval engagement which now ensued are taken from the "Japan Herald," an English newspaper published at Yokohama:

On the afternoon of August 14th, there was a general shifting of the disposition of the fleet, the greater part of which were placed under the island, out of range of the guns on the fort in the middle of the channel, say 1,700 yards on either side. The Euryalus, although shifting, still remained within range, as did also the Perseus. On the morning of the 15th the Pearl, Coquette, Argus, Havoc, and Racehorse proceeded up the bay, and took as hostages three steamers there at anchor—said to be the England, purchased by Satsuma in 1861, for 120,000 dols.; the steamer George Grey (for 40,000 dols.); and the Contest, which cost him 85,000 dols., in May last. The locality of the anchorage of these vessels was snugly behind Point Wilmot.

The weather, which had been stormy during the whole morning, now became worse; it was raining in torrents, and the wind blowing a hurricane round the bay. At ten o'clock the above named vessels, English and Japanese, had returned, and at twelve the men were just piped to dinner, and nothing immediate expected, when suddenly the battery on the main covering the Euryalus, and that on the island covering the Perseus, opened fire. The three hostage steamers were forthwith fired (their crews having been previously sent on shore, and one of the head officers on board, recognized as having belonged to the staff of one of the late ambassadors to Europe, and another officer, at their own request having been taken on board the flagship where they now remain). All the ships weighed and formed line of battle. The Perseus then engaged the battery that had been firing at her in beautiful style, as we are informed, knocking her antagonist's guns over, one after the other; and when she had completed that, as though she had been only getting her hand in, she passed over to the other side, and engaged the battery on the opposite shore. All the batteries (10) were then engaged by the ships, at point blank range, at from 400 to 800 yards respectively (the Euryalus being within 200 yards), commencing with the northernmost and passing down the entire line. About dusk the town was fired in several parts by our shells, and three of the forts silenced. All the ships then returned to their anchorage, save the Racehorse, which had got ashore within 200 yards of the nearest battery, of which accident she availed herself in true British style to pour her metal into it until it was effectually silenced. The Argus was sent to bring her off, which she accomplished after about an hour's delay, during the whole of which time she was under fire from one of the other batteries.

This was Saturday the 15th, during the whole of which day it had been raining and blowing fiercely. The loss on this day to us was 11 killed and 39 wounded. About nine o'clock the whole of one side of the town was blazing. The following day (Sunday) the weather cleared up, the dead (2 officers and 7 seamen) were consigned to their sailors' grave in Euryalus Bay, at eleven o'clock, and the fleet stood out, passing close to the batteries on the island, which it engaged the whole way. The destruction accomplished by the fleet appears to have been enormous. There can be no doubt that the whole city is now one mass of ruins, including the palace, the factories, and the arsenal and warehouses; the batteries also have been seriously damaged; not one of them which had been engaged the first day fired a shot on the second day as the fleet passed out. The three destroyed ships alone have cost Satsuma 245,000 dollars, upward of half of which he has

paid very recently. Several large junks also were destroyed. The Japanese are said to have stood well to their guns, so long as the play was at long range, but seemed somewhat taken aback when our ships came to close quarters.

Although Admiral Kuper did not accomplish all he desired, he yet succeeded in bringing the Prince of Satsuma to terms. He sent agents to Col. Neale, and their negotiations terminated in an agreement that the prince should pay the indemnity demanded of him for the sufferers on the 14th September, 1862, and should endeavor to the utmost to discover the murderers of Mr. Richardson, and should cause them, when discovered, to be executed in the presence of British officers as witnesses of the execution.

In a despatch of Nov. 17th, 1863, in which Col. Neale communicates this information to Earl Russell, he also says that "the information which has reached us from various sources, including some of the officers of the Prince of Satsuma, establishes the fact that the losses sustained by the prince and the punishment inflicted by her Majesty's squadron at Kagosima were very considerable. The destruction of property is estimated at £1,000,000 sterling, and the number of Satsuma's adherents killed and wounded is stated to have been 1,500."

This display of power on the part of England, as well as the preceding exploits of the American and French vessels seemed to produce an impression upon the Japanese. No further acts of hostility occurred during the year; although the Japanese Government persisted in their wish to restrict the intercourse of their country with the foreigners, and to obtain from the treaty Powers a modification of the treaties. The internal wrangle between the anti-foreign party and the friends of foreign trade also continued, but most of the information received about this point seemed to be little trustworthy. It was reported that in October, at an extraordinary meeting of the daimios, it had been resolved by 65 votes against 47 that there was no ground for declaring war against foreigners.

On the 19th of October, the Government of the tycoon issued a notification at Yeddo to the effect that all daimios or princes (excepting only those of the blood royal, and also those intrusted with the direction of affairs) should respectively withdraw to their principalities. The Government no longer requires them to reside at Yeddo; they will be called up once in three years to the metropolis for the space of one hundred days. The Princes of Awarri, Mito and Kishni, being of the blood royal, will reside at Yeddo one year each, by turns.

JEBB, Major-General Sir JOSHUA, R. E., K. C. B., an English statesman and writer on Penal Law and Prison discipline, died in London, June 26th, 1863, at the age of seventy years. He had entered the army at an early age, and had first come into prominent notice when stationed in Australia, from his connection with

the efforts to carry out Captain McConochie's plan of encouraging transported convicts to reform, by granting a partial remission of their sentence as a result of good behavior. The plan of Capt. McConochie failed of success—not so much from any impracticability inherent in it, as from the circumstances under which its execution was attempted, and the remarkably depraved and reckless set of desperadoes who were its first subjects. One of its good results, however, was the calling of public attention to Capt. Jebb, who seems to have performed his duties with a fidelity and ability which deserved commendation. The constantly increasing difficulties experienced by the Home Government, in regard to transportation, most of the colonies protesting energetically against receiving convicts, and some of them threatening revolt if more were sent to them, led to the consideration of other measures for disposing of the convicted criminals of the United Kingdom; and Col. Jebb (he had attained to the rank of colonel a short time previous) was charged with the investigation and reporting of plans for the construction and management of convict prisons. He gave to the subject much thought and study, but at the time (1840) there was very little to be learned in regard to convict prisons—those in existence belonging mainly to two classes, the bad and the very bad institutions. As a result of his report, the Pentonville prison was built. It was, on the *solitary*, or as its friends chose to call it, the *separate*, system. No expense was spared to make it as nearly perfect as possible, and at first Col. Jebb believed that the ends had in view, the punishment of the offence against the law, the isolation of the prisoner from all evil associations and influences, and the use of the best moral means for his reformation, were fully attained. The prisoners were very quiet, a stillness like that of death reigned throughout the prison, and there was no danger of mutiny or outbreaks. But after a time it began to be painfully evident that under the system, though administered with great humanity and gentleness, the minds of many of the prisoners were giving way; that fatuity and mental stupor were becoming very common, and occasional suicides occurred. It was also enormously expensive, the support of each criminal costing \$250 per year while the savings averaged only \$13. Col. Jebb, who had now been permanently placed in the oversight of the prisons of the kingdom, deemed it necessary to modify the system somewhat. Accordingly the prisoners were only retained at Pentonville for twelve or fifteen months, and then either transported to North or West Australia, or sent to the public works where they labored in the open air, and in gangs. This produced some improvement; but the injurious effect of the solitary confinement was still evident, and in the prisons subsequently constructed, the separation was far less rigorous and thorough than it had been at Pentonville. When transporta-

tion (with the exception of 200 or 300 sent annually to West Australia) was at last definitely abandoned in 1854, there was a serious difficulty in providing for the large number of convicts at once thrown upon the Government. There were about 6,000 of these, and the number was rapidly increasing, while as yet there was no adequate provision of convict prisons for their reception. It was necessary also to diminish the term for which they were sentenced, as the confinement in prisons was deemed a severer punishment than transportation to which they had been condemned. The prisons under Sir Joshua's management were completed at as early a period as possible, and provision made for employing about one half the convicts, those who, by good conduct, were deemed deserving, on the public works at Portsmouth and Portland, and in the dockyards at Dartmouth and Chatham. Sir Joshua also reverted to the old system of Captain McConochie, borrowing from it the idea of discharging the most exemplary prisoners before the expiration of their sentence on "ticket of leave." This, when guarded as it was in Ireland, by requiring the persons to report regularly for a time at the constabulary headquarters, and placing them under the surveillance of the constabulary force, proved a judicious measure; but, in England, without such precautions, it became a serious blunder, and imperilled the peace and good order of society. So loud were the public clamors against it in 1855 and 1856, and again in 1862 and 1863, that Sir Joshua found it necessary to modify the system. The employment of convicts on the public works also proved dangerous—several mutinies occurring in which some lives were lost. In these manifold difficulties, Sir Joshua Jebb retained the confidence of the Government, and in general of the nation, as a conscientious, careful, prudent man, who, surrounded by serious embarrassments, and perhaps lacking in the highest order of genius, yet sought to do his duty honestly, faithfully and fearlessly, so far as he could comprehend what that duty was. His death was greatly lamented.

JEWS. The present number of Jews is estimated at from five to seven millions. They are most numerous in Russia, where they number, according to the last census, in the European possessions, 1,425,784, and in Siberia 7,077. This is exclusive of the kingdom of Poland, which (in 1859) had 599,875 Jews. Of the other European countries, Austria had (in 1857) 1,049,871 Jews, Prussia, 254,785; the other German states, together, about 200,000; European Turkey, 70,000; Holland (in 1859), 63,890; France, inclusive of Algeria, 185,007; Great Britain, about 40,000; Belgium 1,500; Denmark, 4,200; Sweden and Norway, 900; Switzerland (in 1860), 4,216; Italy, 34,000; Greece and the Ionian Isles, 10,000; Portugal, 3,000. Morocco (according to Wertheimer's *Jahrbuch der Israeliten*) had before the outbreak of the last war with Spain about 340,-

000, which number has since considerably decreased by persecutions. The Jews in the United States are estimated at about 200,000. A numerous Jewish population is also found in Abyssinia.

A narrative was published, in 1863, by the "Jewish Chronicle," of London, of the discovery by a Jewish officer in the British navy, of a large Jewish city in China, consisting of over 1,000,000 souls, speaking the original sacred tongue, keeping their own laws, and possessing documents, which record their history thousands of years ago. It has been long known that Jews existed in China. From the time when the Jesuits pursued their missionary effort in the Chinese empire, it has been no secret that there, as in India and remoter countries still, small bands of Jews were found maintaining their peculiar national characteristics, and engaged in industrial pursuits. The above narrative, however, was by all familiar with the condition of China deemed unworthy of credence.

Of the Jews in Western Persia some interesting intelligence was published by a Jewish periodical (the "Carmel") of Wilna, Russia: "There are, says this account, about 150 Jewish families in Balprosh, the principal city of Mazsandron, a large province in Western Persia, south of the Caspian Sea, and east of Media. Altogether Balprosh has a population of about 100,000 persons, mostly Persians. The Jews of the city trade with their brethren in the land of Kittim and the Great Tartary, and are engaged in woollen and silk manufactures. They have two synagogues, and about fourteen scrolls of the law. They received these scrolls from Babel (Bagdad?), and they are beautifully written. They reckon from the Babylonian captivity; for, according to their tradition, their fathers immigrated in the time of Nebuchadnezzar, and as they did not obey the call of Ezra the scribe, they remained there to this day. The Jews there live in happiness and comfort under the protection of the shah, who favors them on every occasion. Indeed, so happy are they, that they are esteemed as princes by their wretched brethren in the other provinces. When the labor of the day is over, they assemble in the evenings in the synagogues, and there read the Bible. Some of them also study the Talmud and ethical works. These books, too, are imported from Babel. They have three schools, in which the children are taught Hebrew and Persian. Among themselves they speak Persian, and some also Hebrew."

The Jewish population of Palestine is steadily increasing by immigration. Jews arrive there from all parts of the globe, except America, in numbers steadily increasing, and exceeding those of many centuries before. They settle not only in the city of Jerusalem, but also in the country towns and villages, where they are now permitted to purchase real estate, build houses, and cultivate fields which had lain des-

olate since the days of Hadrian, who changed the name of Jerusalem into that of Aalia, and forbade the Jews to approach its walls within a certain distance. The present population of Jerusalem amounts, according to the careful estimates of Prof. Tischendorf, to 8,000.

An account of the Jewish community in Calcutta says: "The Jews divide themselves into two classes—the European and the Arabic, of whom the one despises the other. I should apprehend that this is, in a much fainter degree, a similar division to that between the so-called White Jews and Black Jews of Cochin. The Calcutta Jews may always be distinguished by their costume from the other inhabitants. They wear a Turkish fez, a tight, variegated vest, a waistcoat in the strict sense, with showy buttons and loose, white sleeves, open at the end, and a zouave trowsers. The dress of Jewesses, *festis diebus*, is very costly, comprehending, I imagine, a considerable portion of the wealth of the house, in costly jewels richly set wherever room can be made for them."

The *Universe Israelite*, a Jewish paper of Paris, gives an interesting account of an ancient judaizing sect in Russia, called the Tsubbotniki. It says: "To the heretics of the third category belong the most ancient in Russia—the judaizing ones, whose origin dates back from the period when Novgorod was still indulging in bold dreams of independence, and when the Lithuanian prince, Michael Olekowitsch, arrived in that town, in order to take charge of its government. He was followed by some Hebrews, who converted many inhabitants to their faith, and thus formed the remarkable sect, which soon spread as far as Moscow, and which has maintained itself, despite all persecutions, to our days. This sect is now better known under the name of the 'Tsubbotniki' (keepers of Saturday). The sectarians consider themselves the representatives of pure Divine worship, and the most faithful observers of the law of Moses. Nevertheless, they know but little of it. They confine themselves to the observance of certain rites, such as circumcision, passover, and the recitation of certain psalms in Hebrew, but written in Russian characters, and the engagement of rabbis. Like the Jews, they wait the advent of the true Messiah, rejecting all Christian doctrines, the sacraments, and also the oath."

The odious and oppressive laws, which in most of the Christian countries have for centuries deprived the Jews of equal civil rights or even prohibited altogether their residence, are more and more disappearing from modern legislation, although in a few countries they are still in existence.

The most notable case of persecution of Jews occurred, in 1863, in Morocco, a country in which as in Mohammedan countries in general they have often been taxed, fined, beaten with "khorbashes," bastinadoed with maize canes; in which they have been torn from their shops by agas and emirs to work for

nothing, laughed at in the law courts, derided in public, oppressed in private, their complaints disregarded, their rights ignored, and their adopted home made for them a place of misery and shame. The account of their sufferings induced that celebrated Jewish philanthropist, Sir Moses Montefiore, to undertake a journey to the sultan of Morocco, to implore justice for his co-religionists. He brought with him warm letters of recommendation from Earl Russel, and, on arriving in Tangier, he prevailed even upon the minister of Spain to instruct the consuls and vice-consuls in the ports of Morocco to "avail themselves of every opportunity which may arise to prevent acts of cruelty on the part of the Moorish authorities against the Israelites; and also in cases of notorious injustice, when the punishment of the lash may be inflicted in order to extort confession, to resolutely interpose their influence with the local authorities to prevent the commission of such act of barbarity."

His journey to the capital of Morocco, which resulted in obtaining complete liberty, not only for the Jews, but for all non-Mohammedan denominations, is thus described:

Sir Moses was resolved to see the sultan, and ask justice in the name of God and man. He pushed up the country by marches of fifteen miles a day, in the horse litter used by women and the sick—his name and the nature of his errand going before him. He was received as visitors of the sultan are sure to be received, with respect and hospitality. Every night the Moors made "mona" for his retinue—the name of an entertainment provided gratis by the people, and subtracted from the taxes which they afterward pay in kind to the sultan. Reaching Morocco, the party was lodged in a palace surrounded by orange gardens and palm groves. But everything depended upon the first step. The sultan hears petitions and grants audiences from the saddle of his Arab; and it makes all the difference upon what horse he rides forth to meet you from the palace gate. If all is bright and favorable, he will be seated upon a white steed; if clouds of displeasure or denial darken the royal mind, a gray horse is caparisoned and mounted; and if anger, confiscation, or death be in the wind, he comes forth on a black charger. It was a good omen, therefore, that, when the Jewish baronet's train was assembled about him in the courtyard of the palace, among thousands of Moorish soldiers and people, his Majesty made his appearance from the archway upon a superb barb of spotless white. This "Prince of Darkness" is, in fact, "a gentleman." He welcomed his generous visitor; admired the spirit and fortitude which had brought his silver hairs so far at such a season; praised the well-known exertions of the baronet for others, not of his race only, but of all creeds in other countries; finally, he received very graciously the petition for justice. A few days afterward a firman appeared, "in the name of God the merciful and gracious," granting to his Jewish subjects perfect equality of right and of protection under the law. "For," says the sultan, with truth, not the less sound or welcome because it is tardy, "injustice here is injustice in Heaven, and we cannot countenance it in any matter affecting either the Jews' rights or the rights of others, our own dignity being itself opposed to such a course. All persons in our regard have an equal claim to justice, and if any person should wrong or injure one of the Jews, we will, with the help of God, punish him."

Among the Christian countries, Switzerland is especially distinguished for intolerant laws

with regard to the Jews. In the canton of Aargau a majority of the voters declared against giving to the Jews the right of suffrage, and on March 13th, the Grand Council (the legislature) resolved the same by seventy-nine against sixty-one votes. The Federal Council of Berne, however—the supreme authority of the Swiss Confederation—on being appealed to by the Jews, decided that all political rights are to be as much enjoyed by the Jewish as by the Christian inhabitants of Switzerland. The Federal Council hesitated, however, in the commercial treaties concluded with several foreign nations, to grant for the Jewish citizens of such nations a general right of free settlement in every canton. The Chamber of Deputies of Holland rejected on this account, on June 15th, 1863, the treaty concluded with Switzerland, by thirty-three against seventeen votes. From a memoir which the minister of the United States of America presented to the Federal Council, it appears that there are among the cantons seven in which the Jews have complete religious liberty, while in seven others they are absolutely forbidden to reside. To the latter class belong the half-canton Basle country (Baselland), where whoever receives a Jew into his family or premises, is fined 300 florins, and who rents a store to a Jew, 50 florins.

The Diet of Holstein repealed, in 1863, some of its most obnoxious laws against the Jews, who received, on the whole, equal rights before the law with the Christians, but remained deprived of the right of suffrage as well as of eligibility to any office.

By this concession of civil rights the Jews of Holstein lose their autonomy which they enjoyed ever since their settlement in the duchy. Hitherto they were permitted to try their own causes in accordance with rabbinical law, and the verdicts were acknowledged by the Government. They further possessed the right of either receiving or excluding foreign Jews without consulting the authorities. Their religious affairs were administered exclusively by their chief rabbi, and no secular power had the right to interfere. All these privileges the Jews of Holstein have cheerfully renounced in exchange for the right of no longer forming a state in the state.

The Duchy of Lauenburg, which, like that of Holstein, has hitherto been subject to the crown of Denmark, though forming at the same time part of the German Confederacy, still perseveres in its intolerance. In this duchy no Jew is permitted to live, nay, even to stay over night.

A special hatred against the Jews is shown by the Greeks in Turkey and Greece. New proofs of it have lately been furnished by bloody riots against the Jews at Galatz, in the Danubian principalities, and Smyrna, in Asia Minor. A more liberal spirit began to prevail in the Ionian Islands. There, in 1863, a Jew was for the first time admitted to a masonic lodge, and

another was chosen into the committee to give expression to the desire of the islands for annexation to Greece. Fears were however entertained that the annexation might greatly deteriorate their condition.

England, France, Holland, and the United States were hitherto the only countries in which the Jews had established a denominational organization. In Italy, during last year, a Congress of Italian Israelites was opened at Ferrara on the 12th of May. The "Archives Israelites" contains an account of the proceedings of this congress, from which we take the following particulars:

Delegates from 31 Italian congregations were present, and the utmost harmony and good feeling prevailed. They commenced proceedings by acknowledging their obligations to their sovereign, Victor Emanuel, and extending a brotherly greeting and an expression of regret to the congregations prevented from participating in the common joy. Just three centuries ago, a congress of the Italian rabbis was held at Ferrara, to deliberate on the means of averting the storm hovering over them, in consequence of the rigorous prohibition of Jewish scientific and theological works. Now it was an assemblage of free Jewish citizens, meeting under the shadow of the Constitution and equal rights, to coöperate for the moral and civil amelioration of the Italian Judaism.

The Congress having organized by electing as its chairman Prof. Giuseppe Levi, one of the editors of the *Educatore Israelita*, it was resolved to petition the Government to pass a law that should protect Jewish citizens from the machinations of conversionists, to compel the restoration of minors who had been lured away from parents and guardians, and to strictly forbid proselyting in hospitals and other public institutions. It was determined to send all future collections for the benefit of the poor of the Holy Land direct, without the intervention of messengers. A resolution was also adopted to ask the Italian Legislative Chambers for a grant toward the support of Jewish worship, as long as it is accorded to other religious bodies.

A want referred to with much feeling, in the deliberations of the Congress, was a society for the publication of moral and religious books. It was finally agreed that each congregation be recommended to contribute 1,000 francs annually toward the diffusion of books to be selected by a committee appointed for that purpose.

In reference to marriages, it was resolved to petition the Government for exemption from the general law, should this, in deference to the Catholic interpretation of certain biblical passages, forbid divorces; but in every other respect to submit to the provisions that might be made. A committee was appointed to report at the next Congress on the advisability of establishing a rabbinical seminary for the kingdom.

A proposal was offered that the Congress convene a synod of Italian rabbis. This they declined to do, leaving the matter entirely in the hands of the minister.

The Congress then appointed an Executive Committee, charged with carrying out its resolutions, and vested with these functions, viz., to watch over the principles sanctioned by the Congress; to receive suggestions from co-religionists on matters of general interest; to comply with them if desirable, and within the limits of its own power, or to convene, if necessary, a new general Congress.

It was, in addition, resolved that, every three years, delegates of the Jewish communities should meet to deliberate on questions of general interest, the first session to take place in the spring of 1866, at a city to be designated by the Executive Committee.

The Congress also adopted a constitution on

condition that three fourths of the congregations which had sent delegates should give their adhesion to the proposed organization. The president of the provisional committee appointed by the delegates, Professor Giuseppe Levi, of Vercelli, officially announced in the last number of the "Educatore Israelita" that twenty-four of the congregations represented had sent in their adhesion to the constitution, and that seven others which were not represented likewise adopted the organization; and that, consequently, the Italian Jewish central organization was duly constituted. It appears that the congregations which either dissented or have not yet declared themselves, form only the fifteenth part of the Jewish population of the kingdom of Italy.

In several countries the Jewish community was rent by grave dissensions. In Constantinople a violent dispute pending between the progressive party of the Jewish community, headed by the Chacham Bashi, and the conservatives, led by a number of subaltern rabbis,

has at last been decided in favor of the latter. The Jewish congregations have been forbidden to elect foreigners as their chiefs, and a governmental order further enacts that the seal of the chief rabbi should be divided into two parts: one half to be in his charge, and the other in that of certain delegates of the subaltern rabbis. This decision is considered as a complete victory of the conservatives.

"The orthodox party in Wurtemberg," says a Jewish paper of this country, "is beginning to protest against the spiritual tyranny of the centralizing Oberkirchenbehörde (upper church authority), appointed by the Government, and which deprives the congregations of their independence. It was lately stated in the Legislature by a member opposed to ecclesiastical encroachments, that the said central authority kept a synagogue closed for seven weeks, because the congregation, disliking the sermons of a new rabbi appointed by this authority, refused to attend them. This central authority belongs to the extreme reform party."

K

KAMEHAMEHA IV., ALEXANDER LIHO-LIHO, King of the Sandwich Islands, born at Honolulu, Feb. 9th, 1834, died in that city, December —, 1863. He was the son of Kamehameha III. He received a good education from Protestant missionaries on the island, and afterward travelled extensively in Europe and the United States. He succeeded to the throne on the death of his father, in October, 1854, and, in 1856, married Miss Emma Rooker, daughter of an English physician. He was amiable in his disposition, though, like most of his countrymen, subject to violent fits of passion and jealousy which, in his case, were aggravated by habits of intemperance. In 1859 he attempted to murder his secretary, during a paroxysm of jealousy against his wife, and when returning reason showed him his folly, he was so much humiliated that he offered to abdicate the throne, but was persuaded to resume his duties. The death of his only son, the Prince of Hawaii—born May 20th, 1858, died August 25th, 1862—unhappily increased his tendency to intoxication, and probably shortened his life. He was succeeded by his elder brother, Lot Kamehameha, who had previously been minister of the interior, and commandant of the army.

KANSAS, a Western Central State of the United States, organized as a Territory in May, 1854, admitted as a State January 29th, 1861. It has an area of 80,000 square miles, and had a population in 1860 of 107,206 inhabitants. The Governor and other State officers were elected in Nov., 1862, for two years, and there was no election in 1863 except for Legislature, Chief Justice and local officers. The candidates for Governor in the election of November,

1862, were Thomas Carney, Republican, and W. R. Wagstaff, Democrat. Governor Carney received 9,990 votes, and Mr. Wagstaff 5,464. The Legislature elected in 1863 was Republican and Union by a very large majority. The Democratic members constituting only one tenth of the whole number of representatives. Robert Crozier, Republican Union, was chosen Chief Justice, for six years, in Nov., 1863, by about 18,000 majority.

The State has a funded debt of \$181,000, of which \$150,000 (7 per cent. bonds) are due July, 1876, and the remainder, \$31,000, was due in July, 1863. It has also a floating debt of \$48,509. There has been great difficulty in collecting the taxes in portions of the State, from the scarcity of money, but the finances of the State are now improving. The school system of the State is not yet very fully developed, and very little of the school fund lands have been sold. Of the 14,766 persons between the ages of five and twenty-one years, in the State in 1863, 8,593 were enrolled as having attended school some part of the year. They had been taught by 210 teachers, and the cost of maintaining the schools had been \$15,756.90. The State Legislature has passed acts for the location and organization of a State university, a State normal school and an agricultural college, and there are besides, four other colleges in the State, all of them, as yet, in their infancy, but with fair prospects of future success. A college has been organized on the Ottawa reservation, 20 miles from Lawrence, the land for the endowment of which was contributed by the Indians themselves. Provision has been made for an institution for deaf mutes and the blind, as well as for the

insane. A State penitentiary is building near Leavenworth. Kansas has been very active in its support of the war, having furnished over 14,000 troops, or about one seventh of its actual population, and its troops, a large portion of them cavalry, and trained to service in the previous border contests, have proved their valor on most of the battle-fields of the West. In the operations in Missouri, Arkansas and the Indian Territory, they have particularly distinguished themselves, both as partisan troops and as the most unflinching and untiring soldiers in the line. The State, especially toward its eastern border, has suffered severely from the raids of the irregular Confederate troops and guerilla bands from Missouri and Arkansas, who have ravaged and plundered the border towns and murdered their citizens as often as they had opportunity. Irregular Federal troops raised to oppose and revenge these raids, have retaliated on secessionists on the borders of Missouri and Arkansas, and have rendered some of the counties along the line almost a desert.

The most atrocious outrage of the war was the attack of Col. Quantrell and his band of Confederate guerillas upon the thriving city of Lawrence, on the 21st of August, 1863. The attack was made in the early morning, and entirely without warning. The citizens, unarmed, were unable to make any defence, and were many of them shot down in the streets in cold blood. The Eldridge House, the largest hotel in the city, and all the stores on Massachusetts street, the principal business street, were plundered and burned, as were many dwellings and stores in other parts of the city. Two hundred and five men were killed and many others wounded. No women or children were killed or wounded, though one assailant snapped his pistol at Miss Lydia Stone, a heroic woman, who had exposed her life for the preservation of others. Several of the churches were destroyed, and the property stolen and burned was estimated to exceed the value of \$2,000,000. Quantrell, the leader of the gang, had been at one time a resident of Lawrence. Senator Lane (General James H. Lane) was in Lawrence at the time, but succeeded in avoiding the guerillas, and as soon as they left the town, raised such force as could be gathered and started in pursuit. Some thirty or forty of the guerillas were overtaken and slain, but the remainder got away safely with their plunder. Much indignation was felt by the citizens of Kansas at the alleged remissness of General Ewing, who was in command of the district of Kansas and Western Missouri, and of General Schofield, who commanded the department of Missouri. Two days after the attack, Gen. Ewing issued the following order :

General Order, No. 11.

KANSAS CITY, MO., August 23d, 1863.

All persons living in Jackson, Cass and Bates counties, Missouri, and that part of Vernon county included in this district, except those living within one mile of

the limits of Independence, Hickman's Mill, Pleasant Hill and Harrisonville, and except those in Kaw township, Jackson county, north of this creek and west of the Big Blue, embracing Kansas City and Westport, are hereby ordered to remove from their present places of residence within fifteen days from the date hereof.

Those who within that time prove their loyalty to the satisfaction of the commanding officer of the military station nearest their present places of residence, will receive from him certificates stating the fact of their loyalty and the names of the witnesses by whom it can be sworn. All who have received such certificates will be permitted to remove to any military station in this district, or to any part of Kansas except the counties on the eastern border of the State. All others shall remove out of this district. Officers commanding companies and detachments serving in companies, will see that this paragraph is promptly obeyed.

All hay or grain in the field or under shelter in the district from which the inhabitants are required to remove within reach of the military stations after the 9th of September next, will be taken to such stations and turned over to the proper officers there, and a report of the amount so turned over made to the district headquarters, specifying the names of all loyal owners and the amount of such produce taken from them. All grain and hay found in such districts after the 9th of September next, not convenient to such stations, will be destroyed.

Quantrell and his band of marauders still hovered around the Kansas border, and on the 7th of October, having ascertained that Major-General Blunt and his escort were on their way from the Indian Territory to Fort Scott, Kansas, and near that fort, he disguised his men, about 300 in number, in Federal uniforms, and attacked the little body of about 100 men composing the escort, very suddenly, intending to capture General Blunt, who was especially obnoxious to these guerillas from his habit of hanging promptly all of them whom he succeeded in capturing. The escort broke, from the suddenness of the attack, but Gen. Blunt succeeded in rallying nine of them, and kept the guerillas at bay till he could rejoin his own forces, which were near. Seventy-eight of the escort were killed, most of them shot down after surrender; among the number was Major Curtis, a son of Major-General Curtis, who was on General Blunt's staff. It was supposed by the Confederates that Gen. Blunt was among the killed.

There have been in Kansas, and probably in Western Missouri, also, a considerable number of men, soldiers of fortune, who, while professing to belong on the side of the Union, have been ready to plunder and rob, in the name of freedom, all against whom they could raise any suspicion of sympathy with the Confederates. These "jayhawkers," as they were called, had really as little interest in the success of the Union cause as their counterparts, the guerillas, had in that of the Confederates; the controlling motive being in both instances the obtaining of plunder for their own emolument.

KENRICK, FRANCIS PATRICK, D. D., an American Roman Catholic prelate, born in Dublin, Ireland, Dec. 3d, 1797, died in Balti-

more, July 8th, 1863. He received a classical education in Ireland, and at the age of 18 was sent to Rome to study for the Church, spending two years at the house of the Lazarists, and four years in the College of the Propaganda, where, in 1821, he was ordained a priest. In the same year he came to the United States, and on the recommendation of the officers of the Propaganda, was appointed head of an Ecclesiastical Seminary recently established in Bardstown, Ky. At this place he passed nine years, visiting occasionally the scattered missions of the diocese, and succeeding, by his ability and energy, in establishing the seminary upon a firm basis.

In 1830 he was consecrated Bishop of Arath, *in partibus infidelium*, and at the same time appointed coadjutor to Bishop Conwell, of Philadelphia, with powers of administrator in that diocese. On Dr. Conwell's death, in 1842, he became his successor, and in 1851 he was transferred to the Archiepiscopal See of Baltimore, of which he retained the charge until his death. In 1852 he presided over the first Roman Catholic council with plenary powers held in the United States, as "Apostolical Delegate," and in 1859 the Pope conferred upon him and his successors the "primacy of honor," which gives them precedence over all Roman Catholic prelates in the country.

The deceased prelate was one of the most learned men and vigorous writers of his creed in the United States, being equally distinguished as a controversialist and a biblical critic. During his residence in Bardstown, he published "Letters from Omicron to Omega" (1828), embodying a defence of the Roman Catholic doctrine of the Eucharist, which had been attacked by Rev. Dr. Blackburn, President of Danville College, Ky., writing under the signature of "Omega." He also published a series of letters "On the Primacy of the Holy See and the authority of General Councils" (1837), in reply to the Rt. Rev. John H. Hopkins, Protestant Episcopal Bishop of Vermont, subsequently enlarged and reprinted under the title of "The Primacy of the Holy See Vindicated," and another series of letters entitled "Vindication of the Catholic Church" (1855), in reply to Bishop Hopkins's "End of Controversy Controverted." Of the same class of publications were his "Catholic Doctrine on Justification Explained and Vindicated" (1841), and "Treatise on Baptism" (1843).

The works, however, which constitute his chief claim to theological eminence, are his Latin treatises on dogmatic theology (*Theologia Dogmatica*, 4 vols., 1839-'40), and moral theology (*Theologia Moralis*, 3 vols., 1841-'43), which form a complete course of divinity, and are used as text books in nearly all the Roman Catholic seminaries in the United States. Enlarged editions of both treatises have recently been published in Belgium. During the latter part of his life he was chiefly employed upon a revised English translation of the Scriptures,

of which, at the time of his death, the whole of the New Testament and the greater part of the Old Testament had been published. It is illustrated by copious notes, and is destined probably to supersede the Douay version in general use. Among the occasional and miscellaneous writings of the Archbishop may be mentioned the article "Roman Catholic Church," in the *NEW AMERICAN CYCLOPÆDIA*.

Archbishop Kenrick was noted for his purity of heart and gentleness of disposition, for the sagacity of his judgment and his moderation in counsel. At the same time, when the occasion demanded energy of action, he was energetic, firm and courageous. It was during his episcopate that the anti-Catholic riots occurred in Philadelphia, and his efforts in allaying the strife and turmoil, and in preventing acts of retaliation by his own people, are gratefully remembered. During the troubles which succeeded the outbreak of the present rebellion he remained loyal to his adopted country, and, notwithstanding a large portion of the Roman Catholic population of Baltimore, including the congregation at the Cathedral, where he usually officiated, sympathized with the secessionists of the Southern States, he never failed to inculcate obedience to the powers placed in authority over the people, and amidst frequent manifestations of impatience and dissatisfaction persisted in invoking the customary blessing on the President of the United States. He was indefatigable in extending the influence and power of his church, and while Bishop of Philadelphia, founded the theological seminary of St. Charles Borromeo, in that city, and introduced into his diocese the Sisters of the Good Shepherd, who devote themselves to the care of Magdalen Asylums.

KENTUCKY. The State of Kentucky was comparatively exempt from invasion by any Confederate force during 1863. Some attacks were made upon the railroad trains running between Louisville and Nashville, and several raids were made by small bands of the enemy upon many towns in the State. Gen. Morgan, also, with a force of about five thousand men marched from the Cumberland river in Tennessee across the State, capturing several towns, and passing into Indiana and Ohio. Previously, on the 23d of March, Gen. Gilmore overtook, by forced marches, a body of the enemy under Col. Pegram at Somerset, in Pulaski county, where a sharp contest ensued. The force of Gen. Gilmore was twelve hundred to two thousand mounted men. Sixty prisoners were captured, and the enemy routed. During the night they retreated across the river, leaving behind them four hundred cattle, which were recovered by Gen. Gilmore. These expeditions not only caused great excitement in some parts of the State, but inflicted severe loss of property upon the inhabitants.

The number of the enrolled militia of Kentucky was 119,577. Out of this number 37,444 entered the Federal service for three years;

11,911 for one year; 413 for nine months, and 1,770 for sixty days; making an aggregate of 51,538, which was almost one half of those between the military ages. Since the beginning of the war the State had advanced on account of the United States Government, in recruiting, arming, equipping, subsisting, and paying volunteers, to November 30th, 1863, the sum of \$2,196,611. Of this sum \$861,221 was refunded; \$605,000 credited as the proportion of taxes levied on the State, leaving a balance of \$730,390. Notwithstanding many counties of the State had been so overrun by invaders and desolated by guerillas and marauders that no revenue could be collected within them, the state of the Treasury for four years presented the following results:

Balance in Treasury, October 10th, 1860....	\$126,548 01
Balance in Treasury, October 10th, 1861....	280,111 65
Balance in Treasury, October 10th, 1862....	459,708 30
Balance in Treasury, October 10th, 1863....	808,387 00

The decline in the valuation of property in the State in 1862, as compared with 1860, was over 165 millions. The largest items of decline were in the value of land and slaves. In the former it was over 50 millions, and in the latter over 30 millions.

The institutions for education in the State are eight colleges, three theological schools, two medical schools, and one law school. The district public schools of the State number nearly five thousand, and are sustained by the income of a fund and local taxation. The charitable institutions consist of a deaf and dumb asylum at Danville, a blind asylum at Louisville, an asylum for the feeble minded at Frankfort, and lunatic asylums at Lexington and Hopkinsville.

The appropriation made by Congress for the endowment of Agricultural Colleges was accepted by the State, and consisted of scrip for 330,000 acres of public lands.

The public works of improvement in the State consist of the Louisville and Portland canal, 2½ miles around the falls in the Ohio river; the works to secure slack water navigation for 260 miles in Kentucky river; also for 231 miles in the Licking river; also for 175 miles in the Green river, and 100 miles of Barren river. The railroads in some portions of the State have suffered in consequence of the war. Tracks have been torn up and bridges and rolling stock destroyed. The number of miles of railroad previous to these disasters was 625.

The position of Kentucky, as one of the border Slave States, imparted more than ordinary interest to the political proceedings in the State. The Legislature, elected in August, 1861, commenced its last session at Frankfort early in January, 1863. The measures presented in this body represented the views of the people of the State. It was unequally divided, and the views of each division are to be found in the resolutions which they recommended for adoption. On the 27th of February, the Assembly adopted the following series of resolutions. They

were subsequently adopted in the Senate, with the exception of the 11th:

1. *Resolved*, That our institutions are assailed by an armed rebellion on one side, which can only be met by the sword; and on the other by unconstitutional acts of Congress, and startling usurpations of power by the Executive, which we have seen by experiment can be corrected by the ballot-box. Policy, as well as principle, requires that Kentucky shall await the process of reform, which is slow but sure, and refrain from all unlawful and unconstitutional acts which have already brought terrible calamities upon the country; whilst we invoke the aid of all patriotic men to avert the evils that threaten our free institutions.

2. *Resolved*, That this General Assembly declares, as before it has oftentimes declared, that the State of Kentucky hath ever been, and is, loyal to the Government of the United States of America, and is determined to maintain that loyalty against both domestic and foreign foes.

3. *Resolved*, That this General Assembly recognizes a manifest difference between the administration of the government and the government itself—the one is transitory, limited in duration only to that period of time for which the officers elected by the people are charged with the conduct of the same; the other is permanent, intended by its founders to endure forever.

4. *Resolved*, That this General Assembly now, in the exercise of its right to differ in opinion with the National Executive, enters its solemn protest against the Proclamation of the President of the United States, dated 1st of January, 1863, by which he assumes to emancipate all slaves within certain States, holding the same to be unwise, unconstitutional, and void.

5. *Resolved*, That this General Assembly declares that the power which has recently been assumed by the President of the United States, whereby, under the guise of military necessity, he has proclaimed and extended martial law over States where war did not exist, and has suspended the writ of *habeas corpus*, is unwarranted by the Constitution, and its tendency is to subordinate civil to military authority, and to subvert constitutional and free government.

6. *Resolved*, That this General Assembly declines to accept the President's proposition for emancipation, as contained in his Proclamation of the 19th of May, 1862.

7. *Resolved*, That this General Assembly deems it proper further to declare that it, together with all the loyal people of the State, would hail with pleasure and delight any manifestation of a desire on the part of the seceded States to return to their allegiance to the Government of the Union, and would, in such event, cordially and earnestly coöperate with them in the restoration of peace, and the procurement of such guarantees as would give security to all their interests and rights.

8. *Resolved*, That Kentucky will adhere to the Constitution and the Union, as the best, it may be the last, hope of popular freedom; and for all the wrongs which may have been committed, or evils which may exist, will seek redress under the Constitution, and within the Union, by the peaceful but powerful and irresistible agency of the suffrages of a free people.

9. *Resolved*, That this General Assembly hails with pleasurable hope the recent manifestations of conservative sentiment among the people of the non-slaveholding States in their late elections, and regard the same as the earnest of a good purpose on their part to coöperate with all other loyal citizens—give security to the rights of every section, and maintain the Union and the Constitution as they were ordained by the founders of the republic.

10. *Resolved*, That, in the judgment of this General Assembly, a convention should be called for the purpose of proposing such amendments to the National Constitution as experience has proved to be necessary to maintain that instrument in the spirit and meaning of its founders; and to that end we reaffirm and adopt the resolutions recommending a call for a convention of the United States, approved January 25th, 1861.

11. *Resolved*, That it is expedient for the Mississippi Valley States, as soon as practicable, to hold a convention of advice and consultation, with a view to determine what is best to be done for the preservation of the whole Government, and for the purpose of maintaining their integrity and Union, and to prevent any one or more States from seizing and appropriating to themselves the exclusive use of the mouths of the Mississippi river, and imposing export and import duties on the commerce and navigation of the other States.

12. *Resolved*, That the laws of this State must be maintained and enforced, and that it is the duty of the constituted authorities of the State to see to it, that by all constitutional means this indispensable end shall be attained.

13. *Resolved*, That the Governor be requested to forward a copy of these resolutions to the President of the United States, and to the Governor of each State, with a request that he lay the same before the Legislature of his State, and to each of our senators and representatives in Congress. Our senators are instructed, and our representatives requested, to use their best efforts to accomplish the objects of these resolutions.

The following preamble and resolutions expressing the views of the minority of the Legislature, were offered in the Senate and Assembly, on the 19th of January, and although they failed to be adopted they have acquired an importance in connection with subsequent events in the State:

In times of war, as in peace, the Constitution of the United States is the supreme law of the land. It prescribes the powers of the Government in its executive no less than in other departments, and it is the only bond of Union between the States.

The Federal Government, as defined by the Constitution, when exercising the powers granted to it is entitled to the allegiance of the people; but loyalty to the Government does not impose upon the citizen any obligation to support an Administration in the enforcement of a policy unauthorized by the Constitution or forbidden by its provisions; but it is the duty of all good citizens to resist encroachments upon their rights, and to defend the Constitution of their country from violence. He who upholds the executive or any other department of the Government in the violation of its provisions is disloyal to the Constitution and an enemy to the freedom of his country.

The Federal Government, deriving all its legitimate powers from the Constitution, is, therefore, the creature of the Constitution, and has no power in any department to suspend any of its provisions, or throw off its restrictions under any pretense whatever.

The maxim that "Governments derive their just powers from the consent of the governed," is one which we ought never to forget. It involves a fundamental principle of freedom—one asserted by our ancestors, and for which they fought and won our independence of the British Crown, and which we never can surrender. It should also be borne in mind that Governments were instituted for the protection of life, liberty and property, and that such as fail to perform this duty will, sooner or later, be overthrown by an intelligent, virtuous, and courageous people.

The history of the present administration of the Federal Government is a history of repeated injuries and usurpations, tending directly to the overthrow of State authority and State institutions, and a consolidation in the Federal Government of all political power, and the erection upon their ruins of a great military despotism as tyrannical and despotic as the worst Governments of Europe, to prove which we refer to the following facts:

The President has, without authority of Congress, suspended the writ of *habeas corpus*—thus striking a deadly blow at the liberties of the people.

He has caused citizens to be arrested, transported

to distant States, and incarcerated in loathsome prisons, without charge or accusation against them.

He has denied to citizens thus arrested and imprisoned a trial by jury, or indeed any trial, and has withheld from them all knowledge and information as to their accusers or the cause of their arrest.

He has subjected his prisoners thus held to barbarous and inhuman treatment, endangering both life and health, and has required hundreds of them so held, as a condition upon which they might be released, to take illegal oaths arbitrarily prescribed by himself or his agents.

He has attempted to destroy the freedom of the press by the forcible suppression of newspapers, because they saw proper to criticize the measures of his administration; and such as have escaped suppression have been subjected to a censorship wholly incompatible with freedom of thought or expression of opinion.

He has attempted to destroy the freedom of speech, by arresting citizens who animadverted upon the measures of his administration.

He has caused to be arrested persons engaged in circulating petitions for the signature of the people; thus interfering with the right of petition.

He has wholly disregarded the right of the people to be "secure in their persons, houses, papers, and effects against unreasonable searches and seizures."

He has interfered with the administration of justice in the State courts by violently forcing the judges to adjourn, and dispersing their grand juries, and by breaking open jails and releasing prisoners confined under regular judicial process for felonies and other crimes.

He has in some of the States, among which is Kentucky, forcibly wrested from the citizen his right to be the candidate for office within the gift of the people, thus striking down the elective franchise; and eminent citizens of this State are now in confinement beyond its borders for no other known reason than that they presented themselves as candidates for office before the people.

He has quartered soldiers in the houses of citizens against their will, and not in the manner prescribed by law.

He has permitted his troops to overrun this State, destroying houses, and fencings of farms and lots. They have sacked the houses of peaceful citizens, destroying their furniture, family pictures, carpets, clothing, and other articles of household goods, and robbed them of their silver ware, stock, and provisions.

He has permitted his wagon masters and others, with armed soldiers, to seize the corn, oats, and hay, &c., of our citizens for the use of the armies, without their consent, and without just discrimination as to whether the farmer could spare the articles or not—fixing their own price upon them, and making their own estimate as to the value and the quantity taken, and giving no receipt or name whereby the owner could successfully seek his pay; and often, when vouchers were given, they were so informal that no money could be drawn upon them.

He has permitted his officers and soldiers to entice slaves in great numbers to leave their masters and owners, and to take them within their camps, and there, with bayonets, to protect them from reclamation; and when civil suits have been brought for their recovery, in many instances the process of the court has been resisted by armed forces, and the owner of the slaves maltreated and imprisoned, for no known cause other than his attempt thus to recover and protect his property.

He has permitted his officers and soldiers, without authority of law, to levy large contributions of money upon unoffending citizens, under the pretence of reimbursing other citizens for losses sustained by the casualties of war.

He has permitted his officers and soldiers with impunity to murder peaceable citizens.

He has given his assent and approval to acts of Congress appropriating and proposing to appropriate enormous sums of the public money to purchase the

freedom of slaves and their deportation to some foreign country, and has invited the border Slave States (including Kentucky) to liberate their Slaves, with promises of compensation from the Federal Treasury.

He has set aside the Constitution of the United States by giving his official sanction to an act of Congress creating a new State within the territory of Virginia without her consent.

He has, without constitutional authority, aided in freeing the slaves of the District of Columbia.

He has, in violation of the Constitution, by proclamation, declared free all the slaves in many of the States, invited them to vindicate their freedom by force, and sought an alliance with them in a war waged against their masters—a monstrous and iniquitous act sanctioned by no law human or divine, finding no parallel in atrocity in the history of barbarous nations.

He is spending large sums of money, appropriated by Congress for the support of the Army, in feeding and clothing slaves stolen from their masters.

In view of the foregoing facts, the truth of which cannot be denied, we do firmly believe, and solemnly declare, that any assistance furnished the Executive in the further prosecution of the war upon the basis of his present policy, tends immediately and directly to the overthrow of both the Federal and State Governments: Wherefore,

1. *Resolved by the General Assembly of the Commonwealth of Kentucky*, That Kentucky will, by all constitutional means in her power, protect her citizens in the enjoyment of the elective franchise, the benefits of the writ of *habeas corpus*, the security of their persons and property against the unconstitutional edicts of the Federal Executive, and their enforcement by the Army under his control.

2. *Resolved*, That, by the constitution of the State of Kentucky, "the right of the owner of the slave to such slave, and its increase, is the same and as inviolable as the right of the owner to any property whatever;" that "Kentucky understands her own interests too well to be thankful for gratuitous advice as to the mode in which she should manage them; and when she wants the assistance of any outside administration of her affairs, she claims the privilege of originating the suggestion;" consequently the proposition made by Abraham Lincoln, for her to emancipate her slaves, is hereby rejected.

3. *Resolved*, That the object and purpose of the war having been perverted by the party now in control of the Government, in violation of its oft-repeated and most solemn pledges, our Senators in Congress are instructed, and our Representatives are requested, to oppose any further aid in its prosecution by furnishing either men or money.

4. *Resolved*, That the proclamations of the President, dated September 22d, 1862, and January 1st, 1863, purporting to emancipate the slaves in certain States and parts of States, set forth therein, are unwarranted by any code, either civil or military, and of such character and tendency as not to be submitted to by a people jealous of their liberties.

5. *Resolved*, That the act of Congress, approved by the President, admitting Western Virginia as a State, without the consent of the State of Virginia, is such a palpable violation of the Constitution as to warrant Kentucky in refusing to recognize the validity of such proceeding.

6. *Resolved*, That Kentucky will cordially unite with the democracy of the Northern States in an earnest endeavor to bring about a speedy termination of the existing war; and to this end we insist upon a suspension of hostilities and an armistice, to enable the belligerents to agree upon terms of peace.

7. *Resolved*, That — commissioners from this State be appointed, whose duty it shall be to visit the Federal and Confederate Governments, at Washington and Richmond, and urge them respectfully to agree upon an armistice for the purposes therein contemplated.

8. *Resolved*, That the Governor of Kentucky is hereby requested to forward a copy of the foregoing pre-

amble and resolutions to the President of the United States, and to each of our senators and representatives in Congress.

On the 29th of January, the minority members of the Legislature, and a large number of persons from various counties of the State, met in the evening in the Senate Chamber, in the Capitol, and organized a meeting, and adopted the preceding preamble and resolutions in the form in which they had been offered in both Houses of the Legislature. Various propositions were then discussed in reference to calling a convention of the people, nominating candidates for State officers and members of Congress, to be chosen at the usual election in August, when the meeting adjourned to the next day. At the second meeting a State Central Committee was appointed, and instructed to call a State Convention to nominate candidates for governor and other officers, to meet at Frankfort on the 18th of February. On the next day, January 31st, this committee issued a call for a Convention. Previous to its meeting an application was made to the Assembly of the Legislature for the use of its hall, which was refused. At the appointed time the Convention assembled at Frankfort, but was soon dispersed by Col. Gilbert, the commander of a regiment of Federal soldiers. On the next day one of the members of the Convention, who was also a member of the lower branch of the Legislature, moved in the House a suspension of the rules, in order to enable him to present the following memorial:

February 19th, 1863.

To the General Assembly of the Commonwealth of Kentucky:

The undersigned citizens of the State of Kentucky, respectfully represent: That they are citizens of said State, and legal voters under the laws and Constitution thereof; that, in pursuance of public notification, they and many other citizens and voters met at the Metropolitan Hall in the city of Frankfort, on the 18th inst., for the purpose of holding a Democratic Convention, and nominating candidates to be voted for at the next August election for the offices of Governor, Lieutenant-Governor, and other State officers to be elected at that time, in obedience to the Constitution of the State; that they and their associates are peaceable and unarmed citizens, and in no wise connected with any military organization; that they met in a peaceable and orderly manner, and for a lawful purpose.

They further state, that soon after they had convened, Col. Gilbert, the military commandant of the post, appeared in said hall, attended by a large military force, surrounding the building, and caused to be read military order No. 3, to the effect that information had been received at headquarters that a large number of rebel spies and emissaries were present, and requiring all persons not residents of the city or members of the Legislature to report themselves immediately at his headquarters; but stated that, for mutual convenience, he had brought his adjutant to the hall, and that they could there and then report themselves, and give satisfactory reference as to their identity; that no person present would be permitted to leave the hall, unless by his order, until all had so reported themselves. The Convention, then, with his permission, proceeded to elect a chairman, and made a call of the counties of the State, the delegates present from each county reporting their names, and giving reference as their counties were respectively called.

When this was done the Convention was about to

proceed to the business before it, when, to the astonishment of all present, Col. Gilbert rose and stated that the further business of said Convention was "arrested;" that those present would not be permitted to hold a Convention within the Department under his command; that if nominations were made the candidates would be arrested, and, if elected, would not be permitted to hold the office to which they might be elected. He said he should preserve the list of names thus obtained; that, in certain contingencies, they might be of great importance; that he required all present to return peaceably and quietly to their homes, and to refrain from all "seditious and noisy conversation!" that whilst willing to allow the "greatest freedom consistent with the times," he should repress all conduct calculated to excite the people. He assigned as a reason for this extraordinary proceeding, that the "Conservative Democratic Legislature of the State" had refused to allow the Convention the use of its hall, saying that, had this refusal not been made, he might have acted differently. He said the conservative democratic papers of the State repudiated them as democrats, and that said papers, as well as common rumor, assigned to them the character of rebel sympathizers.

At the conclusion of these remarks, A. B. Chambers, Esq., the representative from Gallatin county, presented to Col. Gilbert the resolutions appended hereto, which had been adopted at a primary meeting of the Convention, as the resolutions which would be reported to this Convention, and which, in the opinion of said primary meeting and the committee on resolutions, embodied the views of this Convention, and requested that they be read, in order that the objects and views of the Convention might be understood. This proposition was declined by Col. Gilbert, who remarked that the Convention must not be holden.

Without intending to reflect upon Col. Gilbert, or question the authority of the Federal Government within the sphere of its constitutional powers, we, as citizens and freemen of the Commonwealth, submit that in the acts herein referred to, the constitutional rights of citizens peacefully to assemble together, the right of suffrage, and the right of free speech, as well as almost every other right dear to freemen, have been invaded by military authority, against which we enter our solemn protest, and pray your honorable body to adopt such legislation as in your wisdom will best conserve those rights and protect the citizens of this Commonwealth from military violence.

D. MERRIWETHER,
P. D. State Convention.
GEO. W. WILLIAMS, of Hancock.
J. R. BUCHANAN.

1. *Resolved*, That the political principles and views set forth and promulgated by the Democratic National Convention, particularly that held at Cincinnati on the 2d of June, 1856, in the form of resolutions adopted and published to the American people as containing the political faith and creed of the National Democracy, are approved by this Democratic State Convention, reasserted, and again adopted.

2. *Resolved*, As the leading idea in the National Democratic faith, we again assert "that the Federal Government is one of limited power, derived solely from the Constitution; and the grants of power made therein ought to be strictly construed by all the departments and agents of the Government; and that it is inexpedient and dangerous to exercise doubtful constitutional powers.

3. *Resolved*, That this Convention, representing the Democratic party in Kentucky, solemnly declare that they stand opposed to the continuance and further prosecution of the civil war now existing, for the reasons and upon the grounds set forth in the preamble and resolutions presented by Messrs. Grover and Bush in the Senate and House of the Kentucky Legislature, on the 19th of January, 1863, which preamble and resolutions were unanimously approved by a meeting of the democratic members of the Kentucky Legislature, and other citizens of the Democratic party, convened

at the Senate chamber in Frankfort, on the 29th and 30th of January, 1863, and are hereby approved and adopted by this Convention. (See pp. 564, 565.)

4. *Resolved*, That the Union of the States cannot be maintained and perpetuated, unless their constitutions and laws, not inconsistent with the Constitution of the United States, their rights and interests thereby intended to be secured, and their reserved powers, are respected and held inviolate by the General Government, and unless that Government shall refrain from the assumption and exercise of ungranted powers.

5. *Resolved*, That we will coöperate with such of the adhering States as shall concur in opposing the continuance of the existing war, and in the adoption of such pacific measures as may be best calculated to promote a lasting peace in the country and a permanent union of all the States.

Resolved, That we hail with feelings of the liveliest satisfaction the recent victories of our democratic brethren of the Western and Northwestern States, in defence of "the Constitution as it is, and the Union as it was," and we congratulate the friends of constitutional liberty everywhere upon these signal triumphs of the true principles of republican government.

The motion to suspend the rules failed.

Says the "Louisville Journal," in July: "The Convention was dispersed, and the movement for the reorganization of the secession party of Kentucky, under the name of democracy, as respects public and formal action, was suddenly arrested. At this point two courses lay before the leaders of the movement. They were compelled to abandon the movement for the present election, or else to organize secretly, and selecting candidates in the main from the new recruits of the party, with but a comparative sprinkling of original secessionists, quietly to put them in the field without the intervention of any public or formal action. In a word, they had either to throw up their scheme for the present, or to prosecute it by indirection. They unhesitatingly chose the latter course. It is not probable that they so much as seriously thought of the former. And the course they chose they have pursued with energy and with considerable skill.

"The result, with respect to organization, we are not able confidently to state, though secret societies under the style of "Democratic Associations" have been established certainly in many parts of the Commonwealth and probably in all; but, with respect to candidates, the result is at last before the public in a complete "Democratic ticket" for the State, the candidates having been required to steal out to their places in the ticket one by one or in little groups, as the stars appear to steal into their places in the twilight sky, the managers apparently considering that to allow the ticket all at once to burst forth in constellated splendor might challenge too forcibly the attention of the authorities. But at last the ticket is out in full."

Meanwhile the majority of members of the Legislature, known as Union members, assembled in the Hall of the Assembly, on the evening of Feb. 16th, and agreed to "recommend to the Union Democracy of Kentucky that they assemble by delegation in convention in Louisville on March 18th, to nominate suitable

persons as candidates for the various State officers." At the appointed time the Convention assembled at Louisville. Delegates were present from one hundred and three counties, and the Convention contained more than a thousand members. Joshua F. Bell was nominated for Governor, and adopted a series of resolutions, which were thus explained by the present Governor, Bramlette, in a speech delivered in Louisville on July 18th:

Its first resolution approved and endorsed the principles contained in the joint resolutions upon Federal affairs, adopted by our Legislature. (*See pp. 563, 564.*) The spirit of these resolutions declared the loyal attachment of Kentucky to the Government of the United States, and our determination to maintain it; recognized the difference between a transitory administration of the government, limited to an official term, and the government itself, which is permanent, and was intended by its founders to endure forever; declared dissent from and entered its protest against the emancipation proclamation as unwise, unconstitutional, and void; denounced the extension of martial law over States where war did not exist, and the suspension of the writ of *habeas corpus* as unwarranted by the Constitution, tending to subordinate civil to military authority and to subvert constitutional and free government; declared we would hail with delight any manifestation of a desire on the part of the seceded States to return to their allegiance, in which event we would cordially coöperate with them in the restoration of peace and the security of such guarantees as would protect all their interests and rights; hailed the triumph of conservative sentiment in the non-slaveholding States as manifested by the then recent elections, and asserted that the laws of the State must be maintained and enforced, and that it was the duty of the constituted authorities to see that this indispensable end should be attained by all constitutional means.

These points of undying devotion and loyalty to the Government, and the determination to adhere to it and preserve it at all hazards; the duty of the State government to see the law executed; the condemnation of the radical measures of the Federal administration in power, and the pledge to correct them by peaceful and constitutional means through the ballot-box, all meet his most cordial approval and support. There is no issue made against them in Kentucky, and therefore there is no necessity to discuss them here, and he had not discussed them at length, because they were entertained in common by all the Union Democrats, and as our opponents say they hold the same sentiments, there is therefore no issue to be taken with them. But the second resolution of our Convention declared that the present causeless and wicked rebellion should be crushed by the whole power of the Federal Government, and the national authority restored over all the revolted States, and for the accomplishment of that object we were willing to devote our whole resources if necessary. On this resolution our opponents take issue; all the rest are unopposed.

On the 24th of April Mr. Bell declined the nomination for Governor, for the reason that his private affairs, which had been much neglected during the two previous years of trouble, demanded his whole attention. The State Central Committee on the 1st of May tendered the nomination to Thomas E. Bramlette, who accepted it. The election was held on the first Monday in August.

A general act of the Legislature and amendments thereto passed in 1862, constitute the laws of the State regulating elections. The statute required that, so long as there are two

political parties in the State, each should be represented in the officers of every election precinct. An amendment adopted March 15th, 1862, declared that those who had engaged in rebellion for the overthrow of the Government, or who had in any way aided, counselled, or advised the separation of Kentucky from the Federal Union by force of arms, or adhered to those engaged in the effort to separate her from the Federal Union by force of arms, should not be deemed one of the political parties of the State. They, therefore, could not be officers at any election. Another amendment, adopted March 11th, 1862, declared that all citizens who should enter the service of the so-called Confederate States, in either a civil or military capacity, or into the service of the so-called Provisional Government of Kentucky, and continue in such service after the passage of this amendment, or who shall take up or continue in arms against the military forces of the United States or the State, or shall give voluntary aid and assistance to those in arms against said forces, shall be deemed to have expatriated themselves, and shall no longer be citizens of Kentucky, nor may be again, except by permission of the Legislature. Whenever any person attempted to exercise any legal right of a citizen of Kentucky, he might be required to negative on oath this expatriation. Persons who aided in attempting to break up or prevent any election from being held anywhere in the State were liable to be fined from \$50 to \$500, or imprisonment not more than one year. Officers who failed to arrest such offenders may be punished by fine and imprisonment. Persons offering to vote, who should make false statements under oath, should be deemed to be guilty of perjury, and suffer the penalties for that offence.

Previous to the election, Governor Robinson issued a proclamation stating the law relative to elections, and the oath that a voter might be required to take. It was called the "oath of loyalty," and, as administered in the city of Louisville, was as follows:

I — of — county of — State of — do solemnly swear that I will bear true allegiance to the United States, and support and sustain the Constitution and laws made in pursuance thereof as the supreme law of the land, anything in any State Constitution or laws to the contrary notwithstanding, and that I will not take up arms against the United States, nor give aid and comfort, by word or deed, to the enemies thereof, or to those now in rebellion against the United States; and that I disclaim all fellowship with the so-called Confederate States and Confederate armies; and that I will faithfully keep and observe this my solemn oath of allegiance to the Government of the United States of America, with a full understanding that death or other punishment by the judgment of a Military Commission will be the penalty of its violation.

Subscribed and sworn before me this — day of —, 186 .

General Burnside, who was in command of the Department of the Ohio, which included the central and eastern part of the State, issu-

ed the following proclamation previous to the election which was held on August 3d:

General Orders, No. 120.

HEADQUARTERS, DEPARTMENT, OF THE OHIO, }
CINCINNATI (OHIO), *July 31st, 1863.* }

Whereas the State of Kentucky is invaded by a rebel force, with the avowed intention of overawing the judges of elections, of intimidating the loyal voters, keeping them from the polls, and forcing the election of disloyal candidates at the election on the 3d of August;

Whereas the military power of the Government is the only force that can defeat this attempt, the State of Kentucky is hereby declared under martial law, and all military officers are commanded to aid the constituted authorities of the State in support of the laws and of the purity of suffrage, as defined in the late proclamation of his Excellency, Governor Robinson.

As it is not the intention of the commanding general to interfere with the proper expression of public opinion, all discretion in the conduct of the election will be as usual in the hands of the legally-appointed judges at the polls, who will be held strictly responsible that no disloyal person be allowed to vote, and to this end the military power is ordered to give them its utmost support.

The civil authority, civil courts, and business will not be suspended by this order. It is for the purpose only of protecting, if necessary, the rights of loyal citizens and the freedom of election.

By command of Major-General BURNSIDE.

In the western part of the State the following order was issued:

General Order, No. 47.

DISTRICT OF COLUMBUS, HEADQUARTERS, 6th DIVISION, 16th ARMY CORPS, }
COLUMBUS, Ky., *July 29th, 1863.* }

That no further doubt may exist as to the intention and meaning of Special Order No. 159, dated Headquarters 16th Army Corps, July 14th, 1863, it is ordered that no person shall be permitted to be voted for, or be a candidate for office, who has been, or is now, under arrest or bonds, by proper authority, for uttering disloyal language or sentiments.

County Judges within this district are hereby ordered to appoint, as judges and clerks of the ensuing August election, only such persons as are avowedly and unconditionally for the Union and the suppression of the rebellion, and are further ordered to revoke and recall any appointments of judges and clerks already made, who are not such loyal persons.

Judges and clerks of elections are hereby ordered not to place the name of any person upon the poll books to be voted for at said election, who is not avowedly and unconditionally for the Union and the suppression of the rebellion, or who may be opposed to furnishing men and money for the suppression of the rebellion.

The following oath is prescribed and will be administered by judges of elections to voters and to such candidates as reside within this district:

Form of Oath.—I do solemnly swear that I have never entered the service of the so-called Confederate States, that I have not been engaged in the service of the so-called Provisional Government of Kentucky, either in a civil or military capacity, that I have never, either directly or indirectly, aided the rebellion against the Government of the United States, or the State of Kentucky, that I am unconditionally for the Union and the suppression of the rebellion, and am willing to furnish men and money for the vigorous prosecution of the war against the rebellious league known as the Confederate States; so help me God.

Any voter, judge, or clerk of elections, or other person, who may evade, neglect, or refuse compliance with the provisions of this order, will be arrested and sent before a military commission, as soon as the facts are substantiated.

By order of Brigadier-General ASBOTH.

T. H. HARRIS, Assistant Adjt.-General.

In Henderson county the following order was issued:

General Order No. 12.

HEADQUARTERS U. S. FORCES, HENDERSON, Ky., }
July 28th, 1863. }

In order that the proclamation of the Governor and the laws of the State of Kentucky may be observed and enforced, post commandants and officers of this command will see that the following regulations are strictly complied with at the approaching State election:

None but loyal citizens will act as officers of the election.

No one will be allowed to offer himself as a candidate for office, or be voted for at said election, who is not in all things loyal to the State and Federal Government, and in favor of a vigorous prosecution of the war for the suppression of the rebellion.

The judges of election will allow no one to vote at said election unless he is known to them to be an undoubtedly loyal citizen, or unless he shall first take the oath required by the laws of the State of Kentucky.

No disloyal man will offer himself as a candidate or attempt to vote, except for treasonable purposes; and all such efforts will be summarily suppressed by the military authorities.

All necessary protection will be supplied and guaranteed at the polls, to Union men, by all the military force in this command. By order of

JOHN W. FOSTER, Col. Commanding.

W. A. PAGE, Lieut. and Adjt.

Oath to be taken at the Election.—I do solemnly swear that I have not been in the service of the so-called Confederate States, in either a civil or military capacity, or in the service of the so-called Provisional Government of Kentucky; that I have not given any aid, assistance, or comfort to any person in arms against the United States; and that I have in all things demeaned myself as a loyal citizen since the beginning of the present rebellion. So help me God.

On July 16th Colonel Johnston published an order at Smithlands, directing the judges and clerks of the election in the adjacent counties "not to place the name of any person on the poll books, to be voted for at the election, who is not a Union man, or who is opposed to furnishing men and money for a vigorous prosecution of the war against the rebellion. Any person violating this order will be regarded as an enemy to the United States Government, and will be arrested and punished accordingly."

On July 30th General Shackelford published an order very similar to that of Colonel Foster above.

The effect of Gen. Burnside's proclamation on the result of the election was thus reported by the press: The "Cincinnati Commercial" said:

It had no more effect upon the election than would have been produced by a small boy whistling "Yankee Doodle" at the State capital, at six o'clock in the morning. It was unwise to issue such a proclamation, as the only effect it has produced is in giving a color of plausibility to the pretence made by the Wickliffe party, that they were defeated by bayonets. The proclamation didn't influence the election, but it has impaired, if not destroyed its moral force.

The "Louisville Journal" said:

There never was more fairness, more justice, more freedom in the election, than was practised and accorded by the friends of the Union last Monday.

In reply to this the "Louisville Democrat" said:

Below we continue further correspondence from different sections of the State, illustrating the "fairness," "justice," and "freedom" of the election of Monday, August 3d, 1863.

A memorial addressed to President Lincoln by Judge S. S. Nicholas, of Louisville, Kentucky, makes the following statement:

On August 1st, Colonel Mundy, commanding at Louisville, issued his proclamation, with generous assurances to the citizens that their election should be protected against the interference of raiders, of whom no man had the slightest fear, but giving no promise against his own soldiers, as to whom at least one half of the voters stood in the greatest apprehension. On the contrary, he said there would be a military guard at each voting place, accompanied by detectives, who knew "the record of each resident in the several precincts, to point out to the guard any who shall attempt to perpetrate a fraud against the election law;" and that "all who shall present themselves at the polls, and fraudulently attempt to vote, will be immediately arrested by the guard, and confined in the military prison." Accordingly, on the day of election, there were ten soldiers with muskets at each voting place, who with crossed bayonets stood in the doors, preventing all access of voters to the polls but by their permission, and who arrested and carried to the military prison all that they were told to arrest. But there were not very many arrested; it is said not more than thirty or forty, all of whom, with one or two exceptions, were released the next day, it becoming early apparent that there was no need for undue intimidation to secure the success of the Bramlette ticket. Out of some eight thousand voters in the city, less than five thousand votes were taken. How many of the missing three thousand were deterred from attempting to vote cannot be ascertained, nor is it necessary, for the intimidation of three thousand voters is no greater outrage than the intimidation of only five hundred. The interpretation generally put by the opposition party upon the order of Colonel Mundy was, that no man was to have the privilege of having his right of voting tested by the judges if pointed out to the guard, as proper to be arrested, by any one of the colonel's detectives. He not having the semblance of legal or rightful power to interfere with the election, the most sinister suspicions were naturally aroused, and very many deterred from going to the polls, for fear they should be victimized to personal or party malice. Indeed it is rather matter of surprise that so large a number of the opposition party did go to the polls. Similar intimidation was not only practised in other parts of the State, but, from published proof and reliable information, there is no doubt that in very many counties the judges were so dastardly infamous as to submit to the military order, and not permit the Wickliffe ticket to be voted for. The result is that there was not only direct military interference with the election, but it was conducted in most of the State under the intimidation of Federal bayonets.

The candidates for State officers were as follows:

Governor—T. B. Bramlette, U.; Charles W. Wickliffe, Dem.
Lieut. Governor—R. L. Jacobs, U.; W. B. Read, Dem.
Attorney General—John M. Harlan, U.; Thomas Turner, Dem.
Auditor—W. T. Samuels, U.; Grant Green, Dem.
Treasurer—J. H. Gerrard, U.; H. F. Kaifus, Dem.
Register—James S. Dawson, U.; T. J. Frazier, Dem.

The vote for Governor was as follows:

Bramlette 68,306
 Wickliffe..... 17,389

Total vote..... 85,695

Total vote in 1860, 146,216.

The vote for the other candidates was smaller than that for Governor, on each ticket.

The vote for members of Congress was as follows:

	Union.	Democrat.
1st District, Anderson.....	4,323	Trimble..... 711
2d " Yeaman	8,311	McHenry.....3,087
3d " Grider	8,654	Winfrey.....1,293
4th " Harding.....	10,435	Heady.....2,508
5th " Mallory	6,257	Walfe.....2,477
6th " Smith	6,936	Leathers.....1,970
" "		Menzies.....2,283
7th " Clay.....	4,711	Buckner.....2,143
" " Boyle.....	2,457	
8th " Randall.....	7,593	Bradley..... 196
9th " Wadsworth....	6,638	Brown..... 567

Of the Legislature, the Senate consists of 38 members, entirely Union; the House, 100 members, of which five or six were on the Democratic ticket.

The Governor elect was inaugurated on the 2d of September. In his address, he thus stated the public sentiment of the State, as he regarded it to be expressed by the election:

The recent elections clearly and unmistakably define the popular will and public judgment of Kentucky. It is settled that Kentucky will, with unwavering faith, and unswerving purpose, stand by and support the Government in every effort to suppress the rebellion and maintain the Union. That for this purpose she will "devote the whole resources of our Government to crush the present causeless and wicked rebellion, and restore the national authority over the revolted States."

But whilst so devoting our whole resources to uphold and maintain the Government against rebellion, the same devotion to constitutional liberty will equally impel her to oppose her will to all unconstitutional, all wicked, unwise, or hurtful measures of policy, which may be suggested or adopted in the prosecution of our defensive war. This she will do through the peaceful medium of the ballot-box, by the persuasions of argument, and the legitimate force of our constituted tribunals.

We will make no factious opposition; will adopt no mode of opposition which can in any manner check or retard those charged with the administration of the Government in any legitimate effort to suppress the rebellion and restore the national authority over the revolted States.

Kentucky will not affiliate with those at home, or in other States, whose manifest object is, under pretence of opposition to war measures, to cover their real purpose of crippling the energies of our Government, paralyzing its arm of just defence, and forwarding the aims of the rebellion.

The recent vote of Kentucky proclaims that she will not fraternize with rebellion, either open or covert; and with equal emphasis that she will not fraternize with those who would pervert our just defence into a fanatical war upon the constitutional rights and liberties of the people of the Southern States. But firmly and immovably poised upon her own just, loyal, and proud constitutional centre, Kentucky will maintain the right, and support the Constitution of the Union by all the powers and modes sanctioned by the wisdom of a humane experience and a just and legal warfare. "Men and money" to crush the rebellion; votes and argument to correct legislative or executive policy, when erroneous. This is the proclaimed and deliberate will of Kentucky. This is her right and duty. She will maintain her right, and do her duty.

We affiliate with the loyal men north and south, whose object and policy is to preserve the Union and the Constitution, unchanged and unbroken, and to restore the people to harmony and peace with the Government as they were before the rebellion.

It is not a restored Union—not a reconstructed Union—that Kentucky desires; but a preserved Union, and a restored peace upon a constitutional basis.

At the session of the Legislature, which commenced at the beginning of the ensuing year, the Governor recommended that the penal code of the State be so amended as to provide proper preventive as well as punitive remedies for every form of treasonable action, whether it consisted in acts or words, which tended to promote or encourage rebellion. He also recommended that the laws be so amended as to give to any loyal man who suffered in person or property from invasions or raids, a right of action against any or all persons who, after the passage of such act, may aid, encourage, or promote rebellion, either by acts or words of encouragement, or by approval, or by manifesting an exultant and joyous sympathy upon the success of such raids.

In the execution of the act of Congress for the enrolment and draft, the free negroes of Kentucky were not enrolled. The number of able-bodied men of this class was estimated between three and five hundred. A strong protest was made by the people to the enrolment of these persons, and no return was made of them.

A case in which was involved the constitutionality of the confiscation measure of Congress came before the Court of Appeals, the highest court of the State. It came upon an appeal from Mason county, under the title of *Norris vs. Dimpleon*. Judge Bullitt delivered the opinion of the court, in which he held that the act of Congress relative to confiscation was unconstitutional, "because it attempts to authorize the confiscation of the property of citizens as a punishment of treason and other crimes, without due process of law, by proceedings *in rem* in any district in which the property may be, without presentment or indictment by a grand jury, without arrest or summons of the owner, and upon such evidence of his guilt as would be sufficient proof of any fact in admiralty or revenue cases." (Constitution, article 3, section 2; sub-sec. 3, and section 3, sub-sec. 1; and articles 5th and 6th of Amendments.)

"The clause of the Constitution which authorizes Congress to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water, has no bearing on this question. It relates only to war with foreign nations."—[*The Brilliant vs. United States*.]

Judge Williams delivered a separate opinion, in which he held:

1. That both the Congress of the United States and State Legislatures are prohibited from passing bills of attainder; and that none but judicial attainder is known to our Constitutions, whether Federal or State.

2. That judicial attainder can only be had upon a criminal proceeding, and must be upon indictment, or other legal proceeding, with a trial and judgment, as upon an indictment.

3. That treason against the United States can only be committed by actually levying war against them, or in adhering to their enemies in time of war, giving them aid and comfort.

4. That the trial and punishment for treason have been confined by the Constitution to the courts of the country: the punishment to be prescribed by Congress, within constitutional limits.

5. That even upon judicial attainder for treason, there can be no forfeiture of real or personal estate, save for the life of the person attained.

6. That the limitation on the power to punish for treason is a limitation on the war power as to this crime.

7. That this act of Congress, of July 17th, 1862, to suppress insurrection, &c., is in derogation of the personal rights, and rights of property of the citizen, as guaranteed both in the Federal and State Constitutions.

8. That said act is not in conformity with the Federal Constitution, and is in conflict with the Constitution and laws of the States, and derogatory to their sovereignty.

9. That said act cannot be justified by the laws of nations, nor by the usages of war, as recognized by modern, civilized, and Christian nations.

10. That, being in conflict with the United States Constitution, it cannot be upheld as a rule prescribed by a sovereign, in derogation of the laws of nations, but is nullity. (*See CONFISCATION.*)

KERHALLET, CHARLES PHILIPPE DE, a captain in the French navy, and eminent as a hydrographer and meteorologist, born in Brittany in 1809, died in Paris, in February, 1863. Receiving a thorough scientific education in the school of marines, M. de Kerhallet entered the navy early, and, in 1837, had attained a rank and reputation which justified the minister of marine in assigning to him the duty of making a hydrographic survey of the Brazilian coast, from San Louis de Maranhao to Para. This survey was completed in 1840, and the results published in 1841. The next seven years were spent in sea service, but, in 1847, Captain de Kerhallet was directed to make a careful and thorough survey of the African coast, from Cape Verde to Sierra Leone. In 1849 he published a series of maps of this coast, which up to that time had been considered the most dangerous, as it was the least known, of the shores of Africa washed by the Atlantic, and accompanied it by a memoir entitled "Nautical Description of the Western Coast of Africa, from Cape Roxo to the Isles de Los." From this period, with but rare and brief intervals of rest, Captain de Kerhallet was constantly engaged in hydrographical surveys mostly of the African coast. In 1853, in conjunction with M. Vincendin Dumoulin, he explored and mapped, with great care and accuracy, the African shore of the Mediterranean, from the Straits of Gibraltar eastward along the coast of Morocco, an enterprise of great peril from the ferocity of the native tribes on the coast. On the completion of this, in 1857, he published a nautical description of the coast, and also a manual of the navigation of the Straits of Gibraltar. He had previously prepared, at the direction of the Council of the Admiralty, the result of personal observation, mainly descriptions of the Archipelagoes, of the Azores, of the Canaries, and of the Cape de Verde Isles. These monographs were published in 1851. He had also been led by his long

experience and careful observations in the different oceans washing the shores of the Eastern and Western Continents to come to certain conclusions relative to ocean currents and their causes, and the prevalent winds of the different regions, similar to those which were subsequently published by Captain Maury, and published in 1851 (five years before the publication of Maury's "Physical Geography of the Sea") three memoirs under the titles of "General Considerations upon the Atlantic Ocean," "upon the Indian Ocean," and "upon the Pacific Ocean." He commenced at this time his great work, which was published in 1853, in three volumes, 8vo., entitled "Manual of the Navigation of the West Coast of Africa." This work included a description of the entire Atlantic coast of Africa, and the adjacent islands, and was illustrated with drawings giving a succession of views of the entire shores from the Straits of Gibraltar southward. He also published, in 1853, the first edition of his "Manual of Navigation in the Sea of the Antilles" (the Carribbean Sea), a work of great labor and research. A revision and extension of this work was his last literary labor, the final proof sheets of it passing through his hands while he was suffering from the disease which proved fatal. Captain de Kerhallet was a diligent observer and a hard-working student, and in other departments of physical science his attainments were such as would have won him high reputation. He was particularly partial to geographical science, and his occasional papers on countries on the African coast, communicated to the *Bulletin of the Geographical Society at Paris*, were replete with interest.

KILVERT, Rev. FRANCIS, an English scholar and author, born in Bath, 1793, died at his residence, Claverton Lodge, Bath, Sept. 16th, 1863. His education was commenced under Dr. Rowlandson, at Hungerford, where he was a fellow-pupil of the present bishop of Hereford. Afterward, he was for some years at the Bath Grammar School, where his attainments recommended him to the head master, who engaged him as one of the assistant masters prior to his matriculation at Oxford. He entered Worcester College in 1811, was ordained deacon in 1816, and priest in 1817. His first curacy was that of Claverton, near Bath. In 1837 Mr. Kilvert, who had for many years previously taken private pupils in Bath, became possessor of Claverton Lodge, to which he transferred his pupils, and in this sphere of duty continued until his death. In his later years he was constantly receiving testimonials of affection from the young men formerly un-

der his charge, many of whom had become highly distinguished. He was a man of uncommon purity of life, and, as a guide to youth, and the framer of their religious and moral sentiments, his precepts and his holy example were invaluable. In 1822 Mr. Kilvert married Adelaide Sophia de Chièvre, a lady of French extraction, and a refugee of very ancient and historical family. He was the author of several works, among which are: "a volume containing fourteen sermons preached in St. Mary's Church, Bathwick, 1827; a selection from unpublished papers of Bishop Warburton, 1841; a collection of original Latin inscriptions; and "Memoirs of the Life and Writings of Bishop Hurd, with a selection from his correspondence," 1860.

KOWER, THE MAHARANEE JENDAN, relict of Runjeet Singh, Maharajah of Lahore, born not far from 1780, died at Abingdon House, Kensington, August 1st, 1863. She was said to have been of humble birth, but was selected by the Runjeet as one of his harem, and from that time her career was one of splendor, crime, success, and misfortune. As his favorite wife, and the mother of the little prince, she became the most powerful sultana in Asia. Runjeet was succeeded by Kurruck Singh, and she caused him to be despatched with acetate of lead mingled with a curry. Nao Nehal Singh followed Kurruck on the throne, but, as he passed upon his elephant beneath an arch, after his coronation, it was contrived that the masonry should fall and crush him. The widow of Kurruck, and her son, being yet in her way to the throne, she caused the former to be killed by her chamber-women, and the little prince was shown an English rifle, and while examining it the muzzle was turned to his breast and four slugs were discharged in his heart. Having won at last the crown of the Punjaub for her child, she employed the influence thus obtained to revel in license. In conjunction with her lover, Lall Singh, she declared war upon the British, by marching her Sikhs across the Sutlej, but was defeated and finally reduced to the mere guardianship of a protected prince. Then she commenced the net-work of intrigue with Moolraj of Mooltan; Golab Singh, of Cashmere; and Dost Mohammed, of Afghanistan; resulting in the murder of the English officers at Mooltan, and the second Sikh war. She was removed to Benares, too late to avert the great war she had fomented, and in her imprisonment learned that the son for whom she had sinned and plotted was dethroned and exiled. Thenceforward she passed from the eyes of men, a pensioner of the British power.

L

LANSDOWNE, HENRY PETTY FITZ-MAURICE, marquis of, a British statesman, born July 2d, 1780, died Jan. 31st, 1863. He was educated at Westminster School, and at Trinity College, Cambridge; and also passed several years in Edinburgh, under the care of Dugald Stewart, acquiring from his intercourse with that distinguished man, and with Brougham, Jeffrey, Sidney Smith, and others of his own age, a love of liberal principles and constitutional government to which he remained faithful during his whole life. At 21 years of age, being then known by his courtesy title of Lord Henry Petty, he entered parliament for the borough of Calne, and soon gained the reputation of an able and accomplished debater. Upon the death of Mr. Pitt, he succeeded him in the representation of the University of Cambridge, and in 1806 he entered the "All the Talents" ministry under Fox and Grenville as Chancellor of the Exchequer. He had identified himself from the outset of his career with the fortunes of the Whigs, but the short duration of the ministry, which retired in 1807, prevented him from displaying his financial ability.

In the latter year he succeeded his brother as third Marquis of Lansdowne, and transferred his services to the House of Peers, where, during the long period of Tory ascendancy, he was a prominent leader of the Whig party, commanding the respect of his opponents by his powers of debate, his varied and extensive information, and his amenity of manners. Though long compelled to remain in a hopeless minority in parliament, he abated in no degree his efforts in support of liberal measures, and the final triumph of the friends of Catholic emancipation, the abolition of slavery, parliamentary reform, and free trade was very considerably promoted by his eloquence and perseverance.

After 20 years' exclusion from administrative duties, he was appointed in August, 1827, Home Secretary in the short lived cabinet of Viscount Goderich; and upon the formation of Earl Grey's ministry in November, 1830, he became President of the Council, an office which he held during several administrations until the overthrow of the Melbourne ministry and the accession of the Tories under Sir Robert Peel in September, 1841. He resumed the office in 1846 in the ministry of Lord John Russell, and held it until February, 1852. The brief Derby ministry of that year was succeeded in December by that of the Earl of Aberdeen, who solicited Lord Lansdowne to return to his former post. The latter declined, but consented to accept a seat in the cabinet without office, which he occupied until March, 1858, when he retired definitively from public life.

With the exception of Lord Holland, no Whig statesman of the present century had for so many years been a leader in the House of Peers, and subsequent to the death of that nobleman, he was generally regarded, in virtue of his age, his experience, and his persuasive eloquence, as the Nestor of the Upper House.

LEWIS, Sir GEORGE CORNEWALL, an English statesman and scholar, born in Radnor, Wales, October 21st, 1806, died in London, April 13th, 1863. His father, Sir Thomas Frankland Lewis, was a statesman of considerable ability, and had served as joint secretary of the Treasury, vice-president of the Board of Trade, treasurer of the navy, and chairman of the Board of Poor Law Commissioners, and was created a baronet in 1846. Sir George received his early education at Eton, from whence he passed to Christ Church College, Oxford, where he graduated, at the age of twenty-two, ranking as first class in classics and second in mathematics. In 1831 he was admitted to the bar, but never practised, having acquired a legal education as the necessary preliminary to public service. At the age of twenty-nine, he was appointed assistant commissioner to report on the working of the relief of the poor in Ireland; and the following year, made a commissioner to inquire into the affairs of Malta. In 1839 he was appointed successor to his father, as Poor Law Commissioner, and remained in this office till 1847, when he was elected a member of parliament for Herefordshire, and became secretary of the Board of Control. In 1848 he became under secretary of the House Department; in 1850, secretary of the Treasury; and in 1852, on the dissolution of the Russell cabinet, retired from office. In May, 1855, he again assumed office, succeeding Mr. Gladstone, as Chancellor of the Exchequer. When Lord Palmerston returned to power he yielded this position to Mr. Gladstone, and took the position of Home Secretary. On the death of Lord Herbert of Lea, in 1861, Sir George (he had succeeded to the baronetcy, in 1855) took charge of the War Department, the duties of which proved too severe for his already failing health. Though never a brilliant speaker, Sir George was a perspicuous and clear-minded debater, and his thorough acquaintance with public affairs, his sound judgment, clear head, and fixed honesty of purpose, together with his relish for hard work, made him very valuable to the country as a minister of State. Yet, amid the multiplicity of duties which pressed upon him during his twenty-seven years of public service, he was not simply a politician or even a statesman. He dwelt in a higher and loftier sphere; he was eminently a scholar and a man of letters not from any necessity, for his means

were ample, nor from want of employment; but from his intense delight in literary pursuits. Before he graduated at Oxford he had become a frequent contributor to the "Classical Journal and Foreign Quarterly Review," and at the age of twenty-one he had published a translation from the German of Boeckh's "Treatise on the Public Economy of the Athenians." At the age of twenty-four, in conjunction with Mr. Henry Tufnell, he translated Müller's "History and Antiquities of the Doric Race." He was editor of the "Edinburgh Review," from December, 1852, to March, 1855, and left it reluctantly, when called to become Chancellor of the Exchequer. Of the long list of his books, many of them of great merit (though it is said not one of them ever paid the cost of publication), the principal were: "Essay on the Use and Abuse of Political terms;" "On the Origin and Formation of the Romance Languages;" "Inquiry into the Credibility of Early Roman History;" "Influence of Authority in Matters of Opinion;" "A Glossary of Provincial Words used in Herefordshire;" "Treatise on the Methods of Observation and Reasoning in Politics;" "On the Astronomy of the Ancients," a work of great learning and research; and a "Dialogue on the Best Form of Government." He avowed promptly and boldly his sympathy with the Northern States in the present civil war in this country, and, though the majority of Lord Palmerston's cabinet was against him, his services were regarded as indispensable. In private life, Sir G. C. Lewis was a warm-hearted, happy man, always cheerful and equable, and, though undemonstrative in manner, strongly attached to his friends, and greatly beloved by them. His death was very sudden, and affected the House of Commons deeply. Even his political opponents eulogized his worth, his conscientious adherence to duty, and his devotion to the interests of the nation.

LITERATURE AND LITERARY PROGRESS IN 1863. In no period of the past history of the United States has the literary activity of the country been so manifest as in the year 1863. While the price of paper has more than doubled, and the cost of printing and binding been greatly enhanced, and at the same time the scarcity of skilled labor has rendered production difficult, the number of newspapers, periodicals, and magazines, has greatly increased, and the circulation of those previously established been much enlarged, and the number of new books issued surpasses that of any previous year. A tolerably complete catalogue of the books of the year enumerates 2,050 distinct publications, a considerable number of them extending to two or more volumes. The number of reprints has not been large. Aside from translations, and books on which a large amount of editorial labor has been bestowed in the way of notes, additions, appendices, or introductions, there are but 297, and including these the whole number does not

reach 400. There are then not less than 1,650 original American works which have passed through the press during the past year, and an unusually large number of these have attained a sale of more than 10,000 copies, while a few have exceeded 50,000, and one or two 100,000 copies. The most numerous class of publications were those for juvenile readers. Of these, 420, or more than one fifth of the whole number, were issued during the year. 203 were novels, of which somewhat more than one half were reprints; 205 were theological and religious works. The number of works on military science did not exceed 65, while those on legal science numbered 75, and those on medicine, 50. Of works devoted to history—a large portion of them referring to the history of the existing war—there were 110; and about 100 biographical works. Forty-six works were devoted to physical science, and 25 to mathematics and technology. Twelve works were added to the domain of philology, of which but one was reprinted from foreign publications. Political science was discussed in 130 distinct essays and treatises. Seventy works were devoted to education. There were also 42 books in the department of art and illustrative science; 37 volumes of poems, including new poems or collections of poems, by Bryant, Longfellow, Whittier, &c.; and 52 volumes of essays.

A considerable portion of the works on military science are technical treatises for the instruction and guidance of particular arms of the service. To this class belong "Hints to Company Officers on their Military Duties," by Capt. C. C. Andrews, U. S. A.; "The Automaton Company, Regiment, and Battery," by G. Douglas Brewerton, U. S. A.; "Cavalry Tactics," by Col. (now Gen.) Philip St. George Cooke; "A Military Manual for Schools," by F. N. Freeman; "Instructions for Officers and Non-Commissioned Officers on Outpost and Patrol Duty," &c.; "Advanced Guard, Outpost, and Detachment Service of Troops, with the Essential Principles of Strategy and Grand Tactics," by D. H. Mahan, LL.D.; "Uniform for Officers of U. S. Navy;" "United States Infantry Tactics for the use of Colored Troops;" "The Company Clerk," by Capt. August V. Kautz; "Instructions for the Government of Armies in the Field," by Francis Lieber, LL.D.; "The Military Laws of the U. S.," compiled by John F. Callan; "De Hart on Courts Martial;" "Manual of Instructions for Military Surgeons in Examination of Recruits and Discharge of Soldiers," by John Ordronaux, M.D.; "Instructions for Enlisting and Discharging Soldiers," by R. Bartholow; "The Army Regulations of 1861, Revised to 1863;" Gen. Q. A. Gillmore's "Practical Treatise on Limes, Hydraulic Cements, and Mortars;" "Seamanship," by Lieut.-Com. S. B. Luce; "Strategy and Tactics," by Gen. G. H. Dufour, translated from the French, by Captain W. P. Craighill; Gen. John Gibbon's "Artillerist's Manual;"

"Instructions for Heavy Artillery," prepared by a board of officers, and "Hand-Book of Artillery for the Service of the U. S.," by Col. Joseph Roberts. The reports of commanders, or of particular arms of the service, and treatises on military science, constitute another branch of the military literature of the day. Thus we have: "Report of the Engineer and Artillery Operations of the Army of the Potomac," by Gens. W. F. Barry and J. G. Barnard; Major-Gen. Pope's "Report of his Virginia Campaign," with plans; Major-General Rosecrans's "Report of the Battle of Stone River;" "Annals of the Army of the Cumberland," by an officer; "Temporary Fortifications Prepared for the Naval Service," by Edward Barrett; "Practical Strategy as Illustrated by the Achievements of the Austrian Field Marshal Traun," by J. Watts De Peyster; "Daring and Suffering; a History of the Great Railroad Adventure," by Lieut. Wm. Pittenger; Brig.-Gen. G. W. Cullum's "System of Military Bridges in use in the U. S. Army;" Surgeon-General William A. Hammond's "Treatise on Hygiene, with special reference to Military Service;" "Cavalry, its History, Management, and Uses in War," by J. Römer, LL.D.; "The Campaigns of 1862 and 1863," by Emil Schalk; "Summary of the Art of War," by Emil Schalk; "Elements of Military Art and History," by Duparcq; "Official Report of the U. S. Engineer Department, of the Siege and Reduction of Fort Pulaski, Ga.," by Q. A. Gillmore, Brig.-Gen. U. S. V.; "On Military and Camp Hospitals, and the Health of Troops in the Field," by Drs. Baudens and Hough. Among the other books of reference and convenience for the military man, are: "A Military Dictionary," by Col. H. L. Scott, revised to meet the emergencies of the times; "The Soldier's Book," a convenient pocket memorandum, contrived by Capt. R. N. Scott; "The Ready Calculator, or Regimental Pay Table," &c., by Major-Gen. Webb; "Table of Monthly and Annual Pay, Tax, and Organization of the Army of the U. S.," by Major Henry Foote; "Manual for Quartermasters and Commissaries," by Major R. F. Hunter; "Catalogue of the Army Medical Museum;" "The Army Register;" "The Naval Register;" "The Alphabetical Army Register," and "The Army and Navy Almanac and Washington Military Directory, for 1863."

In history, the greatest interest has centred in historical sketches of the existing war. The number of these has continued to increase, and many of those announced the previous year have appeared, and have met with a large sale. The first volume of "The History of the Civil War in America," by John S. C. Abbott, appeared in the spring of 1863. The first volume of "The Great Rebellion; a History of the Civil War in the United States," by J. T. Headley, was issued about the same time. The second volume of Thomas P. Kettell's "History of the Rebellion," appeared in the autumn; as did also the second volume of "The

History, Civil, Political, and Military, of the Southern Rebellion, from its Incipient Stages to its Close," by O. J. Victor. The first volume of other histories of the war, by Mrs. Ann S. Stephens, J. G. Kennedy, E. G. Storke, Samuel M. Schmucker, LL.D., — Blake, C. Edwards Lester, and Lorenzo H. Whitney, have also appeared, and most of them possessing a fair share of merit, have had a large sale. Mr. R. S. Fisher, and Mr. Horace E. Dresser, both well known statisticians, have each published volumes of the events of the rebellion; Mr. Fisher's being in chronological, and Mr. Dresser's in alphabetical order. Mr. Fisher's is accompanied with excellent maps. There have also been a considerable number of serial histories of the war issued in monthly, semi-, and bi-monthly numbers. Among these are W. A. Craft's "The Southern Rebellion;" Evert A. Duyckinck's "History of the War for the Union, Civil, Military, and Naval;" Frank Leslie's "Pictorial History of the War," edited at first by E. G. Squier; Harper's "Pictorial History of the Great Rebellion," edited by Richard Grant White; Dr. Robert Tomes's "The War with the South;" and we might add to these Frank Moore's "Rebellion Record," which has reached, during the year, the completion of its sixth volume. Mr. Moore has also issued six numbers of a serial "Companion to the Rebellion Record," giving valuable narratives and official documents illustrative of the war. Among those who have announced as speedily forthcoming, histories of the war, are Horace Greeley, of the New York "Tribune," and Joshua R. Giddings, of Ohio. Two volumes of a "Southern History of the War," by E. A. Pollard, editor of the Richmond "Examiner," have also appeared, and also two volumes of the "Southern Official Accounts of Battles," answering in part to the "Rebellion Record."

Beside these more extended histories of the war, there have been a considerable number of narratives of portions of the different campaigns published: some of them by American officers who had participated in them; others by foreign officers who had either been sent to this country to observe the military operations, by their governments or by newspapers who desired to have correspondents with the armies, or had joined one or the other army voluntarily. Of the first class were Dr. A. L. Castleman's "Army of the Potomac; Behind the Scenes;" W. D. Bickham's "Rosecrans' Campaign with the Army of the Cumberland;" "The Bivouac and the Battle Field," by Capt. Geo. E. Noyes; "The Story of the Guard: a Chronicle of the War," by Jessie Benton Fremont. (This is also published in German.) The "Color Guard," by Rev. James Hosmer; "The Whip, Hoe and Sword, or the Gulf Department in 1863;" by Rev. George H. Hepworth; "The Peninsula Campaign in Virginia," by Rev. J. J. Marks; "Sketches of the War," by Capt. C. C. Nott; "Beyond the Lines, or a Yankee Prison-

er Loose in Dixie," by Capt. J. J. Geer; "My Days and Nights on the Battle Field," by Carleton (C. C. Coffin); and Dr. T. J. Ellis's "Leaves from the Diary of an Army Surgeon." To the second class belong: M. Ferdinand Lecomte's "The War in the United States," a report to the Swiss Military Department, which had sent him out; "The Army of the Potomac, its Organization, its Commander, and its Campaign," by the Prince de Joinville; William Howard Russell's "My Diary North and South;" Col. B. Estvan's "War Pictures from the South;" "Battlefields of the South, from Bull Run to Fredericksburg," by an English Combatant; Lieut. Freemantle's "Campaign in the South."

Of works bearing directly upon the history of the war, though not written by eyewitnesses, we have Edward Everett's "Gettysburg Oration," Detterline's "Sketch of the Battles at Gettysburg;" James Parton's "General Butler in New Orleans;" C. Edwards Lester's "Light and Dark of the Rebellion;" "The Iron Furnace, or Slavery and Secession," by Rev. John H. Aughey; Bishop's "Loyalty on the Frontier," and "The Captivity of Gen. Corcoran." The Official Report of the Committee on the Conduct of the War published in three vols. in the Spring of 1863, contains much matter for history, and portions of it called out replies from Gen. Franklin and other generals whose conduct was censured in the report.

Though somewhat less direct, the following works published during the year, hold important relations to the history of the present struggle: "Correspondence between Charles G. Loring of Boston, and Mr. Field of England, on the Present Relations between Great Britain and the United States of America;" "The Trial of the Constitution," by Sidney Geo. Fisher; "History of American Conspiracies," by O. J. Victor; "Christian Life and Character of the Civil Institutions of the U. S. developed in the Official and Historical Annals of the Republic," by Rev. B. F. Morris; "France, Mexico, and the Confederate States," by Michel Chevalier; "History of the Sioux War and Massacres of 1862 and 1863," by Isaac D. V. Heard.

The "History of West Point and its Military Importance during the Revolution," by Capt. E. C. Boynton, a sumptuous and beautiful volume, is allied to these, giving, as it does, a full account of the course of training adopted in that school, from which so many of the higher officers of the army have graduated.

During the year two periodicals devoted to the interests of the Army and Navy and to the War have been established. These are the "Army and Navy Journal," a weekly, edited by Captain W. C. Church, commenced in August, 1863; and the "United States Service Magazine," monthly, edited by Captain Henry Coppee, a professor in the University of Pennsylvania, the first number of which bore date January, 1864. Both are conducted

with ability, and supply a want which the war created, but which is likely to be permanent.

Of those historical works published in 1863, the greater part, not reprints, relate either to the general or local history of the United States, or of the colonies from which they sprang. Thus we have a new edition of Frank Moore's "Diary of the American Revolution;" "A History of the United States," by Egbert Guernsey; "Histories of King Philip's War," by Increase Mather and Cotton Mather; "A Description of the Province and City of New York," by John Miller; "History of the Town of Gorham, Me.," by Joseph Pierce; "The First Colonization of New England;" "An Address Delivered at the Erection of a Monumental Stone, in the Walls of Fort Popham, Me., August 29th, 1862," by John A. Parr; "The Vermont Quarterly Gazetteer" (occupied with county histories), edited by Abby M. Heminway; "History of Buffalo Public Schools;" "History of the Town of Cornwall, Vt.," by the Rev. S. Mathews; "The Firelands Pioneer," vol. IV. (the Transactions of the Firelands Historical Society, in Northern Ohio); "The First Century of Columbia College, 1754-1854," by W. Alfred Jones; "Memorial of the Semi-Centennial Celebration of the Founding of Hamilton College, Clinton, N. Y.;" "Speech of John Wingate Thornton on the Colonial Schemes of Popham and Gorges;" John D. Ward's Account of the Steamboat Controversy between New York and New Jersey, 1811-1824;" "Historical Sketch of the 12th Congregational Society of Boston," by Lewis G. Pray; "Kruger's First Discoveries of America and its Early Civilization," edited by W. L. Wagenen; "White Mountain Guide Book," 3d ed., revised; "History of Hadley, Mass.," by Sylvester Judd, with "Family Genealogies," by Lucius M. Boltwood; "A Brief Narrative of the Hostile Conduct of the Barbarous Natives toward the Dutch Nation," translated by E. B. O'Callaghan; "Supplement to the History of Windsor, Conn.," by Henry R. Stiles, M.D.; "Memorial Volume of the Popham Celebration, and Vindication of the Claims of Sir Ferdinando Gorges," by John A. Parr; "The Reed and Cadwallader Pamphlets (1783), Reprinted;" "The History of Cape Cod," by Frederick Freeman; "The Florida Exiles, and the War for Slavery," by Joshua R. Giddings; "Long Island," by W. Alfred Jones, librarian of Columbia College. [To these should be added, the Proceedings, Annals, Journals, and Transactions of the Massachusetts, New York, Vermont, New Hampshire, and Iowa State Historical Societies, and of the Ulster County Historical Society, and Essex (Mass.) Institute, all of which have issued volumes during the year.]

Of historical works by American authors, on topics not connected with their own country, the most remarkable are: John Foster Kirk's "History of Charles the Bold," a work destined to take rank with the histories of Prescott

and Motley; and Rev. E. H. Gillett's "Life and Times of John Huss; or the Bohemian Revolution of the Fifteenth Century." Other historical works belonging to the same class are: Thomas D'Arcy McGee's "Popular History of Ireland;" M. B. Czechowski's "Poland; Sketch of her History;" "Napoleon I.; a Historical Lecture," by Benjamin Blow. The veteran scholar George Ticknor has carefully revised and made considerable additions to his "History of Spanish Literature," of which a new edition has appeared during the year. In the department of ecclesiastical history, there is but one noticeable contribution, "The Documentary History of the Protestant Episcopal Church in the United States," by Rev. Drs. Hawks and Perry. "The Foundations of History, a Series of First Things," by Samuel B. Schieffelin, has been received with such favor that an abridged edition for the use of Schools has been prepared by the author.

Among the reprints are several of considerable importance. Foremost among them are: "History of the Romans under the Empire," by Charles Merivale, B.D., a work in seven volumes, of which three have already appeared here, in sumptuous type and paper (it forms a fitting companion to Arnold's "Rome," and Gibbon's "Decline and Fall of the Roman Empire," bridging the interval between them); a new edition from the Riverside Press of Hallam's "Introduction to the Literature of Europe;" The History of the World, from the Earliest Records to the Present Time," by Philip Smith, B.D., a work presenting, in a condensed form, and in an attractive style, all the results of historical research in the history of nations; "The Constitutional History of England, from 1760 to 1860," by Thomas Erskine May, an admirable continuation of Hallam; vol. v. of the new edition of Thiers' "History of the Consulate and Empire;" "The Social Condition and Education of the People of England," by Joseph Kay; "The Invasion of the Crimea," by William Kinglake; "History of the Reformation in Europe, in the Time of Calvin," by J. H. Merle D'Aubigne; "Track of the Hidden Church; or Springs of the Pilgrim Movement," by Rev. J. Waddington; "A Historical Sketch of the Provincial Dialects of England," by James R. Halliwell; Victor Hugo's "Sketch of the Battle of Waterloo." "The Dictionary of the Bible," comprising its history, antiquities, geography, biography, etc., by William Smith, LL.D., in three vols., 8vo, imported in sheets, by Little & Brown, perhaps, also, belongs to this class of works.

An elaborate work on "Brittano-Roman Inscriptions, with critical notes," by Rev. John McCaul, LL.D., has been published at Toronto, C. W.

"The American Notes and Queries, and Historical Magazine," a monthly periodical, and "The Congregational Quarterly," both contain a large amount of historical matter, of great value and interest.

In biography there have been a number of important works. Among them are "The Life and Correspondence of Theodore Parker," by John Weiss; "The Life of William Hickling Prescott," by George Ticknor, in a superb quarto (since republished in 8vo. and 12mo.); "Life and Letters of John Winthrop," by Robert C. Winthrop; the third and fourth volumes of the "Life of Washington Irving," by Pierre M. Irving; "Memoirs of Theodore Frelinghuysen," by Talbot W. Chambers, D.D.; "Chaplain Fuller, a life sketch of Arthur B. Fuller," by Richard F. Fuller; "Life and Times of William Lyon Mackenzie," by Charles Lindsay; "Life of Stephen A. Douglas," by N. M. Flint; "An Abridgment of Parton's Life of Andrew Jackson;" "Life of Philidor," by George Allen, LL.D., professor in the University of Pennsylvania, one of the most superbly printed books ever issued in this country; "Life and Times of Nathan Bangs, D.D.," by Abel Stevens, D.D., LL.D.; "Life and Military Career of Lieut.-Gen. Thomas Jonathan Jackson," by Markinfield Addey; and a memoir of the same general, reprinted from the Richmond edition, by J. M. Daniels of Virginia; "The Works of Rufus Choate, with a Memoir of his Life," by S. G. Brown; "The Son of Consolation, a Sketch of the Life and Ministry of Rev. B. C. Cutler, D. D.," by Rev. S. H. Tyng, D.D.; "Tribute to the memory of Rev. Henry Anthon, D.D., late Rector of St. Mark's, in the Bowery, N. Y.," by Rt. Rev. Manton Eastburn, D.D.; "Life and Services of Rev. John O. Brigham, D.D.;" "Life and character of Luther V. Bell, M. D.," by Isaac Ray, M. D.; "Memorial of Hon. Thos. Scott Williams, LL.D.;" "Proceedings of the N. Y. Bar on the occasion of the death of John Anthon;" "Memoir of Rev. Erskine J. Hawes," by his mother. Of funeral discourses, addresses, memorials, and eulogies, the number is very large. We can only name the most important: "Prof. S. Waterhouse's Eulogy on Jos. Gibson Hoyt, LL.D., late chancellor of Washington University, St. Louis;" "Rev. L. M. Glover's Funeral Discourse on the death of John Adams, LL.D.;" "Memorial of Edward Robinson, D. D., LL.D.," by R. D. Hitchcock, D.D.; "Rev. D. Howe Allen's Commemorative Discourse of Lyman Beecher, D.D.;" "Rev. Dr. Ferris's do. of John C. Guldin, D.D.;" "Memorial of Dr. William Darlington;" Dr. Dalton's "Memorial Discourse of Roger Sherman Baldwin, LL.D.;" "The Sergeant's Memorial," by his father (Reverend J. P. Thompson, D. D.); "Memorial of William Kirkland Bacon," by his father; "The Sacrifice Consumed: the Life of Edward Hamilton Brewer," by Jeremiah Taylor, D.D.; "In Memory of Carlton Edwards;" "The Young Quartermaster: Life and Death of Lieut. L. M. Bingham, of 1st S. C. Volunteers;" "Jesus, the Resurrection: Funeral Discourse for Mrs. Mary E. Foss," by Rev. Albert S. Hunt; "Transition: a remembrance of Emma Whiting," by Rev. H. S. Carpenter; "The Blessed-

ness of the Righteous Dead," by Rev. J. C. French; "Hosmer's Funeral Address on Nathaniel Fillmore;" "Funeral Oration over Rev. John McDowell, D. D.," by Rev. Morris C. Sutphen; "Sketch of Antonio Bishallany," by Rev. Chas. Whitehead; "Funeral Discourses by Rev. W. B. Sprague, D.D., over Rev. Samuel Os-good, D.D., of Springfield, Mass., and Rev. Timothy Woodbridge, of Spencertown, N. Y.;" "Commemorative Sermon of Reverend Samuel H. Turner, D.D.," by Rev. S. R. Johnson, D.D.; "Discourse at the Funeral of Rev. Richard Pike, of Dorchester," by Rev. Nathaniel Hull, D.D.; "Biographical Memoir of Dr. William D. Brincklé," by Dr. E. B. Gardette; Rev. S. M. Haskins's "The Child of Grace" (Margaret L. B. Ballou); "Rev. Theodore Tebbetts, a Memorial," by Rev. E. C. Turner. Other biographies are the following: "Memoir of Genevra Guerabellia;" "Essay on the Character and Influence of Washington in the Revolution of the United States of America," by Guizot; "The Harvest work of the Holy Spirit, illustrated in the Evangelistic Labors of Rev. Edward Payson Hammond," by Rev. P. C. Headley; "A new Memoir of Hannah More," by Mrs. Helen C. Knight; "A Brief Memoir of Sir Walter Raleigh;" "A popular Life of St. Patrick, by an Irish Priest;" "Sketch of the Life of Rev. Michael Wigglesworth, A. M., author of The Day of Doom," by John Ward Dean; "Drifting About, an Autobiography," by Stephen C. Massett; Dr. Winslow Lewis's "Address at the Annual Meeting of the New England Historic Genealogical Society;" "Ninetieth Birthday Gathering of Rev. Chas. Cleveland, Jan. 21st, 1862;" "Following after Jesus: A Memorial of Susan Maria Underwood," by Mrs. Eliza H. Anderson; "The Captivity of Gen. Corcoran;" Major W. D. Reynolds's "Miss Martha Brownlow, or the Heroine of Tennessee;" "Reminiscences of Amherst College, Biographical, Autobiographical," &c., by Edward Hitchcock, D.D.; "A Narrative of the Life and Adventures of Levi Hanford, a Soldier of the Revolution," by Chas. J. Bushnell; "Life of Archbishop Laud," by Rev. John N. Norton, D. D.; "Toussaint L'Ouverture, a Biography and Autobiography." There were very few biographic reprints. The most important were: "'Christopher North,' a Memoir of John Wilson," by his daughter Lady Gordon; "Chronicles of the Schönberg-Cotta Family," by one of themselves; "Remains, in Prose and Verse of Arthur Henry Hallam, with a memoir;" "Victor Hugo, by a Witness of his Life" (Mme. Hugo); "Rénan's Life of Jesus;" "Life of Bishop Wilson, of Calcutta," by Rev. John N. Norton, D. D.; "Life of Chopin," by F. Liszt. The contributions to genealogy have been larger than usual. We subjoin the most important: "The Sutton Dudleys in England, and the Dudleys of Massachusetts in New England, from the Roman conquest to the present time," by George Adlard; A letter concerning Family History, by Andrew Brown; "The Chapin Genealogy," by Orange Chapin; "The

Toppans of Toppan's Lane," by Joshua Coffin; "The true Genealogy of the Dannel and Dwinnel Family of New England," by Henry G. Dannel, M. D.; "Genealogy of Othniel Phelps, Esq., of Aylmer, C. W.;" "Genealogy of a portion of the Pope Family, together with Biographical Notices of Col. William Pope, of Boston, and some of his descendants;" "Genealogical Memoir of the Huntington Family in the United States," by Rev. E. B. Huntington; "Genealogy of the Montgomery Family," by T. H. Montgomery; "Genealogy of the Stiles Family," by Henry R. Stiles, M. D. Several collections of biographies have been published during the year, some of them serials, others in volumes. The principal were: "Portraits of Celebrated Women, with brief Biographies;" "The Old Merchants of New York," by Walter Barrett, clerk; "American Annual Monitor, or Obituary of the Members of the Society of Friends," for the years 1861 and 1862; "Men of the Time," three numbers, being biographies of Hooker, Rosecrans, Pope, Burnside, Banks, Butler, &c.; "Bramhall's Military Souvenir, a Portrait Gallery of our Military and Naval Heroes;" "The American Nation Illustrated in the Lives of her Fallen Braves and Living Heroes," by J. Gilmary Shea, LL. D.; "The National Portrait Gallery of Eminent Americans," by Evert A. Duyckinck; "The Portrait Monthly;" "The New England Historic Genealogical Register," quarterly; "Obituary Record of the Alumni of Yale College."

The number of works of a theological or religious character published during the year was greatly in excess of former years. Including translations, there were 40 reprints. The Colenso controversy, in the early part of the year, attracted much attention, three volumes of Bishop Colenso's works being reprinted during the year, and replies from Rev. W. H. Green, D. D., Rev. Dr. Cumming, Rev. Dr. Mahan, Rev. Abiel Silver, Rev. C. Walworth, Rev. M. Heiss, and others, being published. Of works on the Scriptures, illustrative or explanatory, the following were the most important: "The Life of our Lord upon Earth, considered in its Historical, Chronological, and Geographical Relations," by Rev. Samuel J. Andrews; "The New Testament: the common English Version Corrected by the final Committee of the American Bible Union;" "The New Testament, with critical Explanatory Notes and Scholia," by Howard Crosby, D. D.; "The Bible Atlas and Gazetteer;" "An Exposition of the Epistle of Paul to the Romans, according to the Analogy of the Catholic Faith," by Rev. Morgan Dix; "A Morning Beside the Lake of Galilee" (reprinted), by J. Hamilton, D.D.; "The Bible as an Educating Power among the Nations," by John S. Hart, LL.D.; "A Year with St. Paul," by Charles E. Knox; "The Risen Redeemer," by F. W. Krummacher, D.D.; "The Astronomy of the Bible," by O. M. Mitchel; "Bible Illustrations; being a Storehouse of Similes, Allegories, and Anecdotes, selected from Spencer's Things

New and Old," by Rev. Richard Newton, D.D.; "The Words of the Lord Jesus," by Rudolf Stier (a new translation); "Stories from the Lips of the Teacher, retold by a disciple" (Rev. O. B. Frothingham); "Shadows of the Rood, or Types of our Suffering Redeemer in Genesis;" "Patriarchal Shadows of Christ and his Church," by Octavius Winslow, D.D.; "The Holy Catholic Bible" (Douay version), 4to., approved by Archbishop Hughes; "I Will; being the Determinations of the Man of God in the Psalms," by Rev. Philip Bennett Power; "Triumphs of the Bible," by Rev. Henry Tullidge; "Lectures on the Symbolic Character of the Sacred Scriptures (New Church)," by Rev. Abiel Silver; "New Pronouncing Bible" (published by the agents of the Methodist Episcopal Book Concern); "Palmoni, or the Numerals of Scripture, a Proof of Inspiration," by Rev. M. Mahan, D.D.; "An Index to the Bible, with suggestions for the proper reading of the Scriptures;" "The Jewish Tabernacle and its Furniture," by Rev. Richard Newton; "The Literary Characteristics and Achievements of the Bible," by Rev. W. Trail; "The Miracles of Christ, as attested by the Evangelists," by Alvah Hovey, D.D.; "Music of the Bible, including a brief view of Hebrew Poetry," by Rev. Enoch Hutchinson; "The Sacred Scriptures the Imperial Record of the Glory of the Holy Trinity," by Right Rev. W. H. Odenheimer, D.D.

The following were the principal Doctrinal Works: "A History of Christian Doctrine," by Rev. W. G. T. Shedd, D.D., 2 vols.; "Watson's Theological Institutes Defended, &c.," by Rev. John Levington; "Guide to the Holy Communion," by Rev. Robert Nelson, with an appendix by Rev. J. W. Shackelford; "A Treatise on Regeneration," by E. C. Wines, D.D.; "Critical History of the Doctrine of a Future Life," by W. R. Alger, with a complete Bibliography of the subject by Ezra Abbot; "Able to Save; or Encouragements to Patient Waiting," by the author of the "Pathway of Promise;" "Christ Even With You," by Rev. Octavius Winslow, D.D.; "Evidences of Christianity;" "Lowell Institute Lectures," by Mark Hopkins, D.D., LL.D.; "The Work of Preaching Christ," by Rt. Rev. Charles P. McIlvaine, D.D.; "The Last Times and the Great Consummation," by J. A. Seiss, D.D.; "Theology of Universalism," by Rev. T. B. Thayer; "How to be Saved; Three Letters to a Friend," by Francis Wayland, D.D.; "The Faith and Order of the Protestant Episcopal Church," by J. H. Hopkins, jr.; "The Atonement, a Sermon," by Rev. James S. Bush; "Catholicity of the New Church," by Rev. B. F. Barrett; "The Guilt of the Pagan," by W. G. T. Shedd, D.D.; "A Renovated Earth, the Saints' Everlasting Home;" "Good Hope Through Grace, or Distinguishing Traits of Christian Character," by Rev. Gardiner Spring, D.D.; "The Four Dispensations," by Jubal Hodges, D.D.; "Works of Nathaniel Emmons, D.D.," edited by Jacob

Ide, D.D., 6 vols.; "Church Discipline," by Rev. Eleazar Savage; "The Roman Catholic Principle," by Rev. F. D. Huntington, D.D.; "Critical History of Free Thought in Reference to the Christian Religion," by A. S. Fanar, D.D. (reprinted); "The Churchman's Reasons for his Faith and Practice," by Rev. N. S. Richardson, D.D.; "Seducing Spirits and Doctrines of Devils," by Rev. W. Crosswell Doane, B.D. The following are the principal works of a practical character: "Aids to Prayer," by Rev. Henry Ward Beecher; "Christian Self-Culture, or Counsels for the Beginning and Progress of Christian Life," by Leonard Bacon, D.D.; "The Infant's Catechism," by Mrs. Bradley; "An Exposition of the Church Catechism," by Henry J. Cammann; "The Great Consummation," by Rev. John Cumming, D.D.; "Man's Cry and God's Gracious Answer," by Rev. B. Franklin; "Speaking to the Heart, or Sermons for the People," by Thomas Guthrie, D.D.; "Twelve Hospital Tracts for Soldiers and Sailors," by A. W. Henderson; "The True Cause of all Contention, Strife, and Civil War in Christian Communities," by Rev. D. C. Hopkins; "Evening Exercises for Every Day in the Year," by Rev. William Jay, a new and revised edition (reprinted); "God's Glory in the Heavens," by William Leitch, D.D.; "Hymns on Heaven;" "The Thoughts of God," by J. R. Macduff, D.D.; "A Present Heaven, addressed to a Friend; The Two Friends; and Heaven our Home," by Dora Greenwell; "The Image of the Beast, with Crumbs of Comfort for God's Dear Children," by S. B. Smith; "Sunbeams for Human Hearts;" "Four Little Books for Soldiers," by J. B. Waterbury, D.D.; "The Wicket Gate, Short Narratives of the Turning of Sinners to God;" "Experiments of Spiritual Life and Health," &c., by Roger Williams, introduction by Dr. Wayland; "God Timing all National Changes in the Interest of his Christ," by William R. Williams, D.D.; "Confirmation Explained and Defended," by Rev. James A. Bolles, D.D.; "Family Sermons," by Horatius Bonar, D.D.; "Calls to the Saviour;" "A Short Treatise on the Rosary," by J. P. Heaney, Dominican; "Jubilee Essays; a Plea for the Unselfish Life;" "The Desert Pathway," by Rev. William Robertson (reprint); "Letters on the Ministry of the Gospel," by Francis Wayland, D.D.; "Beecher's Lectures to Young Men, new and enlarged edition;" "The Army Chaplain," by Rev. W. T. Brown; "The Army Chaplain's Manual," by Rev. J. P. Hammond; "Prairie Breaking, or Scenes in the Work of a Western Pastor," by Rev. J. C. Holbrook, D.D.; "Thomas Fuller's Good Thoughts in Bad Times;" "The Theatre," by Rev. F. H. Newhall; "The Pilgrim's Path; interesting Incidents in Religious Experience;" "Story of My Career," by Heinrich Steffens," translated by W. L. Gage; "The Sacramental Directory," by Rev. John Willison (reprinted); "Woman and her Saviour in Persia," by a returned mis-

sionary; "Living Words from Living Men;" "Address to Parents by a Pastor;" "Christianity and Emancipation," by Joseph P. Thompson, D.D.; "The Sacred Heart Mission Book," by Reverend F. X. Weininger, S. J.; "Hymns and Meditations," by A. L. Waring; "New York City a Mission Field," by Frank W. Ballard; "The Church and the Sunday Schools; Their Mutual Relations, Duties and Interests;" "Gospel Workers," by Rev. J. Cross; "The Mission of Sorrow," by Rev. Gardiner Spring, D.D.; "Thoughts about the Right, Lectures by William Allinson;" "Manual of Devotions for Domestic and Private Use," by Rt. Rev. George Upfold, D.D.; "Universalism a Practical Power," by Rev. E. G. Brooks; "The Comforter, or the Pastor's Friend," by Rev. J. G. Bartholomew; "Army Life, or Incidents from the Prayer Meeting and the Field;" "Discourses on Freedom and War," by Rev. H. W. Beecher; "The Safe Compass and How it Points," by Rev. Richard Newton, D.D.; "Unitarianism in the Present Time," by John Orr; "The Three Cripples," by Rev. P. B. Power; "The Christian's Pocket Companion;" "Daily Walks with Wise Men," by Rev. Nelson Head; "Man's Gift to God;" and "Looking unto Jesus," by Rev. Adolphe Monod" (translations and reprints); "Meditations on Life and its Religious Duties," translated from the German of Heinrich Zschokke, by Frederica Rowan (reprint); "Comfort for Afflicted Youth, in Letters from a Father to his Children;" "Happiness; Discourses delivered at Geneva, Switzerland," by Count Agenor de Gasparin, translated by Mary L. Booth; "Helion de Villeneuve, a French Zouave, a Model for Christian Soldiers;" "Hospital Life; being Incidents from the Prayer Meeting and the Hospital;" "The Blood of Jesus," by Rev. William Reid, of Edinburgh (reprint); "Does the Bible Sanction American Slavery," by Goldwin Smith, Prof. in the University of Oxford (reprint); "Illustrative Gatherings for Preachers and Teachers," by Rev. G. S. Bowes (reprint); "The Man of God; or Spiritual Religion Explained and Enforced," by Octavius Winslow, D.D.; "The Mercy Seat, or Thoughts on Prayer," by A. C. Thompson, D.D.; "Christianity the Religion of Nature;" "Lowell Institute Lectures," by A. P. Peabody, D.D.; "The Prodigal Son," by Rev. George Mott; "Angel Voices, or Words of Counsel for Overcoming the World," enlarged edition; "Of the Imitation of Christ," by Thomas à Kempis, new edition; "Gilead, or the Vision of All Souls' Hospital," by Rev. J. Hyatt Smith; "The Valley of Achor a Door of Hope," a discourse by Henry C. Fish, D.D.; "Five Years of Prayer with the Answers," by S. Irenæus Prime, D.D.; "Christ all in all," by Rev. George Burder (reprint).

We can enumerate only the most important of the occasional lectures and sermons, or collections of sermons: "The Signs of the Times, or a Glance at Christendom as

it is," by Reverend H. L. Hastings; "Two Centuries in the History of the Presbyterian Church of Jamaica, L. I.," by James M. Macdonald, D. D.; "Sermons" preached at the Church of St. Paul the Apostle in 1862, and in 1863; "Lecture on the history of the Jewish Church," by A. P. Stanley, D.D. (reprint); Sermons and Lectures, by Rev. Mr. Clapp, Rev. S. W. S. Dutton, D.D., and by Rev. M. G. Farrington; "The Bridle of Vanity, or Knowledge, Progress, Liberty, and Equality," &c., by Rev. E. Putnam; "Sermons," by Jabez Bunting, D.D. (reprint); Sermons preached before H. R. H. the Prince of Wales, by Arthur Penrhyn Stanley, D.D. (reprint); "Popular Lectures and Addresses," by Alexander Campbell, D.D.; "Beitrage zur Mission der Lutherischen Kirchen in N. Y.," von J. W. Drees; "Baccalaureate Sermons and Occasional Discourses," by Mark Hopkins, D.D., LL. D.; "Address delivered by Rev. Asa D. Smith, D.D., at his inauguration as President of Dartmouth College;" Selections from the Works of Jeremy Taylor, new edition (reprint); "A Willing Reunion not Impossible;" a Sermon by Rev. F. A. Wharton; "The Voice of Elias, or Prophecy Restored;" by S. S. Snow.

Of Polemical Works, the number was hardly so large as usual. The principal were: "Bishop Seabury and the Episcopal Recorder: a Vindication," by Rev. W. S. Perry; "Thrilling and Instructive Developments" (anti-Catholic), by M. B. Czechowski, for many years a Roman Catholic Priest; "Letters of Rev. John Smith, a Presbyterian Minister, to his brother, Rev. Peter Smith, a Methodist Preacher;" "Connection of the Church of England with American Discovery and Civilization," by Rev. W. S. Perry; "The Religious Demands of the Age, a Preface to the collected (English) Edition of the Works of Theodore Parker," by Francis Power Cobbe (reprint); "The true Spiritual Conferences of St. Francis of Sales," translated from the French (reprint); "The Stewards and the People," by Rev. J. Porter; "Christian Union and the Protestant Episcopal Church," by a Presbyter of the Western Diocese of New York; "The Tercentenary Monument, in Commemoration of the Three Hundredth Anniversary of the Heidelberg Catechism;" "Bishop Hobart's Clergyman's Companion," new and enlarged edition; "The Rector's Vade-Mecum, a Manual for Pastoral Use;" "Atheos, or the Tragedies of Unbelief;" "The Complete Sodality Manual and Hymn Book," by Rev. Alfred Young; "History and Ecclesiastical Relations of the Churches of the Presbyterian Orders at Amoy, China," by Rev. J. V. K. Talmage; "The Witness Papers," by Hugh Miller, edited by Peter Bayne; "The Pastor's Manual," prepared by Rev. William Reid (reprint); "The *Ne plus Ultra*, or Lay Representation proven to be Unscriptural, Unreasonable," &c., by Rev. William Barnes; Presbyterian Liturgy Directory for Public Worship, by

C. W. Shields; "Seed Thoughts: a Hand-book of Doctrine and Devotion for Class Leaders, Bible Class and Sunday School Teachers, Young Preachers," &c., by George C. Robinson. A few works on Spiritualism published the past year may properly be included under this head: "Three articles on Modern Spiritualism by a Bible Spiritualist;" "History of the Supernatural in all ages," by William Howitt (reprint); Plain Guide to Spiritualism," by Uriah Clark; "Arcana of Nature; or the Philosophy of Spiritual Existence and the Spirit World," by Hudson Tuttle; "Progressive Tracts, Nos. 2, 3 and 4," by A. J. Davis; "Individuality, or Reason in Search of God; or Spiritualistic Communications from William Brown of Buffalo, a Sailor;" Progressive Annual for 1863; comprising an Almanac, a Spiritual Register, and a General Calendar of Reform." With a few religious Works of a miscellaneous character, we close this formidable list of the theological religious publications of the year: "The Carmel; or, the Conversion of Hermann the Pianist;" "Outposts of Zion; with Limnings of Mission Life," by Rev. William H. Goode; "The Kingdom," by Rev. Wm. M. Willett, Part I.; Scripture History abridged from Mrs. Trimmer (reprint); "The Sunday Evening book," by Several Clergymen; "The Sunday School Prayer Book," by Rev. Treadwell Walden; "Life, Death, and Futurity," by Horace Welby (reprint); "Hymns and Tunes for the Army and Navy;" "The Heidelberg Catechism in German, Latin, and English; Tercentenary Edition, with an Historical Introduction;" "Common Prayer for Christian Worship" (Unitarian).

The number of works on Moral and Intellectual Science has been very small. The most remarkable are: "Evidences of Christianity," by President Hopkins, elsewhere mentioned;" "History of the Intellectual Development of Europe, by John H. Draper, M.D., LL.D.;" "The Souls of Things, or Psychometric Researches and Discoveries" by William and Elizabeth M. F. Denton; "The Logic of Sir William Hamilton," by Henry N. Day, D.D., LL.D.; George Combe's "Moral Philosophy," a new and revised edition (reprint); the continuation of the fine Riverside edition of the Works of Francis Bacon, Baron Verulam, also a reprint; "Intellectual Freedom, or Emancipation from Mental and Physical Bondage," by Charles S. Woodruff, M.D. In Physical Science, the year has been unusually prolific. Foremost among the works of this class stands Prof. William Chauvenet's magnificent "Manual of Spherical and Practical Astronomy," 2 vols. with numerous illustrations. Other contributions to Astronomical Science were: "Annals and Report of Harvard College Astronomical Observatory;" "Astronomical and Meteorological Observations made at the United States Naval Observatory, during the year 1861;" "Annals of the Astronomical Observatory of Harvard College with account of the

Great Comet of 1858," by G. P. Bond; "Description of a new Cataloguing and Charting Machine," by G. W. Hough. In Geology we have: "Report of a Geological Reconnaissance of Indiana, made during the years 1859 and 1860, under the Direction of Richard Dale Owen;" an elegant reprint of Sir Charles Lyell's "Geological Evidences of the Antiquity of Man;" "Report of a Geological Survey of the Upper Mississippi Lead Regions," by J. D. Whitney; "Annual Report of the State Geologist of California;" "Second Annual Report upon the Geology and Natural History of the State of Maine," by the State Geologists; The Great Stone Book, by David Thos. Ansted (Reprint); "Air Breathers of the Coal Period," &c., by J. W. Dawson; "Geological Survey of Canada, with Atlas," &c.; "Ancient Mining on the Shores of Lake Superior," by Charles Wittlesey. In other departments of Physical Science we have: "Methods of Study in Natural History," by Louis Agassiz; "Cursory Thoughts on Some Natural Phenomena;" "Bulletin of Museum of Comparative Zoology at Cambridge;" D. Giraud Elliot's magnificent "Monograph of the Pittidæ;" "A monograph of the Order Pholadacea," by George W. Tryon, jr.; a new edition of Audubon's "Birds of America;" "On the Origin of Species," by Thomas H. Huxley; "Evidence as to Man's Place in Nature," by the same author (both Reprints); "The Sunbeam and the Spectroscope," by Howard Townsend, M.D.; C. L. Brace's "Races of the Old World;" "Physiological Memoirs," by William A. Hammond, Surgeon-General U. S. A.; "The Man of the North and the Man of the South," by C. V. de Bonstetten (Reprint); "Observations on the Genus Unio," &c., by Isaac Lea, LL.D., vol. 9; "Plants, illustrating in their Structure the Wisdom and Goodness of God;" "The Annual of Scientific Discovery for 1863," edited by David A. Wells; "The Philosophy of Natural History on the basis of Smellie," by John Ware, M.D.; "Heat Considered as a Mode of Motion," by John Tyndall, F.R.S. (Reprint); "Substance and Shadow, an Essay on the Physics of Creation," by Henry James; "Class Book of Chemistry," by Edward L. Youmans; "Blues and Carmines of Indigo," by Felicien Capron de Dole (Reprint); "Treatise on the Coloring Matters derived from Coal Tar," by Prof. H. Dussance; "First Outlines of a Dictionary of the Solubility of Chemical Substances," by Frank H. Storer; "Chemical Technology, or Chemistry in its Application to Manufactures," by Thomas Richardson and Henry Watts, vol. I. part 3 (Reprint); Transactions, Proceedings, and Journals of the Academy of Natural Science at St. Louis, of the California Academy of Natural Sciences, of the American Philosophical Society, Academy of Natural Sciences, Philadelphia, Entomological Society of the same city, Lyceum of Natural History of New York, Illinois Natural History Society, Smithsonian Institution, Natural History Society of Montreal,

C. E., and the American Academy of Arts and Sciences.

The works on Political and Social Science have also been numerous. The following are the principal: "The American Theory of Government considered with Reference to the Present Crisis," by Peter H. Burnett; "The Results of Slavery" (Translation), by Augustin Cochin; "Ten Chapters on Marriage," by Wm. B. Hayden; "Political Fallacies," &c., by Geo. Junkin, D.D.; "The System of Landed Credit," &c., by George H. Macaulay; "The Prisoner of State," by D. A. Mahoney; "Four Acts of Despotism," by the same author; "On Liberty," by J. Stuart Mill (Reprint); "The Problem of American Destiny Solved by Science and History;" "Arbitrary Arrests in the South, or Scenes from the Experience of an Alabama Unionist," by R. S. Tharin; "Address at the opening of the New Chamber of Commerce at Milwaukie," by T. Whitney; "Reply to Prof. Parker's Letter in the Boston Post," by Leonard Bacon, D.D.; "The Slave Power, its Character, Career, and Probable Designs," by J. E. Cairnes (Reprint); "Opinion of Attorney General Bates on Citizenship;" "Present Condition of Mexico, Report from the Secretary of State;" "Trial and Proceedings in the case of Clement L. Vallandigham;" "Record of Hon. Clement L. Vallandigham, on Abolition, the Union, and the Civil War;" "The Bloody Week; Murder, Riot and Arson;" "The Empire of the Mother over the Character and Destiny of the Race," by Henry C. Wright; "Principles of Political Economy, with some of their applications to Social Philosophy," by John Stuart Mill (Reprint), a work of great and permanent value; "Lunsford Lane, or another Helper from North Carolina," by Rev. W. G. Hawkins; "French Intervention in America," by Vine W. Kingsley; "Neutral Relations of England and the United States," by Charles G. Loring; "A Letter to the Women of England on Slavery in the Southern States," by Edward Yates, M. A.; "The Federalist, with Historical Introduction and Notes," by Henry B. Dawson, 2 vols.; "Liability of the Government of Great Britain for Depredations of Rebel Privateers considered," by Charles P. Kirkland; "Money," by Charles Moran; "Speeches of Hon. Benjamin F. Thomas, in the 37th Congress;" "The New Gospel of Peace, according to St. Benjamin," parts 1 and 2; "Revelations, a Companion to the New Gospel of Peace, according to Abraham;" "Book of the Prophet Stephen, Son of Douglas;" "Ye Book of Copperheads."

There have been also some valuable contributions to Mechanical Science and Technology; among these were: "The Supplement to Ure's Dictionary of Arts Manufactures and Mines," edited in England, by Robert Hunt, and re-arranged with valuable additions by E. L. Youmans; "Ewbank's Hydraulics," a new and improved edition; John Rack's "French Wine and Liquor Manufacture;" "The Game of Draughts" by Henry Spayth; "Introduction

and Early Progress of the Cotton Manufacture in the United States," by Samuel Batchelder; "The Iron Manufacture of Great Britain," by W. Truran, C. E. (Reprint), but with some additions to the American Edition; "Experimental Researches in Steam Engineering," by B. F. Isherwood; "Ulrich's Complete Treatise on the Art of Dyeing Cotton and Wool," revised and improved by Prof. H. Dussauce (Reprint); "The Dead Shot, or Sportsman's Complete Guide," by Marksman; "Bourne's Catechism of the Steam Engine," new and revised edition; "A Practical Treatise on Mechanical Engineering," &c., by Francis Campin (Reprint); Pierre Blot's "What to Eat and how to Cook it;" "How to Color Photographs;" "Necessity of a Ship Canal between the East and the West;" "Theory and Art of Penmanship; a Manual for Teachers."

In philology, five dictionaries and vocabularies of Indian languages have appeared, viz.: "The Mutsun," by R. F. A. de la Cuesta; the "San Antonio," by Rev. B. Sitjar; the "Iroquois," by Rev. J. Bruyas; and two volumes of the Chinook Jargon, by Geo. Gibbs, LL.D., all published in J. Gilmary Shea's Library of Linguistics; a translation of the "Atharva Veda, with Text and Notes," by Prof. W. D. Whitney; Max Müller's "Lectures on the Science of Language;" Prof. W. H. Green's "Hebrew Chrestomathy," and new editions of Webster's Imperial 8vo., and Pocket Dictionaries.

The principal agricultural works of the year were: Col. Haraszthy's "Grape Culture" (a California book); J. M. Knowlton's "Our Hardy Grapes," &c.; Fearing Burr's "Field and Garden Vegetables;" Isaac A. Hedge's treatise on "Sorgo;" two volumes of essays on "Tobacco Culture;" two books on "Sheep Husbandry," by H. S. Randall, LL.D.; Robert Jennings' "Cattle and their Diseases;" "A Manual of Flax Culture;" D. G. Mitchell's "My Farm of Edgewood," and a reprint of Liebig's "Natural Laws of Husbandry." Much of J. S. Hittell's "Resources of California" is devoted to the agricultural products and interests of that State.

The number of new medical works was large, and few of them were reprints. The most important were: "U. S. Pharmacopœia; Fourth Decennial Revision;" Treatises on Consumption and Weak Lungs, by Drs. Dio Lewis, James C. Jackson, and H. I. Bowditch; Manuals and Treatises on Surgery and Surgical Operations, by Drs. F. H. Hamilton, Stephen Smith, H. H. Smith, John H. Packard; T. Wharton Jones ("Ophthalmic Medicine and Surgery"); Chapin A. Harris ("Dental Surgery"); A. Robertson ("Extracting Teeth"); and Geo. McLeod ("Surgery of the Crimean War") Reprint; Lectures and Treatises on Obstetrics and Diseases of Women, by Drs. Meigs, Simpson (a Reprint), G. S. Bedford, H. R. Storer ("Anæsthetics in Child-Birth"); Monographs on Special Diseases, by Drs. J. B. Upham ("Cerebro-spinal Meningitis"); H.

H. Salter ("Asthma"); C. F. Taylor ("Potts' Disease of the Spine"); W. T. Helmuth ("Diphtheria, Homœopathic Treatment"); Isaac Ray ("Mental Hygiene"); Erasmus Wilson ("Disease of the Skin," Reprint); W. A. Hammond, Surgeon General, U. S. A. ("Hygiene with reference to Military Service," and "Physiological Memoirs"); J. Ordonaux ("Hints on Health in Armies"); "J. J. Woodward ("Camp Diseases in the U. S. Armies"); C. Baunscheidt ("On Diseases of the Eye, and their Cure by a New Method"). On medical science there were: Dr. Martyn Paine's "Institutes of Medicine," a new edition; Dr. T. R. Beck's "Medical Jurisprudence," new edition; Dr. J. Carson's "Lectures on Materia Medica;"; Dr. C. Dunham's "Homœopathy: the Science of Therapeutics;"; Dr. F. Chance's translation of R. Virchow's "Cellular Pathology" (Reprint); Dr. Norton's Prize Essay "On the Senses of Smell and Taste;"; Dr. H. I. Bowditch's "Medical Profession, a Means of Developing the whole Nature of Man;"; Dr. C. A. Lee on "Hospital Construction and Foreign Hospitals," and an account of the "Hospital Transports" of the Sanitary Commission. To these may be added Dr. G. H. Tucker's "Medical Register of the City of New York;"; Dr. H. Millard's "Homœopathic Guide for Emergencies," and the reprint of Dr. Brinton's "Medical Selection of Lives for Assurance."

In the department of law, the most numerous works were reports of cases decided in the supreme courts and courts of appeal of the States, and the United States; of these, there were published during the year, one or more volumes of reports of the courts of seventeen States, two cities (New York and Philadelphia), and the Supreme Court of the United States. There were also published, Digests of the Laws of N. Y., by Abbott Brothers; and Pennsylvania, by F. C. Brightly; of Patent Laws, by S. Law; and of Taxation in the States, by A. B. Sturt. Still other legal works were devoted to the practice and pleadings, or history and jurisdiction of State or local courts, as of the Surrogate Court, in N. Y., or probate courts elsewhere, chancery courts, and The Law of Trusts, Trustees, Administrators, Executors, Guardians, etc., by the late Judge T. Reeve and other writers; Equity Courts, by Van Santvoord; and Courts of Record, by Whittaker. Aside from the "Statutes at Large of the U. S.," edited by G. P. Sanger, there were published numerous editions of special acts of Congress, as "The Direct and Excise Tax Laws" (eight editions, some of them with notes, decisions, explanations, etc.); "Postal Law," "Bank Law," "Loan, Revenue and Currency Acts," &c., &c., &c.; a new edition of Wheaton's "International Law," with notes W. B. Lawrence; and "The Law of Nations, Affecting Commerce during the War," by F. H. Upton, LL.B. There were also some reprints of "Foreign Law Reports," and reports of two important trials.

In educational science—aside from four or five books on the new method of object teaching, by Mr. E. A. Sheldon, Prof. Alphonso Ward, and "Scotia," and a few works on general educational topics, of which the most important were: "The Practical Education of Boys," by Otis Bisbee, of the Poughkeepsie High School; "Help to Education in the Houses of our Country," by Rev. Warren Burton; "Levana; or the Doctrine of Education," by J. P. F. Richter, translated by Rev. C. T. Brooks; "The Semi-Centennial Anniversary of the Albany Academy," &c.—the publications were mostly school books. Of these there were English grammars, by Messrs. H. Kiddle, N. G. Clarke, and J. M. B. Sill; French grammars, by A. Vailant and Prof. W. J. Knapp; German grammars, by Dr. Emil Otto and J. S. Oehlschlager (Ahn's); a Portuguese Grammar, by E. J. Grauert. Of arithmetic and works on pure and mixed mathematics, there were treatises by Prof. C. Davies, J. F. Stoddard, S. A. Felter, Elias Loomis, LL.D.; Oren Root (Robinson's Series); Bryant and Stratton (C. H. Book-keeping); Lassing (Manual of Electricity); and Prof. E. S. Snell (Olmsted's Natural Philosophy, revised and re-written). The new geographies were by C. C. Morgan, E. E. White, and D. W. Camp; histories by J. J. Anderson and Miss Yonge (Reprint). Readers and spellers, by M. Willson, W. T. Adams, C. W. Sanders, and G. S. Hillard. Of other school books, there were "Text Books on Penmanship," by H. W. Ellsworth, and Payson, Dunton, and Scribner; "Rudimentary Drawing," by W. E. Worthen; "A Child's Chemistry," by Prof. W. Hooker, M.D.; "Conversations in French and English" (Bellenger's), by C. & H. Whitcomb; and "Translation Exercises" (*Petit Cours de Versions*), by P. Sadler; "Manual of Gymnastic Exercises in Families," by S. W. Mason; and "Hand-book of Calisthenics and Gymnastics," a valuable and needed work, by J. Madison Watson. To these should be added the little treatise of Mrs. H. Mann and Miss A. P. Peabody, "Moral Culture of Infancy and Kinder-Garten Guide." The reprint of Prof. Craik's "Compendious History of English Literature," and of "Chambers' Encyclopædia," which reached its fifth volume during the year; as well as the issue of "The Annual Cyclopædia," for 1862, may be reckoned among the items of educational progress. Among the numerous educational periodicals, all ably conducted, a new monthly, called "The American Educational Monthly," appeared near the close of the year. The numbers issued thus far give evidence of decided ability.

In the department of geography and travel, the most remarkable original works were: H. D. Thoreau's "Excursions;"; "In the Tropics," by a settler in Santo Domingo; Dr. S. D. Phelps's "The Holy Land; with Glimpses of Europe and Egypt;"; W. T. Coggeshall's "Stories of Frontier Adventure;"; "Three Years in Chili," by a lady; "William Hoffman's

"Monitor; or Jottings of a New York Merchant," &c.; W. L. G. Smith's "China and the Chinese;" Aaron Ward's "Around the Pyramids;" H. P. Leland's "Americans in Rome;" Captain J. Mullan's "Report on the Military Road between Forts Walla-Walla and Benton;" F. H. Howard's "Fourteen Months in American Bastiles;" C. H. Jones's "Recollections of Venice;" "The Great Lakes," by J. Disturnell; "Harper's Hand-book for Travelers in Europe and the East," by W. P. Fetteridge. Of reprints the most important were: W. C. Baldwin's "African Hunting from Natal to the Zambesi," &c.; Sir R. Alcock's "Capital of the Tycoon;" De Smet's "Western Missions and Missionaries," and "New Indian Sketches;" Mrs. F. Kemble's "Journal of a Residence on a Georgia Plantation;" C. G. Leland's translation of H. Heine's "Pictures of Travel;" Mendelssohn's "Letters from Italy and Switzerland," and W. S. Gage's translation of Karl Ritter's "Geographical Studies." The album for postage stamps, American and foreign, with maps and descriptions, belongs also to this department.

The essays were not numerous, but many of them were of great excellence. Among the best were: O. W. Holmes's "Soundings from the Atlantic;" Dr. J. G. Holland's "Letters to the Joneses;" "Our Old Home," by N. Hawthorne; "Gala Days," by Gail Hamilton (Miss A. Dodge); Miss L. M. Alcott's "Hospital Sketches;" Wendell Phillips's "Speeches, Lectures," &c.; M. G. Ware's "Thoughts in my Garden;" Theo. Winthrop's "Life in the Open Air," &c.; T. W. Higginson's "Out Door Papers;" J. H. Hackett's "Shakespeare Notes, Criticisms," &c.; W. W. Brown's "The Black Man; his Antecedents," &c.; C. G. Leland's "Sunshine in Thought;" J. F. W. Ware's "Home Life; what it is, and what it needs;" Rev. Dr. Jacobs's "Notes on the Rebel Invasion of Maryland and Pennsylvania, and the Battle of Gettysburg." There have been new editions in beautiful forms of several of Irving's best essays, and of Ik Marvel's (D. G. Mitchell's) "Dream Life," and "Reveries of a Bachelor," and a new edition, with additional notes, of Christopher North's (John Wilson's) "Noctes Ambrosianæ," of which the first American edition was for many years the only complete one, though Wilson had been for a long time a leading contributor to Blackwood's, and a popular author in Great Britain. Of the reprints, the most important were Alex. Smith's "Dreamthorp;" Thackeray's "Roundabout Papers;" Sala's "Breakfast in Bed;" A. K. H. Boyd's "Every-Day Philosopher in Town and Country;" and Mrs. Browning's "Essays on the Greek Christian Poets and the English Poets."

A larger number than usual of our poets have issued new volumes of poems. Among these are W. C. Bryant ("Thirty Poems"); H. W. Longfellow ("Tales of a Wayside Inn"); J. G. Whittier ("In War Times," &c., and "Poetical Works"); T. B. Aldrich ("Poems"); John

Savage ("Faith and Fancy"); E. C. Stedman ("Alice of Monmouth,") &c. Among the new poets of the year, are J. H. Hopkins, jr. ("Carols, Hymns and Songs"); Lizzie Dolen ("Poems from the Inner Life"); Sarah E. Knowles ("Orlean Lamar,") &c.; Mrs. E. T. Porter Beach ("Pelayo; an Epic of the Olden Moorish Time"); W. A. Devon ("War Lyrics"); C. J. Stedman ("The Russian Ball; or Adventures of Miss Clementina Shoddy"); Kane O'Donnell ("The Song of Iron and the Song of Slaves"); "L." (Sybelle and other Poems"); "Don Pedro Quærendo Reminisco," ("Life in the Union Army," &c.) ("America; a Dramatic Poem,") ("Songs of Alpha-Delta-Phi,") and ("Songs for the Union,") by anonymous authors. Frank Moore has collected a number of war poems, under the title of "Lyrics of Loyalty," and Mr. A. C. Remington, a choice selection of religious and consolatory pieces, under the title, "Poems of Religion, Sorrow, Comfort, Counsel, and Aspiration." Of the reprints, the most important are: Jean Ingelow's Poems, Goethe's, Bulwer Lytton's, Burns's, H. Heine's, Uhland's, C. Swain's, and H. Taylor's ("Philip Van Artevelde"); Palgrave's "Golden Treasury," and Roundell Palmer's "Book of Praise," are the best foreign collection of poems, published recently.

The number of novels, original and reprinted, is larger than usual, and many of them possess a good degree of merit.

Among the most successful and meritorious of the American novels, were: "Hannah Thurston; a Story of American Life," by Bayard Taylor; "Husks," by Marion Harland (Mrs. Terhune); "Peculiar; a Tale of the Great Transition," by Epes Sargent; "The Fatal Marriage," by Mrs. E. D. E. N. Southworth; "Was He Successful," by Richard B. Kimball; "The Old Helmet," by Miss Susan Warner ("Elizabeth Wetherell"); "Round the Block; an American Novel;" "The Days of Shoddy; a Novel of the Great Rebellion in 1861," and "Shoulder Straps; a Novel of New York and the Army," both by Henry Morford; "Vincenzo, or Sunken Rocks," by John Rufini; "Peter Carradine; or the Martindale Pastoral," by Caroline Chesebro; "The Rejected Wife," by Mrs. Ann S. Stephens; "Frank Warrington," by the author of "Rutledge;" "The Orpheus C. Kerr Papers; a Second Series;" "Madge; or Night and Morning," by H. B. G.; "Two Pictures; or what We think of Ourselves and what Others think of Us," by Miss Maria J. McIntosh; "Marian Gray; or the Heiress of Redstone Hall," by Mrs. Mary J. Holmes. Other American novels which met with some success, were: "Broken Columns;" "Rockford; or Sunshine and Storm," by Mrs. L. D. Umsted; "Light," by Helen Modet; "Etna Van de Noir; a Romance of Kentucky," by Sallie J. Hancock; "Mabel; or Heart Histories," by Rosella Rice; "Temptation and Triumph," by Virginia F. Townsend; "The Amber Gods," by Harriet E. Prescott; "Tactics;

or Cupid in Shoulder Straps; a West Point Love Story," by Hearton Drille.

A large proportion of the original, as well as many of the reprinted novels, are published in a cheap form, either as octavo or 16mo pamphlets; the latter having been for the past year the more popular. These small 16mo pamphlet novels should properly be called novellettes, rather than novels. They consist of from 64 to 100 pages, and are sold at ten cents. There are now five publishing houses issuing books of this class, and one house has published sixty or more novels, besides other books sold at the same price. The extent of the sales is very great; the more popular works of the series reaching a sale of 75,000 or more copies. The titles of these cheap novels we cannot give; a few of them are by good writers, and possess a fair share of merit, but the larger portion, both of the octavo and 16mo cheap novels, are of the sensational school, and decidedly trashy. The principal authors of these cheap productions are Dr. J. H. Robinson, Edward S. Ellis, W. J. M. Reynolds, "May Carleton," N. C. Iron, Warren St. John, John S. Warner, Sylvanus Cobb, Ned Buntline (E. Z. C. Judson), Pierce Egan, Mrs. J. Sadlier, Mrs. E. D. E. N. Southworth, Mrs. M. A. Denison, Mrs. Ann S. Stephens, and Mrs. Metta V. Victor.

Of the reprints of the year, many are of a high character, and some will undoubtedly be numbered among English classics. We can hardly predict such permanent success for the works of Miss M. E. Braddon, eight of whose novels appeared during the year, or for those of Mrs. Henry Wood, who furnished the public with eleven novels, all of which found a large and ready sale. Such rapid production is hardly compatible with that careful writing which alone lives longer than a generation. Of other reprints, the most important were: "No Name," and "Sights Afoot," by Wilkie Collins; "Very Hard Cash," by Charles Reade; "Barrington, A Novel," by Charles Lever; "Dark Night's Work," and "Sylvia's Lovers," by Mrs. Gaskell; "At Odds," by the Baroness Tautphœus; "The Conscript; a Tale of War," by Alex. Dumas; "Fanchon the Cricket," by George Sand (Madame Dudevant); "Strange Adventures of Capt. Dangerous," by George Augustus Sala; "A Glimpse of the World" by Miss Sewell; "Chronicles of Carlingford," and "Heart and Cross," by Mrs. Oliphant; "Nathusius; or Above her Station," by Mrs. Hermann Philip; "Wanderings of a Beauty," by Mrs. Edwin James; "A Tangled Skein," by Albany Fonblanque, Jr.; "The Fairy Book," by Miss D. M. Muloch; "The Story of Elizabeth," by Miss Thackeray; "Lost and Saved," by the Hon. Mrs. Norton; "Romola," by Geo. Elliot (Miss Evans); "Austin Elliot," by Henry Kingsley; "The Ring of Amasis," by "Owen Meredith" (Robert Bulwer Lytton); "Mrs. Lirriper's Lodgings," by Charles Dickens; "Bensley; a Story of To-Day," by the author of "Life Before Him;" "Live it Down,"

by J. C. Jeaffreson; "Martin Pole; a Novel," by John Saunders; "The Nose of a Notary," by Edmund About; "Mary Lyndsay; a Novel," by Lady Emily Ponsonby; "Rumor," by Miss Elizabeth Sheppard; "Rachel Ray; a Novel," by Anthony Trollope; "St. Winifred's, or the World of School," by T. W. Farrar; "Boys at Chequasset," and "Faith Gartney's Girlhood," by an anonymous author; "Queen Mab," by Julia Kavanagh; "Held in Bondage, or Granville de Vigne," by "Ouida;" "Pique, a Novel;" "Thrice Lost; a Novel;" "The Cruellest Wrong of All," by the author of "Margaret;" "Skirmishing," and "Who Breaks—Pays," by an anonymous author.

To attempt to give the names of all the Juvenile Books published during the past year, would require far more space than we have at command. The activity displayed in the preparation and publication of works of this class during the year is entirely without precedent. In general, they have not been reprints, and many of them are from the pens of our ablest writers. Among the most successful American writers of juvenile books, have been: T. S. Arthur, whose valuable works may be reckoned by scores; L. M. Sargent, whose Temperance Tales have been universally popular; the brothers Jacob and John S. C. Abbott, the most prolific of writers for children and youth; Rev. D. C. Eddy, D.D., author of the Walter Series; George J. Taylor, Esq.; "Oliver Optic" (William T. Adams); Rev. William M. Thayer, author of the Pioneer Boy Series; J. T. Trowbridge, author of "Father BRIGHTHOPE;" Rev. William P. Breed; John Todd, D.D.; Mrs. Madeline Leslie; Mrs. Dr. Prentiss, author of "Little Susie's Six Birth days," &c.; "Aunt Fanny" (Mrs. Fanny Barrow), author of the Nightcap and Mitten Series; Mrs. M. A. Denison; Mrs. Jane D. Chaplin; Miss Sarah W. Lander; Miss Caroline E. Kelly; Miss Harriet B. McKeever; Miss Virginia F. Townsend; Mrs. C. M. Kirkland; Miss L. M. Alcott; Mrs. L. C. Tuthill; "Mrs. Manners" (Mrs. Maria T. Richards); "Constance Graham;" "Nellie Graham;" "Gertrude Graham;" "Aunt Friendly;" Catharine D. Bell; Mrs. F. J. Burge Smith; C. M. Trowbridge; Mrs. S. C. Mayo; Annie W. Abbot; Mary J. Halpine; "Rena Ray;" Anna M. Hyde; Sarah A. Myers; "Ethel Lynn;" Jennie M. Parker; Caroline Chesebro; Emma Marshall; the author of "Irish Amy;" the author of "Kitty's Victory;" the author of "Kate Morgan's Soldiers;" Nellie Browning, and Phoebe Harris Phelps.

Of the Juvenile reprints, four each are from the pen of the indefatigable A. L. O. E.; R. M. Ballantyne, well known as an author of stories of juvenile adventure; Rev. P. B. Power, and Emma Macallan; and Miss Planche, Miss Yonge, Henry Mayhew, W. G. Kingston, Rev. Chas. Kingsley, Sarah F. Tytler, A. de Bréchat, Fred. Gerstaecker, Mayne Reid, John G. Edgar, Rev. W. K. Tweedie, D.D., Coventry Patmore, and Miss Charlesworth, each one or more.

LONGWORTH, NICHOLAS, an American vine-grower and horticulturist, born in Newark, New Jersey, January 16th, 1782, died at Cincinnati, February 10th, 1863. His father had been a tory during the Revolutionary war, and his large property had been entirely confiscated in consequence. Young Longworth's childhood was passed in comparative indigence, and when yet a boy, he went to South Carolina, as clerk for an older brother; but the climate proved unfavorable to his health, and he returned to Newark and resolved to study law. Believing that the region then known as the Northwest Territory offered the best opportunity of success to young men of enterprise, he emigrated thither, in 1803, and fixing upon the little village of Cincinnati as his residence, he continued his legal studies in the office of Judge Jacob Burnet. His first case, after his admission to the bar, was the defence of a horse thief, for which he received some whiskey stills, which he found after a time in the possession of a man who was anxious to retain them, and, having nothing else to offer him, tendered him a few acres of barren land for them, which he reluctantly accepted. This land, from the subsequent influx of emigration, came to be worth two millions of dollars. His practice as a lawyer was tolerably lucrative, and all his surplus earnings were invested in lands in the city and its immediate vicinity, of whose future value he was fully assured. He had for some years given much attention to the cultivation of the grape, with the view of making wine, and at first attempted, though with little success, the acclimation of foreign vines. He tried about forty different varieties before the idea occurred to him of testing the capabilities of our indigenous grapes. In 1828 he withdrew from the practice of his profession, and commenced experimenting upon the adaptation of native grapes to the production of wine. Two of the varieties, the Catawba and Isabella, seemed to him to possess the best qualities for wine in that climate and soil, and he gradually adopted these throughout his vineyards, though not entirely to the exclusion of others. He had two hundred acres of vineyards, and extensive wine-vaults in the city, where the vintage of each year was stored by itself to ripen. He also purchased wine and grape juice in large quantities, to be converted by his processes into the wines of commerce. These wines eventually became profitable to him and to the thousands of vine-growers and vine-dressers, who emigrated from the wine countries of Europe, and established themselves on the hillslopes of the Ohio, in the vicinity of Cincinnati; but for many years his expenditure was greater than his income from his vineyards. Mr. Longworth did not, however, confine his attention to the culture of the grape. He was also much interested in the improvement of the strawberry, and published the results of his numerous experiments on the influence of the sexual character of the strawberry

in rendering it productive. In private life, Mr. Longworth was a genial, kindly, but very eccentric man, dressing always in the extremest simplicity and plainness, often to the extent of shabbiness, giving largely, and often, but secretly, and oftenest to those whom he called "the devil's poor," the vagabonds and estrays of social life. His property, by the increasing value of his lands and buildings, had increased till, at his death, it was inventoried at nearly fifteen millions of dollars.

• LOUISIANA. The most important subjects of general interest connected with affairs in Louisiana, during 1863, relate, 1st, to the Provisional Judiciary adopted in that State; 2d, the movements to organize a State Government; and 3d, the organization of the labor of the freedmen.

After the capture of New Orleans and some other parts of Louisiana by the Federal forces, the military being under command of Major-General Butler, and the naval under Admiral Farragut, in April, 1862, a system of government for the territory rescued from the enemy became necessary, and nothing was called for by the wants of the community more than some tribunal to decide controversies which were constantly arising. All the functions of the previously existing disloyal Government having been suspended, and among others the judiciary, a new one for the time being, embracing among others the judicial powers, must take its place. At first, as questions arose, they were often decided by the major-general himself. Some were by him from time to time referred to other persons for examination and decision: to the various members of his staff; to other officers and military men under his command, and sometimes to civilians. The decisions of these gentlemen were required to be respected and obeyed, and the justice obtained in this manner, uncertain as it was, without system and in a great degree accidental, depending much on first impressions of the gentlemen to whom reference was made, the opportunity for investigation, or the want of it, was still immeasurably better than none, and was in fact a necessity of society. Soon, however, institutions in the nature of courts were established by the general commanding, and an officer was detailed to hear and decide controversies of a particular character. Soldiers were detailed to execute his commands, to bring the accused before him for trial, and to see that the judgment pronounced was executed. Such a court had no name in fact, but was known by the name of the officer holding it. It had no formal records, although probably some one of the men detailed kept a list of the persons against whom judgment was rendered, and some brief memorandum of the judgment itself, such as the number of dollars of fine or of days of imprisonment, and this person shortly came to be called clerk, if he was not originally so termed.

About June, and five or six weeks after the

occupation of the city by the Federal forces, a court was established called the Provost Court of the army of the United States, having at first, as its name imports, power only to decide questions relating to the army, officers or soldiers. From time to time other questions were referred to this court, relating to persons not connected with the army, and particularly to matters of police and the punishment of crimes generally, and the jurisdiction over cases of this kind from frequent repetition of the references of them to it became habitual. Before the summer after the conquest had expired, this court exercised unquestioned jurisdiction of all criminal cases arising in the city of New Orleans. Shortly after this acquisition of jurisdiction, civil matters, in the absence of courts endowed for that purpose, were referred from time to time to this court.

The major-general commanding the department, and his staff under him, being in possession of the power, were of course appealed to by the wronged or distressed. This was done naturally, without reflecting further than to see that they seemed to have the power of government and to restrain and redress wrongs. They had it, and they alone had it, and as conquerors, they had the right and theirs was the duty to exercise it. The right and duty in such a case come directly from the possession of the power and the necessity for its exercise, and this is very manifest when the matter is viewed in a practical light. They follow so necessarily and naturally that they are never questioned. Where society by conquest and the suspension of its civil institutions is reduced to its elements, nothing is plainer than that it is the duty of those who have the power, however obtained or held, to protect the weak against the strong and to maintain order and the rights of citizens among themselves. This right and duty in such a state of wants and means are as apparent as is in the simplest case the connection of cause and effect.

In August following the conquest of the city, General George F. Shepley, of Maine, was appointed Military Governor of Louisiana, and among other things he immediately set about providing a system of courts for the State. Most of the judges of the courts that had been in operation there, and the other officers of them, were disloyal, and having fled the country on its capture were still absentees in the Confederacy so-called, and could not have been continued in office even if they had been willing to remain. Governor Shepley therefore had substantially to erect new courts. He found it easier and more natural to erect such as they had before had, and accordingly he appointed John S. Whittaker Judge of the Second District Court of the parish of Orleans. The old Second District Court had been a court of probate and successions, in addition to possessing the ordinary powers of a local court in civil matters. This action seemed

like setting in motion that old court under the new motive power of the Federal Government. It was in fact, perhaps, more properly speaking, the establishment of a new court by the Executive of the Federal Government, with the jurisdiction and powers theretofore pertaining to the court previously bearing that name. This court therefore had all the powers pertaining and belonging to the old court of that name, among which were those of a Probate Court. It had also power to hear and decide civil cases generally, where the defendant resided in the parish of Orleans or was a non-resident of the State. Where a defendant resided in the State, however, and not in the parish of Orleans, this court could not entertain a suit against him, that having been under the jurisdiction of the constitutional State court to whose jurisdiction this court had been appointed to succeed.

The Sixth District Court of the parish of Orleans was also put in motion shortly after the capture of the city.

Rufus K. Howell, the incumbent of that bench, had always been a loyal man, and having early taken the oath of allegiance to the Federal Government, was allowed to resume his functions and continue his court under the government of the Federal arms. He continued under his old commission which he had received from the State of Louisiana before her attempted secession, and had held and acted under after the act of secession and during the Confederate rule. Here was one commission that had been held from the State of Louisiana while she was yet loyal and free from secession, continued through the day and rule of secession into the time of the capture and government of the State by the Federal army, and still held and its functions exercised by that same firm man and worthy judge under Federal rule.

This court, like the one before mentioned, retaining and exercising all the powers it had possessed, as originally constituted, had general jurisdiction in civil cases, where the defendant was a resident of the parish of Orleans, or was a non-resident of the State, and was served with process within it.

The Fourth District Court of the parish of Orleans was also established, and Judge J. Hiestand was appointed to its bench. This court, in addition to the general jurisdiction in civil cases, possessed by the other district courts of the parish of Orleans, entertained appeals from justices' courts, the hearing of which constituted a large part of its business.

These three civil courts were all of them constituted by Governor Shepley, in September, and October, 1862, and entered upon the discharge of their duties about the 1st of November, that being the time when the courts in New Orleans, from usage immemorial, resume their session after the vacation of summer.

These were the only courts of civil jurisdiction in the State, and their jurisdiction was limited as against defendants resident of the

State, to citizens of the parish of Orleans. As to other residents of the State, outside the parish of Orleans, there was no court in which they could be sued. The Federal army held several counties in this condition.

The Provost Court, under Judge Joseph M. Bell, administered all the criminal justice of the State in all its departments, and, previous to the establishment of the civil courts, had occasionally exercised jurisdiction in civil cases.

This was the condition of things when, on the 15th day of December, 1862, the officers of the United States Provisional Court for the State of Louisiana, arrived in New Orleans, from New York.

This court was constituted by an order of the President, and Chas. A. Peabody of New York made judge, with power to appoint all other officers. He appointed the officers mentioned in the order, and the court thus constituted was composed of the following persons: Charles A. Peabody, *Judge*; Augustus D. B. Hughes, *Clerk*; Isaac Edward Clarke, *Marshal*; George D. Lamont, *Prosecuting Attorney*.

This court, made up as to its personnel in the North, and sent constituted and organized for immediate business to Louisiana, attracted much attention, as well for the novelty of its constitution as for the character and extent of its jurisdiction and powers, which are only limited by the limit of human acts and transactions capable of becoming subjects of judicial investigation.

They embrace all causes, civil and criminal, including causes in law, equity, revenue and admiralty, and particularly all such powers and jurisdiction as belong to the district and circuit courts of the United States.

This court, embracing within its jurisdiction all things of judicial action in the State and having jurisdiction of certain cases concurrently with other courts, had also an extensive field of labor, unoccupied and untouched by any other court.

The parts of the State held by our armies outside the parish of Orleans had no courts, civil or criminal, and no process from the courts of the parish of Orleans went thither. No local courts could well be created there, for our tenure of the country was not always permanent, or at least was liable to fluctuation from time to time. At one time, and for months together, a large and wealthy tract of country, embracing several counties, would be in possession of, and held by, the Federal army, and, at another time, another part of the State of equal extent would be so held, and these districts, one after the other, by the retirement of the Federal army from them, returned to the occupation and control of the rebel army. This was the case in different parts of the State, at different times, to such an extent that perhaps no part of the State, except the city of New Orleans, had been uniformly held by the Federal arms, since its first capture by them.

A central court, therefore, with power to

bring litigants to the focus of the State, and whose operations, practically, would expand and contract with the flow and ebb of our army, was a great desideratum, and almost indispensable to the administration of justice in those parts of the State. This want, not only as to matters within the cognizance of State courts, but also as to those within the cognizance of the Federal courts throughout the State, embracing the eastern and western judicial districts of Louisiana, the Provisional Court was well calculated to supply.

No review of the judgments of this court by any other was allowed, and cases originating there were heard and determined there in the first instance, and then in review; and in all cases, as well those originating there as those brought there on appeal from other courts, the rights of parties were finally settled there. "His judgments, to be final and conclusive," says the executive order—meaning the judgments of Judge Peabody.

The power to hear and determine finally all cases involves the power to hear and determine finally cases originating in other courts, as well as those originating in the court in question, and, accordingly, cases were brought to this court on appeal from other courts, and were there determined finally. From the United States Circuit Court cases pending there on appeal from the District Court of the United States were transferred, by order, to this court, and there heard and decided.

Other courts of the kind may have been created by generals in command of armies of occupation, but no account of any bearing any comparison with this, in the fulness and completeness of its powers and organization, is to be found. (*See PROVISIONAL COURT FOR LOUISIANA.*)

From the local courts of the State—and the First, Second, and Sixth District Courts, of the parish of Orleans, among others—appeals had lain in former times to the Supreme Court of the State, a court having only appellate jurisdiction, and being the court of last resort under the State system of judiciary. Accordingly, these courts now organized held that their decisions were subject to be reviewed by the Supreme Court of the State, and on appeals being taken, in accordance with the practice theretofore existing, they treated them as regular, and stayed proceedings on the judgments appealed from, until a decision of the Supreme Court. In this manner many of the judgments rendered in the district courts above mentioned, of the parish of Orleans, were stayed and in suspense.

The Supreme Court had not been organized or set in motion since the reestablishment of the Federal authority there. Two of the former judges had actually fled with the Confederates, on the capture of the city, and the other had not acted. In this condition of things the three district courts were of little practical benefit. All the judgments they ren-

dered which were of moment to induce the defeated party to appeal, were carried by appeal to the Supreme Court, a court of that time having an ideal, rather than a real, existence; for it was, if not wholly dead, at least in a state of suspended animation. The necessity for a court to decide these cases, and the accumulations of former years, led to the appointment of judges for the Supreme Court of Louisiana, and, accordingly, in April, 1863, the following judges were appointed:

Chief Justice—Charles A. Peabody, of New York.

Associate Justices—John S. Whittaker, of New Orleans, and of New Orleans.

Throughout nearly the entire year 1863 the courts above mentioned, all provisional in their nature, constituted the judiciary establishment of Louisiana, a State, in times of peace, of very large products and transactions, and numerous and large litigations, and having in those times, in the parish of Orleans alone, eight or ten courts, and in each of the other parishes of the State, of which there were forty-six, at least one local court of record of general jurisdiction.

The Provost Court, which had been presided over from its institution by Major Joseph M. Bell, of Boston, a member of General Butler's staff, on his retirement with General Butler in December, 1862, to relieve an urgent want at the time, was taken charge of by Judge Peabody, of the Provisional Court, who, for several months, held both courts, in one dispensing justice in civil matters, and in the other the entire criminal justice of the State daily.

He was succeeded in the Provost Court by Augustus De B. Hughes, Esq., of New York, who continued to preside over that court until near the end of Aug., 1863, when that court was discontinued, and a new one with the same name, but powers somewhat different, was instituted, at the head of which, as judge, was A. A. Atocha, a native of New Orleans, but, until recently, a citizen of New York.

In November, 1863, E. Hiestand, then judge of the Third District Court, was appointed to the First District Court of the parish of Orleans, a court of general criminal jurisdiction, and this court was opened, and the trials of criminal cases arising in the parish from that time were chiefly in that court.

Two recorders' courts, performing the duties of police and committing magistrates, and trying for petty offences, were organized in September, by the Military Governor. The city, in times of peace, had four. These courts relieved the Provost Court of much of its business, and left that to the legitimate duties of a provost court of the army.

Parish courts of general jurisdiction, like the old constitutional courts of the same name, were also established in the parishes of Jefferson and St. Bernard, East Baton Rouge, and a few others in the latter part of the year 1863.

In some instances, the same judge was authorized to hold several of those courts.

Late in the year 1863 the Second District Court of the parish of Orleans (a probate court), was authorized by Governor Shepley to perform the duties of a probate court for other parishes of the State in which there was no court of that kind, the necessity of such a provision becoming very urgent, and it being not expedient to erect new courts for that purpose.

Such was substantially the condition of the provisional judiciary of Louisiana at the end of the year 1863, twenty months after the capture of the city of New Orleans.

All of the few courts there, except the United States Provisional Court, under Judge Peabody, were creations of the Military Governor, bearing the names and having the jurisdiction and attributes of old constitutional courts of the State in former times, with some few modifications by way of enlargement or curtailment of their powers, made by the Military Governor of the State.

Those courts required no written constitutions or orders defining their powers. They had the powers theretofore belonging to the courts whose names they bore, which had been well known and recognized in the community. The appointment of a judge and other officers to a certain court was, in effect, the establishment of a court having the powers theretofore belonging to the court named, and the investment of the judge with the powers theretofore under the State government pertaining to the office of the same name. The process of constituting and endowing a court in this manner is very brief and simple. There is, for instance, the Second District Court of the parish of Orleans. An order to the effect that a certain man is appointed judge of the Second District Court of the parish of Orleans, puts at once into existence a court having the powers formerly belonging to that court, and gives him the powers and rights and privileges previously belonging to one holding the office of the same name, and this even to the extent of determining his salary or compensation for services, which it was always held was the same as that provided by law for the same officer under the State constitution.

These courts, well adapted to the wants of such a community in times of peace, perhaps were not so well suited to times of war, when industrial and commercial pursuits are, in a great measure, suspended, and resorts to courts are much less frequent, and for causes very different—when the amount of judicial force required is much less, but the flexibility and power of adaptation called for are much greater.

The Provisional Court, on the contrary, had a written charter, prepared with reference to the occasion, and was eminently adapted to the wants of the locality—in the then condition of things. Its powers to hold its sessions in the State, wherever in the condition of the country it could, and of changing its place from

time to time; of calling to itself, wherever sitting, litigants, whether plaintiffs or defendants; of expanding to cover whatever of the State was held by our arms, and of contracting its operations territorially as the territory held by our arms should be contracted; the comprehensiveness of its jurisdiction as to subject matters and parties, and the conclusiveness of its decisions, in each case terminating the litigation, were features most of them peculiar to it, and giving it immense powers; it may well be added, however, that powers so immense as those possessed by this court could properly be confided for exercise only to a man having qualifications of the highest order.

For further facts of interest, the reader is referred to the article, *PROVISIONAL COURT FOR LOUISIANA*.

The movement for the reorganization of a State Government in Louisiana, commenced early in the year. In February, 1863, the question was brought before the principal Union associations of New Orleans, as the only channel through which public opinion could be reached. The plan finally adopted was upon the theory that the Constitution of Louisiana was destroyed by the rebellion, and could not be again put into operation. Its principal features were as follows:

1st. Civil reorganization by loyal citizens of Louisiana, without the control or interference of the military authorities, except for protection.

2d. The appointment in each parish (county) of the State—within the United States lines—of a civilian, as Commissioner of Registration, empowered to open books of registration, in which should be inscribed the names and residences of any citizens of the United States, having resided six months in the State and one month in the parish, and who should swear to such qualification; and in addition that he took the oath freely and voluntarily for the purpose of establishing a State Government loyal to the United States.

3d. That after a sufficient number of citizens should be inscribed, and a sufficient area of the State embraced, the Military Governor should order an election of members of a convention to frame a new constitution; representation in the convention to be based on the ratio of one delegate to every 2,500 of the (white) population, according to the last census of the United States.

4th. That on the adoption of this constitution by the people made voters under it, an election of State officers should be ordered.

Those who prepared this plan stated the reason for the adoption of the white basis of representation to be that the only part of Louisiana in which they could operate was the first and second congressional districts, which had been excepted by the President from the operation of his emancipation proclamation of Jan. 1st, 1863; and it was only by adopting the white population as the basis of represent-

ation that they could bring the slaveholder to an equality with themselves at the ballot-box.

After discussion for three months, the machinery of the movement was completed by the appointment of a committee known as the "Free State General Committee." It was composed of five delegates from each of the Union Associations of New Orleans and the adjoining parish of Jefferson, wherein alone such associations had been formed. Of this committee Thomas J. Durant was chosen president and James Graham, secretary. The committee, having matured their plans, laid them before the Military Governor, G. F. Shepley, who entirely approved of their purpose, and consented to carry out the registration. For this object he appointed Mr. Durant Attorney General and Commissioner of Registration, with power to appoint registers in the parishes.

Under the laws of Louisiana previous to secession, a registration of voters was required in the city of New Orleans only, and an office for that purpose had existed. This office had been held by Gov. Shepley, in 1862, previous to the election of Messrs. Hahn and Flanders to Congress at Washington. The system adopted was only to register those who took the oath of allegiance required by Gen. Butler, but it had no reference to, and afforded no proof of, qualification to vote under the laws of Louisiana. Neither did it come up to the regulations adopted by the committee and approved by the Military Governor. A new registration was therefore ordered by the Governor, at which the applicants were required to take an oath. It was commenced also in the country parishes as well as New Orleans, but these were soon overrun by the enemy, and not a foot of Louisiana beyond the city and outside of the range of Union cannon was left in possession of the Federal forces. The military excitement which now ensued, in July, suspended for a time all efforts at registration.

The regulations of the committee adopted for the purpose of registration, prescribed the place where the office should be opened in New Orleans, the manner of registering the names, and the following oath to be sworn and subscribed by the citizens:

I, ———, do solemnly swear (or affirm) that I am a citizen of the United States of America; that I have resided six months in the State of Louisiana, and one month in this parish; that I am of the age of twenty-one years and upward; that I will bear true faith and allegiance to the United States of America, and will support the Constitution thereof; and that I now register myself as a voter, freely and voluntarily, for the purpose of organizing a State Government in Louisiana, loyal to the Government of the United States.

It was also declared, under the approval of the Military Governor and attorney-general, that any person swearing falsely to any material part of the above oath would be deemed guilty of perjury, and be liable to prosecution and punishment accordingly.

Meantime, delegates from a meeting of planters had been sent on to Washington to petition the General Government for authority to proceed to the election, in November, of Federal and State officers, in pursuance of the Constitution of the United States, and the State Constitution of Louisiana. The subject was laid before the President, and considered officially, and the following reply made:

EXECUTIVE MANSION, }
WASHINGTON, June 19th, 1863. }

Messrs. E. E. Mathiot, Bradish Johnston, and Thomas Cottman :

GENTLEMEN: Your letter, which follows, has been received and considered :

To his Excellency Abraham Lincoln, President of the United States.

The undersigned, a committee appointed by the planters of the State of Louisiana, respectfully represent that they have been delegated to seek of the General Government a full recognition of all the rights of the State as they existed previous to the passage of an act of secession, upon the principle of the existence of the State Constitution unimpaired, and no legal act having transpired that could in any way deprive them of the advantages conferred by the Constitution. Under this Constitution this State wishes to return to its full allegiance, in the enjoyment of all rights and privileges exercised by the other States under the Federal Constitution. With the view of accomplishing the desired object, we further request your excellency will, as the commander-in-chief of the army of the United States, direct the Military Governor of Louisiana to order an election, in conformity with the Constitution and laws of the State, on the first Monday of November next, for all State and Federal officers.

With high consideration and respect, we have the honor to subscribe ourselves your obedient servants,

E. E. MATHIOT,
BRADISH JOHNSTON,
THOMAS COTTMAN.

Since receiving the letter, reliable information has reached me that a respectable portion of the Louisiana people desire to amend their State Constitution, and contemplate holding a convention for that purpose. This fact alone, as it seems to me, is a sufficient reason why the General Government should not give the committee the authority you seek to act under the existing State Constitution.

I may add, that while I do not perceive how such a committal could facilitate our military operations in Louisiana, I really apprehend it might be so used as to embarrass them.

As to an election to be held next November, there is abundant time, without any order or proclamation from me just now. The people of Louisiana shall not lack an opportunity for a fair election for both Federal and State officers by want of anything within my power to give them.

Your obedient servant,

ABRAHAM LINCOLN.

Two parties of individuals were thus engaged in distinct efforts to restore a State Government. The one acted upon the theory that the Constitution was destroyed by secession, and the other that its operation was only suspended. This led to considerable discussion of the effect of the Secession Act upon the State. The first Constitution of Louisiana was adopted January 22d, 1812, and on April 8th, the State was admitted into the Union. In 1845, a new Constitution was adopted, which was superseded by another Constitution in 1852. On the 12th of December, 1860, a law passed the Legislature, providing for a State Convention on the ground that "the condition of public affairs" required "action for the interest and welfare of the State." Everything was

legally done up to the opening of the Convention on January 23d, 1861. This body passed the act of secession, and in many material points remodelled and reconstructed the Constitution of 1852, "and made or assumed to make substantially a new Constitution of 1861—not in conformity with or in allegiance to the Constitution of the United States, but to that of the Confederate States. The conservative portion wished to reorganize the State under the Constitution of 1852, on the ground that the acts of the Convention which framed the ordinance of secession and the Constitution of 1861 were void, and that the Constitution of 1852 was still in force. The Free State Committee desired to call a Convention and form an entirely new Constitution. The real point of issue between these parties is thus set forth in the organ of the latter :

Although much breath has been wasted upon this subject (the Constitutions of '52 and '61) by certain ingenious politicians amongst us, who prate so loudly of their loyalty, and yet who are extremely desirous of holding important offices of honor and emolument under the National and State Government, yet, for the reasons before set forth, the question is altogether immaterial; for, in the conflict of arms incident to this rebellion, the predominant ideas of the good people of Louisiana have far preceded either Constitution; and to reorganize now the State on the slave basis which both Constitutions and the laws passed under them recognized, has become an utter impossibility. Free soil and free speech have grown up into absolute necessities, directly resulting from the war, which has converted into dust and ashes all the Constitutions which Louisiana has ever made, embodying the ideas of property in our fellow-man, and all the baneful results of this system of African slavery. The present war is nothing but the conflict of the ideas of slavery and liberty. The war must necessarily last until one or the other idea fully, fairly, and decisively triumphs. We can neither progress nor regress until this question is determined. We cannot have peace until public opinion is brought quite up to this point. We cannot reorganize the civil Government of our city, and still less that of our State, and get rid of the fearful incubus of martial law now pressing down our energies by its arbitrary influence, unless we believe, give utterance to and establish the fundamental principle of our National Government: "all men are created free and equal." We know of no better way to effect this than by calling a Convention as soon as possible, to declare the simple fact that Louisiana now is and will forever be a free State.

The Free State General Committee, or their friends for them, insist that in August the Military Governor, Gen. Shepley, was in Washington, and at that time the plan of the committee was adopted in the Cabinet, and adopted in all its parts, as above stated, and a special order was issued from the War Department to Gen. Shepley, directing him to carry the plan into execution. They say, "this order may be seen at the War Department." Such facts as these would place the movement under the guidance and control of loyal citizens of Louisiana, who were steadfast opponents of slavery, and demanded its immediate abolition throughout the State. They further insist as follows :

During the absence of Governor Shepley, near the end of August, 1862, President Lincoln wrote to Gen. Banks, referring to the registration then being con-

ducted by Mr. Durant, approving of the plan of calling a State Convention instead of a State election under the old Constitution, and expressing the hope that the work of the Convention might be completed in season to hold the elections before the next session of Congress. The Free State Committee, being apprised of this letter, gave to the President the reasons; which none but those on the ground could understand, of the difficulty, indeed of the impossibility of so expediting the registration outside of New Orleans as to be ready for the election at so early a date.

In October, 1863, Mr. B. F. Flanders, returning from Washington, reported that the President had complained that the work was too slow, and that, on his pointing out to the President that there was not a sufficient amount of territory and of the population of Louisiana under the occupation and protection of the forces of the United States to justify an election, according to the views of the President himself, as formerly expressed, in attempting to organize a State Government, the President immediately said he would modify his previous opinion, and would then say that so great was, in his view, the necessity for immediate action, that he would recognize and sustain a State Government organized by any part of the population we then had control of, and that he wished Mr. Flanders to say so on his return to Louisiana.

On the 27th of October, the papers of New Orleans contained an address "To the Citizens of Louisiana," signed W. P. Pugh, president, E. Ames, vice-president of the Executive Central Committee of Louisiana. The citizens were addressed "as citizens loyal to the Government of the United States," and the address proceeds:

The want of civil government in our State can, by a proper effort on your part, soon be supplied, under laws and a constitution formed and adopted by yourselves in a time of profound peace. It is made your duty, as well as your right, to meet at the usual places, and cast your votes for State and parish officers, members of Congress, and of the State Legislature.

* * * * *

The day, as fixed by our laws, is Monday, the 2d day of November next, 1863. There is nothing to prevent your meeting on the day fixed by law, and selecting your agents to carry on the affairs of government in our own State. The military will not interfere with you in the exercise of your civil rights and duties, and we think we can assure you that your action in this respect will meet the approval of the National Government. Even now, the day of election in every rebellious State has passed, with the exception of Louisiana, and should you suffer that to pass, the whole country will be in a state of anarchy, without any civil government of the people's own choosing, and subject to the danger of being thrown as "vacated" territory, into the hands of Congress, where the wish of many is, that our State, with others, shall be thrown. We charge this design upon a certain faction here and at the North, the result of whose action, in our minds, threatens to destroy republican liberty and republican institutions.

Louisiana has always been at heart loyal to the United States. She never seceded by a majority vote. The true interests of her citizens comported only with her remaining loyally in the Union. She was juggled and forced into the position of seeming rebellion, but in our opinion she was and is still one of the United States. Now that it is practicable—thanks to the gallant army and navy of the United States—her citizens desire to assume forthwith their old status, and to replace the star of their State, with lustre bright as ever, on the glorious flag of our common country. We raise no minor points. Our objects are to restore the Union and preserve the National Constitution.

A correspondence took place between this

committee and the Free State Committee, in which the latter were invited to coöperate in the movement. This the latter declined, on the ground that the movement was illegal and unjust. They further say:

There is no law in existence, as stated by you, directing elections to be held on the first Monday of November.

The Constitution of 1852, as amended by the Convention of 1861, was overthrown and destroyed by the rebellion of the people of Louisiana, and the subsequent conquest by the arms of the United States, does not restore our political institutions.

But not only is your movement illegal, but unjust; you are only a party. What principles of State policy you may entertain, you have not referred to in your communication. As a party, then, without the consent and against the wishes of the only lawful authority here, the military governor and the commanding general, you undertake to appoint your own commissioners of election; hold the polls at such places as you may select; admit such electors as you may deem proper, and on such proceeding you propose to declare yourselves (for who could be chosen but yourselves?) officers of the State of Louisiana, and to assume the functions of a State Government here; while in all these proceedings, the plan of which is known only to yourselves, your opponents have no opportunity of participating. We beg you to reflect how unjust such a course would be, could it be carried out.

We look upon the result of such an attempt as a nullity, producing no legal effect.

No general election took place in response to this address. An announcement was made that the intention of holding an election was abandoned. It was claimed that an election was held in some parishes, and certain persons were chosen as members of Congress. At the commencement of the session in December, 1863, persons appeared in Washington, claiming to be members of Congress under this election. Their claims were rejected.

Meantime, the registration proceeded, and the Free State Committee, in order to hasten forward their plan, conferred with the Military Governor for the purpose of holding an election about January 25th, 1864, for delegates to a State Convention. It was then anticipated that the election would be held at that time.

On the 5th of November, the free colored population of New Orleans held a meeting, and resolved to address the Military Governor, Shepley, for the liberty of being registered as voters, to the right of which they considered themselves as entitled. The following address was adopted at the meeting:

To His Excellency Brig.-Gen. G. F. Shepley, Military Governor of Louisiana:

The undersigned respectfully submit the following to his Excellency:

That they are natives of Louisiana and citizens of the United States, that they are loyal citizens, sincerely attached to the country and the Constitution, and ardently desire the maintenance of the national unity, for which they are ready to sacrifice their fortunes and their lives.

That a large portion of them are owners of real estate, and all of them are owners of personal property; that many of them are engaged in the pursuits of commerce and industry, while others are employed as artisans in various trades; that they are all fitted to enjoy the privileges and immunities belonging to the condition of citizens of the United States, and among

them may be found many of the descendants of those men whom the illustrious Jackson styled "his fellow citizens," when he called upon them to take up arms to repel the enemies of the country.

Your petitioners further respectfully represent that over and above the right which, in the language of the Declaration of Independence, they possess to liberty and the pursuit of happiness, they are supported by the opinion of just and loyal men, especially by that of Edward Bates, Attorney General, in the claim to the right of enjoying the privileges and immunities pertaining to the condition of citizens of the United States; and to support the legitimacy of this claim, they believe it simply necessary to submit to your Excellency the following considerations, which they beg of you to weigh in the balance of law and justice.

Notwithstanding their forefathers served in the army of the United States in 1814 and 1815, and aided in repelling from the soil of Louisiana a haughty enemy, over confident of success, yet these and their descendants have ever since, and until the era of the present rebellion, been estranged and even repulsed, excluded from all rights, from all franchises, even the smallest, when their brave fathers offered their bosoms to the enemy to preserve the territorial integrity of the republic.

During this period of forty-nine years they have never ceased to be peaceable citizens, paying their taxes on assessments of more than nine millions of dollars.

At the call of Gen. Butler they hastened to rally under the banner of Union and Liberty, they have spilled their blood and are still pouring it out for the maintenance of the Constitution of the United States; in a word, they are soldiers of the Union, and they will defend it so long as their hands have strength to hold a musket.

While Gen. Banks was at the siege of Port Hudson, and the city threatened by the enemy, your Excellency called for troops for the defence of the city, and they were foremost in responding to the call, having raised the first regiment in the short space of forty-eight hours.

In consideration of this fact, as true and as clear as the sun which lights this great continent; in consideration of the services already performed, and still to be rendered by them to their common country, they humbly beseech your Excellency to cast your eyes upon a loyal population, awaiting with confidence and dignity the proclamation of those inalienable rights which belong to the condition of citizens of the great American republic.

Theirs is but a feeble voice claiming attention in the midst of the grave questions raised by this terrible conflict, yet confident of the justice which guides the action of the Government, they have no hesitation in speaking what is prompted by their hearts. "We are men, treat us as such."

General, the petitioners refer to your wisdom the task of deciding whether they, loyal and devoted men, who are ready to make every sacrifice for the support of the best Government which man has been permitted to create, are to be deprived of the right to assist in establishing in the new Convention a Civil Government in our beloved State of Louisiana, and also in choosing their representatives, both for the Legislature of the State, and for the Congress of the nation.

The prayer of the petitioners does not appear to have been granted.

On the 24th of December, an order was issued by the Military Governor, directing the several registers to keep a book of the names of persons taking the oath issued with the amnesty proclamation accompanying the message to Congress. The registration for voters was likewise continued. On the 8th of January, 1864, Gen. Banks announced that he should issue a proclamation ordering an election of

State officers. A crisis had come with the Free State Committee. The plan they had proposed to pursue would be a failure unless the general commanding would accede to their wishes. Entreaties to allow the convention election to go on were made to Gen. Banks, aided by the demonstration of an immense public meeting assembled in its favor. He was, however, unyielding, and on the 11th of January issued the following proclamation:

HEADQUARTERS DEPARTMENT OF THE GULF, }
NEW ORLEANS, Jan. 11th, 1864. }

To the People of Louisiana :

I. In pursuance of authority vested in me by the President of the United States, and upon consultation with many representative men of different interests, being fully assured that more than a tenth of the population desire the earliest possible restoration of Louisiana to the Union, I invite the loyal citizens of the State qualified to vote in public affairs, as hereinafter prescribed, to assemble in the election precincts designated by law, or at such places as may hereafter be established, on the 22d of February, 1864, to cast their votes for the election of State officers herein named, viz.: Governor, Lieutenant Governor, Secretary of State, Treasurer, Attorney General, Superintendent of Public Instruction, and Auditor of Public Accounts—who shall when elected, for the time being, and until others are appointed by competent authority, constitute the civil Government of the State, under the Constitution and laws of Louisiana, except so much of the said Constitution and laws as recognize, regulate, or relate to slavery, which, being inconsistent with the present condition of public affairs, and plainly inapplicable to any class of persons now existing within its limits, must be suspended, and they are therefore and hereby declared to be inoperative and void. This proceeding is not intended to ignore the right of property existing prior to the rebellion, nor to preclude the claim for compensation of loyal citizens for losses sustained by enlistment or other authorized acts of Government.

II. The oath of allegiance prescribed by the President's proclamation, with the condition affixed to the elective franchise, by the Constitution of Louisiana, will constitute the qualification of voters in this election. Officers elected by them will be duly installed in their offices on the 4th day of March, 1864.

III. The registration of voters, effected under the direction of the Military Governor and the several Union Associations, not inconsistent with the proclamation or other orders of the President, are confirmed and approved.

IV. In order that the organic law of the State may be made to conform to the will of the people, and harmonize with the spirit of the age, as well as to maintain and preserve the ancient landmarks of civil and religious liberty, an election of delegates to a convention for the revision of the Constitution, will be held on the first Monday of April, 1864. The basis of representation, the number of delegates and the details of election will be announced in subsequent orders.

V. Arrangements will be made for the early election of members of Congress for the State.

VI. The fundamental law of the State is martial law. It is competent and just for the Government to surrender to the people, at the earliest possible moment, so much of military power as may be consistent with the success of military operations; to prepare the way, by prompt and wise measures, for the full restoration of the State to the Union and its power to the people; to restore their ancient and unsurpassed prosperity; to enlarge the scope of agricultural and commercial industry, and to extend and confirm the dominion of rational liberty. It is not within human power to accomplish these results without some sacrifice of individual prejudices and interests. Problems of State, too complicate for the human mind, have been solved by

the national cannon. In great civil convulsions, the agony of strife enters the souls of the innocent as well as the guilty. The Government is subject to the law of necessity, and must consult the condition of things, rather than the preferences of men, and if so be that its purposes are just and its measures wise, it has the right to demand that questions of personal interest and opinion shall be subordinate to the public good. When the national existence is at stake, and the liberties of the people in peril, faction is treason.

The methods herein proposed submit the whole question of government directly to the people—first, by the election of executive officers, faithful to the Union, to be followed by a loyal representation in both Houses of Congress; and then by a convention which will confirm the action of the people, and recognize the principles of freedom in the organic law. This is the wish of the President. The anniversary of Washington's birth-day is a fit day for the commencement of so grand a work. The immortal father of his country was never guided by a more just and benignant spirit than that of his successor in office, the President of the United States. In the hour of our trial let us heed his admonitions!

Louisiana, in the opening of her history, sealed the integrity of the Union by conferring upon its Government the Valley of the Mississippi. In the war for independence upon the sea, she crowned a glorious struggle against the first maritime power of the world, by a victory unsurpassed in the annals of war. Let her people now announce to the world the coming restoration of the Union, in which the ages that follow us have a deeper interest than our own, by the organization of a free Government, and her fame will be immortal!

N. P. BANKS, M. G. C.

The Free State General Committee and their friends insisted that the general stepped in and determined the constitutional question adversely to them (radicals), by declaring the Constitution of the State in force. They further insisted that he declared martial law, which was nothing but his will, to be superior to the Constitution, which implied that he could amend the Constitution wherein he pleased; and that the laws, with regard to slavery, though untouched by the President, were declared inoperative by the general; and that all these assumptions of power were of the most dangerous character to the liberties of the people, and to republican government. The committee, however, determined to participate in the election, for the sake of the power the Governor would have in the convention election, but protested against it. Mr. Michael Hahn was nominated for Governor by those who favored the proclamation of General Banks, and Mr. Benjamin F. Flanders was nominated by the free State men. Mr. Hahn was elected by a large majority of the votes cast. The friends of the Free State General Committee said: "The result of the election is merely the registration of a military edict, and is worthy of no respect from the representatives and executive of the nation." The friends of the Free State General Committee insisted that by this election no State Government was created. They said: 1. "It is not such in accordance with the President's proclamation. That proclamation declares that whenever, in certain States named, not less than one tenth of the voters, in 1860, each having taken the oath aforesaid,

and being a qualified voter by the election law of the State existing immediately before the so-called act of secession, and excluding all others, shall reestablish a State Government, etc., such shall be recognized as the true Government of the State," etc.

They further said:

Have the military proclamation of the commanding general and the election held under it on the 22d of February, in the meaning of the President, "reestablished a State Government?" Clearly not. The commanding general's proclamation recognizes the old Constitution of Louisiana of 1852, as being in existence, and orders an election under it, in which the votes of the people have nothing to do with reestablishing Government; the reestablishment having been made beforehand for them by the general proclaiming the old Constitution as existing.

2. Nor is the result of the election, and the seven officers chosen, a State Government. The people have elected a Governor, a Lieut.-Governor, and five officers of the executive department. This is not a State Government, for by the Constitution of Louisiana, which the commanding general declared in force, as well as by all other State Constitutions, the Government consists of three Departments: Executive, Legislative, and Judicial. The reason why an election for members of the Legislature was not ordered is plain, although not avowed; there is not within the Union lines, where a real election could be held, a sufficient number of parishes to elect a majority of the whole number of members constituting the Senate and House of Representatives, and less than a majority is, by the Constitution, not a quorum to do business; so that under this pretended State Government, no officer elected can be legally paid, for that can only be done by an appropriation made according to law.

The same Constitution provides that the judges of the Supreme and District Courts, as well as justice of the peace, shall be elected by the people; the judges now in office have been simply appointed by General Shepley; and should Mr. Hahn, under pretence of being civil Governor, undertake to appoint judges, the act would be a mere usurpation without the shadow of right.

No State Government, then, is reestablished by this election.

But still further, the proclamation of the President has not been complied with, as to the persons who voted.

The Constitution of Louisiana, of 1852, art. 12, says: "No soldier, seaman, or marine in the army or navy of the United States"——"shall be entitled to vote at any election in this State."

The commanding general issued an order permitting soldiers recruited in Louisiana, and having the other qualifications, to vote. How many votes of this kind were polled, we are not able to say; that many did, and many sailors and others disqualified, also voted, is notorious.

Again, the act of the Louisiana Legislature, of March 20th, 1856, provides for the appointment in New Orleans, of a register of voters, and that no man shall vote who is not registered, and that the office of registration shall be closed three days before the election, and no one registered on those three days. Now, prior to the late election, the register having closed his office according to law, orders were at once given to two other officers, the recorders of the city, who have no such powers or functions by law, to register voters, which they did night and day, and such persons as they registered were allowed to vote.

The commanding general, in his proclamation of the 11th of January, says that he will order the election of members of a Constitutional Convention, to be chosen on the first Monday of April, and that he will, by a subsequent order, fix the basis of representation, the number of delegates, and the details of the election. This will put the whole matter under military

control, and the experience of the last election shows that only such a Convention can be had as the overshadowing influence of the military authority will permit. Under an election thus ordered, and a Constitution thus established, a republican form of government cannot be formed. It is simply a fraud to call it the reestablishment of a State Government. In these circumstances, the only course left to the truly loyal citizens of Louisiana is, to protest against the recognition of this pretended Government, and to appeal to the calm judgment of the nation to procure such action from Congress as will forbid military commanders to usurp the powers which belong to Congress alone, or to the loyal people of Louisiana.

The further details of this subject belong to the record of 1864. (*See CONGRESS, U. S., for the admission of members from Louisiana.*)

Outside of the lines of the Union army and its posts, the enemy had a general control of the State during the year, and the Confederate Government was recognized. At the usual time in November, it was reported that an election for State officers was held, at which Henry W. Allen was chosen Governor without opposition, and B. W. Pearce Lieut.-Governor. The representatives to the Congress at Richmond were also elected by a general ticket, and not by districts.

The Emancipation Proclamation of President Lincoln was declared by him not to extend in its operation to the parishes of St. Bernard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terre Bonne, Lafourche, Ste. Marie, St. Martin, and New Orleans, including the city of New Orleans. The slaves held in these parishes did not become freedmen when the Union army occupied that portion of the State. Only one point of difference marked their position thus far during the war as compared with it during the twenty previous years. An act of Congress forbade the forcible return of the slave to his master by any military force of the United States. This was the only change in the fortunes of the slaves. As these excepted parishes were held by a Federal military force, it followed that the slaves were at liberty to go whithersoever they pleased outside of the plantations. Consequently thousands, and tens of thousands of them became hangers on to the camps, and filled New Orleans with a pauper population. The welfare of whites and blacks soon required some decisive steps for the amelioration of the evil. On the plantations many of the owners remained. They, under the advice, and with the coöperation of Gen. Banks, endeavored to come to terms with the negroes as to their future relations with each other. Each planter made such terms with the employed as he found convenient or possible. Rules were also adopted on some plantations relative to the labor. These rules provided that the negroes should labor the usual number of hours, and receive about their usual supply of food; but beside this they were to have wages averaging from three to ten dollars a month—one half of it at the end of each month, the balance at the end of the year. Various punish-

ments were prescribed for bad conduct, and rewards for good conduct, such as would appeal, it was hoped, to the sensibilities, instincts, and interests of the negro. The punishments and fines prescribed under this system of free labor were as follows:

The punishments on the place will be: First, fines; second, the stocks; and lastly, expulsion from the place.

The penalty for the first offence will be a fine of one dollar; second, three dollars; third, five dollars; and fourth, expulsion.

No hand will leave the place without written license.

If a hand leave the place, or is expelled, his back wages will be forfeited to the hospital funds, out of which the physician and medicines must be paid.

Each hand will be responsible for the loss or careless damage of tools, stock, or any other property.

Stealing will be punished by a fine of twice the value of the property stolen, one half to go to the hospital fund.

By this method large numbers were induced to return to the plantations. The wages which they received were low, because the able-bodied were generally taken into the army, and because the crop generally raised being sugar, it was more uncertain than cotton. At the close of the year, the system of labor adopted was declared to be a "decided success." A large number of the negroes were enlisted, forming a corps d'Afrique, and many were also employed by the Government on plantations worked by its orders.

A more complete view of the system of labor adopted by Gen. Banks will be obtained from the rules prescribed for its regulation during the year 1864, with the experience and results of the year 1863 before him. The following were the rules prescribed:

General Orders, No. 23.

HEADQUARTERS, DEPARTMENT OF THE GULF, }
NEW ORLEANS, February 3d, 1864. }

The following general regulations are published for the information and government of all interested in the subject of compensated plantation labor, public or private, during the present year, and in continuation of the system established January 30th, 1863:

I. The enlistment of soldiers from plantations under cultivation in this Department, having been suspended by order of the Government, will not be resumed except upon direction of the same high authority.

II. The Provost Marshal General is instructed to provide for the division of parishes into police and school districts, and to organize from invalid soldiers, a competent police for the preservation of order.

III. Provisions will be made for the establishment of a sufficient number of schools, one at least for each of the police and school districts, for the instruction of colored children under twelve years of age, which, when established, will be placed under the direction of the Superintendent of Public Education.

IV. Soldiers will not be allowed to visit plantations without the written consent of the commanding officer of the regiment or post to which they are attached, and never with arms, except when on duty, accompanied by an officer.

V. Plantation hands will not be allowed to pass from one place to another, except under such regulations as may be established by the provost marshal of the parish.

VI. Flogging and other cruel or unusual punishments are interdicted.

VII. Planters will be required, as early as practicable after the publication of these regulations, to make

a roll of persons employed upon their estates, and to transmit the same to the provost marshal of the parish. In the employment of hands, the unity of families will be secured as far as possible.

VIII. All questions between the employer and the employed, until other tribunals are established, will be decided by the provost marshal of the parish.

IX. Sick and disabled persons will be provided for upon the plantations to which they belong, except such as may be received in establishments provided for them by the Government, of which one will be established at Algiers, and one at Baton Rouge.

X. The unauthorized purchase of clothing, or other property, from laborers, will be punished by fine and imprisonment. The sale of whisky, or other intoxicating drinks, to them, or to other persons, except under regulations established by the provost marshal general, will be followed by the severest punishment.

XI. The possession of arms, or concealed, or dangerous weapons, without authority, will be punished by fine and imprisonment.

XII. Laborers shall render to their employer, between daylight and dark, ten hours in summer, and nine hours in winter, of respectful, honest, faithful labor, and receive therefor, in addition to just treatment, healthy rations, comfortable clothing, quarters, fuel, medical attendance, and instruction for children, wages per month as follows, payment of one half of which, at least, shall be reserved until the end of the year:

For first class hands.....	\$8 00	per month.
For second class hands.....	6 00	"
For third class hands.....	5 00	"
For fourth class hands.....	3 00	"

Engineers and foremen, when faithful in the discharge of their duties, will be paid \$2 per month extra. This schedule of wages may be commuted, by consent of both parties, at the rate of one fourteenth part of the net proceeds of the crop, to be determined and paid at the end of the year. Wages will be deducted in case of sickness, and rations, also, when sickness is feigned. Indolence, insolence, disobedience of orders, and crime, will be suppressed by forfeiture of pay, and such punishments as are provided for similar offences by army regulations. Sunday work will be avoided when practicable, but when necessary, will be considered as extra labor, and paid at the rates specified herein.

XIII. Laborers will be permitted to choose their employers, but when the agreement is made, they will be held to their engagement for the year, under the protection of the Government. In cases of attempted imposition, by feigning sickness, or stubborn refusal of duty, they will be turned over to the provost marshal of the parish, for labor upon the public work, without pay.

XIV. Laborers will be permitted to cultivate land on private account, as herein specified, as follows:

1st and 2d class hands, with families, one acre each.

1st and 2d class hands, without families, one half acre each.

2d and 3d class hands, with families, one half acre each.

2d and 3d class hands, without families, one quarter acre each.

To be increased for good conduct at the discretion of the employer. The encouragement of independent industry will strengthen all the advantages which capital derives from labor, and enable the laborer to take care of himself and prepare for the time when he can render so much labor for so much money, which is the great end to be attained. No exemption will be made in this apportionment, except upon imperative reasons, and it is desirable that for good conduct the quantity be increased until faithful hands can be allowed to cultivate extensive tracts, returning to the owner an equivalent of product for rent of soil.

XV. To protect the laborer from possible imposition, no commutation of his supplies will be allowed, except in clothing, which may be commuted at the rate of \$3 per month for first class hands, and in similar

proportion for other classes. The crops will stand pledged, wherever found, for the wages of labor.

XVI. It is advised as far as practicable, that employers provide for the current wants of their hands, by perquisites for extra labor, or by appropriation of land for share cultivation; to discourage monthly payments so far as it can be done without discontent, and to reserve till the full harvest the yearly wages.

XVII. A Free Labor Bank will be established for the safe deposit of all accumulations of wages and other savings; and in order to avoid a possible wrong to depositors, by official defalcation, authority will be asked to connect the Bank with the Treasury of the United States in this Department.

XVIII. The transportation of negro families to other countries will not be approved. All propositions for this privilege have been declined, and applications have been made to other departments for surplus negro families for service in this department.

XIX. The last year's experience shows that the planter and the negro comprehend the revolution. The overseer, having little interest in the capital, and less sympathy with labor, dislikes the trouble of thinking and discredits the notion that anything new has occurred. He is a relic of the past, and adheres to its customs. His stubborn refusal to comprehend the condition of things occasioned most of the embarrassments of the past year. Where such incomprehension is chronic, reduced wages, diminished rations, and the mild punishments imposed by the army and navy, will do good.

XX. These regulations are based upon the assumption that labor is a public duty, and idleness and vagrancy a crime. No civil or military officer of the Government is exempt from the operation of this universal rule. Every enlightened community has enforced it upon all classes of people by the severest penalties. It is especially necessary in agricultural pursuits. That portion of the people identified with the cultivation of the soil, however changed in condition, by the revolution through which we are passing, is not relieved from the necessity of toil, which is the condition of existence with all the children of God. The revolution has altered its tenure, but not its law. This universal law of labor will be enforced upon just terms, by the Government, under whose protection the laborer rests secure in his rights. Indolence, disorder and crime, will be suppressed. Having exercised the highest right in the choice and place of employment, he must be held to the fulfilment of his engagements until released therefrom by the Government. The several provost marshals are hereby invested with plenary powers upon all matters connected with labor, subject to the approval of the provost marshal general, and the commanding officer of the department. The most faithful and discreet officers will be selected for this duty, and the largest force consistent with the public service detailed for their assistance.

XXI. Employers, and especially overseers, are notified that undue influence used to move the marshal from his just balance between the parties representing labor and capital, will result in an immediate change of officers, and thus defeat that regular and stable system upon which the interests of all parties depend.

XXII. Successful industry is especially necessary at the present time, when large public debts and onerous taxes are imposed to maintain and protect the liberties of the people and the integrity of the Union. All officers, civil or military, and all classes of citizens who assist in extending the profits of labor, and increasing the product of the soil, upon which, in the end, all national prosperity and power depend, will render to the Government a service as great as that derived from the terrible sacrifices of battle. It is upon such consideration only that the planter is entitled to favor. The Government has accorded to him, in a period of anarchy, a release from the disorders resulting mainly from insensate and mad resistance to sensible reforms which can never be rejected without revolution, and the criminal surrender of his interests and

power to crazy politicians, who thought by metaphysical abstractions to circumvent the laws of God. It has restored to him, in improved rather than impaired condition, his due privileges, at a moment when, by his own acts, the very soil was washed from beneath his feet.

XXIII. A more majestic and wise clemency human history does not exhibit. The liberal and just conditions that attend it, cannot be disregarded. It protects labor by enforcing the performance of its duty, and it will assist capital by compelling just contributions to the demands of the Government. Those who profess allegiance to other governments, will be required, as the condition of residence in this State, to acquiesce, without reservation, in the demands presented by Government as a basis of permanent peace. The non-cultivation of the soil without just reason, will be followed by temporary forfeiture to those who will secure its improvement. Those who have exercised, or are entitled to the rights of citizens of the United States, will be required to participate in the measures necessary for the reestablishment of civil government. War can never cease except as civil governments crush out contest, and secure the supremacy of moral over physical power. The yellow harvest must wave over the crimson field of blood, and the representatives of the people displace the agents of purely military power.

XXIV. It is therefore a solemn duty resting upon all persons, to assist in the earliest possible restoration of civil government. Let them participate in the measures suggested for this purpose. Opinion is free and candidates are numerous. Open hostility cannot be permitted. Indifference will be treated as crime, and faction as treason. Men who refuse to defend their country with the ballot box or cartridge box, have no just claim to the benefits of liberty regulated by law. All people not exempt by the law of nations, who seek the protection of the Government, are called upon to take the oath of allegiance in such form as may be prescribed, sacrificing to the public good, and the restoration of public peace, whatever scruples may be suggested by incidental considerations. The oath of allegiance, administered and received in good faith, is the test of unconditional fealty to the Government, and all its measures, and cannot be materially strengthened or impaired by the language in which it is clothed.

XXV. The amnesty offered for the past, is conditioned upon an unreserved loyalty for the future, and this condition will be enforced with an iron hand. Whoever is indifferent or hostile, must choose between the liberty which foreign lands afford, the poverty of the rebel States, and the innumerable and inappreciable blessings which our Government confers upon its people.

May God preserve the Union of the States!

By order of Major-Gen. BANKS.

GEO. B. DRAKE, A. A. General.

For the military operations in Louisiana, *see* ARMY OPERATIONS. For the regulations as to trade, *see* COMMERCIAL REGULATIONS.

LUTHERAN CHURCH. The Lutheran Church is, next to the Church of England, the most numerous among the denominations, which, at the beginning of the sixteenth century, repudiated the authority of the Pope and the Roman Catholic Church. It is still the predominant church in Sweden, Norway, and Denmark, in Hanover, Saxe, and a number of other German States, while in Prussia and several minor States of Germany it has been united with the Reformed Church into the United Evangelical Church. It has also a numerous membership in Russia, Holland, France, and the United States. The Lutheran Almanac for 1864 gives the following statistical view of the Lutheran Church in the United States:

One of the Synods of the second class, the Franckean Synod, has resolved to apply for admission to the General Synod, at the session of the latter body in 1864.

The number of ministers in the Synods connected with the General Synod was 904; in the other Synods, 514. Total, 1,418.

There are 6 theological seminaries, 7 colleges, 15 academies, and 9 female seminaries in connection with the General Synod, and 8 institutions not connected with the General Synod. The church has five organs published in the English language (exclusive of one in South Carolina), 11 in German, 2 in Swedish, and 3 in Norwegian.

Three of the synods, which were formerly in connection with the General Synod—those of

* Not represented at the last Convention of the General Synod.

† The statistics in the German *lutherische Kalender* for 1864 are somewhat different. The *Kalender* gives the names of forty-two Synods, beside the above forty, the Norwegian Synod in Wisconsin, Iowa, and other States, with 2,000 members, and the Canada Synod, with 1,500 members. The totals of the *Kalender* are 1,530 ministers, 2,312 churches, 294,721 communicants.

Virginia, North and South Carolina—effected last year an independent organization, by constituting themselves as the “General Synod of the Lutheran Church in the Confederate States.” The first General Synod was held at Concord, North Carolina, in May, 1863. One of the delegates from Virginia, gives the following account of the proceedings:

We adopted without a dissenting voice, after a few slight amendments, a constitution. The vote, after the discussion upon it, was taken in solemn silence by our rising to our feet, and when it appeared that every delegate was standing, we united in thanksgiving with the president, on bended knees, to Almighty God, and the General Synod of the Confederate States was a fixed institution.

After this transition from a convention into a synod, much important business was transacted. In accordance with a plan suggested and urged upon the delegates in a series of five articles, published last winter in the “Southern Lutheran,” we have adopted a “Book of Worship.” Committees were appointed a year ago upon the liturgy, hymn-book, catechism, government, and discipline, &c., &c. These committees were faithful to their duty, and came to Concord well prepared to report. All their reports were accepted and adopted, with some amendments, and referred to a committee composed of the chairman, or acting chairman, of these various committees, to prepare for and superintend the publication of them in one volume—to be called “The Book of Worship.” In it are contained the following items:

- 1st. Order of morning service, and order of evening service, with four general prayers, the use of which is optional with the minister, that is, the use of the forms of general prayer is optional—the use of the introductory service is not optional, but must be followed as prescribed in the book.
- 2d. Service for festival days, days of humiliation, fasting, &c.
- 3d. Gospels and epistles, and lessons for the passion week, published in full.
- 4th. Family prayers for each morning and evening of the week.
- 5th. Forms for the performance of ministerial acts—baptism, confirmation, &c., &c., one of each.
- 6th. Apostles’, Nicene, and Athanasian Creeds.
- 7th. Augsburg Confession, without note or comment.
- 8th. Luther’s Smaller Catechism—literal translation, without any additions, alterations, or explanations.
- 9th. Form of government and discipline.
- 10th. Constitutions of General Synod.
- 11th. Collection of hymns—about 450—containing the best of all accessible collections.

The General Synod is not merely an advisory body, but is clothed with power enough to enforce obedience to its enactments. In all cases of fundamental doctrine, forms of worship, and church discipline, it is the highest court of appeal.

Some features of this new constitution were regarded by a large party of the Lutherans in the United States as a considerable improvement upon the constitution of the old General Synod. Thus the “Lutheran,” of Philadelphia, one of the leading organs of the church, remarked: “The seceding States may, and we fervently trust and believe, will, be brought back to their allegiance, but it by no means follows that the Lutheran synods of the South will merge themselves again in our General Synod. The movement we chronicle may be of immense importance in the future. It will be seen that this new General Synod has not been blind to some of the bitter lessons ex-

perience has been teaching us, and if our church in the South is to have a separate existence, the theory on which it has started, and the practical steps it has taken, are sagaciously adapted to their ends.”

A special hymnbook for the “Lutheran Churches of the Confederate States,” containing about 450 hymns, was compiled by Rev. Mr. Roedel, of Wytheville, Wythe county, Va., and adopted by the District Synods. A Liturgy was prepared by Dr. Bitte, of Salem, Va., and Rev. Mr. Rude, of Columbus, S. C. Catechism, Confession, Liturgy, and Hymns, are to be bound together, and form a Book of Worship. The weekly organ of the Church, the “Southern Lutheran,” was removed from Charleston, at the beginning of the attack, in the spring of 1863, and edited by Rev. Mr. Rude, of Columbus, S. C.

The synod of Virginia, which convened in Salem church, Augusta county, Va., on Oct. 22d, 1863, and which was attended by a delegate from the synod of Western Virginia, passed the following resolutions with regard to the formation of the General Synod of the Southern Church of the Confederate States:

1. *Resolved*, That the General Synod thus formed, meets with our approbation, in so far as we have been definitely certified through our delegates concerning its structure, and the adoption of the Augsburg Confession, and the three chief, ancient creeds, as its doctrinal basis. But as we have received no official statement of its transactions for examination, we deem it expedient and proper to sustain only a qualified connection with it, as a synod, until we shall be prepared by further information to take intelligent action thereupon.

2. *Resolved*, That we fully approve of the stand taken by our delegates in earnestly contending for “our most holy faith” in that convention.

Except in the States of Virginia, North and South Carolina, the Lutherans of the slaveholding States, mostly natives of Germany, remained loyal to the Federal Government. It was reported from Texas, that up to December 13th, 1863, all the ministers of the Texas Lutheran synod were at their posts, and that none of them had been pressed into the rebel service. Many of their members had been dragged from their homes under the conscription law, and as many as possibly could, escaped into Mexico, with the loss of everything. In numerous instances, those who tried to evade it by concealment, were hunted down by dogs and summarily hung. From a letter of Rev. W. T. Strobel (formerly of Texas, but now of Danville, N. Y.) to the “Kirchenbote,” it appears that the ministers succeeded in getting letters to Germany, *via* Mexico, giving the friends there the particulars of their trying situation. The Rev. Pastor Bonenberger, of the German Lutheran Church in Galveston, was the only minister remaining in that city. The church and Congregational school were, however, well attended, but the cost of living was so enormous that he could remain at his post only by “boarding round” among his people. It was also mentioned that the synod

met as usual in April, 1862, but that the brethren living in the western counties of the State were for the most part unable to attend.

In the northwestern part of the United States there are two Scandinavian Synods; the one is called the Norwegian Lutheran Synod, and has a seminary in Decorah; the other is called the Augustana Synod, consisting for the most part of Swedish and a few Norwegian congregations, and with a seminary at Paxon, whither it has been removed from Chicago. Formerly these synods stood aloof from each other, but of late both have put forth efforts to come to a better understanding. On the 17th of June, pastors of both synods held a Conference at Chicago. It was agreed to hold another Conference next year, and it is hoped that a friendly correspondence will be established between the two bodies.

The Lutheran Churches in Germany are profoundly agitated by the demand of the laity for an introduction of a representative constitution, and, in particular, the representation of the laity at the Church Assemblies. In the kingdom of Hanover, the Government, after a long resistance, yielded to the demand of the people, and submitted the draft of a new church constitution to a preparatory synod (Vorsynode). The election of delegates to this synod showed that, in Hanover, as well as in most other countries of Germany, there is little harmony between the majority of the clergy and the majority of the laity. The delegates of clergy to the synod were mostly High Churchmen, those of the laity, decided Liberals. The synod was opened on October 6th, and closed its labors on December 14th. Both parties, in the progress of the proceedings, deemed it necessary to make mutual concessions, and, at length, adopted a new church constitution with entire unanimity. According to this constitution, the Church will have hereafter a National Synod, to consist, beside a few members, appointed by the king, of 29 clerical and 29 lay delegates. In the Grand Duchy of Hesse Darmstadt, the Chamber of Representatives adopted also the draft of a new constitution for the Protestant Church, which provides for the introduction of presbyteries and synods.

Among the Lutheran missions in foreign countries, that of the Evangelical Lutheran Missionary Society among the Tamils of East India has been thus far the most successful. According to the last annual report of 1863, the Lutheran congregations among the Tamils number 5,488 souls, an increase over the preceding year of 300 souls. 1,296 children are educated in 55 schools. Several new churches are in course of construction. The number of missionaries is 17, and 170 natives have been educated in the seminaries of the mission as assistants.

LYNDHURST, JOHN SINGLETON COPLEY, Lord, a British statesman and jurist, born in Boston, Mass., May 21st, 1772, died October 12th, 1863. He was the son of the eminent

portrait and historical painter, John Singleton Copley, by whom he was taken to England about a year before the outbreak of the American Revolution. He was educated at Trinity College, Cambridge, where, in 1796, he took his degree of B. A. as Second Wrangler and Senior Smith's prizeman; and having soon after been appointed a Fellow of his College and "Travelling Bachelor," he was enabled for the first and only time in his life to revisit his native country. In 1797, he was called to the bar, and for many years subsequent travelled the midland circuit, rising by very slow degrees to professional eminence. In 1819, having then obtained the leadership of his circuit, he first brought himself into public notice by the able manner in which he conducted the defence of Watson and Thistlewood, indicted for high treason. Though previously a liberal in politics, he so favorably impressed the tory leaders by his talents on this occasion, that he was soon employed by them in behalf of the Government in several important state trials, and in 1818 was appointed chief justice of the county palatine of Chester. Thenceforth until his death he remained for the most part a member of the party from which he had received his earliest promotion.

Having entered parliament in 1818, he was appointed solicitor-general in the Liverpool administration in the succeeding year, and knighted, and in 1820 he took a leading part in the proceedings against Queen Caroline, avoiding, by the moderation and skill which he displayed, the censure so freely bestowed upon most of the parties to the trial. In 1824 he succeeded to the attorney-generalship. At the general election in 1826, he was returned one of the members for the University of Cambridge, in conjunction with Lord Palmerston, and a few months later he accepted the mastership of the Rolls. During the early debates on Roman Catholic emancipation, in the spring of 1827, he showed himself a strenuous opponent of the measure; but to the surprise of the public he soon after entered the liberal cabinet of Canning as chancellor, Lord Eldon retiring, and was raised to the peerage as Baron Lyndhurst, April 27th, 1827. After the death of Canning, in August, he retained the office during the short-lived administration of Viscount Goderich, and that of the Duke of Wellington which succeeded, retiring with his colleagues, upon the triumph of the whigs, in November, 1830. Previous to this he had given his full support to Roman Catholic emancipation, declaring that he felt no apprehension for the safety of the Church.

Shortly after retiring from the chancellorship, he was appointed Chief Baron of the Court of Exchequer, the duties of which office he discharged until 1834. Having practised chiefly at the common law bar, he did not establish for himself as chancellor so high a judicial character as was anticipated; but in the more congenial field of the exchequer he earned a repu-

tation as a judge second to that of no man of his time, and the business of the court was soon enormously increased, while its decisions were considered of greater weight than those of the King's Bench itself. Though prevented by official duties from participating largely in parliamentary proceedings, he was one of the most strenuous opponents of the reform bill, and upon the resignation of Earl Gray, in 1832, endeavored unsuccessfully to form a new conservative ministry in conjunction with the Duke of Wellington. He held the Great Seal again during the brief administration of Sir Robert Peel, in 1834, and after retiring from office, devoted himself for several years chiefly to the interests of his party, becoming one of the most effective leaders of the tory opposition in the Upper House.

His speeches at this time were characterized by power, brilliancy, bitterness, and sarcasm, particularly his annual review of each session, and were considered to have exercised a great influence in reanimating and consolidating the conservative party. In 1841, Sir Robert Peel formed his second ministry, and Lord Lyndhurst for the third time accepted the Great Seal, which he retained until 1846, when he

declared himself "at the close of his public, almost of his natural life." He however occasionally took a prominent part in the proceedings of the House of Lords, supported the Derby ministry of 1852, advocated the war with Russia, and denounced the policy adopted by Lord Clarendon in concluding the peace of 1856 as a practical capitulation on the part of England. Until the infirmities of age overcame him, his speeches, remarkable for their elegant and severely simple style, and delivered with a voice of singular sweetness and power, were listened to with unabated interest; and to the day of his death he continued one of the most trusted advisers of the crown, and is understood to have greatly influenced, if not entirely guided by his opinions the conduct of the leaders of the party in power.

In personal appearance Lord Lyndhurst was remarkably handsome, and although past 90 years of age, his vigorous and graceful carriage caused him to be considered by strangers a much younger man. He was twice married, his second wife, to whom he was united at the age of 65, being a young Jewish lady of remarkable beauty. His offspring by both marriages being daughters, his title expires with him.

M

MADAGASCAR, an island of the Indian Ocean lying east of Mozambique in Eastern Africa, and separated from it by the Mozambique channel. It is about 816 miles long and 288 at its greatest width. Its area is about 200,000 square miles, and its population is estimated at 4,700,000. *Hiera-Be* "the great land," is the name given to it by the natives, in contradistinction to the smaller islands which surround it. Its great mineral wealth in the precious metals and coal, its fertile soil, its magnificent forests, the extent of its silk culture, and its admirable ports have made it for many years an island of great interest to European powers, and that interest is now enhanced by its proximity to the Oriental possessions of Great Britain and France, and its position on the lines of communication with the East by way of the Red Sea. Its inhabitants are composed of two different races, the dominant one being Malay or Malagash as they call themselves, and the larger but subject race are African, though with long hair, and approaching more nearly to the Kaffir than to the Negro. There are numerous subdivisions or tribes of both races, and in the southeast a small tribe who call themselves Anta-Smours seem to be of Arab origin. The largest and most enterprising of the Malay tribes are the Hovas, occupying originally Ank-Hova, a territory in the centre of the island, but who have of late years attained to the supreme power over the whole island. They do not number more than 350,000 or 400,000. Their capital is called Tananarivo, or "the

thousand villages," being made up of a considerable number of small villages surrounding within a distance of seven or eight miles the central one of Émirne, in which is the palace of the monarch of the Hovas. The population of Tananarivo is estimated at 75,000. At various times for more than two hundred years France has maintained a claim to the possession of Madagascar, though it is difficult to ascertain exactly the grounds upon which she has based it. The principle of international law is well established that the "rights of a nation to a foreign territory must depend either upon discovery, conquest, or treaties of cession." The French did not discover the island, for it was discovered by the Portuguese; they did not conquer it, though they often attempted to do so, but were defeated and driven from it with heavy losses, and from 1786 till 1861 they have had no other than merely nominal settlements on the island, and those only at Tamatave, or if for a short time four or five individuals were permitted to reside at Tananarivo, they were expelled with ignominy more than once for plots against the Government. They could claim no treaty of cession for their only treaty had been one with the King of the Hovas, of amity and commerce, and in acknowledging Radama II. as King of Madagascar, they had emphatically relinquished any claims which they might previously have made to sovereignty over the island.

The domination of the Hova dynasty is recent, dating back only to the first years of the

present century, when Audrian Ampouïène, a chief of one of the Hova tribes, united all the Hovas under his sway and commenced the conquest of the tribes bordering on Ank-Hova or "the country of the Hovas." He had succeeded in bringing two of the more prominent of these tribes into subjection, when he died in 1810, and was succeeded by his son Radama I., who inherited his father's talents and ambition, and proceeded to carry out his measures for reducing the adjacent tribes to subjection.

In 1814, Vice-Admiral Sir Robert Farquhar was governor-general of the Mauritius, an able and far-seeing officer. The movements of Radama I. had come to his knowledge, and believing the time a favorable one to advance the condition of Madagascar, to improve its Government, open its ports to commerce, and break up its connection with the slave trade, he put himself in communication with the Hova chief, concluded a commercial treaty with him, undertook the education of his two younger brothers, and arranged subsequently a further treaty, by which Radama I. agreed to abolish the slave trade, and received in return a recognition of his claims as King of Madagascar, a small pension, and the aid of English officers to discipline his troops. Sir Robert Farquhar was absent from the Mauritius for two years, but on his return in 1820 he carried out with due diligence the measures agreed upon with Radama I. Schools were established throughout the kingdom; missionaries of the London Missionary Society established schools and printing presses and churches there, and the king having decreed complete religious toleration, affairs moved on prosperously. In 1828 Radama died, poisoned it was said by his chief queen, Ranavalana, who, with her paramour, Audrian Mihaza, was exasperated at the decadence of idolatry, and the custom of the ordeal of poison, by which the Hovas had for many generations been in the habit of disposing of those who had incurred their displeasure. The queen succeeded to Radama I., and immediately nullified as many of his acts as she could, and put an end to the schools and the labors of the missionaries, as well as to the commercial intercourse which had hitherto existed between the country and Great Britain. Cruel and despotic in her character, sensual and superstitious in her disposition, Ranavalana hesitated at no barbarity which should consolidate her power, terrify her enemies, or gratify her revenge. In her reign of thirty-three years more than 250,000 persons were said to have perished by the hands of the executioner or by the *tanguin* or ordeal of poison. Her persecution of the Christian converts was relentless, and she had evidently fully determined to drive Christianity from the island. This savage queen had one son, named Rakoto, not by Radama I., but by her paramour, Audrian Mihaza, to whom, notwithstanding the ferocity of her disposition, she was tenderly attached. He was amiable

and gentle in temper, but lacked resolution and vigor of character. He had received what little education he had from foreign missionaries, Catholic and Protestant, and was kindly disposed toward them, protecting them and their converts so far as possible, but unfortunately he had early imbibed habits of intoxication, which were encouraged by the young men who had been brought up with him. Emissaries of France, meantime, and especially Jesuit emissaries, were seeking, in the feigned character of physicians, an introduction into the island, and endeavoring to gain a controlling influence over the weak and amiable young prince, who, it was understood, was to succeed to the throne on his mother's demise. A M. Laborde was the first of these, himself an adventurer, who in his turn introduces another adventurer shrewder and sharper than himself, though not with an entirely stainless reputation. This last, a M. Lambert, who, though of French origin, and professing to be a representative of France, had been for some years a merchant at the Mauritius, succeeded in ingratiating himself into the favor of the prince, and procured from him his signature to a proposition to the French Government to establish a protectorate over Madagascar, and a promise to acknowledge the French emperor as his suzerain; asking only aid to dethrone his mother and rule in her stead. Armed with this document, Lambert left Madagascar in 1854, first placing the two Jesuits, professedly physicians, in charge of his royal protégé, and hastened to France. The French Government, before entertaining the proposition, sent Lambert to the British Government with it, and Lord Clarendon, then foreign secretary, promptly refused to coöperate in any such measure. Lambert returned to Madagascar in 1855, and having obtained from the prince, in an unconscious moment, a grant of privileges of mining, timber, lands, and agricultural products, which in reality made him almost the sole proprietor of the island, he once more returned to Europe to make provision for the organization of a company to avail themselves of these privileges in an event which he proposed bringing about. He then repaired again to Madagascar with ample presents for the queen, as well as for the prince and princess, and in concert with the Jesuits, and some other Frenchmen on the island, the adventurous traveller, Madame Ida Pfeiffer, and the friends of the young prince, though probably not the prince himself, concerted a scheme for the assassination of Ranavalana. The conspiracy was revealed before the time for its consummation, and the queen, sending back the presents, banished the Frenchmen from the island; first detaining them for nearly nine weeks in the marsh and jungle, whose miasma is almost certain death to Europeans, and put the native conspirators to death.

At length, in 1861, the queen died, not by violence, but in her bed, and though Ramboas-

asalama, the really legitimate heir, and the known exponent of the late queen's policy, sought to murder the young prince, Rakoto, the voice of the people was so strongly in favor of the latter, that he was, with but slight opposition, proclaimed king, under the title of Radama II. His first measures were such as to win general approval. He did not put his rival to death, as custom among the Hovas would have justified him in doing, but contented himself with banishing him to his estates. He proclaimed toleration of all religions, and the free admission of foreigners into the kingdom; made treaties of commerce with England and France; encouraged schools, and prohibited the *tanguin*, and seemed destined to renew and improve the golden days of the reign of Radama I. But his best friends saw with pain that his intemperate habits were fast enslaving him, and that under their baneful influence he was developing a disposition to cruelty and superstition, which had not hitherto been supposed to belong to his character. The adventurer Lambert was still a boon companion, and had been created by him Duke of Im-erana, and he had gathered around him a body-guard of young debauchees, mostly his early associates, who were named *mena-maso* or "red eyes," from the pretence that excessive watchfulness in the king's interests had inflamed their visual organs. These young men were from the southern portion of the island, and were a different race from the old counsellors of Radama I., and thus the jealousy of caste was added to the prejudice to which their depraved conduct gave rise. Early in the year a strange epidemic, akin to the tarantulism of the middle ages, the convulsionary excitement in France, or the jerks of Sweden and Lapmark, a few years since, broke out in the capital and the adjacent provinces. The persons affected leaped, danced, howled, saw visions, and heard voices from the invisible world; they brought to the king messages from his mother and from the late king, and announced to him that if he did not stop the praying, some great calamity would befall him. Radama II., though at first incredulous, soon gave heed to these professed revelations, collected the convulsed persons at his palace, sought to communicate with the dead through them, and demanded that they should receive idolatrous honors as they passed through the streets. Under the dictation of these fanatics, and the *mena-maso*, the king now began to entertain the idea of arresting the progress of Christianity, by assaulting a number of the Christians and the leading statesmen who were opposed to him on political grounds. On the 7th of May he announced to his ministers that he was about to issue a decree, that if any person or persons wished to fight with fire-arms, swords, or spears, they should not be prevented, and that if any one were killed the murderer should not be punished. This was something more than the recognition of duel-

ling; it was a declaration of civil war, with a promise of immunity to all who took part in it. The object of this strange decree was to protect the perpetrators of the intended assassinations from punishment. The ministers, after a day's deliberation, came to the palace and besought him, on their knees, in the name of the people, not to issue the decree, but he insisted on doing so. Finding all remonstrance vain, they withdrew, and the foreigners having left the capital, the officers and chief men met at the prime minister's to concert measures for compelling the king to change his purpose and give up the *mena-maso* to punishment, for it was universally believed that this was one of their projects. A list of thirty-three of these dissolute young men was drawn up; ten of them were seized and executed, and most of the remainder made their escape to the stone house, a portion of the king's palace. The officers sent envoys to the king demanding the revocation of the decree and the surrender of these favorites. Seven times they presented these demands, and seven times were refused; at last, terrified at the gathering storm, he yielded in part, consenting to surrender his favorites on condition that their lives should be spared, and that their only punishment should be perpetual imprisonment; but the concession came too late. The *mena-maso* were seized and marched away to be executed the next day, and the next morning the king was strangled by the conspirators. The throne was offered to the queen with a written constitution, by which she was to be bound in ruling the nation. If she consented to accept this, she would be their ruler; if she declined it, it would be offered to another, and her fate could hardly be doubtful. After receiving some explanations she gave in her adherence to the new form of government, and took the oath to observe the constitution. The nobles then said: "We also bind ourselves by this agreement: if we break it we shall be guilty of treason, and if you break it we shall do as we have done now." The constitution was then signed by the queen, and by the prime minister as the representative of the nation, and Rabodo I. was proclaimed Queen of Madagascar.

Rabodo is a niece of the late queen Ranavalana, and it is said was, like her aunt, in favor of persecuting the Christians. She is represented as a woman of great energy of character, and though she pleaded earnestly for the preservation of the life of the king, and to prevent bloodshed, she had not been on good terms with him for some years. Another wife, a slave, was his favorite, but he had threatened to kill her if she became a Christian.

The constitution thus summarily adopted as the organic law of the nation, is a singular document, but evinces a more extended knowledge of constitutional governments than most of the Hova nobles could well be supposed to have possessed. One of its first articles is that "her majesty shall not drink intoxicating

liquors," a wise provision, when it is remembered that Radama I., Ranavalana, and Radama II. were all given to this besotting vice. It also abolishes the use of the tanguin. Other provisions are the following:

"The word of the sovereign alone is not to be law, but the nobles and heads of the people, with the sovereign, are to make the laws.

"Perfect liberty and protection are guaranteed to all foreigners who are obedient to the laws of the country.

"Friendly relations are to be maintained with all other nations.

"Duties are to be levied, but commerce and civilization are to be encouraged.

"Protection, and liberty to worship, teach, and promote the extension of Christianity, are secured to the native Christians, and the same protection and liberty are guaranteed to those who are not Christians.

"Domestic slavery is not abolished, but masters are at liberty to give freedom to their slaves, or to sell them to others.

"No person is to be put to death for any offence, by the word of the sovereign alone; and no one is to be sentenced to death till twelve men have declared such person to be guilty of the crime to which the law awards the punishment of death."

During his short reign, and in the early portion of it, Radama II. made treaties of friendship and commerce with Great Britain and France, and both nations, on the ratification of the treaties, sent magnificent presents (the Emperor and Empress of France crowns for the royal pair, and the Queen of England a Bible), to be presented on the day of the coronation, which took place September 23d, 1862. These treaties are alike in their provisions, and are intended to encourage commercial relations between the respective countries. They have been acknowledged by the new Government. The adventurer Lambert, however, mindful of his own interests, had taken advantage of the besotted condition of the king to induce him to recognize and confirm the grant he had made to him in 1855, before coming to the throne. No monarch in his senses would ever have made such a grant to a foreigner, or even to one of his own subjects. The following are some of the items of this grant:

CHAP. I. We authorize J. Lambert to form a company, having for its object the working of the mines of Madagascar, the forests, and the lands situated on the coasts and in the interior. The said company shall have the right of making roads, canals, building yards, establishments of public utility, of coining money with the king's effigy; in a word, it shall do all that it may deem calculated to promote the good of the country.

CHAP. II. Art. 1. We grant and concede to the company the exclusive privilege of working all the mines in Madagascar, including those already known, and those which may hereafter be discovered.

Art. 2. We grant and concede equally to the said company, as well for itself as for those whom it may admit to take part in it, the privilege of choosing, on all the coasts and in the interior of the country, any unoccupied lands to be put into cultivation. In consequence the company shall become proprietor of the

lands which it shall have chosen, as soon as it shall give us notice of having taken possession of them.

Art. 3. The company shall not pay any duties upon the ore produced, nor upon the profits made upon it.

Art. 4. The produce of the working of the mines of Madagascar, and upon cultivation, shall enjoy the privilege of free exportation without duty. Its [the company's] property shall not be liable to be burdened with imposts. What shall be brought in for the company shall pay no duty.

Art. 5. We relinquish to this company all the mines of Soatsimanampiovana, so as to put them into condition for the immediate employment of laborers. We also give to the company the house at Soanierana to establish there the headquarters of its administration.

The company, for its part, engages to assist to the best of its power the king's projects for the amelioration and civilization of the country; and on the 12th of September, 1862, Lambert added a clause, in which he promised to give to Radama II., and his successors, ten per cent. on the net profits.

The company was formed at Paris, and was authorized by an imperial decree, dated May 2d, 1863. The arrangements of the company for choosing lands are admirably comprehensive. They are to choose: 1. All such as from vicinity to the ports are likely to become centres of population. 2. Those situated along the course of navigable rivers. 3. The unoccupied land nearest to the Hovate ports and to the actual existing centres of population. 4. The fertile lands in the most healthy localities. 5 and 6, in the neighborhood of forests, and where gum and caoutchouc are procurable. 7. Lands suitable for pasturage and rice. 8. Wherever it may be presumed that there are metallic and mineral riches.

Ten days after the authorization of this company, Radama II. was strangled, and the new Government, while acknowledging and confirming the commercial treaties, at once repudiated these grants. Indeed the Constitution adopted at the accession of Rabodo, or as the natives style her, Rasoahéry Meujaka (the beautiful and strong sovereign), closes with this article: "Rasoahéry succeeds directly to Ranavalana. Radama II. is as if he had never existed; his body is deprived of sepulture." Thus directly does it disavow all his acts and decrees, except such as may be reenacted by the reigning sovereign. The French Government are unwilling to relinquish the grant which Lambert secured from the late king. In the October number of the *Revue des Deux Mondes* an article appeared, entitled "*La France et Madagascar*," written by M. Henri Galos, avowedly deriving its facts from administrative sources, and evidently inspired by the French Government. This article, after stating the French claims, urges the propriety of inciting the coast tribes of Madagascar, now subject to the Hovas, the Sakalavas, Betsinso-racas, and Betonimenes, to rise against the dominant race, and to afford them French assistance, that the Hova Government being overthrown there may be a better opportunity for France to claim from the conquering party

the fulfilment of the claims now made in virtue of this grant. The moral obliquity of such a course, which would throw the country back into the barbarism from which it is but just emerging, to satisfy the greed of a trading company, and compel the confirmation of an unjust grant, seems not to have occurred to the writer; but on a question where the moral sympathies of all Christendom would be opposed to her, France cannot afford to ignore the ethical bearings of her action.

MAGNESIUM. H. Sainte-Claire Deville and H. Caron describe (*Ann. de Chim. et de Physique*, lxvii. 340) their most recent and improved method of obtaining this metal in absolute purity, with an account of its properties in that condition. The pure metal has a density of 1.75, is very ductile, and when burnished affords plates of a slightly bluish or violet tint, and of great lustre. The surface tarnishes in the air, but not more rapidly than that of zinc, and the oxidation is never very deep. The metal fuses at about the fusing-point of zinc; a little above this it burns with an intensely brilliant flame. The preparation of the pure metal magnesium, as in the case of pure aluminium, is growing into importance in connection with the arts and with commerce; and it has been suggested that the former metal may at no distant day become extensively used as a substitute for silver.

MAINE. The political campaign in this State commenced on July 1st, when a convention of the Republican party, numbering nearly 1,300 delegates, from 300 towns, assembled at Bangor, to nominate candidates for Governor and other State officers. The call for the convention was made by the Republican State Committee, but embraced all persons in favor of sustaining the administration in its efforts to subdue the rebellion. On the second ballot Samuel Cony was nominated as candidate for Governor; and subsequently a series of resolutions were adopted declaring, in substance: First—That it is the solemn duty of all loyal men to take a firm stand in favor of the national administration in conducting the war. Second—That the convention would "unite as one man in sustaining the civil and military policy and measures of the Government, without qualification or reservation." Third—That those assemblages of northern citizens who had protested against the arrest of persons engaged in discouraging enlistments, "while they have expressed no execrations against the foe now invading the free States," were not to be trusted as counsellors in the present crisis of the country; and Fourth—That Vice-President Hamlin and the two Senators in Congress be requested to repair immediately to Washington and urge upon the President "the importance and necessity of placing along the coast a sufficient naval and military force to protect the commerce of the country from the piratical depredations of the rebels." Mr. Cony, who had in the previous year been a prominent

member of the party known as the "War Democrats," and had canvassed the State in favor of the election of Jameson, the candidate of that party, accepted the nomination and the platform of principles established by the convention, and during the succeeding canvass the Republicans and the War Democrats, by whom he was supported, formed an organization under the name of the Union party.

On August 6th, the Democratic party met in convention at Portland, about 900 members being present, and organized by the choice of Samuel Jaycox, of Fairfield, a former Whig, as president. The prominent candidate for Governor was Bion Bradbury, who had been selected in the same capacity the previous year, and as doubts existed in the minds of several delegates as to the views which he held respecting the conduct of the war and the policy of the administration, a letter from him on the political position was read to the convention. The following extracts indicate the purport of this communication:

The convention has most important duties to perform. It assembles amid the unspeakable horrors of a bloody and desperate civil war. The country is oscillating between despotism and anarchy. The long continuance of the war has stirred the deep passions of men. The voice of reason is almost drowned in the terrific storm that rages around us, and madness rules the hour. The times and the occasion demand calm deliberation and the exercise of the highest wisdom and the noblest patriotism. All mere party views sink into insignificance, and the intensely absorbing question arises, what can be done to save the country from impending ruin? It seems to me that the hope of restoring the Government rests in the united action of all conservative men, in resisting the fanatical spirit of radicalism largely pervading the land, which now controls, with its revolutionary doctrines, and pernicious influence, the counsels of the present national administration, and in substituting in its stead an enlarged patriotism and a liberal statesmanship which look alone to the conservation of the Constitution and the restoration of the Union with all the rights of the States unimpaired.

After recapitulating what he considered the arbitrary and unjust acts of the administration, he continued:

Are the people of Maine ready to concede the claim set up by the national administration to that despotic power which could deprive them of their dearest rights and most sacred privileges—of all those noble guarantees affecting life, liberty and property, which are secured to them by the grand old Constitution established by their fathers, as the embodiment of the great principles upon which rests the base of the mighty fabric of the Government? I believe the people will never acquiesce in such doctrine. * * * *

But opposition to the present war policy and war measures of the administration is not opposition to the Government. The administration is not the Government. Those in authority are but the agents of the people to carry on the Government under the Constitution. They may exceed or pervert their constitutional powers—they may destroy the Constitution itself. Under such circumstances, to oppose the administration is to support the Government.

To uphold the Government, to maintain the Constitution, to restore the Union as it was—is the first duty of every citizen. To fail in the duty is to be false to ourselves, to posterity and to the great cause of constitutional liberty, and it is equally a duty to protest

against a policy calculated to prolong the war and subvert the Constitution.

This letter proving satisfactory to the convention, Mr. Bradbury was nominated by a large majority. A series of resolutions was also adopted. The first three announced the devotion of the Democracy to the Constitution and the Union. The next announced that in the opinion of the convention the war was conducted by the present administration "not for the restoration of the Union, but for the abolition of slavery and the destruction of the Union." The next declared that the "people are the only lawful sovereign in this country;" that public functionaries are but the servants of the people, and, as such, responsible to them, and that there is a manifest difference between the Government and the administration of the Government, the latter being merely the agents of the people, subject to their approval or condemnation. The next was in the following terms:

Resolved, That whenever the people of the seceded States or any one or more of such States, shall express their desire to return to the Union, to be represented in the Congress of the United States, and to resume their obligations to the Constitution and the Union, the Democratic party will hail their return with joy, and will freely welcome them back under the protecting folds of the national flag, "with all the dignity, equality and rights of the several States unimpaired;" and we condemn and denounce the new and startling doctrine, now for the first time avowed by the organs of the Republican party, that the extinction of slavery in such States should be made a condition of their restoration to the Union, as a violation of the public pledges of the party, and as a wicked attempt to overthrow the Constitution, revolutionize the Government, prolong the war indefinitely, and finally to establish a military despotism on the ruins of our republican Government.

The next two resolutions protested against interference in elections and martial law, to which succeeded the following:

Resolved, That we unite with the Democracy of the other States, in denouncing the arrest and mock trial by court-martial, and banishment of Clement L. Vallandigham, a citizen of Ohio, for no other reason than words addressed to a public meeting, in criticism of the course of the administration, and in condemnation of a certain military order, as a high-handed outrage upon the rights of the citizen under the Constitution of his own State and that of the United States.

Resolved, That the conscription law, in the opinion of this Convention, is an unnecessary, unwise, unequal and oppressive law—deemed by many to override the Constitution and the rights of the States, and to be destructive of the liberties of the people. While the Democratic party counsel obedience to the laws and respect for the constituted authorities, and deprecate all illegal and violent resistance to the execution of any law, however unjust and oppressive, we believe that common justice requires that the burdens arising under this act shall be assumed and equalized by the State, and we appeal to the administration to suspend the enforcement of this law, until the courts of competent jurisdiction shall have decided that it is a constitutional enactment.

The two concluding resolutions were complimentary to the army, and to Gov. Seymour of New York, who was thanked for his "able stand taken and maintained in defence of the

citizen and State as against the encroachments of centralized power."

The following additional resolution was also adopted:

Resolved, That the convention cordially approves every effort of towns to enable, by bounties, its conscript citizens to go to the war, or to obtain a substitute, or to pay to the Government the \$300 which it asks in lieu of a substitute, because the conscript law is in force and not yet judicially decreed unconstitutional; and we recommend every town to elect to the next legislature representatives who will support a law to legalize, or to have adopted by the State all such bounties and aid furnished by towns to the conscripts.

The election was held September 14th, with the following result:

Samuel Cony, Union	67,916
Bion Bradbury, Democrat.....	50,366

Majority for Cony.....	17,550
------------------------	--------

The total vote was 118,282, being larger by 30,643 than the vote of 1862. The legislature elected at the same time consisted of, Senate: Union 30, Democrat 1; House of Representatives: Union 120, Democrats 31.

During 1863 ten regiments of Maine volunteers were mustered out of the service of the United States, the terms of their enlistments having expired, and at the close of the year there remained in active service sixteen regiments and one battalion of infantry, one regiment and one company of cavalry, one regiment of heavy and six batteries of light artillery, and one company of sharpshooters. At the same date two veteran regiments of infantry, recruited under the authority of a general order from the War Department, a second regiment and an additional company of cavalry, and a battery of light artillery were nearly ready for the field. A considerable number of men also went into regiments in the field, making between four and five thousand enlisted under the October call of the President for 300,000 men. In addition to the Government bounty of \$402 for veteran recruits, and \$302 for new recruits, the State, in October, offered a bounty of \$100 to all recruits entering incomplete organizations then in the State, and \$55 to recruits entering regiments or corps in the field, and, as in 1862, numerous cities and towns paid extra bounties to recruits enlisted within their limits, anticipating legislative grants for legal authority in such cases. These latter bounties were considerably larger than in the previous year, and under the stimulus to recruiting thereby afforded it was hoped that the quota of Maine would be filled without resorting to a draft. As in former years, considerable numbers of the seafaring population entered the naval service, for whom the State has not yet received credit in the apportionment of her several quotas.

The draft ordered by the President proceeded, during the summer months, in a peaceable and orderly manner, and the number of men held for service, or accepted as substitutes, was

about 2,000. Various towns having voted in public meeting sums sufficient to pay the commutations of such of their citizens as might be drafted, Gov. Coburn, in view of the complications and embarrassments which might result from these proceedings, asked the opinion of the justices of the Supreme Court upon the legal questions involved in the following interrogatories:

1. Has a city or town any legal right to pledge its credit to raise money for the purpose of paying the commutations of such of its citizens as may be drafted into the service of the United States under the law aforesaid?

2. Has a city or town any legal right to raise money by taxation to provide commutations for such of its citizens as may be thus drafted?

The Court held that Congress had full power, under the Constitution, "to command all the resources of the nation, the lives of its citizens, to prevent, by any and all proper means, that fearful anarchy which would be so imminent if its dissolution should become an accomplished fact;" that the liability to serve, procure a substitute, or pay the commutation fee, as created by the Enrolment Act of March 3d, was of a purely personal nature; and that the question really amounted to this: "Whether a town can legally raise money gratuitously to discharge the pecuniary obligations of its citizens, or to procure their exemption from military or other service." Such a power, they decided, was not conferred upon the municipal corporations of the State. They concluded their opinion as follows:

Were a town to raise money to be distributed to favored individuals, the tax assessed for such a purpose could not for a moment be upheld. Still less can it be when the obvious and inevitable tendency of it would be to defeat the object for which the act of Congress before referred to was passed. That was an act to raise soldiers, not to raise money. Its preliminary and special purpose was to suppress insurrection by means of an armed force, to be raised in pursuance of its provisions. If one town may assess taxes to pay the commutation money of those who may be drafted, so may all, and the Government would be left without a soldier for its protection, and the nation surrendered into the power of those who are warring for its overthrow. By such a course the wealth and taxable property of the community would be diverted from the defence of the Government, and the resources of the State would be turned to its destruction, by depriving it of the means necessary for its preservation.

We therefore answer each of the interrogatories in the negative.

At the outbreak of the rebellion, the bonded State debt amounted to \$699,000. On January 1st, 1863, this had been increased by expenses incidental to the war to \$1,472,000, and during 1863 there was added a further war debt of \$950,000, making the total debt of the State, on January 1st, 1864, \$2,422,000. This increase was caused by the payment of bounties to soldiers and the aid advanced, in 1862, to their families. To provide for the payment of the interest on the public debt, and, in some part, for the other extraordinary charges of the Government, the Legislature of 1863

increased the State tax or that year by the addition of a mill on the dollar of valuation, to the tax of the previous year. In addition to the money expended on account of volunteers, directly by the State, which constitutes a claim against the General Government, there had been expended, at the commencement of the present year, by cities, towns, and plantations in the State, upward of \$4,000,000, chiefly for bounties, to which sum large additions have since been made.

The following table represents the condition of the sixty-nine banks of Maine on December 1st, 1863.

LIABILITIES.	
Capital Stock.....	\$8,008,000.00

Bills of other Banks and Checks.....	1,047,979.44
Specie.....	678,043.48
Total.....	\$21,326,040.74

In 1862 the Legislature passed an act exempting the State banks, for the space of one year, from the severe penalties imposed by their charters in the event of their suspending specie payments. In 1863 this act was renewed, and in consequence of the imposition by Congress of a tax upon the circulation and deposits of the local banks, the Legislature remitted one half of the State tax imposed upon the banks by their charters.

By a resolution adopted, March 25th, the Legislature accepted, in behalf of Maine, the grant of land guaranteed by act of Congress, July, 1862, to each State, for the purpose of establishing an Agricultural College. A board of thirteen regents was also created, with authority to receive scrip for the land, to locate the same, to examine localities for the proposed college, and to examine and report upon similar institutions in other States.

The comparatively defenceless condition of the Maine seaboard was, from the outset of the war, a subject of much solicitude to her citizens, and, in conformity with resolutions adopted by the State Legislature, and the urgent solicitations of Governor Coburn, the General Government expended, during the year, large sums upon the permanent fortifications in the harbor of Portland, at the mouth of the Kennebec river, and in the narrows of the Penobscot, beside constructing earthworks at Rockland, Belfast, and Eastport, at each of which places two batteries of five guns each were mounted, and single batteries of five guns each at Castine and Machiasport. The northeastern frontier of the State is entirely unprotected, and the only means of defence yet suggest-

ed is the construction of a railroad connecting it with the seaboard, by which an army with supplies and munitions could be speedily concentrated. The excitement on the subject of coast defences was heightened during the summer by the daring exploit of the crew of the rebel privateer "Archer," who, on the night of June 29th, surprised and captured the U. S. revenue cutter "Caleb Cushing," in the harbor of Portland, and carried her to sea. She was pursued by two steamers manned by armed volunteers, overhauled a short distance from the city, and blown up by her crew who escaped in boats, but were speedily captured.

The crops of the State were considerably injured by the drought which prevailed so extensively over the United States, in 1863, the hay crop, one of the chief staples, being much below the average. The demands of the war also caused such a scarcity of laborers that, in many parts of the State, it was a common thing to see women working in the fields.

MARTIAL LAW. A deeply interesting case involving the existence and power of martial law in the sections of the country in which the civil courts were exercising their jurisdiction, arose in the State of Indiana, and on appeal was decided by the Supreme Court.

June 8th, Maj. G. Collins Lyon, chief provost marshal of the District of Indiana and Michigan, issued an order to Capt. Wilcox, provost marshal at Indianapolis, requiring him to issue an order prohibiting the sale of liquor, by any one, to enlisted men. Captain Wilcox thereupon issued the following notice:

"OFFICE OF PROVOST MARSHAL, }
INDIANAPOLIS, June 8th, 1863. }

"All persons engaged in the traffic and sale of spirituous and intoxicating liquors within this city are notified that they are strictly prohibited, from and after this date, from selling the same to any enlisted soldier. A violation of this order, by any person whomsoever, will be visited with severe punishment.

"By order of FRANK WILCOX,
"Captain, and Provost Marshal."

Joseph Griffin was arrested and imprisoned by Capt. Wilcox for an alleged violation of the foregoing military order and notice. After his release he commenced this suit in the Marion Common Pleas, against the captain for false imprisonment. Griffin was licensed to retail to everybody except minors, intoxicated persons, &c., both by the State and Federal Government.

Capt. Wilcox answered the complaint of Griffin by justifying his arrest and imprisonment under the order and notice above set out; and the court held the justification sufficient and a bar to Griffin's suit for damages.

Griffin appealed from the judgment of the Common Pleas to the Supreme Court of the State; the opinion of the Court was read by Perkins, J. After stating the facts of the case, he says:

Legal authority is a justification to a person in making an arrest. Authority appearing on its face to be illegal, is not a justification, and will be no protection for making an arrest.

This case, it may be remarked, does not involve the question of the right, in any person, or body of men, to suspend the writ of *habeas corpus*. Griffin did not apply for that writ in order to effect his discharge from imprisonment. He submitted to that, and then sued for damages for the imprisonment. And, it may be here observed, that the suspension of the writ of *habeas corpus* does not legalize a wrongful arrest and imprisonment; it only deprives the party thus arrested of the means of procuring his liberty, but does not exempt the person making the illegal arrest from liability to damages, in a civil suit, for such arrest nor from punishment in a criminal prosecution.

The real question, lying at the bottom of this case, involves the war power of the President of the United States, that is, his power to act upon martial law without its having been first declared by the sovereign power of the State. If the military could legally arrest and punish Griffin for selling a glass of liquor to a soldier, they could legally arrest and punish him for expressing what they might assume to style a disloyal opinion. If they could not legally punish him for the one, they could not for the other. Could they do either? is the question.

Griffin was not arrested and imprisoned under the civil law of this State, nor of the United States, for he had violated no such law. There is no act of Congress, nor of the State Legislature, prohibiting the sale of liquor to an enlisted soldier. The only law in this State containing such prohibition, when Griffin made his sale to a soldier, was that enacted by the military order of Major Lyon. Griffin was arrested, then, by military authority. Could he be legally arrested, for the cause alleged for his arrest, by that authority, in the place, and at the time it was so made?

Griffin was not connected with the military or public service, was not a spy from the enemy, and was not within military lines. He was a citizen of the State, pursuing, lawfully, his lawful avocation, in the civil walks of life. Had he been a soldier, in the service, he would have been subject to the well-defined code of military law, which requires obedience by soldiers to the orders of their officers, and subjects them to punishment, by such officers, in prescribed modes, for disobedience to these orders. In this case had Major Lyon addressed his order to the soldiers subject to his command, forbidding them to drink intoxicating liquor, or to leave the lines to go where it could be obtained, and the soldiers, subject to his jurisdiction, had disobeyed his order, he might, perhaps, though the point is not now before us for decision, have caused them to be punished by military law. Military men, in the service, are subject to the code of military law, enacted for their government, and to be enforced, in prescribed modes, by military officers. So, legislative bodies administer the *lex parlamentaria*, the law governing legislatures. It is a special law for such bodies. But, as a general proposition, the citizen, in the civil walks of life, is not subject to military orders, nor to the *lex parlamentaria*, nor to punishment by military or parliamentary law. He is governed by the law of the land, administered in the courts of justice. He may, sometimes, be subject to martial law, executed by military officers, as the agents of the king, president, or governor, as the case may be. When the citizen is governed by the military power, he is not governed by the soldier's code of military law, but he is said to be governed by martial law; and this law is perfectly distinct and entirely different from military law to which soldiers are subject. When the military commander, as the agent of the king, president, or governor, governs the citizens, he does not rule them by the code of military law, enacted for the soldiers, as has been said, and for disobedience to which they are punished, but he governs the citizens by arbitrary will. See the "Articles of War," for the government of soldiers, enacted by Congress, in Brightly's Dig., p. 73. We may further illustrate the distinction between governing and punishing those subject to

the military coae by military tribunals, and governing the citizen by martial law, which is, in fact, no law, but arbitrary will, by referring to Sections 30 and 38 of the act of Congress of March 3d, 1863.

Such is military law. What is called martial law, is applied to the citizen, by subjecting him to the government of the military in certain exigencies. "Martial law is the law of war, that depends on the just but arbitrary power and pleasure of the king, for, though he doth not make any laws but by the common consent in parliament, yet in time of war, by reason of the necessity of it, to guard against dangers that often arise, he useth absolute power; so that his word is law. However opposed to other authorities, this expresses what is distinctly meant, both in England and in this country, by martial law."

—New Am. Cyclop., tit. Martial Law. The question now arises, when and where can the citizen be subjected to martial law? He cannot, certainly, without an act of Congress be subjected to that law except upon necessity—occasioned by force, actually existing or immediately threatened, at the time and place where martial law is exercised. Whether, by act of Congress, martial law could be declared throughout the United States, we need not inquire. See De Hart, Mil. L., p. 17.

Martial law is the law of force, and is employed under two general conditions:

1. In a part, or the whole, of a foreign country, when, being at war with such country, our army may invade it, and expel the governing power from a part or the whole of it.

2. When force may expel the civil authority from a part or the whole of our own territory; or, perhaps it may be said, martial law is exercised in our country, the military being on the spot to execute it, where no civil authority exists. But where the civil authority exists, the Constitution is imperative that it shall be paramount to the military. The right to govern by martial law does not grow out of the mere fact that we have an army; for we have that at all times, in peace as well as in war. The right to govern Indianapolis by martial law does not arise upon the mere fact that soldiers are stationed in the city, or are often marched through it; for soldiers are stationed at different points, and marched from place to place in the country at all times, in peace as well as in war. Yet, in ordinary times, surely the officers commanding them do not claim to govern the citizens, not connected with the army, by martial law.

The right, in the military officer, to govern by martial law, as we have said, arises upon the fact of existing, or immediately impending force, at a given place and time, against legal authority, which the civil authority is incompetent to overcome; and it is exercised precisely upon the principle on which self-defence justifies the use of force by individuals. Robbers and burglars, and in some cases, rioters may be resisted and even slain, in self-defence, by private individuals. That is, there are cases where force must be resisted by force, instead of waiting for the civil authorities. This is the doctrine of Rutherford, in his Institutes of Natural Law. See Book 1, chap. 19; Book 2, chap. 9. This is the doctrine expressed by the maxim, "*inter arma silent leges*."

"When the courts of justice be open, and the judges and ministers of the same may by law protect men from wrong and violence, and distribute justice to all, it is said to be time of peace. So when by invasion, insurrection, rebellion or such like, the peaceable course of justice is disturbed and stopped, so as the courts be as it were shut up, *et silent inter arma leges*, then it is said to be time of war."—Coke upon Littleton, as quoted in Law. Wheat. Int. Law, p. 525.

There is another maxim sometimes quoted in connection with the above from Cicero, which deserves a moment's notice: *Salus populi suprema lex*—the good of the individual must yield to that of the public. This maxim, also, is acted upon only locally and

temporarily. Broom says of it: "Hence there are many cases in which individuals sustain an injury for which the law gives no action; as when private houses are pulled down, or bulwarks raised on private property, for the preservation and defence of the kingdom against the king's enemies. The civil law writers indeed say, that those who suffer have a right to resort to the public for satisfaction, but no one ever thought that the common law gave an action against the individual who pulled down the house or raised the bulwark, and the reason is that a man may justify committing the private injury for the public good, as for instance, the pulling down of a house, if necessary, in order to arrest the progress of a fire."—Broom's Maxims, p. 1. See the subject of this maxim well discussed in 2 Kent, 338, *et seq.*

These two maxims, and their application, illustrate and define martial law, under absolute governments; and, for the purposes of the case at bar, we shall concede the right to exercise that law, as thus defined and applied under our Government, limited, as all its departments are, by a constitution. It is the law of force, applied to govern persons and places whence the civil law is expelled; its officers rendered unable to execute it, by forcible resistance. This right, thus temporarily and locally to exercise martial law, in case of necessity, is the war power of the Governor of a State and of the President of the United States, and it is all the war power that either possesses by virtue of which he can assume to govern independently of the civil law; and this war power each executive usually exerts through his subordinate military officers.

This may be further illustrated by examples.

During the administration of Governor Wright, as the Executive of this State, it was alleged that a rebellion existed in Clay county—that the officers of the civil law were overpowered by force. Governor Wright, as commander-in-chief of the military power of the State, sent a military force to the county, the commander of which, as the representative of the Executive, would, if necessary, govern that locality by the war power, till the civil law could resume its sway; but because there was forcible resistance to law in Clay county, did that fact authorize Governor Wright to overthrow the civil authorities in the whole State, and assume unlimited arbitrary power, to be exercised through military officers?

During the administration of Washington, as President of the United States, a rebellion occurred in Western Pennsylvania, on account of the excise law; the civil power was overcome in that portion of the State. General Washington sent thither a military force, and, within the limits of the territory from which the rebels had expelled the civil power, and for just the time necessary to restore the ascendancy of that power, Washington, by his generals, might have found it necessary to govern by the war power. So Washington understood this question, and he instructed his officers accordingly. See Irving's Life of Washington, vol. 5, ch. 25.

Rhode Island presents a different example, but strictly within the same principle; an example where the rebellion was not local, but throughout the entire State, and called into exercise the war power of a Governor of the State. Rhode Island was governed upon a royal charter granted by King Charles the Second. The people petitioned for a convention to form a new and more democratic constitution. The legislature, year after year, denied the petition. The people finally took the subject into their own hands, called a convention, formed a new constitution, and were proceeding, a great majority of the people engaging in the undertaking, in 1842, to overthrow, entirely to extinguish the old government, and put the new one into operation in its place. Force was resorted to on both sides. The contest was not local, but extended to every foot of territory in the State. The legislature of the old government passed an act authorizing the Governor of that government to en-

force martial law; he thereupon announced it by proclamation, and then exercised it to the extent of forcible resistance to the old government, which was throughout the whole State. New Am. Cyclop., tit. Dorr; Burke and Causin's Reports to House Rep. in Congress in 1844; Luther v. Borden, 7 How. (U. S.) Rep. 1. The charter Governor, King, also called on the President of the United States for aid to put down the rebellion; the President tendered it, and the people of Rhode Island were crushed by military power.

The right, then, of the President to temporarily govern localities, through his military officers, he derives solely from the fact that he is the commander-in-chief of the army, and is to see that the laws are executed; and he can exercise it to just the extent that, and no further than, by the laws of war, a commanding general in the army of the United States could do it. Where the laws are, or may be, executed without the interference of the President, by his military, he has no right thus to interfere.

The President does not derive his war power from his oath to support, protect, and defend the Constitution. That simply obliges him to obey the Constitution himself, and to use the power which that instrument confers upon him, and none else, to cause others to obey it. He does not derive his war power from the right to suspend the writ of *habeas corpus*. We do not think he possesses that right, under the Constitution. We think that is an act of legislative power which can only be performed by Congress; and, even when rightly suspended, it does not justify an exercise of the war power beyond the necessities of the case, but simply takes away the means of obtaining liberty when illegally deprived of it. Simply because the *habeas corpus* is suspended, is it right to destroy every man's liberty and property? The right, in a case of emergency, to exercise the war power, temporarily and locally, supposing that power to exist at all, under the Constitution, does not depend upon the fact of the *habeas corpus* being suspended, or not suspended.

The war power of the President, then, may be stated thus: He has a right to govern, through his military officers, by martial law when and where the civil power of the United States is suspended by force. In all other times and places the civil excludes martial law—excludes government by the war power. Where force prevails, martial law may be exercised. But in all parts of the country where the courts are open and the civil power is not expelled by force, the Constitution and laws rule, the President is but President, and no citizen, not connected with the army, can be punished by the military power of the United States, nor is he amenable to military orders. If, in such parts of the country, men commit crimes defined by law, they must be punished according to the Constitution and the law in the civil courts. If, in such parts of the country, men have not perpetrated acts constituting, in law, crimes, their arrest, trial, and punishment by military courts is but a mode of applying Lynch law; is, in short, mob violence.

Having ascertained the principle by which the legality of cases of military arrest and punishment is to be tested, we are now prepared to proceed to the application of the principle to the case at bar.

The existing rebellion in the United States, vast as is its extent, is not general, but local. It is confined to the Southern States. It is a sectional rebellion. The theatre of force where the civil tribunals are closed is sectional, bounded by geographic lines. It is limited to the slave States. This has been unanimously decided by the Supreme Court of the United States in the Prize cases. 2 Black's Rep., p. 635.

No one of the Northern States, constituting as they together do, a decided majority of all the States, desires to overthrow the Constitution of the United States, or to withdraw from under its operation; nor do any considerable portion, perhaps not any, of the people of such States manifest any desire to resist

the legal execution of the Constitution and laws. Resistance to illegal arrests and mob violence is not necessarily resistance to the Government. The courts, in all the Northern States, are and have been open. But the Southern States are attempting, by violence, to sever the Union, and the Government of the United States and the people of the Northern States are attempting, as they assert, to prevent the severance of the Union of these heretofore united States. Such is the object, on both sides, of the war, not to maintain or overthrow the old legal Government of the United States, but, on one side, to continue the existence of, and on the other to sever, the territorial unity of the nation. And the opposition to the Administration (not the Government), in the quiet, law-abiding States of the North, is not forcible, but a peaceful difference, and conflict of opinion and argument as to the cause of the rebellion, and the measures which should be pursued as best calculated to restore territorial unity, under the government of our fathers, with the least destruction of property, the least sacrifice of life and constitutional liberty, and in the shortest possible time. And the question now is, does such peaceful conflict of opinion and argument justify the Administration in subjecting those who differ with it to the military power? For the case at bar, though perhaps not of that description in its facts, yet rests entirely upon the principle, as we remarked at the outset, of governing by martial law; as it would not be pretended that the military could make such arrest of the citizen as that involved in this case, in time of peace. We have found no legal principle that will justify such a course. We know of no precedent for such an exercise of the war power as that above propounded, viz.: of subjecting opponents, simply in political opinions, to martial law for expressing those opinions; for such opinions are not force, nor is the expressing of them force, nor is it a crime by any law of the land.

We feel constrained, then, to come to the conclusion that the war power of the President is limited to the simple right of exercising martial law, simply as a military chief, locally and temporarily, where actual or immediately impending force renders it a military necessity. No other doctrine can be reconciled with the Constitution of the United States, or is compatible with the liberties of the people.

The next question that arises is, how is the existence of the fact that the civil power is superseded by illegal, forcible resistance, to be ascertained? Is it a fact to be proved on the trial, or decided by the Court upon judicial knowledge? If the former, there is no averment in the answer of the existence of such fact, and it was bad for that reason. If the latter, we are able to state, with a feeling of complete assurance, that there has at no time been any forcible resistance on the part of the people to the civil power, in the city of Indianapolis, which the officers of the law were not easily able to overcome, when disposed to do their duty. The courts have at all times been open, and there are a sufficiency of them here, including those of the City, State, and United States, to meet the public necessities. And, extending our observation from the city to all parts of our commonwealth, we are proud and happy in being able to say, in honor of the people and State of Indiana, that all the citizens of the State, with scarcely an exception, if indeed there is one, are, and always have been, eminently true and patriotic, and remarkably patient. Judge Leavitt, in the Vallandigham case, we regret to say, assuming to speak by judicial knowledge, but beyond question upon false and slanderous information, of the people of this State, charges that a portion of them are affected with the rankest disloyalty. Our judicial knowledge is thorough to the contrary. The people of Indiana are all for the Constitution, the Union as formed by it, and the laws enacted pursuant to it. No one is opposed to the Government (using that word in its proper

sense, and not as meaning the Administration), but only where opposition is expressed to any proceeding, to acts believed to be illegal and tyrannical, as perpetrated by individuals. The people of the State, in the language of an illustrious statesman now no more, are for LIBERTY and UNION, *one and inseparable, now and forever*. They are, as we said above, and again repeat, devoted to the *Constitution*, the *Union*, and the *laws*, and with one accord, unite in the invocation—*Sunto perpetua*.

The judgment below is reversed with costs.

MARYLAND. The most important events in the general history of Maryland during the year relate to the invasion of the State by the enemy, the progress made toward an emancipation of the slaves, and the civil and military administration of affairs. The object of the enemy at the time of the invasion was generally supposed to be the capture of Baltimore and Harrisburg, with such other advantages as might follow from this success. This impression was created at Baltimore by southern statements of the design of the campaign. The idea was there foreshadowed and enforced that it was not good policy on the part of Gen. Lee to begin "by alarming greatly the hostile populations and give them warning to run off their herds and flocks, so as to leave the country waste before him;" but that with the Federal commander "once well cleared out of his path, he can throw the whole Confederate army into Pennsylvania, wide-winged, far-stretching, in one vast, combined movement, enveloping Washington on the one side, Harrisburg on the other, and so forward! forward! till our red battle flag reflects itself in the Delaware." For details of the movements of the armies see ARMY OPERATIONS.

Considerable excitement was created in Baltimore on the evening of June 29th, by a report that a body of the enemy's cavalry had appeared at Westminster, and had attacked a body of Delaware cavalry and driven them within seven miles of the city. At eleven o'clock at night the signal agreed upon by Gen. Schenck was made by the fire bells to call the citizens to arms for the defence of the barricades. The signal corps stationed on the different roads had fired rockets, announcing the approach of a hostile cavalry force on the Reisterstown road. Through some parts of the city the cry "To arms! To arms!" was shouted, and men with muskets in their hands were seen running to and fro and rapidly assembling at the points of rendezvous. In half an hour several thousands were in arms, and the headquarters of Gen. Schenck were surrounded with bristling bayonets. Quiet was soon restored in the city, and considerable enthusiasm, but no panic, prevailed. The number of the citizens collected at the barricades was between five and seven thousand. All the military in the city were called out and kept under arms all night. No force of the enemy appeared. The mistake arose from the announcement of the movements near Westminster. On the next day the following order declaring martial law was issued by Gen. Schenck:

VOL. III.—39 A

HEADQUARTERS MIDDLE DEPARTMENT,
8TH ARMY CORPS,
BALTIMORE, June 30th, 1863.

The immediate presence of a Rebel army within this Department, and in the State of Maryland, requires, as a military necessity, a resort to all the proper and usual means of defence and security. This security is to be provided against known hostilities and opposition to the lawful and National Government from every quarter and in every form.

Traitors and disaffected persons within must be restrained and made to contribute to the common safety, while the enemy in front is to be met and punished for this bold invasion. Martial Law is therefore declared, and hereby established in the city and county of Baltimore, and in all the counties of the Western Shore of Maryland.

The Commanding General gives assurance that this suspension of the civil Government within the limits defined shall not extend beyond the necessities of the occasion.

All the civil courts, tribunals and political functionaries, of State, county or city authority, are to continue in the discharge of their duties as in times of peace; only in no way interfering with the exercise of the predominant power assumed and asserted by the military authority.

All peaceful citizens are requested to remain quietly at their homes, and in the pursuit of their ordinary vocations, except as they may be possibly subject to calls for personal services, or other necessary requisitions for military purposes or uses hereafter.

All seditious language or mischievous practices tending to the encouragement of rebellion are especially prohibited, and will be promptly made the subject of observation and treatment.

Traitorous and dangerous persons must expect to be dealt with as the public safety may seem to require. "To save the country is paramount to all other considerations."

When the occasion for this proclamation passes by, no one will be more rejoiced than the Commanding General, that he can revoke his order and return to the normal condition of a country at peace, and a Government sustained by a united and loyal people.

ROBERT C. SCHENCK,
Major-General Commanding.

At his request, also, two gunboats were placed by Com. Dornin near the end of Broadway, and one at the bridge on the western side, in positions to bear upon the city and its approaches.

At the same time Morrisville was visited by the cavalry of the enemy; also Sandy Spring, Laurel, and other places. Horses, cattle and forage were taken, but no persons were impressed into their army. No returns have been made of the loss of the citizens of the State in consequence of this invasion. The destruction on the Baltimore and Ohio railroad embraced a range of eighty miles between Harper's Ferry and Cumberland. Twelve large bridges were either burned or blown up; eight first-class water stations were destroyed, and most of the valuable machinery and fixtures removed; more than thirty miles in length of the best kind of telegraph wire were taken away, and a thousand supporting poles were cut down; over seven miles in length of heavy new iron railway track, which had been used only five months, were torn up from its bed of stone ballast, and eighteen thousand of the largest oak and chestnut crossties on which the rails were laid—rails and ties were burned together, and thus the iron rendered unfit for use. The road

was soon, however, again repaired. Notwithstanding the repeated destructions of large portions of this road by the enemy, during its last fiscal year it paid into the State Treasury two dividends of three per cent. each on the stock in the main stem of the road, and two other dividends of four and a half per cent. each, on the stock in the Washington branch. On account of capitation tax of passengers over the latter branch, it also paid a sum which made its aggregate payments into the State Treasury \$310,512.51, showing it to be one of the most remunerative of the State's investments.

The State assumed the payment of the National Tax of August 5th, 1861, and borrowed \$173,587 to aid in this payment. It was not needed for the purpose, and the whole was returned to the creditors with interest, a few months afterward.

The condition of the State Treasury at the close of 1863, is thus reported by the Governor: "The receipts and disbursements for three years reduced to the receipts and disbursements on ordinary account, present the following results:

RECEIPTS.

Receipts for 1861.....	\$960,813.08
Receipts for 1862.....	1,449,976.12
Receipts for 1863.....	1,437,075.39

DISBURSEMENTS.

Disbursements for 1861.....	\$1,046,356.41
Disbursements for 1862.....	1,120,550.37
Disbursements for 1863.....	953,681.91

"The gratifying result of all the Treasury operations is that at the end of the fiscal year 1863—with no new debt contracted—with more than \$100,000 of the old extinguished, and upward of \$371,000 paid the General Government—there is a balance on hand of more than a million of dollars, exclusive of the cash to the credit of the Sinking and the School Funds."

"By adverting to the tables which accompany the Comptroller's Report, it appears that whilst the apparent debt of the State on the 30th of September last, was \$14,793,742.51, yet, under the system pursued of annually investing the accruing interest of the Sinking Fund in the bonds of the State, that fund is at present the holder of upward of half that portion of said debt, for which the State is required to provide interest; for deducting from the above amount of apparent debt the sum of \$3,269,321.11, the interest on which is provided by the Baltimore and Ohio Railroad Company, and the whole debt of the State on which she is in fact required to pay interest, is reduced to the sum of \$11,524,421.40: and of this there was held by the Sinking Fund, on the 30th of September last, the sum of \$5,649,656.83, and on other bonds to the amount of \$144,423.39 have been purchased on account of that fund since that day, making the present amount held by the Sinking Fund, \$5,794,080.22, or more than a moiety of the interest bearing debt of the State."

The condition of the Treasury was consid-

ered to be so prosperous, that the Governor refrained from recommending the total repeal of all direct tax laws, only through a consideration of the demands which might arise in consequence of the existing war. A restriction of the rate of taxation, however, he recommended.

There is no uniform school system in the State. In some counties commissioners are elected by the people; in others they are appointed by the Orphans' Court, in others by the county commissioners, and in others still, the courts or the Commissioners perform the duties. Little uniformity exists also in the mode of taxation for this object.

An enrolment of the State militia made in 1862, gave the number between eighteen and forty-five years of age, as 95,442 citizens. After deducting all exemptions for physical disability and other causes, recognized in the State law, there remained 57,558 men subject to military duty. The force sent into the service of the United States and raised for home defence, was fifteen regiments and two companies of infantry; two regiments and two battalions of cavalry, and five companies of light artillery.

There are no institutions for the deaf mutes and blind in the State. Such youthful persons are educated by the State in the institutions of Pennsylvania. The penitentiary of the State pays a fair profit by hiring the services of its inmates to contractors at a fixed rate.

The value of merchandise exported to foreign countries from Baltimore during 1863, was \$8,054,012. The imports during the same time was \$4,078,139; of this amount the value of articles free of duty, was \$118,738; do. paying duty, \$3,959,401.

A part of Maryland is in the middle military department which embraces New Jersey, Pennsylvania, Delaware, Western Virginia, the eastern shore of Maryland and Virginia, and the counties of Cecil, Hanford, Baltimore and Anne Arundel, Md. With headquarters at Baltimore, Gen. Robert C. Schenck was in command until near the close of the year. The difficulties which occurred at Baltimore in 1861, and the well-known sympathy of a considerable portion of the citizens of Maryland at that time with the South, and the importance of the State to the Federal Government, and its location between Washington, the capital, and the northern free labor States, have caused an important military force to be retained within the State. It has been constantly an object with the commanding general to prevent any "aid and assistance" being given to the enemy, by persons in his department. Some examples will illustrate the strictness of the military vigilance in Baltimore. On June 29th two persons, Elmore and Walters, were arrested on a charge of being disloyal and uttering treasonable sentiments. They took the oath of allegiance and were set at liberty. At the same time one Anchor, arrested for "treasonable practices," was examined and paroled.

On the 27th information was communicated to Col. Fish, provost-marshal, in relation to the conduct of Mrs. Julia Sterrett, wife of Capt. Isaac S. Sterrett, late of the United States navy, but now in the rebel service, which induced him to order her arrest. Accordingly, about 4 o'clock in the afternoon, Lieut. Marcus Stirling, of the 1st County Cavalry, proceeded to the family residence, No. 115 North Charles street, and stated the object of his visit, whereupon the door was suddenly closed and entrance refused. The lieutenant then called his guard, which previously had not appeared, and was soon inside. He told Mrs. Sterrett that he had orders to take her into custody, and that she must prepare forthwith to go south. Several persons present remonstrated against the proceedings, and called for the officer to show the authority by which he acted, but he declined complying with their request. But a few minutes elapsed before Mrs. Sterrett appeared, when she was attended to a carriage and driven to the wharf of the Fortress Monroe steamer, and shortly afterward was on her way South. During the proceedings a crowd of four or five hundred persons assembled, and as soon as the lady made her appearance there was a disposition manifested to prevent her departure, but the cavalry in attendance soon cleared the way.

July 7th.—L. Crowther, a British subject, was yesterday before the military authorities, but the nature of the charge did not appear upon the records.

John Brashears was yesterday arrested upon the charge of being disloyal to the Government. Held for an examination.

Frank Airey was arrested on the charge of interfering with the enrolment, and remanded to be examined.

William Muller, an alleged refugee from the South, was arrested, and released upon his parole of honor.

William T. Cronin was yesterday arrested by the officers upon the charge of being disloyal. Took the oath and was released.

Mrs. Elizabeth Cronin was also arrested, charged with attempting to resist the enrolment, but was soon afterward released.

John McCaull, arrested upon the charge of violating the orders of Gen. Schenck, served his term of forty-eight hours' close imprisonment, and was released yesterday.

John Montevre was arrested upon the charge of being disloyal, but took the oath, and is now permitted to keep his soda fountains in operation.

July 11th.—Mrs. E. N. Toy, who keeps the large boarding house corner of Charles and Centre streets, was summoned before the Board of Enrolment, of the Second District, charged with not giving proper information to the enrolling officers with respect to the male boarders of the house. She subsequently furnished the information and was released by the board after being admonished.

John W. McCafferty, J. Casey Barry, and Patrick Lannan were arrested by enrolling officers on the same charge, and were also released on giving correct information, and after being lectured.

Wm. T. Cronin and his wife, residing at Perrymansville, Hartford county, were brought to this city yesterday on the charge of resisting the draft, and taken before Provost-Marshal Cathcart and Commissioner Haverstick. The board, under the circumstances of the case, released the accused after admonishing them of the consequences of a resistance to the law.

The restaurant known as West White House, corner of Baltimore and Greene streets, kept by S. J. Schaffer, was closed yesterday by order of Col. Fish, the proprietor having violated the order of Gen. Schenck in keeping open after the prescribed hour. Schaffer was arrested, but took the oath and was discharged.

Peter Dible, proprietor of a confectionary store on the corner of Baltimore and Schroeder streets, was yesterday arrested upon the charge of being a rebel and keeping his store open after the prescribed hour. He took the oath of allegiance and was released.

July 13th.—John Bosley was arrested by the detec-

tives upon the charge of having powder in his possession. He took the oath of allegiance and was released.

Michael Burke and James Gallagher were arrested upon the charge of abusing the Ethiopians who labor on the fortifications. He was held for further examination.

July 14th.—Thomas Bevan was arrested by Government detectives upon the charge of rendering assistance to rebel soldiers who were wounded, and expressing sentiments of a treasonable character. He took the oath of allegiance, and was set at liberty. Terence McCann was taken into custody upon the charge of receiving letters from the rebel prisoners, and in other respects sympathizing with aiders and abettors of the rebellion. Held for further examination.

Mary O'Keefe and Bridget Jennings were yesterday arrested by the officers upon the charge of giving aid and comfort to rebel prisoners, supplying them with whiskey, &c. Paroled and discharged.

T. J. Huddleston was also arrested upon the charge of having been a soldier in the rebel army and since paroled. He was ordered to be sent across the lines by way of Fortress Monroe. Edward Byrne was taken into custody charged with expressing treasonable language in one of the city hotels. Examined and ordered to be sent across the lines by the Fortress Monroe route.

July 15th.—Patrick Kelly and Richard Johnson were yesterday arrested at Havre de Grace and brought to this city by the military authorities, upon the charge of ferrying deserters across the Susquehanna river. Held for further examination.

Thomas Nash and Laura C. Durdery were yesterday arrested by a Government detective, upon the charge of giving aid to rebel soldiers. They took the oath of allegiance and were discharged.

Joseph Burrowitch, arrested a few days ago upon the charge of attempting to obtain a pass under false pretences, was yesterday discharged after taking the oath of allegiance.

Terence McCann, arrested on the charge of receiving rebel letters for the purpose of delivery, took the oath and was released.

July 16th.—George W. Joice was arrested by the military authorities upon the charge of expressing treasonable sentiments. He took the oath of allegiance and was discharged. John Berry was also arrested upon a similar charge and held for further examination. George Dean, charged with being a refugee from the South, was examined, took the oath and was discharged. William Bagnal and Robert Bagnal were arrested upon the charge of being refugees from the South. They were proven to be British subjects, and were released upon their parole of honor. James Logue applied for a pass to leave the city, but upon refusing to take the oath of allegiance was held for a further examination.

Edward Leary was arrested yesterday by Policeman Frazier, charged with using seditious language, and was sent before Col. Fish.

Eliza Fleming, charged with aiding and sympathizing with, and Catharine Fendley, charged with throwing bread into the cars to, the rebel prisoners on Canal street last evening, were arrested by Policemen Lamden and Kentzler, and taken before Col. Fish, provost-marshal.

July 17th.—Albert Lee was yesterday arrested by the military authorities upon the charge of being a rebel, and refusing to take the oath. Held for further examination. Julius Maychow, G. H. T. Merger, John Willey, and Charles Heldricks were yesterday at the military headquarters, and acknowledged they were refugees from the South. They were examined and sent north, with the understanding that they are not to return until the war is over, and if they do they are to be treated as spies. Catharine Finley, Thomas Nash, and James Logue were yesterday arrested by the officers, upon the charge of aiding rebel prisoners in their passage through the city. They all took the oath and were released.

July 18th.—Mary Staunton was yesterday arrested

by the military detectives upon the charge of aiding the rebels—took the oath of allegiance and was discharged. Sarah Start was also taken into custody, charged with being disloyal—took the oath and was released. John Lee, upon the charge of being a disloyal man, was arrested—took the oath and was released.

R. W. Newman, who was arrested a few days ago by one of the pickets, at the suburbs of the city, upon the charge of disloyalty, yesterday underwent an examination before Capt. French—took the oath of allegiance and was released.

An inexperienced youth, named Hans W. Reed, was arrested at a late hour on Thursday night, upon the charge of hissing national airs at the Front street Theatre. He claimed to be a British subject, and Col. Fish discharged him with the understanding that his father would control his future conduct.

July 20th.—Colin Mackenzie, arrested a few weeks since upon the charge of recruiting for the South, and for disloyalty generally. Case decided and sent south by way of Fortress Monroe.

William J. Stewart, arrested about one month ago, charged with expressing disloyal sentiments. Sentenced to go south by way of Fortress Monroe.

Richard Johnson, James Church, Dennis Charles Driscoll, George W. Howe, James W. Goodis, Nicholas Owen, William Larkin and John S. Dallam, arrested upon charges of disloyalty and expressing treasonable sentiments, took the oath and were released.

Mrs. Amelia Mariner, arrested upon the charge of aiding rebel prisoners and expressing treasonable sentiments, took the oath and was released. Lucy Smith and Stevenson Hiss, arrested upon the charge of cheering for Jeff. Davis, took the oath and were released. A. J. Shriver, a refugee from the South, took the oath and was paroled.

A few days ago information was given Major-Gen. Schenck, to the effect that a number of slaves belonging to the rebels had been imprisoned for a considerable period in the slave prison of Messrs. B. M. & W. L. Campbell, No. 232 West Pratt street. After due consideration he concluded to discharge and confiscate them; and a member of his staff was ordered to authorize Col. Birney, now engaged in the raising of a negro regiment, to proceed to the place and make a suitable disposition of all therein confined. Yesterday morning Col. Birney, accompanied by a small guard, proceeded to the place and informed one of the proprietors of the object of his visit.

He then went through the entire establishment and had all the negroes assembled before him. A number of able-bodied men were found belonging to that old and notorious rebel George H. Stewart, formerly a major-general of militia. All these were enlisted in the negro regiment now forming, whilst other slaves belonging to other rebels were set at liberty. A number of persons who heard of the proceedings assembled in front of the building and seemed highly gratified with the proceedings.

July 21st.—Patrick McCarthy, John Kamoragh and D. F. Mahan were arrested on the charge of expressing treasonable language. They were all held for an examination. Thomas O'Leary was brought from the city jail, where he had been some time upon a similar charge. Samuel B. Wilson was brought in as a refugee from the South, and Henry Kemp and Wm. H. Ward, arrested upon the charge of disloyalty. They took the oath of allegiance and were discharged.

July 22d.—The following cases are recorded on the military police docket of yesterday, at the Gilmer House: Frank McIntire was arrested by the military detectives upon the charge of resisting an enrolling officer; Joseph Beehler was arrested upon the charge of making false representations concerning the position and resources of the enemy; S. Hamilton Davis, arrested on the charge of being a rebel spy; John Krim, arrested upon the charge of being a desperate rebel and with having been in the rebel army. All held for a further examination. Henry Forner, Moses Hitson, Jacob Ensor, and George Lowers were arrested upon

the charge of being blockade runners. Held for a further examination. George Chery, arrested upon the charge of disloyalty, readily took the oath of allegiance and was discharged. Patrick Collins was arrested upon the charge of having Government clothing in his possession, and awaits an examination. Lawrence Sands, arrested upon the charge of expressing treasonable language, and Patrick O'Hearn, upon a similar charge, took the oath and were set at liberty.

July 27th.—Owen P. Connolly was arrested and taken to the eastern district station by citizen George R. Lawton, on a charge of wishing that Jeff. Davis would give the Union army —. He was held for an examination before the provost-marshal.

July 28th.—Michael Foley, arrested about four weeks ago upon the charge of expressing disloyal sentiments, yesterday took the oath of allegiance and was discharged. James Lloyd, Wm. E. Miller, Andrew Hunter, and Henry Mankin were also arrested upon the charge of disloyalty, but were set at liberty after taking the oath.

John Mather, arrested upon the charge of selling liquor to soldiers, remains in custody until a further examination. Joseph Dunker and John G. Biddy, arrested upon the charge of disloyalty and the expression of treasonable sentiments; held for an examination. John Campbell, upon the charge of charging too much hack hire to Federal officers; held for an examination.

July 29th.—David Ross was arrested upon the charge of swearing that he despised soldiers' clothes and all who wore them. Richard R. Lynch, arrested upon the charge of abusing Federal soldiers; held for a further examination. Joseph Dunkell, arrested for using treasonable language, and John Campbell, charged with charging too much hack hire in the case of Federal officers. Both were discharged. There was no proof in the case of Campbell.

July 30th.—William G. Whittingham, and F. M. Hancock, who were arrested upon the charge of expressing treasonable sentiments, yesterday underwent an examination before Capt. French, and were discharged after taking the oath of allegiance. Rev. Peyton Harrison was also arrested upon a similar charge, and held for a further examination. William D. Caldwell and Martha A. Caldwell were arrested upon the charge of being disloyal to the Federal Government. They took the oath of allegiance and were set at liberty. Thomas Davis and Thomas Wicket, arrested yesterday upon the charge of being refugees from the South, were conveyed to the Gilmer House, and now await a further examination. Thomas M. Clark and Adelia Clinton were also arrested upon the charge of disloyalty, but took the oath and were released.

During the month of July arrests were made of 361 persons on various charges by the military authorities. Of the number 317 took the oath and were released, 5 were sent to Fort McHenry, 3 to Washington for the action of the authorities there, 11 to the North, 6 across the lines, and the remaining 19 were held for a further examination.

Aug. 1st.—Shortly after the breaking out of the rebellion a young man named William D. Brown, well known in South Baltimore as a shipbuilder, left here, went south, and enlisting in the rebel army, received a captain's commission. In the recent battle near Gettysburg he received a mortal wound, and was buried by the Federal soldiers. At the instance of his mother, the remains were exhumed and brought to this city and deposited in the public vault of the cemetery. As it was designed to have the body buried in the lot of the family, Mr. Charles R. Coleman, cashier of the Mechanics' Bank, and a relative of the deceased, called on General Schenck, and was assured that no interference would be made provided that the proceedings were conducted without display.

Accordingly, the relatives and friends of the deceased assembled at the cemetery (public notice having been given in the newspapers), and attended the interment, the Rev. Henry Slicer officiating. As soon as the exercises terminated several military officers

appeared and arrested eighteen of the party. They were conducted in carriages to the headquarters of General Tyler, in the Gilmer House, and there remained until about nine o'clock, when Col. Cheseborough, of the staff of Gen. Schenck, appeared and released the whole party upon their promise to appear at Gen. Schenck's headquarters this morning at nine o'clock.

There were many persons at the funeral, including a number of ladies, but the latter were not arrested. Of the parties arrested it should be stated that at least three fourths are unconditional Union men, and developed their love of country even on the 19th of April.

Sept. 12th.—Early yesterday morning the attention of Major-Gen. Schenck was called to the publication in the "Baltimore Republican and Argus" of a piece of poetry called the "Southern Cross." This production, which breathed a strong Southern spirit, had been previously published here, in musical sheets, and suppressed, but, notwithstanding, the proprietors of the "Argus" permitted it to reappear in their paper. An order was addressed without delay to Captain French of the provost-marshal's guard (Col. Fish being sick) to proceed forthwith and arrest the publishers and editor, viz.: Beale H. Richardson, Frank A. Richardson, proprietors; and Stephen J. Joice, principal editor. The two last mentioned were arrested about half past one o'clock at the publication office, corner of Baltimore and Gay streets, and the senior partner at his residence, Saratoga street. They were conveyed under guard to the quarters of Colonel Fish, corner of Eutaw and Camden streets, with strict orders not to be allowed to communicate with any person whatever. Also to send them under guard beyond the Federal lines south, by way of the Baltimore and Ohio Railroad, with the understanding that they shall not return during the war. The wording of the order precluded them from receiving a change of clothing, an interview with the members of their families, or assistance of any kind, and at the hour specified they were rapidly on their way to Dixie.

[Since the first edition of this volume, Mrs. Joice writes: "My husband had no opportunity of obtaining either a change of clothing or a dollar of money to supply his wants in a strange country; and at no time was he allowed to see a member of his family before being hurried away; his wife and children were entirely ignorant of his arrest and banishment until after he was on his way from home." Neither did Mrs. Richardson see her husband or give him clothes or money]. Mr. Beale H. Richardson is about sixty years of age, has published the "Republican and Argus" for a period of about twenty years. His son, Frank Richardson, succeeded to the chief proprietorship of the paper about four years since; and Mr. Joice has been editing the paper about the same length of time.

Arrests were also made for similar causes in several counties of the State.

On the 27th of June General Schenck caused the following order to be issued:

Special Order.

HEADQUARTERS, MIDDLE DEPARTMENT,
EIGHTH ARMY CORPS,
BALTIMORE, June 27th, 1863.

There is an association existing in the city of Baltimore known as the "Maryland Club." The meetings of this body, and of those who frequent its rooms, or are entertained by its members, take place at a building on the corner of Franklin and Charles streets. Departing from the original character and purposes of its institution, this club has for a long time past degenerated into a resort for those who are disaffected toward the Government, hostile to its legally constituted authorities, and who give countenance, encouragement, and aid to the unnatural and causeless rebellion by which our institutions and national integrity are sought to be overthrown. So dangerous and mischievous an association cannot be permitted longer to maintain this attitude in a loyal community. The "Mary-

land Club" is therefore suspended, and its house of meeting taken possession of and closed.

In the execution of the order the names of all persons found in the building, and of all who belong to the association, and of all who habitually frequent it, will be taken, and an inventory will be made of the property and records of the papers of the association, and the same held subject to future orders.

By command of Major-General SCHENCK.

DONN PIATT,

Lieut.-Col. and Chief of Staff.

The building occupied by the club was located on the corner of Franklin and Cathedral streets, and their interior arrangements were said to compare favorably with any similar association in the country. General Schenck, in sending one of his staff to take possession of the building, announced his reasons therefor. The principal one was, that it had degenerated into a political club, whose members were opposed to the Federal Government. A few members were present when the military entered, on Sunday morning. They soon retired. Col. Piatt gave orders that nothing should be injured or removed, and an inventory be taken of the furniture, library, wines, and other stores. A short time afterward the Alston Association Club and the Germania club houses were closed by orders of General Schenck. The object of the former was principally for the promotion of the fine arts, whilst that of the latter looked to the improvement of both mind and body, in reading choice works of science, literature and art, in billiards and other healthful games. The following statement was made by the leading press of the city:

There are many loyal men who belong to these two clubs, whose standing in society is certainly unquestionable, and some of these complain of the execution of an order which deprives them of all the benefits they formerly enjoyed, simply because there are some amongst them who are unfavorable to the present administration. Some members of the Germania have had an interview with Col. Piatt, chief of the general's staff, and have offered to produce their constitution, papers, and lists of members for examination, but they are assured that if all the members will take an oath of allegiance their fine building shall be reopened, and thus the matter stands. The fact is that General Schenck's duties, especially within the past two weeks, have been so onerous, requiring almost constant labor, that he cannot be expected to give such matters a thorough investigation at present. Let the members exercise patience, cultivate a spirit of contentment, and it may be, ere long, that their difficulties and inconveniences will terminate.

On the 2d of July, Gen. Schenck issued a proclamation prohibiting the citizens of Baltimore city and county from keeping arms in their possession unless enrolled as volunteer companies for the defence of their homes. The execution of the order was intrusted to Gen. E. B. Tyler, assisted by the provost-marshal and chief of police. At ten o'clock, Marshal Vannostrand appeared at headquarters, when the 51st Massachusetts volunteers, Col. Sprague, were placed at his disposal. The subsequent proceedings were thus described by the same authority above quoted:

These men acted in concert with the police, and being formed into parties of three and four, were soon

diligently engaged in searching the houses, particularly those occupied by suspected parties. Furniture wagons were provided the parties, and as soon as arms of almost every description were discovered in the dwellings, they were placed therein. In many instances the residences of citizens known to be loyal to the Government were not searched, but from others were gathered muskets, carbines, rifles, revolvers of all kinds, sabres, bayonets, swords, bird and ducking guns, in considerable quantities. Some of the owners took the precaution to attach their names to the weapons taken, in order that they may recover them at no distant day. In some instances parties refused to permit the search, when they were arrested and held for a further examination.

On the 3d of July, Gen. Schenck issued the following proclamation :

HEADQUARTERS, MIDDLE DEPARTMENT, }
EIGHTH ARMY CORPS, }
BALTIMORE, July 3d, 1863. }

To-morrow is the anniversary of our National Independence. It will be celebrated here and elsewhere throughout the land, with various forms of public observance. One single and appropriate demonstration all can make. Let every man on that day show his colors. I request and recommend, therefore, that every house and place of business of every loyal citizen of Baltimore shall have displayed upon it to-morrow, from ten o'clock A. M. to six P. M., the American flag. Let this be done, the ensign being large or small, according to the means and opportunities of each person, and the city will be clothed with the glorious and honored emblem of our nationality. If there be any spot where it does not appear, its absence there will only prove that patriotic hearts do not beat beneath that roof.

ROBERT C. SCHENCK,

Major-General Commanding.

Some resistance was made to the enrolling officers under the acts of Congress providing for a draft or conscription. In Harford county, in July, the barn of an enrolling officer and another citizen were burned. An assessment was immediately ordered by Gen. Schenck of three thousand dollars, upon "persons known to be disaffected to the loyal Government of the country and encouragers of rebellion, and who reside within six miles from the points where the barns were burnt." Fourteen hundred dollars were assessed in like manner to pay for the destruction of buildings in Anne Arundel county.

The enlistment of colored men for the army occasioned much excitement in the State. The white male population of Maryland in 1860, was 256,839; the free colored male 39,746, and the male slaves, 44,313. Col. Birney was authorized by the Secretary of War, in July, to enlist the free negroes into the service. It was decided by the War Department to credit colored troops to the State, the same as any other troops. The enlistment occasioned the absconding of slaves in large numbers, and led to the discussion of various questions. By those who were non-slaveholders it was urged, that to take away from the State the hearty, strong, and able free blacks who did the manual labor on the farms of the seven comparatively free counties of the State and in the city of Baltimore, would leave those sections of the State without labor, or else compel them, the most loyal sections of the State, to hire slave labor. They said: "It is well known

that free white labor will not enter the State to supply the place of the free colored laborer while slavery continues to exist here. This at once gives a new value to the institution which no loyal man desires should be permanent, and which it has been both hoped and conceded the war would destroy, and which, likewise, the Administration has taught us to believe it was its policy to rid us of forever."

It was also urged that the course pursued by Col. Birney of enlisting none but free persons, would double the value of slave property, and indirectly put money into the hands of those hostile to the Government. To avoid such a result, they urged that slaves should bear their proportion of the public burden, and should be enlisted equally with the free persons of color. The views of the expediency of such enlistments brought up the question of its legality. The affirmative was argued in the public press by Judge Hugh L. Bond, and the negative by Governor Bradford. The views of the Government were doubtless expressed in the following letter of Judge Advocate General Holt:

JUDGE ADVOCATE GENERAL'S OFFICE, }
August 26th, 1863. }

Hon. E. M. Stanton, Secretary of War :

Sir—I have read and carefully considered the letter of the Hon. Hugh L. Bond, addressed to yourself under date of the 15th inst., and mainly concur in his views, which are certainly presented with much force.

The right of the Government to employ for the suppression of the rebellion persons of African descent held to service or labor under the local law, rests firmly on two distinct grounds: First, as PROPERTY: Both our organic law, and the usages of our institutions under it, recognize fully the authority of the Government to seize and apply to public use private property, on making compensation therefor. What the use may be to which it is to be applied does not enter into the question of the right to make the seizure, which is untrammelled in its exercise save by the single condition mentioned.

Secondly, as PERSONS: While those of African descent held to service or labor in several of the States, occupy under the laws of such States the status of property, they occupy also under the Federal Government the status of "persons." They are referred to *eo nomine* in the Constitution of the United States, and it is not as property but as "persons" that they are represented on the floor of Congress, and thus form a prominent constituent element alike in the organization and in the practical administration of the Government.

The obligation of all persons—irrespective of creed or color—to bear arms, if physically capable of doing so, in defence of the Government under which they live, and by which they are protected, is one that is universally acknowledged and enforced. Corresponding to this obligation is the duty resting on those charged with the administration of the Government, to employ such persons in the military service whenever the public safety may demand it. Congress recognized both this obligation on the one hand and this duty on the other, when, by the 12th section of the act of 17th July, 1862, it was enacted that "the President be and he is hereby authorized to receive into the service of the United States, for the purpose of constructing intrenchments, or performing camp service, or any other labor, or any military or naval service, for which they may be found competent, persons of African descent, and such persons shall be enrolled and organized under such regulations, not inconsistent with the Constitution and laws, as the President may prescribe."

The terms of this act are without restriction, and no

distinction is made, or was intended to be made, between persons of African descent held to service or labor, and those not so held.

The President is empowered to receive them all into the military service and to assign them such duty as they may be found competent to perform. The tenacious and brilliant valor displayed by troops of this race, at Port Hudson, Milliken's Bend and Fort Wagner, has sufficiently demonstrated to the President and to the country the character of the service of which they are capable. In the interpretation given to the Enrollment Act, free persons of African descent are treated as "citizens of the United States," in the sense of the law, and are everywhere being drafted into the military service.

In reference to the other class of persons of this race—those held to service or labor—the 12th section of the act of 17th July is still in full force, and the President may in his discretion receive them into the army and assign them such field of duty as he may deem them prepared to occupy. In view of the loyalty of this race, and of the obstinate courage which they have shown themselves to possess, they certainly constitute at this crisis in our history a most powerful and reliable arm of the public defence. Whether this arm shall now be exerted is not a question of power or right, but purely of policy, to be determined by the estimate which may be entertained of the conflict in which we are engaged, and of the necessity that presses to bring this waste of blood and treasure to a close. A man precipitated into a struggle for his life, on land or sea, instinctively and almost necessarily puts forth every energy with which he is endowed, and eagerly seizes upon every source of strength within his grasp; and a nation battling for existence, that does not do the same, may well be regarded as neither wise nor obedient to that great law of self-preservation, from which are derived our most urgent and solemn duties. That there exists a prejudice against the employment of soldiers of African descent, is undeniable; it is, however, rapidly giving way and never had any foundation in reason or loyalty. It originated with and has been diligently nurtured by those in sympathy with the rebellion, and its utterance at this moment is necessarily in the interests of treason.

Should the President feel that the public interests require that he shall exert the power with which he is clothed by the 12th section of the act of 17th July, his action should be in subordination to the constitutional principle which exacts that compensation shall be made for private property devoted to the public uses. A just compensation to loyal claimants to the service or labor of persons of African descent enlisted in our army, would accord with the uniform practice of the Government and with the genius of our institutions.

Soldiers of this class, after having perilled their lives in defence of the Republic, could not be reënslaved without a national dishonor revolting and unendurable for all who are themselves worthy to be free. The compensation made, therefore, should be such as entirely to exhaust the interest of the claimants: so that when soldiers of this class lay down their arms at the close of the war they may at once enter into the enjoyment of that freedom symbolized by the flag which they have followed and defended.

Very respectfully, your obedient servant,

J. HOLT, Judge Advocate General.

These views were subsequently adopted in the action of the Government as appears by the following order of the Secretary of War:

WAR DEPARTMENT, ADJUTANT GENERAL'S OFFICE,
BUREAU FOR THE ORGANIZATION OF COLORED TROOPS.
WASHINGTON, October, 1863.

In accordance with orders from the President of the United States, the following recruiting stations have been established for colored troops in the State of Maryland: Baltimore; Havre de Grace, Hartford county; Broad Creek, Cecil county; Chestertown, Kent county; Queenstown, Queen Anne's county; Kent Island Landing, Kent county; Oxford, Talbot

county; Slaughter's Creek, Dorchester county; Princess Ann Wharf, Somerset county; Forrest Wharf; St. Mary's county; Leonardtown, St. Mary's county; Benedict, Charles county; Lower Marlboro, Calvert county; Monocacy, Frederick county; Hagerstown, Washington county; Annapolis, Anne Arundel county; Ellicott's Mills, Howard county; Cherrystone Creek, Northampton county, Va.; Chesconessex Creek, Accomac county.

All claims by alleged owners of slaves who may be enlisted will be laid before the board appointed by the President, and consisting of Hugh E. Bond, Thomas Timmons, and L. E. Straughn. The board will hold its session at Baltimore, Md.

Rolls and recruiting lists will be furnished the board for public information, and on demand exhibited to any person claiming that his or her slave had been enlisted.

Claims must be presented within ten days after the filing of the said rolls. No claims will be received or entertained from any person who is or has been engaged in rebellion against the Government of the United States, or who in any way has given aid or shall give aid or comfort to the enemies of the Government; and all claimants shall file with their claims an oath of allegiance to the Government of the United States.

Col. Wm. Birney, 2d United States colored troops, recruiting and mustering officer for the State of Maryland, will furnish official copies of all muster-in rolls for the information and guidance of the above board.

Any citizen of Maryland who shall offer his or her slave for enlistment into the military service shall, if such slave be accepted, receive from the recruiting officer a certificate thereof, with a descriptive list of such slave, and become entitled to compensation for the service or labor of said slave not to exceed the sum of three hundred dollars, upon filing with the above board a valid deed of manumission and release, and making satisfactory proof of title; and any slave so enlisting shall be forever thereafter free.

All enlistments will be made in accordance with the provisions of General Order No. 329, current series, War Department.

By order of the Secretary of War:

C. W. FOSTER, Assistant Adj't-Gen'l Volunteers.

Such was the disposition of the slaves to cross the lines and enter the service in the counties bordering on the city of Washington, that patrols were established by the owners to arrest them. Thus most of them were stopped before they reached their destination. It was distinctly asserted by the press in September that in twelve months, with or without slave enlistments, there would not be a slave in Maryland who desired to be free except the aged and infirm.

But another and still more important question came under discussion during the latter part of the year. It related to the emancipation of the slaves. The development of the views on this subject is shown in the movements of the political organizations. On the 23d of May, 1861, a Union State convention was convened at Baltimore which defined the position of the Union men of Maryland, and provided for the appointment of a State Central Committee; under the auspices of this committee a State convention was assembled, officers nominated, and the State election held in November of that year. In the progress of events Union Leagues were organized throughout the State, which were represented by the Grand League of the State of Maryland. In the spring of 1863, the Union men desired a

conference and organization, "that they might be able more effectually to sustain the National Administration in its great struggles." In response to resolutions of a mass meeting in Cumberland on April 30th, the Grand League issued a call for a State convention to assemble in Baltimore on June 16th. The call was addressed to "all persons who support the whole policy of the Government in suppressing the rebellion." Meantime a meeting of Conservative Union men representing about half of the counties of the State was held in Baltimore on May 14th, which resulted in a meeting of the State Central Committee above mentioned, by whom a State convention was called to meet on June 23d. The convention called for June 16th met and adopted the following resolutions:

Resolved, That the unconditional Union men of Maryland ought to vote for no candidate for Congress who does not avow himself in favor of giving a hearty support to the whole policy of the Administration, and pledge himself to enter and abide by the Administration caucus for Speaker of the House of Representatives.

Resolved, That the unconditional Union men of Maryland ought to nominate and vote for no candidate for the General Assembly who does not pledge himself to call a constitutional convention, to assemble at the earliest practicable period.

Resolved, That the policy of emancipation ought to be inaugurated in Maryland.

They made no nominations but appointed a committee of conference and adjourned to the 23d. The only general officers to be chosen at the election in November were a comptroller and commissioner of the Land Office. Members of Congress from districts were also to be chosen. On the 23d both conventions assembled. They were designated, for distinction sake, as the Union League Convention, and the State Central Committee Convention. The Committee of Conference of the former proposed to a like committee appointed by the latter, that both conventions should adjourn *sine die*, after uniting in a call for a third convention to meet at a future day for the purpose of making nominations. The latter committee declined the proposition, and as the former made its adoption an alternative, both committees separated.

The convention called by the State Committee then adopted the following, with other resolutions:

The State of Maryland, faithful as ever to the principles of national unity and independence which actuated our forefathers; firm in its reliance on the Government they founded, and undisturbed in its trust by the two years of war which have deluged our fields with blood, sends these her delegates from every quarter of her territory to renew her solemn pledge to the world in behalf of that Constitutional Government of the United States, which for more than three quarters of a century compelled the respect of mankind and secured the liberty, happiness, and prosperity of all its people.

In testimony whereof, it is by this convention

Resolved, 1st, That we consider it our proud privilege to republish our faith, and to set forth our determination in the face of those enemies of our common

country who now stand in hostile array on the soil of Maryland eager to drag her into the vortex of national ruin.

Resolved, 2d, That it is the paramount duty of every citizen to proclaim his unwavering support of the Union of these States as the only safeguard against domestic anarchy and foreign interference; that in the Union and Constitution may be found the quiet, peaceful remedy for every political ill that can befall a just and law-abiding people; and that we should now and forever discountenance every effort, from whatever quarter, to sever the bonds that have so long held us together in harmony as a nation.

Resolved, 3d, That her unquestionable duty is to stand by the constitutional authorities of our country in the firm, unflinching prosecution of a war wickedly forced on us; to rebuke with cordial alacrity every effort to create disunion by the formation of parties or factions opposed to the Government or injurious to the Constitution; and with patriotic zeal, to cast aside all personal predilections; all differences upon subordinate measures of State policy, so that by unity of purpose and unity of action the Union itself shall be redeemed and perpetuated.

Resolved, 4th, That as the sword alone is tendered to us by the enemies of the Union, we have no alternative but the acceptance of that sad arbitrament; that rebellion is not to be conquered by politics; that this convention ignores all issues, local or national, but those of war, until treason shall succumb before an offended people.

A resolution was also adopted declaring that the Legislature, at its next session, should make provision for submitting to the people the question of the call for a constitutional convention. They nominated S. S. Maffit for comptroller, and Wm. L. W. Seabrook for commissioner, and adjourned. The convention called by the Grand League after the failure of the Committee of Conference to agree, nominated H. H. Goldsborough for comptroller, and Wm. L. W. Seabrook, above mentioned, for commissioner. The following resolutions, offered by a member, were unanimously adopted, and the convention adjourned:

Resolved, That the Union men of Maryland are unconditionally such, and in favor of the most vigorous measures for the suppression of the rebellion, and the restoration of the National authority throughout the Republic.

Resolved, That there is no such thing in times of rebellion as supporting the National Government without supporting the Administration of the National Government; that the administration of the National Government is confined by the Constitution to the President, assisted in their several spheres of duty by the administrative departments; and that therefore, while the freedom of speech and of the press should not be arbitrarily infringed, therefore the measures of the President, and the general policy of his administration, should, under the present trying circumstances of the country, be sustained by all true patriots in a spirit of generous confidence, and not thwarted by captious criticism or factious opposition.

The division of the Union men of the State now became complete. One party was designated as Union men and the other as Unconditional Union men; and emancipation became one of the most important subjects of discussion in the political canvass. On the 11th of September the State Central Committee issued an address to the people of the State, in which they

say that it is evident, in their opinion, that a party entertaining more ultra views than they would deem it prudent or advisable to sanction—demanding peremptory emancipation, without regard to constitutional rights, or even the reasonable convenience of those who have been heretofore, and are now, connected with the institution of slavery in Maryland, have indicated a purpose to make this the paramount and leading issue in the approaching canvass, at the imminent risk of disturbing the harmony of the Union party. They further say :

Whatever shape this movement may assume, it may well be doubted by conservative men, whether the aggravation of feeling it is certain to produce, may not have the effect of retarding rather than facilitating the object proposed to be accomplished. The only regular and constitutional mode of dealing with a subject like this, is by direct appeal to the people in the modes which they have chosen to indicate. Any effort to precipitate a more speedy settlement of the question, unless by common consent, is hardly likely to receive the countenance of any large portion of our citizens, whether for or against the institution of slavery in Maryland. This committee cannot understand in what manner immediate emancipation is proposed to be brought about, unless by the interposition of a power beyond the Constitution and laws of the State. The minority as well as the majority have rights, and they will claim to be heard in the final settlement of this question. We can approach the subject but in one way.

When a State Convention is called to assemble, it will be time enough to bring up an agitation looking to the fullest interchange of opinion, before the final adoption of any plan, by the only recognized body to which all such subjects of right belong. That time has not yet come. The people have already become dissatisfied with the radical views of many who have taken sides in this issue, and it is believed that they have never been more united than in their purpose to rebuke the ultra spirit which has shown itself. This committee will be slow to believe, that in a State, loyal as Maryland is known to be, the power of this Government will be used in forcing an issue which cannot fail to throw a damper upon the efforts of Union men. Slavery, it is said, has been the head and front of this rebellion. It is no doubt true that both North and South it has been a fruitful source of agitation for years past. But it is no excuse for violence and a disregard of constitutional law that such has been the working of our political system. The evil of slavery attaches equally to those who formed our Federal Constitution, as to the Border States men of the present day, who are innocently connected with it.

The Union men of the State of Maryland, represented by this Committee, belong to all parties, and they have made common cause in this great conflict for the life of the Republic. Emancipationists and slaveholders stand shoulder to shoulder in support of the Government. There are those who believe that the State of Maryland should avail herself of an early occasion to adopt some principle of gradual and compensated emancipation; and there are those again who believe that during the existence of this rebellion, and while the State is virtually under military control—a large section being still held under martial law—it is advisable in order to secure all shades of opinion in a common effort to restore the Union, to ignore all side issues, and move in solid phalanx, with one object and one purpose to engage their attention.

There is still another class who, convinced by every day's experience of the ruinous effects of this war upon the Border States, believe that those who cling

most to the idea of immediate emancipation, must be unreasonable indeed, if they could desire a more rapid change than that which is now going on, and has left the institution of slavery within our limits already scarcely worth the trouble of contending for. Upon one point, however, there is entire accord, and that is, that the safety and integrity of this Union rises above every other issue, whether public or private; and the authorities of the Government, whether slavery is recognized or not, must be sustained in putting down this rebellion.

On the 16th of September the Unconditional Union State Committee, appointed by the convention which assembled on June 16th, issued an address to the people of the State, in which they say :

We disavow all measures for the violent abrogation of slavery in our midst. We claim that in the exercise of our prerogatives as American citizens we owe it to ourselves to discuss fairly, and finally to dispose of, this evil; and we hereby solemnly declare it to be our conviction that the dignity, the honor, and the prosperity of our people alike demand that we should legally and constitutionally abolish the institution at the earliest period compatible with the best interests of the State, and the permanent welfare, stability, and unity of the nation.

Since "the people know that the substance (of slavery) is already gone, and that only the skeleton has been left," we are of the opinion that the sooner the skeleton is removed the better it will be for the true interests of the State and the nation; at the same time we are fully persuaded that this can only be accomplished by at once bringing the people face to face with it in the election of such men only as are willing to discharge their whole constitutional duty by accepting their full measure of responsibility in calling a Constitutional Convention at the earliest moment practicable.

We are admonished by the refusal of the last Union Legislature to provide for taking the sense of the people in respect to a Convention, that it will not do to take for granted, because a candidate is heartily in favor of suppressing the rebellion, therefore he will favor the earliest removal of its producing cause, or give to the people the opportunity so to declare.

That men who seek to legislate in this crisis need first to emancipate themselves from the influence of the great disturbing interest is, we think, abundantly attested by the fact that the "Convention Bill" which passed the House of Delegates last year, and which was defeated in the Senate on the very last night of the session, contained a clause that the Convention therein provided for should "not alter or abolish the relation of master and slave, as it now exists in the State."

In presenting the nominees of the Unconditional Union party for the suffrages of the people of Maryland we desire to have no concealment of our views or their own. We believe a manly, frank course is the best, and that true men will despise hypocrisy and subterfuge in this hour of the nation's peril, and recognize hostility to the Government, conceal itself under whatever garment of loyalty it may, or call itself by what title it may choose.

Fellow-citizens, the men we present to you are in favor of supporting the Administration in every effort to put down the rebellion, and in every measure which it has thought necessary for the permanent peace of the country when the rebellion shall have been subdued.

We believe that the only way to put down the rebellion is to put it down by force of arms, and for this purpose we are willing to vote every dollar necessary, and to give every available man, black or white.

We do not think ourselves at all superior to our ancestors of Revolutionary memory, who fought side

by side with colored troops, nor to Andrew Jackson, who commanded and complimented the colored militia who fought with him at New Orleans. We believe it is the bounden duty of the President to use all force and every weapon which God has put within his grasp, and the laws of the United States have authorized him to wield, in defence of the nation.

Traitors have no choice as to the weapons which are to be used in their destruction, and loyal men only ask that they be speedy and sure.

Nevertheless, while we yield the right of the Government to summon to the field every person capable of bearing arms, we hold that it is right, and shall invoke the assistance of the Government to recompense loyal masters who are thus deprived of services to which they are entitled by the laws of the State.

The committee then proceed to discuss the entire question of emancipation as it relates to the welfare of Maryland.

The contest for State officers was between these two divisions of the Union party. In the Fifth Congressional District was a party opposed to the measures of the Administration, of such strength as to elect their candidate for Congress. Their views on the questions at issue in the State election are thus expressed by one of the county conventions in the district:

Resolved, That as Union men, we are not only opposed to emancipation in this State, but even to all agitation of the question at this time as premature and unwise, and likely to cause division where there should be union, and permanent discords where there should be abiding harmony.

Resolved, That we support the Union for the sake of the Constitution, and are opposed to the exercise by the General Government of all unauthorized powers, deeming it of little consequence if the Constitution is to be sacrificed, whether it is effected by usurpation or rebellion.

Resolved, That our devotion for the Union increases with its perils; and regarding it as the palladium of our liberties, the ark of true republicanism, and the hope and asylum of the oppressed of all nations, we yield it our heartfelt allegiance, and will ever support it by legal and constitutional means.

The day of election was Tuesday, the 3d of November. As the time approached the following correspondence took place, and was published:

OFFICE OF UNION STATE CENTRAL COMMITTEE, }
BALTIMORE, October 26th, 1863. }

To the President:

SIR: A suspicion having taken possession of the minds of many loyal Union voters of the State of Maryland, that the election about to take place on the 3d of November will be attended with undue interference on the part of persons claiming to represent the wishes of the Government, I am induced, by what I know to be the desire of a large number of our people, and in furtherance of applications daily made to me, to ask most respectfully that you would place me, as chairman of the Union State Central Committee, in possession of your views upon this subject, in order that they may be communicated to loyal voters throughout this State.

I will beg you to believe, Mr. President, that it is with no doubt or distrust on my part, as to what will be your response to this letter, that I ask this favor at your hands; but simply to satisfy a large class of persons who believe that an expression of opinion on your part would not be without its benefit to the people of the State in promoting what we all desire, a fair expression of the public voice.

I am, with great respect, your obedient servant,
THOMAS SWANN,
Chairman of the Union State Central Committee.

EXECUTIVE MANSION, }
WASHINGTON, October 27th, 1863. }

Hon. Thomas Swann:

DEAR SIR: Your letter, a copy of which is on the other half of this sheet, is received. I trust there is no just ground for the suspicion you mention; and I am somewhat mortified that there could be a doubt of my views upon this point of your inquiry. I wish all loyal qualified voters in Maryland and elsewhere to have the undisturbed privilege of voting at elections; and neither my authority nor my name can be properly used to the contrary.

Your obedient servant, A. LINCOLN.

On the 31st of October, Governor Bradford addressed the following letter to President Lincoln:

EXECUTIVE OFFICE, }
ANNAPOLIS, October 31st, 1863. }

To his Excellency President Lincoln:

SIR: Rumors are to-day current, and they reach me in such a shape that I am bound to believe them, that detachments of soldiers are to be despatched on Monday next to several of the counties of the State, with a view of being present at their polls on Tuesday next, the day of our State election. These troops are not residents of the State, and consequently are not sent for the purpose of voting, and as there is no reason, in my opinion, to apprehend any riotous or violent proceedings at this election, the inference is unavoidable that these military detachments, if sent, are expected to exert some control or influence in that election. I am also informed that orders are to be issued from this Military Department, on Monday, presenting certain restrictions or qualifications on the right of suffrage—of what precise character I am not apprised—which the Judges of Election will be expected to observe. From my knowledge of your sentiments on these subjects, as expressed to Hon. R. Johnson, in my presence, on the twenty-second instant, as also disclosed in your letter of instructions to Gen. Schofield, since published, in reference to the Missouri election, I cannot but think that the orders above referred to are without your personal knowledge; and I take the liberty of calling the subject to your attention, and invoking your interposition to countermand them. I cannot but feel that to suffer any military interference in the matter of our elections, or to prescribe any test of oath to voters when all the candidates in the State—with the exception, perhaps, of two or three in one Congressional District—are all loyal men, would be justly obnoxious to the public sentiment of the State. There are other reasons why such proceedings would appear as an offensive discrimination against our State. Our citizens are aware that highly important elections have recently taken place in other States, without, as it is believed, any such interference by the Government authorities; and if votes by hundreds of thousands have been allowed to be cast there without objection, and with no limit upon the elective franchise other than the State laws prescribe, and where one, at least, of the candidates so supported was considered so hostile to the Government that for months past he has been banished from the country, certainly any such interference as between the loyal men now candidates in this State would, under such comparisons, be more justly objectionable, and finds nothing in the present condition of things here to justify it. I rely, therefore, upon your Excellency for such an order as will prevent it.

I have the honor to be, with great respect,

Your Excellency's obedient servant,
A. W. BRADFORD.

To this letter the President, on the 2d of November, made the following reply:

WAR DEPARTMENT, WASHINGTON, November 2d, 1863.
To his Excellency A. W. Bradford,

Governor of Maryland:

SIR: Yours, of the 31st ult. was received yesterday about noon, and since then I have been giving most

earnest attention to the subject matter of it. At my call Gen. Schenck has attended, and he assures me it is almost certain that violence will be used at some of the voting places on election day, unless prevented by his provost guards. He says that at some of those places the Union voters will not attend at all or run a ticket unless they have some assurance of protection. This makes the Missouri case of my action, in regard to which you express your approval.

The remaining point of your letter is a protest against any person offering to vote being put to any test not found in the laws of Maryland. This brings us to a difference between Missouri and Maryland, with the same reason in both States. Missouri has, by law, provided a test for the voter with reference to the present rebellion, while Maryland has not. For example, General Trimble, captured fighting us at Gettysburg, is, without recanting his treason, a legal voter by the laws of Maryland. Even General Schenck's order admits him to vote, if he recants upon oath. I think that is cheap enough. My order in Missouri, which you approve, and Gen. Schenck's order here, reach precisely the same end. Each assures the right of voting to all loyal men, and whether a man is loyal each allows that man to fix by his own oath. Your suggestion that nearly all the candidates are loyal I do not think quite meets the case. In this struggle for the nation's life, I cannot so confidently rely on those whose election may have depended upon disloyal votes. Such men, when elected, may prove true, but such votes are given them in the expectation that they will prove false. Nor do I think that to keep the peace at the polls, and to prevent the persistently disloyal from voting, constitutes just cause of offence to Maryland. I think she has her own example for it. If I mistake not, it is precisely what Gen. Dix did when your Excellency was elected Governor. I revoke the first of the three propositions in Gen. Schenck's General Order No. 53, not that it is wrong in principle, but because the military being, of necessity, exclusive judges as to who shall be arrested, the provision is liable to abuse. For the revoked part I substitute the following:

That all Provost Marshals and other military officers do prevent all disturbance and violence at or about the polls, whether offered by such persons as above described, or by any other person or persons whatsoever.

The other two propositions of the order I allow to stand. Gen. Schenck is fully determined, and has my strict order besides, that all loyal men may vote, and vote for whom they please.

Your obedient servant,

A. LINCOLN, President of the United States.

The order of Gen. Schenck above mentioned was dated Oct. 27th, but first published in Baltimore in the evening "American" Nov. 2d, and is as follows:

HEADQUARTERS MIDDLE DEPARTMENT, }
EIGHTH ARMY CORPS, }
BALTIMORE, MD., October 27th, 1863. }

It is known that there are many evil-disposed persons now at large in the State of Maryland, who have been engaged in rebellion against the lawful Government, or have given aid and comfort or encouragement to others so engaged, or who do not recognize their allegiance to the United States, and who may avail themselves of the indulgence of the authority which tolerates their presence to embarrass the approaching election, or, through it, to foist enemies of the United States into power. It is therefore ordered:

I. That all provost marshals and other military officers do prevent all disturbances and violence at or about the polls, whether offered by such persons as above described or by any other person whomsoever.

II. That all provost marshals and other military officers commanding in Maryland shall support the Judges of Election on the 4th of November, 1863, in requiring an oath of allegiance to the United States, as the test of citizenship of any one whose vote may be challenged on the ground that he is not loyal, or does not admit his allegiance to the United States, which oath shall be in the following form and terms:

I do solemnly swear that I will support, protect, and defend the Constitution and Government of the United States against all enemies, whether domestic or foreign; that I hereby pledge my allegiance, faith, and loyalty to the same, any ordinance, resolution, or law of any State Convention or Legislature to the contrary notwithstanding; that I will at all times yield a hearty and willing obedience to the said Constitution and Government, and will not, either directly or indirectly, do any act in hostility to the same, either by taking up arms against them, or aiding, abetting, or countenancing those in arms against them; that, without permission from the lawful authority, I will have no communication, direct or indirect, with the States in insurrection against the United States, or with either of them, or with any person or persons within said insurrectionary States; and that I will in all things deport myself as a good and loyal citizen of the United States. This I do in good faith, with full determination, pledge, and purpose to keep this my sworn obligation, and without any mental reservation or evasion whatsoever.

III. Provost marshals and other military officers are directed to report to these headquarters any judge of an election who shall refuse his aid in carrying out this order, or who, on challenge of a vote being made on the ground of disloyalty or hostility to the Government, shall refuse to require the oath of allegiance from such voter.

By order of Major-Gen. SCHENCK.

W. H. CHESEBROUGH, Lieut.-Col. and A. A. G.

On the same afternoon the Governor issued the following proclamation, instructing the Judges of Election to obey the election laws:

PROCLAMATION BY THE GOVERNOR.

STATE OF MARYLAND, EXECUTIVE DEPARTMENT, }
ANNAPOLIS, November 2d, 1863. }

*To the Citizens of the State,
and more especially the Judges of Election:*

A military order issued from the Headquarters of the "Middle Department," bearing date the 27th ult., printed and circulated, as it is said, through the State, though never yet published here, and designed to operate on the approaching election, has just been brought to my attention, and is of such a character, and issued under such circumstances, as to demand notice at my hands.

This order reciting "that there are many evil-disposed persons now at large in the State of Maryland, who have been engaged in rebellion against the lawful Government, or have given aid and comfort or encouragement to others so engaged, or who do not recognize their allegiance to the United States, and who may avail themselves of the indulgence of the authority which tolerates their presence to embarrass the approaching election, or through it to foist enemies of the United States into power," proceeds among other things to direct "all provost marshals and other military officers, to arrest all such persons found at or hanging about, or approaching any poll or place of election, on the 4th of November, 1863, and report such arrest to these headquarters."

This extraordinary order has not only been issued without any notice to, or consultation with the constituted authorities of the State, but at a time and under circumstances when the condition of the State, and the character of the candidates, are such as to preclude the idea that the result of that election can in any way endanger either the safety of the Government, or the peace of the community.

It is a well-known fact that, with perhaps one single exception, there is not a Congressional candidate in the State whose loyalty is even of a question-

able character, and in not a county of the State outside of the same Congressional District is there, I believe, a candidate for the Legislature or any State office, whose loyalty is not equally undoubted. In the face of this well-known condition of things, the several classes of persons above enumerated are not only to be arrested at, but "approaching any poll or place of election." And who is to judge whether voters thus on their way to the place of voting have given "aid, comfort, or encouragement" to persons engaged in the rebellion, or that they "do not recognize their allegiance to the United States," and may avail themselves of their presence at the polls "to foist enemies of the United States into power"? As I have already said, in a very large majority of the counties of the State there are not to be found among the candidates any such "enemies of the United States;" but the provost marshals—created for a very different purpose—and the other military officials who are thus ordered to arrest approaching voters, are necessarily made by the order the sole and exclusive judges of who fall within the prescribed category—an extent of arbitrary discretion, under any circumstances, the most odious, and more especially offensive and dangerous in view of the known fact that two at least of the five provost marshals of the State are themselves candidates for important offices, and sundry of their deputies for others.

The military order, therefore, is not only without justification when looking to the character of the candidates before the people, and rendered still more obnoxious by the means appointed for its execution, but is equally offensive to the sensibilities of the people themselves, and the authorities of the State, looking to the repeated proofs they have furnished of an unalterable devotion to the Government. For more than two years past there has never been a time when, if every traitor and every treasonable sympathizer in the State had voted, they could have controlled, whoever might have been their candidates, a single department of the State, or jeopardized the success of the General Government. No State in the Union has been, or is now, actuated by more heartfelt or unwavering loyalty than Maryland—a loyalty intensified and purified by the ordeal through which it has passed; and yet looking to what has lately transpired elsewhere, and to the terms and character of this military order, one would think that in Maryland and nowhere else is the Government endangered by the "many evil-disposed persons that are now at large."

Within less than a month the most important elections have taken place in two of the largest States of the Union; in each of them candidates were before the people, charged by the particular friends of the Government with being hostile to its interests, and whose election was deprecated as fraught with the most dangerous consequences to its success. One of the most prominent of these candidates was considered so dangerously inimical to the triumph of the National cause that he has been for months past banished from the country, and yet hundreds of thousands of voters were allowed to approach the polls, and to attempt "to foist" such men into power, and no provost marshals, or other military officers, were ordered to arrest them on the way, or so far as we have ever heard, even test their allegiance by any oath.

With these facts before us, it is difficult to believe that the suggestion, that the enemies of the United States may be foisted into power at our coming election, was the consideration that prompted this order; but whatever may have been that motive, I feel it to be my duty to solemnly protest against such an intervention with the privileges of the ballot box, and so offensive a discrimination against the rights of a loyal State.

I avail myself of the occasion to call to the particular attention of the Judges of Election, the fact that they are on the day of election clothed with all

the authority of Conservators of the peace, and may summon to their aid any of the executive officers of the county, and the whole power of the county itself, to preserve order at the polls and secure the constitutional rights of the voters.

It is also made their "special duty" to give information to the State's Attorney for the county, of all infractions of the State laws on the subject of elections; and by these laws it is forbidden to any "commissioned or non-commissioned officers, having command of any soldier or soldiers quartered or posted in any district of any county of the State, to muster or embody any of said troops, or march any recruiting party within the view of any place of election during the time of holding said election."

I need not, I am sure, remind them of the terms of the oath they are required to take before entering upon their duties, and according to which they swear "to permit all persons to vote who shall offer to poll at the election, &c., who in their judgment shall, according to the directions contained in the constitution and laws, be entitled to poll at the same election, and not to permit any person to poll at the same election who is not in (their) judgment qualified to vote as aforesaid."

It is the judgment of the Judges of Election alone, founded upon the provisions of the constitution and the laws of the State, that must determine the right to vote of any person offering himself for that purpose. I trust and believe that they will form that judgment, and discharge their duty, as their conscientious convictions of its requirements, under the solemn obligations they assume; shall dictate, undeterred by any order to provost marshals to report them to "Headquarters."

Whatever power the State possesses, shall be exerted to protect them for anything done in the proper execution of its laws.

Since writing the above, I have seen a copy of the President's letter to the chairman of the Union State Central Committee, bearing the same date with the order, and evidently showing that the order was unknown to him, that it would not have been approved by him if he had known it, and that it is therefore all the more reprehensible.

By the Governor: A. W. BRADFORD.
Wm. B. HILL, Secretary of State.

BALTIMORE, MONDAY EVENING, Nov. 2d, 1863.

After the above was in print, at three o'clock this afternoon, I received from the President the following despatch:

I revoke the first of the three propositions in Gen. Schenck's General Order No. 53, not that it is wrong in principle, but because the military being of necessity exclusive judges as to who shall be arrested, the provision is liable to abuse. For the revoked part I substitute the following: "That all provost marshals and other military officers do prevent all disturbance and violence at or about the polls, whether offered by such persons as above described, or by any other person or persons whomsoever." The other two propositions I allow to stand. My letter at length will reach you to-night.

A. LINCOLN.

Whilst this modification revokes the authority of the provost marshals and military officers to arrest the classes of persons enumerated in the preamble to the order "found at or hanging about or approaching any poll or place of election," it directs them to prevent all violence or disturbance about the polls, &c.

To meet such disturbances the Judges of Election, as I have already stated, are clothed with ample powers, and I had received no previous intimation that there was any reason to apprehend a disturbance of any kind at the polls on the day of election. In the absence of any military display there would certainly seem to be as little cause for such apprehensions as ever before existed. A preparation by the Government by military means to provide for such a contingency will be quite as likely to provoke as to subdue such a disposition. Not only so, but

the military thus required to prevent violence or disturbance about the polls must necessarily be empowered to arrest the parties they may charge with such disorder, and they are still left in effect "the exclusive judges as to who shall be arrested"—a power they may as readily abuse as any other.

I regret, therefore, that I can perceive no such change in the general principles of the order, as to induce me to change the foregoing proclamation.

A. W. BRADFORD.

This proclamation appeared in the daily "American" on Wednesday, Nov. 4th, the day after election, as the editor states:

The Governor's Proclamation was issued on Monday evening, instructing the judges of Election to obey the election laws of the State, and promising them the protection of the State in so doing. This Proclamation was sent to us by the Governor for publication in yesterday (Tuesday) morning's American. On Monday evening, after the Proclamation was in type, a written order reached us from General Schenck peremptorily forbidding its publication until further orders from him. We accordingly took the Governor's Proclamation out of our columns, regretting that such an order should have been issued.

The Proclamation of the Governor, however, appears in our columns this morning, with the sanction of Major-Gen. Schenck, and also a military order in reply to it from the Commanding General. This reply first appeared in our afternoon edition yesterday, before the order prohibiting the publication of the Governor's Proclamation was rescinded. This, we are informed, was not intended by Gen. Schenck, he having sent a verbal order to publish the Governor's Proclamation, with his reply, which was, through some misunderstanding, not communicated to us.

The military order of Gen. Schenck, above mentioned, in reply to Governor Bradford's Proclamation, was as follows:

HEADQUARTERS MIDDLE DEPARTMENT,
EIGHTH ARMY CORPS,
BALTIMORE, MD., November 3d, 1863. }

A very extraordinary Proclamation was issued last evening by his Excellency, A. W. Bradford, Governor of Maryland, in relation to General Order No. 53, from these Headquarters. I will not presume, with my knowledge of Governor Bradford, that that Proclamation was designed to produce collision between the military power and citizens who are assembled at the polls to vote at the election tomorrow; but I cannot doubt that its obvious tendency is to invite and suggest such disturbance. When that Proclamation came to my knowledge, late last night, I felt it to be my duty to take measures for restricting, as far as possible, its circulation in those parts of the State to be most affected by it, until there could go out with it the letter of the President of the United States on the subject, written yesterday to Governor Bradford, a copy of which I have now obtained.

I will make for myself but one or two comments on the Proclamation.

The intimation of the Governor that my Order might have been prompted by some other consideration than patriotic purpose or official duty, is unworthy of reply, and unworthy of him. He knows, and the people of Maryland and of this Military Department know, how single and earnest and constant has been my aim to avoid all side influences, and to keep in view and act steadily upon the idea of maintaining the just authority of the National Government against disloyalty in all its forms, and for the general good only.

It was in this spirit that I issued the General Order in question. Its simple purpose is to prevent traitorous persons from controlling in any degree by their votes, or taking part in the coming election. The

Order is not aimed at candidates, either individually or as a class, as the Governor would presume. Neither is it aimed at, nor can it be by any interpretation, in any way interfere with the rights of loyal voters. It is only framed and intended to exclude from a voice in the election of those who are to administer the affairs, either of the National Government or of this loyal State, such individuals as are hostile to that Government of which Maryland is a part. Will any good citizen pretend that the exclusion of such persons is not a wise and wholesome protection due to those who adhere to and sustain the Constitution and lawful authority? And it is clearly not a hardship to be complained of by the individual challenged for such disqualification, when he is permitted to purge himself by his own oath of allegiance to the Government in the management of which he claims a share. Governor Bradford himself cannot appreciate more highly than I do the sterling loyalty of the great majority of the people of Maryland; but he must know, as I do, that there still remain at large, from forbearance of the Government authority, a very considerable number who are more or less actively engaged in aiding and encouraging Rebels in arms. Even in his Proclamation he admits the existence of such prevailing disloyalty in the counties of at least one of the Congressional districts. But my General Order was only put forth after the receipt, through all the last month, of a great number of letters, petitions, and appeals in person, from respectable and loyal citizens, particularly throughout the Southern part of the State, on both sides of the Bay, imploring the issuing of such an order. I have only failed in complying with their requests, by making its provisions less stringent than justness and fairness to loyal citizens seemed to them to demand.

I would add only, to show with what anxiety I have sought on this occasion to secure peace and good order at the polls, that officers intrusted with this duty have, in every instance, been furnished with written or printed instructions of which the following is one clause: "The officers and men are to be cautioned not to commit or permit any unlawful violence. They must not enter into political discussions, and are to remember that while protecting the polls from Rebel sympathizers, they are conservators of the peace, and are there to support the Judges of Election." Even Governor Bradford could scarcely object to this. I now repeat to the Provost Guards that instruction, and enjoin upon them, that while they enforce the observance of the General Order firmly and faithfully, as directed, they do it in every respect discreetly and temperately. I append copies of the President's letter and of the General Order as modified.

ROBT C. SCHENCK,
Major General Commanding.

The official correspondence was closed with the following letter of Governor Bradford in reply to President Lincoln:

STATE OF MARYLAND, EXECUTIVE DEP'T, }
ANNAPOLIS, November 3d, 1863. }

His Excellency Abraham Lincoln,
President of the United States:

SIR: Your letter of the 2d instant, in reply to mine of 31st ultimo, reached me to-day after I had already read it in the Baltimore papers of this morning. Your Excellency has in this respect the advantage of me, though, following your example, I shall send a duplicate of this to the press, the probabilities are, looking to recent events, that the military authorities will not allow its publication.

When I wrote to you on Saturday last, I had not been able to procure a copy of the military order in reference to the election, and acted merely on the rumors of its character. When I saw it, as I did for the first time on Sunday, I found it even more objectionable than rumor had represented it; and

when I was shown on the same day a copy of your letter to Mr. Swann, in which you say you trust there is "no just grounds for the suspicion" he had expressed, and declaring that you felt "mortified that there could be a doubt upon this point of your (his) inquiry," which point was a suggestion by Mr. Swann "that the election about to take place will be attended with undue interference on the part of persons claiming to represent the wishes of the Government," I rested satisfied that I should receive from you a prompt countermand of the order in question.

If the sending out of one or more regiments of soldiers, distributing them among several of the counties to attend their places of election, in defiance of the known laws of the State prohibiting their presence; ordering military officers and provost marshals to arrest voters guilty, in the opinion of such officers, of certain offences; and menacing judges of election with the power of the military arm in case this military order was not respected, is not an "undue interference" with the freedom of elections, I confess myself unable to imagine what is.

The purport of your Excellency's remarks in your letter to me is confined chiefly to a justification of the exclusion of disloyal voters from the polls by means of the administration of an oath of allegiance. Without stopping to analyze the particular oath in question, it may be sufficient to say that this clause of the order is by far the least objectionable of the three. If any who were once citizens of the United States have been guilty of such conduct as justly disfranchises them, let them take the consequences. I, for one, have not interfered, and shall not interfere to prevent it. But I insist that the judges whom the State has provided are the exclusive judges of the question of such citizenship, and that they shall be allowed to exercise their own judgment upon that question; and I shall never cease to protest against any attempt of the military power, in a loyal State, to control that judgment, and especially against the use of any threats tending to coerce an observance by these judges of any law which such a power shall undertake to prescribe.

The first and third sections of the order are the most remarkable items of the arbitrary authority it assumes. The first places all persons supposed to have given "aid and comfort or encouragement" to persons engaged in the rebellion, and those who "do not recognize their allegiance to the United States," at the mercy of a military officer and provost marshal, and orders the latter to arrest them when "approaching the polls," &c.; and the third clause intimates to the judges of elections, in very unmistakable terms, the dangers they incur in case they disobey the military authority. These sworn officers of the law have a new law prescribed to them in this military order, and for disobedience of which they are to be reported to "these headquarters," and must, of course, take warning of the consequences that will ensue.

I am aware that your Excellency has so far modified the first of said sections as to substitute for it a direction to these provost marshals "to prevent all disturbance or violence about the polls," &c.; and that, in speaking of the terms of the original order, you admit that "these officers being of necessity the exclusive judges as to who shall be arrested, the provision is liable to abuse." But I submit, with deference, that whilst this modification may relieve that part of the order of some of the most immoderate of its powers, it still leaves these officers the exclusive judges of who are guilty of violence or disturbances, and, of course, of who are liable to arrest therefor, and leaves them, consequently, the same opportunity for a similar abuse of power, the probability of which you may the more readily estimate when I inform you that several of them are themselves candidates at the same election for some of our most important offices.

You refer several times in your letter to the Missouri case, and to my approval of your course therein, and seem to think that the two States are in the same condition and have been treated in like manner. Without pausing to compare their condition or their respective liability to violence at the polls, I propose to contrast the proceedings which have severally taken place in the two. You say, "My order in Missouri, which you approve, and Gen. Schenck's order here, reach precisely the same end." The only action of yours in reference to the Missouri case, of which I have expressed approval, or of which I have any knowledge, is, as mentioned in my letter to you, that "disclosed in your letter of instructions to Gen. Schofield," bearing date the 1st of October last; and whether the instructions contained in that letter and Gen. Schenck's order "reach the same end," as you suppose, or not, they certainly propose to reach it by very different means.

To estimate correctly this difference, we must compare the course respectively taken by the department commanders in the two States.

Gen. Schofield, in his order of the 28th of September, 1863, and to which I understand you to refer, when in your letter to him, above mentioned, you commence by saying, "under your recent order, which I have approved," &c., lays down the following as the military law for Missouri on the subject of elections:

"The right," says he, "of the people peaceably to assemble for all lawful purposes, and the right freely to express their will at the polls according to law, are essential to civil liberty. No interference with these rights, either by violence, threats, intimidation, or otherwise, will be tolerated."

Again, in the same order, he says:

"Any officer, soldier, or civilian, who shall attempt to intimidate any qualified voter in the exercise of his right to vote, or who shall attempt to prevent any qualified voter from going to the polls or voting, shall be punished by imprisonment or otherwise," &c.

If these provisions are compared with the first and third sections of Gen. Schenck's order, the contrast, rather than the similarity, will I think be striking.

In your same letter to Gen. Schofield you further say: "At elections, see that those and only those are allowed to vote who are entitled to do so by the laws of Missouri." Not only thus conceding to the State law the right to prescribe the qualifications of the voter, but enjoining upon the military commander to see that he be allowed to enjoy that right.

Though your Excellency refers to the difference in the qualification required of voters in the two States, I can hardly suppose, especially in view of the unqualified and emphatic terms in which you recognize the control of the State laws, that you mean to place that recognition upon the ground that you approve the laws of one State and not of the other; and besides, I think, we might be allowed some benefit of the consideration that in Missouri they have recently held a Constitutional Convention, which enabled them to remodel their laws on the subject of the elective franchise—an opportunity we have not yet enjoyed, and which is necessary for the purpose of such modification, though such necessity might possibly be dispensed with hereafter, in view of the new power which military commanders claim to exercise in the premises.

The conclusion of your Excellency's letter makes an allusion to past precedents in Maryland, and is evidently designed to make the point that I should be the last to complain of such an order, as it is, as you say, "precisely what Gen. Dix did" when I was elected Governor. If such was the case the proceeding at least does not seem to have been very effective in reducing the vote of the State, as I received fifteen thousand more votes than the highest candidate at the Presidential election the preceding year, and when a very large vote was polled in the State. But your Excellency will, I think, find that no such order as the present was ever issued by Gen. Dix.

It is, besides, of some importance to note the

difference in the condition of our State between that time and now. Her present condition requires no comment; but then, I beg leave to remind you, she was hovering upon the brink of secession. Her legislators had been arrested but a short time before, to prevent them passing an ordinance for that purpose; and at the election referred to there was an organized secession party, under the guise of a peace party, with a nominated ticket in every county, and believed to be then actuated with the determination to carry the State into rebellion.

Under these circumstances, what was the order issued by Gen. Dix? It was issued on the 1st November, 1861, and referring to the authority vested in him "to arrest all persons in rebellion against the United States," proceeded to direct the arrest of persons appearing at the polls "known to have been recently in Virginia bearing arms against the authority and forces of the United States, and who have returned to their former homes with the view of taking part in the election;" as also of "other individuals, lately residents of Maryland, who have been engaged in similar acts of hostility, or actively engaged in aiding and abetting those in arms."

The class of persons to be arrested, it will be observed, is much more distinctly marked by the order of General Schenck, and there is consequently much less margin for mistake or abuse of authority. Not only so, but the order does not seem to have applied to the proper residents of the State, but only to returning Rebels; and so far from being "precisely" what Gen. Schenck has now directed, it not only contains no expression which can by any implication be tortured into a menace of the judges of election, but prescribes no oath of allegiance or any other oath to be taken by any one.

I find no allusion in your Excellency's letter to the fact adverted to in mine, that no military intervention or test oath was ordered in either of the late important elections that have taken place in Pennsylvania and Ohio. If your Excellency cannot, as you say, confidently rely even upon loyal men "whose election may have depended upon disloyal votes," and therefore cannot recognize the force of my suggestion that nearly all our candidates are loyal, it is difficult to see what reliance you could have reposed in such a candidate as Mr. Vallandigham, and quite as difficult for us to understand why such a discrimination has been allowed against a State whose citizens claim to be, if not as numerous, at least as loyal as those of any other.

I have the honor to be, your obedient servant,
A. W. BRADFORD.

The principal issue at the election was stated by Mr. Henry Winter Davis in a speech delivered in Baltimore on the evening of Oct. 28th, thus:

Our great questions now are, not whether we shall maintain the Republic by force of arms. No man now calling himself a Union man dares to moot that question. It is not now a matter of opprobrium to say that we are for the Union unconditionally. That now is the cry and watchword. [Great applause.] The time has passed beyond those old landmarks. The Peace men have no candidate in Maryland. The traitors do not recognize the United States Government, and cannot cast a vote in Maryland. That the men of Maryland are resolved to abide by the Government of the United States, now no man doubts; for twice she has cast two-thirds of her whole vote in favor of unconditionally maintaining the Union. [Great applause.]

Those things are of the past. We march forward to the future. Having secured the permanent consolidation of Maryland with the United States, we now go on to secure the consolidation of Maryland in principle, feeling, and institution with our great free sisters of the North. We have opened resolutely

the question of emancipation, and on the 4th of November twenty thousand majority will ratify in advance the opinion of the people of Maryland. [Applause.]

For Comptroller: Goldsborough, Unconditional Union, 36,360. For Maffit, Union, 15,984. Total vote, 52,344. Total vote in 1860, 92,502.

The Legislature elected was as follows:

	Senate.	House.	Total.
Union and Emancipation.....	10	47	57
Union pledged to a Convention. 3		5	8
Union unpledged.....	6	4	10
Democrats.....	3	18	21
	22	74	96

For members of Congress the vote was as follows: 1st District, Cresswell, Unconditional Union, 6,742. Crisfield, Union, 5,482. 2d District, Webster, 7,736; no other candidate. 3d District, Davis, 6,200; no other candidate. 4th District, Thomas, 13,462; no other candidate. 5th District, Holland, Unconditional Union, 3,352; Calvert, Union, 2,237; Harris, Democrat, 4,939.

The political position of the members of Congress is thus stated in the New York "Tribune":

In four out of the five Congressional Districts the candidates of the Unconditional Union and Emancipation party are elected. The successful candidates have taken the solemn pledge to support the policy of the President, including his Emancipation Proclamation, and they will, therefore, reinforce the Union majority in Congress. The number of Congressmen hitherto elected is 185; of these, if we include the three members for Western Virginia, 94 are pledged to support the measures which the Administration has used, for the suppression of the rebellion. The Maryland election increases this number to, at least, 98, giving the Administration a majority of eleven.

Governor Bradford in his message to the Legislature on Jan. 7th, 1864, refers to the State election in November preceding. He mentions the order of Gen. Schenck, and says:

I, therefore, on Monday evening preceding the election, issued a Proclamation giving them (the Judges of Election) the assurance of the protection of the State to the extent of its ability. Before the following morning orders were sent to the Eastern Shore, directing its circulation to be suppressed, the public papers were forbidden to publish it, and an embargo laid on all the steamers in port trading with that part of the State, lest they might carry it. * * *

How far it accomplished the purpose claimed for it, or how far my anticipations of the consequences of the order and the abuses to which it would lead were realized, will appear by a brief reference to some of the transactions connected with its execution. These abuses commenced even before the opening of the polls. On the day preceding the election, the officer in command of the regiment which had been distributed among the counties of the Eastern Shore, and who had himself landed in Kent County, commenced his operations by arresting and sending across the bay some ten or more of the most estimable and distinguished of its citizens, including several of the most steadfast and uncompromising loyalists of the Shore. The jail of the county was entered, the jailer seized, imprisoned, and afterwards sent to Baltimore, and prisoners confined therein under indictment were set at liberty. The commanding officer referred to gave the first clue to the character of the disloyalty against which

he considered himself as particularly commissioned, by printing and publishing a proclamation in which, referring to the election to take place next day, he invited all the truly loyal to avail themselves of that opportunity and establish their loyalty "by giving a full and ardent support to the whole Government ticket upon the platform adopted by the Union League Convention," declaring that "none other is recognized by the Federal authorities as loyal or worthy of support of any one who desires the peace and restoration of the Union."

To secure the election of that ticket seemed to be the business to which he and his officers especially devoted themselves throughout the day of election. In the statements and certificates which have been forwarded to me from different counties in that Congressional District, I have been furnished, I presume, with an account of part only of the outrages to which their citizens were subjected. The "Government ticket" above referred to was in several, if not all of those counties, designated by its color; it was a yellow ticket, and armed with that, a voter could safely run the gauntlet of the sabres and carbines that guarded the entrance to the polls, and known sympathizers with the rebellion were, as certified to me, allowed to vote unquestioned, if they would vote that ticket, whilst loyal and respected citizens ready to take the oath, were turned back by the officer in charge without even allowing them to approach the polls.

In one district, as appears by certificate from the Judge, the military officer took his stand at the polls before they were opened, declaring that none but "the yellow ticket" should be voted, and excluded all others throughout the day. In another district a similar officer caused every ballot offered to be examined, and unless it was the favored one, the voter was required to take the oath and not otherwise; and in another again, after one vote only had been given, the polls were closed, the Judges all arrested and sent out of the county, and military occupation taken of the town.

But I will not detain you with a recapitulation of all the abuses that these statements disclose. I have caused copies of them to be transmitted to you, and they cannot fail to arrest your attention. They present a humiliating record, such as I had never supposed we should be called upon to read in any State, still less in a loyal one like this. Unless it be indeed a fallacy to suppose that any rights whatever remain to such a State, or that any line whatever marks the limit of Federal power, a bolder stride across that line that power never made even in a Rebel State than it did here on the third of last November.

A part of the army which a generous people had supplied for a very different purpose, was on that day engaged in stifling the freedom of election in a faithful State, intimidating its sworn officers, violating the constitutional rights of its loyal citizens, and obstructing the usual channels of communication between them and their Executive.

MASSACHUSETTS. The State Legislature convened at Boston, in January, 1863, and organized by the choice of Jonathan E. Field as president of the Senate, and Alexander E. Bullock as speaker of the House of Representatives, both persons being members of the Republican or Union party. John A. Andrew was again inaugurated Governor, having filled the office during the two previous years, and in his message delivered to both houses, announced that the receipts (ordinary) for the past year had amounted to \$2,947,732.48, and the disbursements (ordinary) to \$1,633,390.93; the receipts (extraordinary) to \$7,830,269.77, and the disburse-

ments (extraordinary) to \$6,397,757.40. The resources of the State on January 1st, 1863, consisting of real estate, bonds, mortgages, railroad stocks, school funds, claims against the United States, etc., amounted to \$18,011,010.05, and the liabilities, consisting of scrip issued on various accounts, to \$11,129,578.71, leaving a surplus of resources of \$6,881,431.71.

Financial statements to January 1st, 1864, show that, during the year 1863, the receipts of the State Treasury were \$7,229,823.18, including a State tax of \$2,392,344.00, and a bounty tax of \$3,324,274.74; while the disbursements amounted to \$6,728,597.70, of which \$5,116,032.19 came under the head of State aid in enlistments and reimbursements of bounties paid by cities and towns, leaving a surplus of \$501,224.48 in the hands of the treasurer.

The Legislature adjourned on April 29th, having passed about 350 bills. Among the expenditures provided for were, \$1,000,000 for coast defences and \$500,000 for the purchase of arms, beside about \$5,500,000 for expenses connected with the war. The following resolutions reported by the Committee on Federal Relations were also adopted:

Resolved, That Massachusetts reaffirms her loyalty to the Constitution and to the Union of the United States of America, to the General Government, its officers and magistrate, and to all the laws, acts, and proclamations by which the Government aims to preserve the national authority; and pledges to the maintenance of the same all her moral and material resources.

Resolved, Since it is the main and vital object of our national organization "to promote the general welfare and secure the blessings of liberty to ourselves and our posterity," that she cordially recognizes the policy, the justice, and the necessity of the ultimate extinction of all those forms of tyranny and vassalage which have hitherto marred our national unity and power; and that she countenances, approves, and will ever maintain all lawful acts of the constituted authorities which recognize and contemplate this end.

Resolved, That she tenders to the President, and to the officers and men of our national forces, her profound thanks for their untiring efforts in the cause of our country, which, being one with the cause of universal freedom and humanity, is destined, under God, and through our unflinching loyalty, to be crowned with success.

The Democratic State Convention met at Worcester, on September 3d, to nominate candidates for State officers and four delegates to the National Convention to be held in 1864. The following nominations were made: Governor, Henry W. Paine; Lieutenant-Governor, Thomas T. Plunkett; Secretary of State, F. O. Prince; Treasurer, Nathan Clark; Attorney-General, Theodore H. Sweetster; delegates to the National Convention, Josiah G. Abbott, E. D. Beach, Isaac Davis, and James D. Thompson.

The following resolution, alleged to be substantially the same adopted by Congress at the extra session of 1861, was offered, but after some debate was laid on the table:

Resolved, That the present deplorable civil war has been forced upon the country by the disunionists of

the Southern States now in arms against the Constitutional Government and in arms around the Capitol; that in the present emergency the Democratic party, banishing all feelings of mere passion and resentment, will recollect only its duty to the whole country; that this war is not waged on their part in any spirit of oppression, or for any purpose of conquest or subjugation, or for the purpose of overthrowing or interfering with the rights or established institutions of those States, but to defend and maintain the supremacy of the Constitution, and to preserve the Union in all the dignity, equality, and rights of the several States unimpaired, and that, as soon as these objects are accomplished, the war ought to cease.

The regular resolutions subsequently adopted declare, that it is the duty of every citizen to sustain the National Government; that the democracy will meet armed rebellion with the sword, and "unconstitutional acts of Congress and startling usurpations of power by the executive" with the ballot; that the paramount objects of the democracy are, to restore the Union as it was, and to maintain the Federal Constitution; that the party are opposed to the doctrine of secession, to all interference on the part of the National Government, or its officers, with the local and domestic affairs of the several States; to all interference by the citizens of one State with the domestic affairs of any other State; to the assumption of any assumed powers by any department of the Government; to any and all efforts on the part of the Administration to continue the present deplorable civil war for the purposes of subjugation or emancipation; to the extension of martial law over States not in rebellion; to all interference by the military authorities with civil elections; to all the enemies of the Constitution and the Union, whether they be found in open rebellion at the South or insidiously at work at the North; that obedience to the Constitution is the only true test of loyalty to the Government, and any wilful omission to comply with, or departure from, its provisions by any department or officer of the Government, whether in time of war or in time of peace—under the plea of military necessity, moral duty, or any other modern name for treason or revolution, is fraught with as much danger to the Government and the rights and liberties of the people as is armed resistance to the laws, or open rebellion; that the proposition to reduce a State to the condition of a territory, under the pretence that by the rebellious acts of her citizens she has ceased to form an integral part of the Union, is calculated to excite abhorrence; that the attempt of the radicals to insist on their party platform as a condition of peace, is revolutionary in its character, and tends, not merely to prolong the war, but to produce anarchy and despotism.

That whenever any State in arms against the laws of the Government shall lay down its arms and submit to the laws and the constituted authorities, the people thereof will be entitled to resume and enjoy all the rights and privileges given by the laws and the Constitution to citizens of the several States.

That we have entire confidence in the patriotism of the people and in their determination, voluntarily, to

maintain in sufficient force the army of the United States; we therefore look upon the conscription act, passed by the last Congress, as unwise and needless; we are opposed to its provisions as harsh, oppressive, and unequal in their operation, and contrary, as we believe, to the Constitution; but ever mindful that our Government cannot exist if individual opinion be substituted for judicial decisions, we feel compelled to obey and counsel obedience to the act, and all acts of Congress, until the competent judicial tribunals shall declare them to be unconstitutional or until they have been legally repealed.

That the thanks of every liberty-loving, law-abiding, and honest man throughout the land are due to the Hon. Horatio Seymour, Governor of the State of New York, who, amid all the storms of fanaticism and rage that have swept over our nation, has stood up as the firm and unflinching supporter of the Union, the Constitution, and the laws, and the rights of the States against Federal usurpations, and has so nobly vindicated and defended the majesty and dignity of the people and State of New York.

That the doctrine of secession, and the doctrines of its faithful ally of disunion, the Abolition party, have produced this deplorable civil war, are each entirely inconsistent with our frame of Government, tend inevitably to anarchy, and are alike destructive to the Union.

The remaining resolutions praised the soldiery and condemned the improvident management of the Administration; expressed sympathy for those who had lost relatives by the casualties of war; and urged a speedy peace on honorable terms.

The Republican Convention assembled at Worcester, on September 24th, and renominated, by acclamation, Gov. Andrew and his colleagues in office. A series of nine resolutions was also adopted. The first pledged the convention to "an unwavering and unconditional support of the National Government in its efforts to suppress the wicked rebellion against its authority." The second declared that, in a contest like the present "between slavery and liberty," Massachusetts had no apprehension that "any of the rights of the citizen would be lost, or any of the old landmarks of personal freedom destroyed." The third expressed the thanks of the convention to the soldiers and sailors of the nation. The fourth declared that the President's Emancipation Proclamation of January 1st, 1863, has the approbation of the people of Massachusetts, and is justified as a measure of military necessity, and as a measure of security for the future peace and tranquillity of the reunited nation, and as a guaranty to the world that the contest is for civilization and Christianity. The fifth deprecated the idea that a permanent peace can be obtained by negotiating with rebels. The three succeeding resolutions were in the following terms:

Resolved, That the secession of a State under our political system has no legality and no legal meaning whatever. It is but another name for rebellion; and rebels are not entitled to the privileges of the Union, while they are still liable to its obligations and duties. And, inasmuch as slavery was the sole cause of the revolt, and as while slavery exists there can be no permanent peace in the Union, it is the duty of Congress and the Executive to insist that the practical extinguishment of slavery throughout the rebel Confed-

eracy shall follow as fast as possible upon its legal and official death. Let the restored nation be made prosperous and glorious by a Union of Free States under a republican form of government, which is guaranteed to them by the Constitution, and with which experience has proved that the existence of slavery is wholly incompatible.

Resolved, That Massachusetts is for the prosecution of the war to the entire suppression of the revolt. In this cause we extend the hand of fellowship to loyal men of all political parties, and we recognize as political enemies all men who make this issue subordinate to their partisan dogmas, or who seek to make peace with the rebels on any terms short of their submission to the national authority and the suppression of their pretended Confederacy.

Resolved, That the policy of employing colored soldiers is wise and just, and should be enlarged and liberalized by putting such soldiers on a perfect equality with whites as to rights and compensation while in the service. The nation has a right to the services of all its subjects in every part of its domain, and no pretended or real claim to service on the part of master or employer, in the South or the North, should be allowed to interfere with that primary allegiance which is due to the country itself.

The concluding resolution recommended Gov. Andrew and the other candidates nominated, as worthy of support.

The election took place on November 3d, with the following result :

	1862.	1862.
John A. Andrew, Republican.....	70,483	80,835
Henry W. Paine, Democrat.....	29,207	52,587
Majority for Andrew.....	41,276	28,248

The remaining candidates on the Republican ticket received majorities, varying but slightly from this. The following was the result of the election of members of the Legislature :

	Senate.	House.
Republican.....	35	198
Democratic	5	41
Republican majorities.....	30	157

The people were also authorized at this election to vote yea or nay on the question of repealing the amendment to the Constitution, which was adopted on the 9th day of May, 1859, and which provides that "no person of foreign birth shall be entitled to vote, or shall be eligible to office, unless he shall have resided within the jurisdiction of the United States for two years subsequent to his naturalization, and shall be otherwise qualified, according to the Constitution and laws of this Commonwealth." The result was, yeas, 10,035 ; nays, 6,082.

During the nine months subsequent to Jan. 1st, 1863, Massachusetts raised and equipped one regiment and one battalion of cavalry, 1,250 men ; one regiment of heavy artillery, 1,073 men ; two regiments of infantry (colored), 2,052 men ; seven companies of horse artillery, 1,015 men ; three batteries of light artillery, 454 men ; and 509 recruits for organizations in the field ; total, 6,353 men. The whole number of volunteers furnished by her to the land forces of the United States from April 16th, 1861, to October 17th, 1863, was as follows :

	Men.
For three months, 5 regiments, 1 battalion, 1 company.....	3,736
For 36 days, 1 company (Boston Cadets).....	117
For 3 months, 1 company.....	101
For 4 months, 1 company.....	131
For 6 months, 1 light battery.....	155
For 9 months, 17 regiments, 1 company.....	16,837
For 3 years, 41 regiments, 34 companies and recruits for same.....	54,531

Total during the present war to Oct. 17th, 1863... 75,608

This is exclusive of the men obtained by the Enrolment and Conscription Act of March 3d, 1863, the operations of which are shown in the following table :

Citizens enrolled in the first class.....	107,386
" " second class.....	56,792
Number drafted.....	32,079
Exempted.....	22,343
Failed to report.....	3,046
Held to service.....	6,690
Paid commutation.....	3,622
Furnished substitutes.....	2,325
Served personally.....	743
Number actually realized by the draft..	3,068

If to the volunteers and drafted men be added those who have from time to time enlisted in the naval service of the United States and the regular army, the number of men furnished by Massachusetts during the war will exceed 100,000.

The most interesting event in connection with the volunteer movement was the raising and equipping of the 54th and 55th colored regiments, the former of which was the first organization of its kind formed in the free States. By an order of Secretary Stanton, issued January 20th, Gov. Andrew was authorized to raise such a number of colored companies of artillery and infantry regiments as he might find convenient, and to make the necessary requisitions upon the War Department. Recruiting went on briskly throughout the State, and agents were sent to various parts of the country with power to fill up the regiments to their maximum. On May 28th, the 54th left Boston for Port Royal, exciting no little enthusiasm in its march through the city, and on July 18th it participated with great credit in the assault upon Fort Wagner, where its gallant commander, Col. Shaw, was killed, and the regiment lost 13 officers and 278 men killed, wounded and missing. The 55th marched on July 21st, and has since been employed in the Department of the South.

Under the President's call of October 15th for 300,000 volunteers, the quota of Massachusetts was 15,126 men. The governor immediately issued an order for that number, stating the amount of bounties which would be paid, and offering recruits the choice between artillery, infantry, and cavalry regiments. For various reasons recruiting went on slowly, the chief ones being the inadequate bounties offered by the State, and the impossibility of increasing them under existing laws. By an act of the Legislature of 1863, the municipal governments of the Commonwealth were prohibited

paying bounties to volunteers, and the bounty authorized to be paid by the governor was limited to \$50 per man. Another act prohibited cities and towns from voting or appropriating any money to relieve or discharge men who should be drafted, or from paying bounties or gratuities to any volunteer or drafted man, except such as should be authorized by existing laws.

To provide a remedy for this state of things, Governor Andrew convened a special session of the Legislature, on November 11th, and in an elaborate message recommended an addition to the monthly pay of volunteers, rather than a large bounty paid at the time of mustering into service. Much diversity of opinion was manifested on the subject, and a bill was finally passed which may be considered as a compromise between both methods. It provided for the payment of a bounty of \$325 on mustering into service, or, if the recruit should elect, a bounty of \$50, and the additional pay of \$20 per month, and in case a soldier should be discharged honorably after six months' service, the same was to be continued for six months longer, or, if he should die in service, the money was to be paid to his legal representatives. The bill also provided for the retaining of the money in the State treasury subject to the call of the volunteer, to bear five per cent. interest; gave the State aid to families who might need it, notwithstanding the increased bounty; provided for the paying of the bounties, the borrowing of the money at a rate of interest not to exceed five per cent., and the punishment of persons fraudulently obtaining the bounty. The passage of the bill gave a considerable stimulus to volunteering, and under the inducement of the large bounties offered by the State and the General Government, there was every appearance at the close of the year that the quota of Massachusetts would soon be filled.

The annual report of the Board of Education shows that the sum raised during the year for wages, board, fuel, care of fires and school rooms, amounted to \$1,434,015.20, which, added to the sum of \$49,044.05 distributed to the towns out of the school fund, makes a total of nearly a million and a half of dollars expended in support of public schools, exclusive of repairs and the erection of school-houses, and the cost of school-books. The number of public schools in the State is 4,626. In addition to these there are fifty-six incorporated academies and four normal schools supported by the State, beside numerous private schools. The number of persons in the State between the ages of five and fifteen years, is 238,381; number of scholars of all ages in all the public schools, in summer, 225,921; in winter, 227,252; average attendance in all the schools in winter, 182,041; in summer, 180,062; average wages of male teachers per month, including the value of board, \$44.87; of female teachers, \$18.90. This is a decline of about fifty cents per month in

the wages of both classes of teachers. Many towns neglected to keep their common schools the full time required by law, and to maintain High Schools as provided for by the statutes. In eighty-three towns the common schools were not kept for the term of six months, and forty-six towns which should maintain High Schools have neglected to do so.

The reports of the penal, reformatory, and benevolent institutions of the State, showed that they were generally in a satisfactory condition. The number of paupers in the State almshouses was materially decreased from the previous year, and in consequence of the lack of able-bodied male inmates it became necessary to hire help for nearly all the farm operations connected with those institutions. This was owing to the scarcity and high prices of labor, and to the plentiful inducements held out by the recruiting officers. The number of prisoners in the State prison was seventy-four less than in the previous year, and the number of commitments, both in 1862 and 1863, was smaller than for many years. The Legislature of 1863 created a board of State charities, having general supervision of the subject.

The following table exhibits the condition of the banks to November 30th, 1863:

Capital stock.....	\$66,901,340
Circulation.....	31,773,972
Deposits.....	46,062,149
Due to other banks.....	12,146,001
Total liabilities.....	\$156,883,462
Notes and bills discounted.....	\$134,708,363
Specie.....	9,324,013
Due from other banks.....	18,650,805
Total resources.....	\$162,683,181

The following table, prepared from the annual reports of the Massachusetts railroad companies, shows their progress and condition during the last fourteen years:

For the year	Miles of railway.	Cost per mile of road.	Earnings per mile of road.	Expenses per mile of road.	Net inc. per mile of road.
1849....	1,130	\$45,600	\$5,452	\$2,744	\$2,708
1850....	1,150	45,424	5,663	2,733	2,930
1851....	1,150	45,556	5,730	2,903	2,827
1852....	1,150	46,153	5,987	2,672	3,315
1853....	1,192	46,453	6,706	3,035	3,071
1854....	1,262	46,783	6,391	4,303	2,583
1855....	1,343	45,949	6,775	4,220	2,555
1856....	1,351	46,480	7,217	4,260	2,957
1857....	1,367	45,473	6,653	3,877	2,576
1858....	1,380	45,057	6,229	3,488	2,741
1859....	1,380	44,646	7,081	4,030	3,051
1860....	1,371	43,842	7,247	3,999	3,248
1861....	1,356	43,957	6,846	3,785	2,561
1862....	1,386	43,297	6,965	3,817	3,148

The earnings of the roads, temporarily depressed in 1861 through the influence of the rebellion, show, so far as statistics have been received, a large increase in 1863, and at no time since the introduction of the railway system into Massachusetts has it stood on a firmer basis. The number of miles of road in the State is sufficient for the present needs of the population, and most of the companies are expending liberal sums in repairing and strength-

ening their road beds, and in other improvements.

Among the reports presented to the Legislature of 1863, was one containing the census returns of 1860, and a synopsis of every other census that has been taken in the State. From this it appears that the increase in the population of the State, from 1850 to 1860, was 23.70 per cent. The largest county increase was in Norfolk, being no less than 38.36 per cent. The largest town or city increase was in Somerville, being 126.67 per cent. Six towns, Somerville, Lawrence, Brookline, Marlborough, Melrose, and Natick, exhibit an increase of 100 per cent. Massachusetts ranks as the thirtieth State in the Union in respect to its area, but ranks as the first in the number of inhabitants to the square mile, first in the absolute increase of population per square mile from 1790 to 1860, and also first in the same from 1850 to 1860. While there is a large percentage of excess of males over females in all the Western States, the females outnumber the males in Massachusetts by more than 37,000; a fact of great importance in determining the causes which have made recruiting more active in the Eastern than in the Western States.

MASTERMAN, STILLMAN, an American physicist, born in Weld, Franklin county, Maine, January 28th, 1831, died in that town July 19th, 1863. His early opportunities of education were very scanty, but from childhood he manifested an intense interest in physical science, and spent every leisure moment from the severe toil of a farmer's boy in the study of whatever could aid him in forming an acquaintance with it. At the age of twenty he had managed to collect a number of scientific and classical works, and had thus become familiar with the elements of physics and chemistry; making such apparatus as the materials at hand would permit, grinding and polishing small lenses, and constructing prisms for experiments on fluid media. He had also taught himself Latin enough to read with some ease, and had become familiar with algebra, geometry, and trigonometry. He removed, in 1851, to Minnesota, but returned after a little more than a year, with his health greatly impaired by the influence of that climate. His first publication was a paper in the Smithsonian Reports for 1855, entitled "Observations on Thunder and Lightning," in which he gave the results of three hundred and four observations on thunder storms occurring from 1850 to 1854, in relation to the character, duration of the thunder peal, and interval between the flash and report, with other curious allied data. From this time he became a frequent contributor to scientific journals, and nearly twenty papers from his pen, on astronomy, meteorology, and physical science, appeared in the Smithsonian Reports, "The American Journal of Science," and the "Astronomical Journal." Though generally without instruments, his observations were remarkable for their accuracy

and faithfulness. During the last two years of his life, and until his disease (pulmonary consumption) compelled him to desist from all labor, he was engaged in the reduction of the observations made at the Washington Observatory during the fifteen years previous to Superintendent Maury's departure, which that official had left unreduced.

METHODISTS. The most numerous body of American Methodists, the Methodist Episcopal Church, suffered during the past year a considerable decrease of membership, the number of members and probationers being reduced from 942,906, in 1862, to 923,394, in 1863. This loss was chiefly caused by the omission, in the Baltimore Conference, to report the statistics of the membership of the Virginia congregations. In fact, the temporary loss thus suffered by the Baltimore Conference (21,065) exceeds the total loss of the Church, thus leaving for the remainder of the conferences a small gain. Heavy losses were also sustained by the Cincinnati (3,000), Southern Illinois (2,747), and Western Virginia (2,229) Conferences; while the greatest gains were recorded in Northwest Indiana (2,555), Missouri and Arkansas (2,230), East Genesee (1,741), Vermont (1,317), and Foreign German (1,194).

In 1862 the members were divided between the States and Territories as follows:

States and Territories.	Membs.*	States and Territories.	Members.
California.....	3,939	Missouri	3,446
Colorado Territory..	192	Nebraska	2,025
Connecticut	17,780	New Hampshire....	10,467
Delaware.....	10,757	New Jersey	44,970
District of Columbia	3,310	New York.....	160,300
Illinois	87,914	Ohio	132,000
Indiana.....	89,463	Oregon	2,573
Iowa.....	36,633	Pennsylvania.....	104,413
Kansas.....	4,361	Rhode Island.....	3,482
Kentucky	2,799	Vermont	14,301
Maine.....	23,885	Virginia	35,429
Maryland	52,874	Washington Territ'y	224
Massachusetts	29,365	Wisconsin.....	23,427
Michigan.....	32,283		
Minnesota	6,744	Total.....	939,356

The Church, at the end of 1863, had 6 bishops—Morris, elected 1836; Janes, 1844; Scott, Simpson, Baker, and Ames, all elected in 1852. The number of effective travelling preachers was 5,885; of superannuated, 903—total, 6,788; the number of local preachers, 8,156. The contributions to the great Societies were reported as follows: Missionary Society, \$391,073; Sunday-school Union, \$11,633; Tract Society, \$12,534. The Church had two biblical institutes, 22 colleges, 96 seminaries, female colleges, and academies. The Book Concern of the Church publishes, at New York, a Quarterly Review, "The Christian Advocate and Journal" (weekly); the "Sunday-School Advocate" (circulation 228,400 copies); "Sunday-School Teachers' Journal" (15,000); "Good News" (50,000 copies); the "Missionary Ad-

* These totals include the statistics of the Mission Conference in Germany, and the Liberia Conference in Africa. The membership of the former increased from 2,181, in 1862, to 3,375, in 1863, being a gain of 1,194. The statistics of the Liberia Conference were not received in time for the publication of general minutes; the membership in 1862 was 1,369.

vocate," at Cincinnati; the "Ladies' Repository" (monthly); "Western Christian Advocate;" and two German papers, "Apologist" and "Sonntagsglocke;" besides weekly papers at Auburn, Pittsburg; Chicago, St. Louis, San Francisco, and Salem (Oregon). There are, besides, independent denominational papers published, at New York (2), Auburn, Buffalo, Boston (2), Montpelier (Vt.), Rockford, Ill., (in Swedish). The Missionary Society supported 237 missionaries in the foreign, and 1,082 in the domestic missions.

Nearly all the annual conferences again passed strong resolutions expressive of loyalty to the Government of the United States, as well as of their wish for the speedy abolition of slavery. In most instances these resolutions were passed with entire unanimity. Of the conferences lying in, or partly extending into the slave States, those of West Virginia, Missouri, East Baltimore and Philadelphia were very emphatic in the expression of their loyalty. In the Baltimore Conference only a strong opposition manifested itself to the passage of any resolutions of this kind, and all the majority of the conference was willing to grant consisted in the adoption of the following resolution:

Resolved, That the President of the United States of America be respectfully requested to appoint a day of national fasting and prayer to Almighty God, that it may please Him to bring our civil war to an end, and restore to us unity, peace, and prosperity.

The question of lay delegation continued to be discussed throughout the Church with great animation. On May 13th, a convention of lay members to consider "the question of lay delegation in the general conference" was opened in New York city. The convention was largely attended from all parts of the Union, and organized by electing Governor Cannon, of Delaware, temporary president. After the organization of the convention ex-Governor Wright, of Indiana, was elected to preside. There was a large attendance of Methodist laymen from all parts of the Union. A series of resolutions were adopted, of which the following are the most important:

Resolved, 1. That in the judgment of this convention, the time has fully come when the laymen of the Methodist E. Church should be more intimately united with the ministry in the management of its general interests, and that the proper mode of securing this would be by providing for an equal representation of the laity in the general conference.

Resolved, 6. That a convention of lay delegates be held in the city of Philadelphia on the 17th day of May, 1864, to take such action on the subject of lay delegation as may then be proper; such delegates to be chosen in accordance with a plan to be devised by a committee of seven, to be appointed with power by this convention.

Resolved, 7. That another committee of fifteen be appointed, with power to add to their number, to present these resolutions and the entire subject of lay representation to the consideration of the ensuing general conference; and the said committee are hereby instructed to confer with any committee upon lay representation that may be appointed by the general conference, and to report to the delegate convention provided for by the preceding resolution.

Subsequently the committee of fifteen was increased to twenty-five, in order that all portions of the Church might be represented. Among the members of this committee are ex-Gov. Wright, of Indiana; Professor Strong, Hon. Moses Odell, a member of Congress for Brooklyn; Gen. Fisk, of Missouri; U. S. Senator Willey, of West Virginia; U. S. Senator Harlan, of Iowa; Gov. Evans, of Colorado Territory; W. H. Allen, formerly President of Girard College. Among those who addressed the convention were Bishop Simpson, Gov. Cannon, Gov. Wright, Judge Bond, of Baltimore; Rev. Dr. Eddy, Rev. R. M. Hatfield, Rev. Dr. Nadal.

In Missouri, the Church continued to receive accessions from the Methodist Episcopal Church, south. The most notable instance of this kind was the coming over of eighty-five members of the Southern Church in Louisiana, who thus explained the step taken by them:

We hereby declare our relations as members of the Methodist Episcopal Church, south, forever severed—severed by the treasonable acts and conduct of that official body that should have been the guardian of our rights and of the purity of our church—and that by this conduct on their part they have absolved us from all obligation or allegiance to them as a body, and that every member of the church has full right to attach himself or herself to such other church organization as may receive him or her, and whose doctrines and practices may be consonant with his or her views, without any ground of censure therefor. Therefore,

Resolved, That we hereby recommend to the members of this church as a body to apply to the proper authorities of the Methodist Episcopal Church for connection with that ecclesiastical organization.

From many places of the State, the Union men applied to the authorities of the Methodist Episcopal Church to send them Methodist preachers. In order to facilitate the extension of the Church, and, in particular, to supply every village and every town in the State with a minister, and organize churches in them, the Missionary Board appropriated for the State \$7,000, and in St. Louis an organization was formed, for inviting and encouraging the emigration of Methodists to the State. In Kentucky, many leading men of the Southern Methodist Church expressed the opinion that after the restoration of the Union, and the prospective cessation of slavery, the reunion of the Kentucky conferences of the Southern Methodist Church with the Methodist Episcopal Church would not present great difficulties.

On November 30th, the following important order was given by the Secretary of War, permitting the occupation of Southern Methodist churches, and placing them temporarily at the disposal of the bishops of the Methodist Episcopal Church.

WAR DEPARTMENT, ADJ'T-GENERAL'S OFFICE. }
WASHINGTON, November 30th, 1863. }

To the Generals commanding the Departments of the Missouri, the Tennessee and the Gulf, and all Generals and Officers Commanding Armies, Detachments and Posts, and all Officers in the service of the United States in the above mentioned Departments:

You are hereby directed to place at the disposal of the Rev. Bishop Ames, all houses of worship belonging to the Methodist Episcopal Church south, in which

a loyal minister who has been appointed by a loyal bishop of said church, does not officiate.

It is a matter of great importance to the Government in its efforts to restore tranquillity to the community, and peace to the nation, that Christian Ministers should, by precept and example, support and foster the loyal sentiments of the people.

Bishop Ames enjoys the entire confidence of this Department, and no doubt is entertained that all Ministers who may be appointed by him will be entirely loyal.

You are expected to give him all the aid, countenance and support practicable in the execution of his important mission. You are also authorized to furnish Bishop Ames and his clerk with transportation and subsistence when it can be done without prejudice to the service, and you will afford them courtesy, assistance and protection.

By order of the Secretary of War,

E. D. TOWNSEND,
Assistant Adjutant-General.

The Missionary Board of the Church appropriated \$35,000 for reorganizing the Church in the reoccupied slave States, and two of the bishops were to this end sent south.

The Evangelical Association, also called German Methodists or Albrights, had, according to their almanac (*Kalender der Evang. Gemeinschaft*) for 1864, 47,388 members in nine conferences (East Pennsylvania, Central Pennsylvania, Pittsburg, Illinois, New York, Wisconsin, Iowa, Ohio, Indiana), 386 travelling preachers, 589 Sunday schools with 27,070 scholars and 6,046 teachers and officers, 549 churches, of an estimated value of \$630,300 and 131 parsonages, of an estimated value of \$69,822. The denomination has 3 literary institutions: Greensburg Seminary, at Greensburg, Summit co., O.; Union Seminary, at New Berlin, Union co., Pa.; and Plainfield Seminary, at Plainfield, Will co., Ill. Another one was in the course of construction near Buffalo, N. Y. The Evangelical Association held in 1863 its quadrennial General Conference, which began on Oct. 1st at Buffalo.

The Wesleyan Methodists of England held, in 1863, their 120th Annual Conference, in Sheffield, on July 30th, and the following days. Rev. Dr. Osborn was elected president and Rev. J. Farrar, secretary. Of the "Legal Hundred" ministers who form the Conference, two had died and eight had retired.

The Missionary Society, according to the last annual report, sustains 4,618 chapels and other preaching places, 889 missionaries, 17,035 subordinate agents, and has in the missionary congregation 142,789 members, besides 13,804 on trial, and 146,457 scholars in schools.

The most important event in the history of British Methodism is the movement toward a union of the several "liberal Methodist bodies," meaning all the Methodist organizations except the main branch, the Wesleyan Methodists. This movement was inaugurated by the New Connection Methodists, at the annual conference, where a resolution was introduced and carried with acclamation, in which the hope was expressed "that the day may not be far distant when the several sections of

liberal Methodism shall become united in more intimate relations." The proposition was well received and cordially seconded by the Primitive Methodist Conference. The Conference of the United Methodists adopted by acclamation a resolution, that a union of the various liberal Methodist communities, founded on a mutually satisfactory basis, would be productive of great advantages to themselves and promote the cause of ecclesiastical freedom and the diffusion of evangelical truth; and at the same time authorized the Connectional Committee to confer with any of the liberal Methodist bodies who might be willing to enter into negotiations, with a view to give effect to the preceding resolution. The Conference of the Bible Christians expressed high gratification "that the Methodist New Connection Conference had shown an earnest disposition to fraternize" with them and the other branches of the Methodist Church, yet in reply to resolutions from the London and Portsmouth districts, recommending the Annual Conference to consider the propriety of effecting an amalgamation with the Methodist New Connection, expressed the conviction that "for the present we had better persevere in the work allotted to us by Providence in our separate capacity, but, should the hand of Providence, at any future period, appear to lead us into closer binding with that estimable denomination, we shall be prepared to deliberate seriously on the subject." The Wesleyan Reform Union also declared they had heard with pleasure the resolution of the New Connection Conference, but in view of the fact that the Union is composed of self-governing churches, united more upon the model of the Independent and Baptist Unions than as a Connection governed by a Conference or annual assembly, the essential principles which govern the churches of the Union would be violated by any attempt to amalgamate them with any other body.

At the same time, when the Union movement was inaugurated in England by the New Connection Conference, it was started by the Canada Conference of the same denomination in British North America. The organ of the Canadian New Connection Methodists suggested that the different Methodist bodies of Canada might unite in establishing a General Conference, to be held every four years, or that the executive committees of the several bodies might meet to deliberate on the execution of this plan. The hope for a union between the liberal branches of Methodism was generally shared by the Methodist denominations of Canada.

In the United States, the Methodist Protestants generally signified their willingness to unite with the Methodist Episcopal Church, as soon as lay delegation should be introduced. The prospective abolition of slavery is moreover expected to remove the most important obstacle to a reunion of the Wesleyan Methodists with the Methodist Episcopal Church.

The 12th French Conference began in Paris June 19th, 1863, and elected Rev. James Hocart, of Lausanne, president. The present statistics of the Conference are: Districts, 2; Circuits, 13; Chapels and Preaching-rooms, 182; Ministers and Probationers, 24; Colporteurs and Day Schoolmasters, 15; Local Preachers, 85; Members, 1,522; on trial, 123; Day Schools, 7; Sunday Schools, 41; Sunday-School Teachers, 227; Scholars, 1,821. One preacher on trial was admitted into full connection.

The progress of Methodism in Italy is encouraging. The congregation at Parma, at the anniversary of the first sermon preached there, numbered 91 communicants, with 30 on trial. Methodist service has also been opened in the city of Asola.

The German Annual Conference reported for 1863 the following summary of their statistics: Missionaries members of Conference, 18; missionaries probationers, 6; helpers not yet admitted, 14; colporteurs, 2; members in full connection, 2,126; members on trial, 1,249; chapels with parsonages, 13; preaching places, 156; hearers, 12,725; contributions for Missionary Society, \$1,196.77; church property, real worth, with Book Concern, \$47,400.00; general contribution of all members for all purposes, \$8,625.73.

The Book Concern at Bremen publishes three Methodist periodicals. The Missionary Institute, in the same city, had five students.

The Scandinavian missions of the Methodist Episcopal Church had, in 1862, 4 churches, 911 members, 5 Sunday schools with 193 children. In Spain (Gibraltar), the Wesleyan Methodists of England had, in 1863, 2 circuits, 1 chapel, 1 other preaching place, 3 missionaries, 20 subordinate agents, 40 members, 6 on trial, 295 scholars in schools, 600 attendants on public worship.

MEXICO. The progress of events in Mexico during 1863 having developed with unexpected clearness the motives of the Church or reactionary party in bringing about European intervention, a few words respecting the origin and history of that party seem necessary, by way of preface, before proceeding to the record of the year. During the long period of Spanish ascendancy Mexico was subjected to numerous injurious and degrading restrictions, and her native population systematically excluded from important administrative and ecclesiastical offices, which were regularly sold in Madrid to the highest bidder, or filled by appointment of the viceroys. This policy was especially marked in the government of the Mexican Church, and resulted, in the course of three centuries, in rendering the clergy in many respects an alien body, having few associations or feelings in common with the people; and, like the majority of Spanish officials, occupied with building up and perpetuating a material and moral power, which, in proportion as it became greater, became dearer to them. Thus churches, chapels and religious

houses dotted the surface of the more populous and civilized provinces, and not a little of the vast mineral wealth of the country was employed in the embellishment of these buildings, until some of them, as the cathedral in the city of Mexico and the Church of Our Lady of Guadalupe, became the receptacles of almost fabulous treasures in the precious metals and gems.

The first revolution under Hidalgo and Morelos in 1810-'11 found the church in undisturbed possession of its wealth, and in the enjoyment of revenues far beyond the necessities of religious culture. Neither in Mexico nor in the mother country had the immunities enjoyed by the clergy since the time of the inquisition been interfered with, and the partial reaction from the radical reforms inaugurated by the French revolution seemed to indicate the preservation of things as they were. Hence the clergy, intent upon protecting their property and privileges, and not displeased probably by the restoration of absolute government and the inquisition under Ferdinand VII., lent no sympathy to the popular movement, which degenerated in a few years into a partisan contest, and by the commencement of 1820 seemed thoroughly repressed in all parts of the country. In that year, however, the despotism of Ferdinand and the inquisition were both overthrown in Spain, and the restoration of the constitution of 1812, together with the suppression of convents and other liberal measures, foreshadowed a policy, which, if applied to the colonies, would inevitably lead to the sequestration of Church property and the decline of ecclesiastical authority. Hence the Church party, though eminently conservative, and sympathizing with the absolutist party of Spain, felt constrained in self-defence to lend its influence in favor of the revolution under Iturbide, preferring, after a nice calculation of probabilities, to cast its lot with an independent government, rather than subject itself to despoilment at the hands of the Spanish Cortes.

The revolution proving successful, it immediately became the object of the clergy to control the government which they had aided in forming, and thus prevent interference with their immunities. This, with the resources possessed by them, was not a difficult matter, and among a population made up of such conflicting elements as the Mexican, it has always been possible by a judicious expenditure of money and an appeal to prejudices or class interests, to form a strong party in favor of the Church. To the efforts of this party may be ascribed most of the revolutions that have distracted the country down to the present time, and the defeat of every liberal measure; and the apparent anarchy of the last forty years, which the Church party has for its own interests represented as incurable, has been in fact a struggle between the ideas of progress inaugurated during the present century, and that reactionary policy which would restore the in-

quisition and other institutions of a past age. Wherever the Church could not control it has sought to destroy, and not a few of the "pronunciamentos" and "plans" aimed at existing administrations, and the number of which perplexes the reader of Mexican history, have had their origin in the selfish desire to hold and increase property and power at the sacrifice of national peace and stability. Administration after administration has been overthrown upon any appearance of an intention to nationalize Church property or even to promote liberal measures, and the crowning effort of the party is seen in its scheme to destroy by the aid of foreign intervention the independence which it aided in securing, and to fasten upon Mexico the reproach of being the only Catholic country in the world, in which the temporal affairs of the Church have remained unchanged during the revolutions of the last half century.

It speaks volumes in favor of the energy and influence of the Church party that from the revolutions of 1820 down to 1860, with some few exceptions, no president, however hard pressed, has ever ventured to encroach upon what is commonly regarded as consecrated property. Congress indeed, in 1833, abolished the compulsory payment of tithes, including a tenth part of the first fruits which grew upon the soil of the republic and the firstlings of the cattle; but so many persons, for conscientious reasons or for other causes, continued to pay this tax that the revenue of the Church suffered no serious diminution. In fact, by the partial separation of the Church from the State in that year, the former gained a more complete independence than it had ever before enjoyed, and in consequence a greater degree of power, the bishops thenceforth exercising control over all ecclesiastical property as *quasi* corporations sole. When the Government went further, and proposed in 1835, at the suggestion of President Gomez Farrias, to appropriate the property of the Church to the payment of the public debt, the proposition was promptly met by a revolution, which led to the conversion of the confederation of States into a consolidated republic, with Santa Anna as dictator. Eighteen years later, after a dreary interval of constantly recurring revolutions, the same man found himself again in the presidential chair with unlimited powers. A combination of liberals drove him from the country, and, under the presidency of Comonfort, decrees were promulgated confiscating the property of the Church and forbidding the clergy to hold real estate. Revolutionary outbreaks prevented the enforcement of these, and a civil war of unexampled duration and fury between the liberals, under Juarez, and the Church party led by Zuloaga and Miramon, followed, resulting in 1860 in the triumph of the former.

The contest by this time had become narrowed down to a struggle between the ultra liberals and ultra conservatives. There was

no longer any middle party; and almost the sole question involved was whether the enormous unemployed wealth in the hands of the clergy should remain with them, or should be appropriated to discharge the claims of foreign nations, engendered during many years of anarchy and confusion, and to the payment of the constantly increasing national debt. This was practically decided by the abolition, in 1860, under the administration of Juarez, of all the special privileges of the clergy, and the sequestration of the Church property which was sold to the people at a low nominal price. As a last resort, the Church party, in despair of their ability to regain the influence they once wielded, determined to solicit foreign intervention, hoping, by some fortunate turn in affairs, to build up a monarchy upon the ruins of the republic, and place upon the throne a European prince of absolutist tendencies, under whom they might obtain a respite from the attacks of their enemies. A tolerable pretext for such intervention was afforded by claims for injuries to persons or property. This, however, was not considered sufficient to justify, in the estimation of the world, such a change in their government as they desired, and profiting by their superior means of moulding foreign opinion, they labored to create the belief that Mexico was unfitted for free institutions and utterly incapable of self-government.

As if enough had not been done by them during the previous forty years to bring their country into discredit with foreign nations, they forthwith commenced a series of unparalleled excesses in all parts of the republic, sparing neither native nor foreign born, and murdering, robbing and destroying, until Europe should be worked up to the proper pitch of indignation, and "in the interests of civilization" claim to interfere. Almonte, Miramon and other agents abroad, meanwhile, from time to time laid this unhappy state of things before the tribunal of public opinion, and thus skilfully prepared the way for intervention.* How that was finally brought about has been related in the preceding volumes of this work. The object of this preface is to show that the Church party has systematically provoked the calamities which it now seeks to cure by intervention; and it will be seen further on, that, after two years of hostilities, and the nearly complete overthrow of the liberal party and destruction of the republic, the elements of disturbance remain in full vigor, and that the proper remedy has not yet been applied.

* "We now understand," says the "London Times" of May 27th, 1862, "the origin of the whole affair. The monarchy, with the Archduke Maximilian for emperor, was the idea of certain Mexican refugees, members of the Reactionary or Clerical party in Mexico, and partisans of Marquez and other ruffians, whose misdeeds have been among the principal causes of our intervention. If Ferdinand Maximilian goes to Mexico, he will find his most active friends among the men who have shot, tortured and robbed, until Europe has at last lost patience." A remarkable confirmation of this statement is afforded in a speech delivered by Signor Romero, the Mexican Minister to Washington, at a dinner in the city of New York, Dec. 16th, 1863.

That intervention is no new scheme of the Church party, but has been its policy almost from the time of Iturbide, is frankly confessed by M. Malespine in a recently published pamphlet on the Mexican question, which, though written in the interests of France, contends that the Imperial Government committed a serious error in not accomplishing the "regeneration" of Mexico in coöperation with Juarez and the liberals. After describing the social and political condition of the country at the establishment of the republic, he shows how the reactionist party, formerly known as the Spanish Church party, gradually began to prepare the way for a return of Mexico to Spanish rule; and how, when the people showed themselves inflexibly opposed to this idea, it endeavored, by the aid of France, to establish an independent monarchy, and notwithstanding its proposals were rejected, shrunk from no means to render intervention inevitable. More explicit testimony to the same point is furnished in a pamphlet published by order of the French Government, as long ago as 1839, and which sets forth the causes of the French naval expedition against Mexico in the preceding year. The following extract will suffice:

It is known that it is to the clerical party that the differences which have arisen between France and Mexico must be attributed. This party wishes to bring back Mexico to monarchical rule, and has pushed it to a war with us in order to arrive at this end. Since the Algerian expedition we are supposed to fear distant expeditions and foreign conquests. It is well known that the Algerian affair has disgusted us with the rôle of dupe. It is less known in Mexico than anywhere else. The Priest party thought that by injustice, insult, and outrage, it would bring France to undertake the conquest of the Mexican republic, and that a monarchy would then be established. France seemed better suited than any other nation to carry out this vast design. Her humor is warlike. She chafes under injuries, even though their redress would involve a greater injury.

No recent statistics of the numbers or wealth of the clergy have been published; but from the report of the Minister of Justice and Ecclesiastical Affairs made in 1852, it appears that there were then in Mexico 4,615 clergy, including 1,043 regulars; 58 nunneries, containing 1,484 nuns; and 5 establishments belonging to the Sisters of Charity, with 37 sisters and 41 novices. The ecclesiastical hierarchy consisted of one archbishop, at Mexico, and twelve bishops. The annual amount collected by them at the present time under the head of tithes, parochial dues, charities, masses, and the sale of devotional articles, has been estimated at from \$6,000,000 to \$8,000,000, and their revenue from all sources at \$20,000,000 per annum. The total value of all descriptions of Church property may be computed at from \$250,000,000 to \$300,000,000, including \$50,000,000, in the shape of incumbrances upon property for the performance of masses, and comprising probably from one third to one half of the real estate in the country. One half of the property in the city of Mexico, including

many millions in money, is in the hands of the archbishop, who thereby wields a power over his tenants unknown to other countries, and does not disdain to assume the functions of a banker. In any part of the world, the possession of so much wealth would imply a formidable power; but, in Mexico, where, through revolutions and forced subsidies, extravagance of living, gambling and other vices, vicissitudes of fortune are frequent and sudden, it is easy to see how an impoverished Government may be overawed or corrupted by it, and opposition rendered of no avail. The union of spiritual and material power in the most intellectual class of the country, though in theory not necessarily injurious, has proved in practice eminently so in this country, and liberal Mexican statesmen have invariably thrown the weight of their influence against it—thus far without effect.

A letter from Vera Cruz thus described the positions of the French and Mexican forces, on January 1st, 1863. The former had from 7,000 to 8,000 men in San Augustin del Palmar, San Andres Chalchecomula and Orizaba; about the same number in Perote and Las Vegas; 4,000 in Tampico; and about 8,000 distributed as convoys, garrisons, etc. Vera Cruz was held by a guard of marines. On the Mexican side there were 25,000 regulars and 10,000 volunteers at Puebla; 12,000 between that city and the capital; 12,000 in the latter place; 8,000 at Queretaro; and a reserve of about 14,000 under Alvarez in the State of Guerrero. The estimate of Mexican strength was based upon somewhat exaggerated statements, and was probably above the mark.

On January 8th, four French men-of-war, under Rear-Admiral Bouet, appeared off Acapulco, and demanded facilities for supplying their sailors with provisions, water, and coal. The demand being refused, a bombardment was opened the next morning, and continued three days, resulting in the destruction of twelve houses and damage to fifty more. The defences of the harbor, consisting of one fort and three small batteries, were silenced on the first day. The French made no attempt to land, nor did they obtain the supplies they demanded.

On the 13th a detachment under Vice-Admiral Jurien de la Gravière, which had occupied Tampico, was compelled to evacuate that place, in consequence of an anticipated attack by a superior body of Mexicans. They retired to their fleet, but did not effect their embarkation without considerable loss. One war-steamer ran aground and was burned by the crew, and three vessels loaded with provisions, coal, and munitions of war, fell into the hands of the Mexicans. A French account, however, represents that Tampico was evacuated because Gen. Forey had need of part of the garrison elsewhere, and deemed it unsafe to leave the remnant exposed to the attacks of many large guerilla bands which were congregating in the neighborhood.

On February 16th the French advance began its march from San Augustin del Palmar to Puebla, a distance of twelve leagues, and about the same time the garrison was withdrawn from Jalapa, to reënforce the invading column. After many tedious delays General Forey set out from Orizaba on the 23d, having, a week previous, published at Vera Cruz a proclamation announcing his intention to march immediately upon the capital, and assuring the Mexicans that he came as a friend, not as an enemy. Four days later he was followed by his diplomatic coadjutor, M. Saligny, with the rear guard. His advance, however, had only reached within fifteen miles of Puebla when he was obliged to fall back some twenty miles to protect his communications, constantly threatened by guerilla bands; and, at the beginning of March, his troops were scattered over a wide extent of country, and reported to be moving in various directions.

In the meantime the national forces were concentrating at Puebla and Mexico, and making every preparation for a determined defence. In the former city the property belonging to convents of nuns was confiscated for the support of the army, as that of the monks had been some time before, and the defences, consisting of an outer line of twelve forts, and an inner line of smaller works, principally convents, were strengthened by every resource of engineering skill at the disposal of the defenders. General Ortega held command within the city, while near at hand, on the road leading to Mexico, was another force under General Comonfort. A unanimity of feeling and purpose, more apparent than real, seemed to animate the people, and the Government issued a stirring address, in which it reiterated its intention to maintain liberty and independence at all hazards, and to use the dictatorial powers conferred upon it for war purposes by Congress to their fullest extent. No clemency was to be shown to traitors, and the influence of preachers, it was announced, must restrict itself to the affairs of their ministry, without in any way interfering with public issues, or obstructing the acts of private life.

About the middle of March the French, 20,000 strong, with the addition of 5,000 Mexicans under Marquez, began to invest Puebla, occupying the hill of Amalocam, which commands the road to Vera Cruz, and is about three miles from the nearest Mexican fort, and four miles from Puebla itself; and the hill of San Juan, on the road to Mexico, two miles from the nearest fort, and a little more than two miles from Puebla. Frequent skirmishes took place between Gen. Forey's troops and the advanced parties of Ortega and Comonfort. Deserters went over to the Mexicans in considerable numbers, and guerillas continued the system of annoyance by which they had so seriously retarded the French advance ever since their first landing in the country. On the 21st they attacked, at La Purga a working party of 1,500

men, some of them armed, who were building the railroad upon which the French were to depend for their supplies, and carried off the Mexican laborers prisoners.

In the meantime Gen. Forey had opened the siege. On the 20th he attempted to throw his whole force upon Gen. Comonfort, who then occupied a position on a hill some miles beyond the French advanced posts, on the road to Mexico; but Comonfort, divining his intention, made a seasonable retreat, and the French returned to Puebla, devoting their particular attention to the establishment of batteries on the side toward Mexico. On the 21st the bombardment opened. The Mexicans made repeated sorties and frequently dislodged the besiegers from their positions. A Mexican sergeant, captured by Ortega, was "branded in the face with the mark of a traitor, and then released, that the nation might know her good from her bad children." On the 26th, after having battered down a part of Fort San Xavier, the French sent out a storming party to take it by assault, but they were repulsed. Soon after midnight, on the morning of the 29th, a similar attempt was made with a like result. A third assault likewise failed, and Gen. Forey thereupon concentrated the fire of all his artillery upon the fort, which being built of adobe, was soon rendered untenable, and was carried by a large force of foot chasseurs and Zouaves. Part of the garrison of 700 men was captured, but Ortega succeeded in removing most of the guns and ammunition.

This success gave the besiegers a foothold in the city, and the speedy capture of two adjoining fortified positions enabled them to occupy two of the principal streets leading to the Place d'Armes. Their difficulties, however, seemed only to have begun. Every street was barricaded, every house a fortress; and the Mexicans fought with an obstinate valor, which severely tested the patience of their adversaries. But step by step the latter advanced, until by the middle of April nearly one half of the city, including the Place d'Armes and the Cathedral, which had been converted into a huge fortress, was in their possession. The advantages gained, however, were more nominal than real, as Ortega, holding the strong forts of Loreto and Guadalupe, with but slightly diminished resources, commanded the French position. On the other hand, the French had effectually interposed themselves between Comonfort and the garrison, so that the latter were cut off from reënforcements and supplies from the city of Mexico. Toward the latter part of April, the approaches were brought within a short distance of Fort Guadalupe, and a heavy cannonade was directed against Forts Carmen, Totimihua-can, Zaragoza, and other adjoining works. At daybreak on the 25th, after the explosion of several mines by the besiegers, a vigorous assault was made by a battalion of Zouaves upon the fortified convent of St. Inez. The head of the column penetrated into the building, but

was cut off to a man, and the remainder was compelled to retire. This was the severest check which the French received, their loss amounting to several hundred killed and prisoners, and Gen. Forey was induced, in consequence, to suspend further decisive proceedings until the arrival of his heavy siege artillery.

A few days of comparative inactivity followed. On the 5th and 6th of May, Comonfort, with the coöperation of the garrison, endeavored to throw a convoy of provisions and ammunition into the city, but was driven away with loss; and on the 8th he was attacked by Gen. Bazaine near San Lorenzo, and completely routed, losing 2,500 men and a considerable part of his artillery and ammunition. His troops retired in a demoralized mass toward Mexico, leaving Puebla to the mercy of the besiegers. On the 16th the latter had their heavy guns in position, and at once opened on Fort Totimihuacan, which was soon breached. An assault was ordered for the same night, and in the midst of the preparations for it Ortega, now effectually cut off from all reinforcements and supplies, sent word to Forey, that if he would permit the garrison to retire with arms, baggage, and artillery, the town would be surrendered. This proposition was rejected, and shortly afterward a flag of truce was sent by Ortega, announcing his unconditional surrender. Previous to this, the Mexican army had been disbanded, arms of every kind rendered unserviceable, and the magazines blown up. About 15,000 men, including 1,000 officers, of whom 23 were generals, fell into the hands of the French. A part were sent to Martinique, 3,000 joined the Mexican contingent under Marquez, and an equal number were employed as laborers on the railroad between Vera Cruz and the city of Mexico. Ortega himself, with a few officers, succeeded in making his escape. On the 19th, General Forey made his triumphal entrance into Puebla amid a salute of 101 guns, just two months after he had commenced the siege.

The retreat of Comonfort's disorganized troops upon the capital in a measure prepared the Mexican Government for the great calamity which was to follow. With the fall of Puebla, where was concentrated their best army, and which had been their chosen position for a stand against the invaders, all idea of further resistance in that part of the country ceased. Even had Ortega's troops escaped from Puebla, the capital was untenable against an attack with heavy artillery, and the French, flushed with victory, were capable of overpowering all resistance. Hence Juarez, gathering up the remnant of his troops, and accompanied by Congress and the Government officials, carrying with them the public archives, left Mexico on the 31st for Queretaro, whence he retired to San Luis Potosi, and established there the seat of Government.

Meanwhile, on May 20th, the French advance under Gen. Bazaine pushed on toward

the capital, followed some days later by the main body of the army; and on June 10th, Gen. Forey entered the city amidst extravagant demonstrations of joy from the Church party, and the resident French population. Immediately afterward he published his manifesto to the Mexican people, announcing that his mission had the twofold purpose of making the weight of French arms felt, and of offering Mexico the coöperation of France to assist in establishing a government which should be the result of free choice—"a government which shall practise, above all, justice, probity, and good faith in its foreign relations, and liberty at home; but liberty, as it should be understood, walking in the path of order, with respect for religion, property, and family."

He then proceeded to explain the basis upon which the new Government would be established: no forced loans nor requisitions; property to be under the safeguard of the laws; frauds of public property to be punished; the army to be formed by recruiting instead of levying; imposts to be proportioned to the condition of the person, and, if possible, certain laws, weighing on the poorest producers, to be abolished; employés who are guilty of dishonesty to be removed and punished; the Catholic religion to be protected, and the bishops reinstated in their dioceses—the general believing that the emperor would view with great pleasure liberty of worship proclaimed by the Government; energetic measures to be taken to suppress robbery, and the courts to be organized in such a manner that justice may be administered honestly and without fraud. "I invoke," he added, "the coöperation of all minds; I invite all parties to lay down their arms, and employ their efforts in future not in destroying but in constructing. I proclaim forgetfulness of the past, a complete amnesty to all who adhere in good faith to the Government which the nation, in the full enjoyment of its liberty, may choose. But I declare enemies of their country those who turn a deaf ear to my conciliatory voice, and I will pursue them wheresoever they may seek refuge."

Having prepared the way for "regeneration" by silencing the public press, he undertook, in conjunction with M. Dubois de Saligny, the French minister, to organize a provisional government. A superior council or junta, composed of 35 members, instituted by a decree of June 16th, designated in its turn three Mexican citizens, Gen. Almonte, the Archbishop of Mexico, and Gen. Salas, to whom were intrusted the executive powers of the Government; and the junta itself was divided into sections, each of which took charge of a ministerial branch of the administration. The same junta subsequently summoned an Assembly of Notables to the number of 215 persons, who were to decide upon a form of government, one half of the members constituting a quorum: Should this body be unable to come to a decision, the junta had power to dissolve them and

proceed to the formation of another Assembly, to which members of the first might be eligible. The three persons exercising the executive power, known as the regency, had the privilege of vetoing all the acts and resolutions of the Assembly of Notables; but as both of these bodies were appointed by the junta, and as the latter was appointed by Gen. Forey, it became evident that in point of fact the choice of a form of government rested with the representative of the French emperor, and that the Mexican people would have very little to say in the matter. The ratification by popular vote of the decision of the Assembly of Notables, although provided for by the letter of instructions of Napoleon III., seems never to have occurred to Gen. Forey in framing his decrees.

The Assembly of Notables convened on July 10th, and at once, without debate, declared for an imperial government by a vote of 213 to 2. The Archduke Maximilian of Austria* was at the same time proclaimed emperor, and in case he should not accept the throne, it was voted that the Emperor Napoleon be requested to designate a substitute. On the 17th of August, a deputation, headed by Gutierrez de Estrada, formerly Minister of Foreign Affairs, left Vera Cruz for Europe, charged with the offer of the crown to the Archduke.

If the French accounts may be believed, the decision of the Assembly was received with tumultuous joy by all classes of Mexicans, the prospect of a stable government under a European prince, supported by European bayonets, being in every respect preferable to the long rule of anarchy under which the country had groaned. But, as has been justly observed, in a land of such distances, and infrequent communication, it was hardly probable that even then all the inhabitants knew that the French occupied the city of Mexico; and impossible that conventions of the different States should have been held to send delegates to a General Convention, in which a question of such vital import should be at least discussed. The greater portion of the people had never heard of the name of Maximilian, and were in no respect represented by the few pseudo "notables" assembled in the capital (who were, in fact, prominent members of the Church party), or responsible for their acts.

That the Assembly had exhibited indecent haste, as well as departed from Napoleon's programme, in assuming their action to be definitive, was evident from the subsequent course of the French Government. The Emperor had explicitly instructed Gen. Forey, on his de-

parture for Mexico, to cause the provisional government which might be formed there, to "submit to the Mexican people the question of the form of political rule which should be definitively established;" and he was not slow to perceive that the proceedings of the French general and the notables, if unnoticed by him, would tend to degrade the newly created empire, in the estimation of the world, to the level of a despotism.

Accordingly, M. Drouyn de l'Huys, the French Minister of Foreign Affairs, hastened to remind the French commander that the instructions of his master, the Emperor, should be carried out to the letter:

We have noticed with pleasure, he wrote on the 17th of August, 1863, as a symptom of favorable augury, the manifestation of the Assembly of Notables in Mexico in favor of the establishment of a monarchy, and the name of the Prince called to the empire. But, as I indicated to you in a former despatch, we can only consider the vote of this Assembly as a first indication of the inclinations of the country. With the great authority which attaches to the men of mark who compose it, the Assembly recommends to its fellow citizens the adoption of monarchical institutions, and designates a prince for their suffrages. It is now the part of the Provisional Government to collect these suffrages in such a manner that no doubt shall hang over this expression of the will of the country. I shall not indicate to you the method of securing this indispensable result. It must be found in the institutions of the country and its local customs.

Before these views of the French Government were made public, the Mexican deputation arrived in Europe, and proceeding at once to Trieste, had an interview with the Archduke on October 3d, at his castle of Miramar, in the neighborhood of the city. Gutierrez de Estrada, who was the spokesman of the occasion, recapitulated, after the fashion of the Church party, the causes which had led the Mexican nation to seek in the reestablishment of monarchy the termination of their discords, claiming that the latter were the necessary consequence of all that had occurred since the emancipation of the old Spanish colonies. As a matter of course he paid a compliment to Napoleon III., who had taken so leading a part "in the great and noble task of Mexican regeneration;" and declared that in making choice of an Austrian prince the notables had only rendered homage to the most popular traditions of the country, which had been happiest and best governed under the rule of the Archduke's ancestors. "The finger of God," he added, "by endowing the Archduke Ferdinand Maximilian with the richest and rarest qualities, pointed and designed him as the object of the unanimous choice of the people. The Archduke could not refuse the crown thus spontaneously and enthusiastically offered to him without opposing the designs of Providence; and if Providence had brought out to light the gifts and merits of the prince, it was clearly in order to direct them toward the fulfilment of his great work—the salvation and regeneration of Mexico."

* Ferdinand Maximilian Joseph, Archduke of Austria, is the oldest brother of the reigning Emperor of Austria. He was born the 6th of July, 1832, and was married on the 27th of July, 1857, to Maria Charlotte, daughter of the King of Belgium, but has no issue from this marriage. Archduke Maximilian is a vice-admiral, and chief commander of the Austrian navy, and is reported to be familiar with everything belonging to the naval service. He has the reputation of being the most liberal among all the Austrian princes, and a warm supporter of the Constitution, which his brother is now trying to develop in Austria.

The vote of the Notables, engrossed on parchment, and enclosed in the handle of a sceptre of solid gold, was then presented to the Archduke.

Maximilian, who was already familiar with the French programme, and was aware of what was expected of him, replied to the deputation as follows:

The wishes of the Mexican Assembly of Notables have touched me deeply. It cannot but be exceedingly flattering for our House that they have turned their eyes to the descendants of Charles V. Although the mission of maintaining the independence and welfare of Mexico on a solid foundation, and with free institutions, is a most noble one, I must, nevertheless, in complete accordance with the views of the Emperor Napoleon, declare that the monarchy cannot be reestablished on a legitimate and firm basis without a spontaneous expression of the wishes of the whole nation. I must make my acceptance of the throne dependent upon a *plébiscite* of the whole country. On the other hand, it would be my duty to ask for guarantees, which are indispensable to secure Mexico against the dangers which threaten her integrity and independence. Should these guarantees be obtained, and the universal vote of the nation be given in my favor, I am ready to accept the crown, subject to the approval of the emperor, my brother. In case Providence should call me to this high mission, I must at once declare that it is my firm intention to open the path of progress by a Constitution, as was done by my brother, and after the complete pacification of the country to seal the fundamental law with an oath. By such means only can a new and really national policy be called into existence by which all parties, forgetting all disputes, would coöperate with me in raising Mexico to a prominent rank among nations. Carry back with you these frank declarations to your fellow citizens, and act in such a manner as it may become possible for the nation to declare what form of Government it desires to have.

For several weeks after the removal of Juarez and the Mexican Government to San Luis Potosi, the French remained quietly in the city of Mexico, engaged in organizing the empire, and awaiting reinforcements. During July and August, various bodies of national troops, under Doblado, Arteaga, and others, occupied the States of Queretaro, Guanajuato, Michoacan, and Jalisco, immediately north and west of Mexico, while Ortega was concentrating a force in Zacatecas. Swarms of guerillas infested the roads leading to the city of Mexico, who waged a war of extermination against the French pickets and outposts; and in the southern provinces a desultory contest of the same character was kept up by Carvajal, Tellez, and other chiefs. Assassinations of persons friendly to the French interest were said to be frequent in the capital, and in consequence the Provisional Government was compelled to resort to severe measures of repression and retaliation. Most of the foreign ministers recognized the Government *de facto* established there, and all declined to remove to San Luis Potosi, to which place Juarez had offered them safe conduct. The only important military operation undertaken by the French during the summer, was the reoccupation, on August 11th, of Tampico.

With the commencement of October, both parties were busily occupied with preparations

for the active resumption of hostilities; the French designing to march northward through Queretaro and Guanajuato to San Luis Potosi, and westward to Guadalajara, in the State of Jalisco; and the Mexicans preparing to dispute their advance. Some minor successes had infused new hopes into the latter, and their aggregate force in the field was still considerable. In the latter part of the month, Comonfort was appointed by Juarez minister of war and commander-in-chief, and took post with an army of 15,000 men near Queretaro, while Gen. Diaz, with 3,000 troops, mostly mounted men and guerillas, was directed to operate against the French communications between the city of Mexico and Vera Cruz. On the 22d, Gen. Bazaine published an address to the Mexican people, in which he announced that he had been appointed commander-in-chief of the "Army of Intervention," General Forey returning to France, and that this change implied no deviation from the political programme previously announced.

Early in November, the Franco-Mexican column destined for the north took up its march from the capital, the reactionist General Mejia commanding the advance; and on the 13th, Comonfort, while reconnoitring in the neighborhood of Queretaro with a small mounted escort, was surprised and killed by a similar party from the invading army. The Mexicans charge that he was assassinated in cold blood by his enemies. Upon the announcement of his death at San Luis Potosi, Juarez appointed Gen. Negrete minister of war, and Gen. Uraga commander-in-chief; the latter being at that time in the neighborhood of Morelia, the capital of Michoacan, with a considerable force. On the 19th, Mejia occupied Queretaro without resistance from the national troops under Doblado, who retired toward Guanajuato; and being joined a few days later by Gen. Douai, their united forces marched thence for Guanajuato, which they entered quietly on December 8th. Meanwhile another column under Gen. Bazaine moved to the northwest, in the direction of Guadalajara, while a third, under Gen. Berthier, with whom was the reactionist Marquez, marched toward Morelia, with a view of coöperating with Bazaine against Guadalajara or Zacatecas.

The policy of the Mexican leaders seems to have been to avoid a general engagement with the main body of the Franco-Mexican army, but by moving on its wings, to watch the opportunity to make a successful flank movement, and thus enter the valley of Mexico and besiege or take the capital, from which the greater part of the troops had been withdrawn—an exploit which would have had a prodigious moral effect upon their cause, both at home and abroad. For this purpose Doblado and Negrete were instructed to fall back, the one toward Lagos and Aguas Calientes, on the road to Zacatecas, and the other to San Luis Potosi, thus drawing the enemy after them,

while Uraga should overpower Marquez at Morelia, and thence march rapidly to the capital. Early on the morning of December 17th, Uraga, with about 8,000 men, fell suddenly upon the Franco-Mexican force under Marquez, who, however, having received secret intelligence of the proposed attack, was fully prepared. A sanguinary battle of several hours' duration followed. The national forces at one time penetrated into the plaza of the town, but after severe fighting were driven out and forced to retreat with heavy loss, the French claiming to have taken 1,000 prisoners and eleven pieces of artillery. A few days later the remnant of Uraga's army was attacked by Col. Saint, and sustained another defeat, with which active hostilities terminated for the month in the State of Michoacan. The invading columns thenceforth pursued their march without interruption toward the north, and by the close of the year Gen. Bazaine was within a short distance of Guadalajara.

Meanwhile the column under Douai and Mejia pressed rapidly forward from Guanajuato to San Luis Potosi, whence Juarez retired on December 18th, to Monterey, accompanied only by a few armed attendants. On the 24th, Mejia occupied the town, where three days later he was attacked by Negrete, who was repulsed, losing some artillery, baggage, and prisoners. The close of the year left Negrete in the neighborhood of San Luis Potosi, awaiting the arrival of Doblado and Ortega, in conjunction with whom he proposed to make another attempt to eject Mejia.

In addition to the operations above detailed, there was an attempt by Gen. Cobos, at a revolution in favor of the interventionists at Matamoros, in the early part of November, which was quickly repressed by the Juarist governor, Don Manuel Ruiz, who caused Cobos to be shot. Ruiz, however, was almost immediately driven out of the city, and Serna, also a liberal, appointed governor in his place. The last movement, however, seems to have been a local quarrel, having little or no connection with the question of intervention. Though north of the capital the prospects of the national party seemed gloomy enough, in the south Gen. Diaz was reported to be active between Vera Cruz and Mexico, threatening Orizaba and other places; and in the States of Oajaca and Puebla, a body of several thousand men were organizing to cooperate with him. While from the mountain fastnesses of Guerrero the old chief Alvarez, who had hitherto taken no active part in the war, issued an address to the Pinto Indians of the south, over whom his influence has for many years been predominant, urging them to oppose the French, who were about to strip them of their privileges. The southern States of the republic had, in fact, been scarcely invaded, still less subdued, and notwithstanding numerous reports of the defection of Doblado and Vidaurri, the resignation or removal of

Juarez, and dissensions of all kinds among the national leaders, they remained at the close of the year loyal to the country, and still controlled a military organization which favorable circumstances might develop into a formidable power.

On January 1st, 1864, the districts in the interior of Mexico occupied by the forces of the French intervention formed a triangle, of which the apex was at Mexico and the sides extended north to San Luis Potosi, and west as far as Guadalajara. In an easterly direction, the situation of the country subject to the intervention was nearly the same, resembling an irregular trapèze, formed of two unequal triangles; the greater one having its apex at Mexico, and the two sides almost equal, each almost 180 miles in length, and about 50 miles apart; while the smaller one had its apex at Vera Cruz, and formed a triangle with equal angles, each 50 miles long. To complete this description the total superficies of the country over which the Franco-Mexican intervention is more or less dominant, may be stated as a length of about 600 miles, by a breadth of from 130 to 150 miles.

Insignificant as this territory may seem in comparison with the whole national domain, it nevertheless comprises some of the most rich and populous States and cities, although the total population included in it falls far below a majority of the nation. "After the *coup d'état* of December 17th, 1857," says an English writer, reviewing the incidents of the year, "all the towns occupied at this moment by the Franco-Mexican troops, including even the important city of Guadalajara, were in the power of the reactionary government; and yet that did not prevent the chiefs of that government—after a three years' struggle, sustained by the gold of the clergy, and backed by foreign jobbers—from succumbing at last, and going ignominiously to beg for foreign intervention."

The progress of the Franco-Mexican armies, and the number of cities and towns that had declared their adherence to intervention, were conspicuously noticed in official French papers, the object evidently being to show, that although the resistance of Juarez was not entirely subdued at the close of the year, the position of affairs was satisfactory enough to justify the Archduke Maximilian in taking possession of the throne won for him by Napoleon III. The Mexican deputation had returned home, immediately after their interview with the Archduke, ostensibly to obtain a ratification of the empire by a popular vote. But, as if to show how hollow was this whole proceeding, it was subsequently submitted to him that any nearer approximation to a popular vote among so scattered a population as the Mexicans than such as was to be obtained from a more or less general submission to the French arms, was altogether impracticable. The Archduke lent no unwilling ear to statements of this nature, and prepared from the outset to take advantage

of any pretext offered to him, was ready to accept the progress of the French arms as an indication of the submission of the Mexicans to his rule. As a matter of form, however, he awaited at Miramar the return of the Mexican deputation.

The difficulty of taking a vote of the whole people, in accordance with "the institutions and local customs of the country," as required by M. Drouyn de l'Huys, is shown by M. Malespine in the pamphlet above referred to. "Shall the poll be declared open," he asks, "only in the localities occupied by the French troops, or in all Mexico? If in the former manner, the vote would not be the largest manifestation of the popular will, because the whole people would not be consulted; in the latter the appeal could not be made known to them, and would consequently fall to the ground." And he proceeds to show that the French occupation was effective in only a comparatively small portion of the Mexican territory, and that even this was overrun by numerous bands of guerillas, whence he concludes that an expression of Mexican opinion at the time of the return of the deputation from Europe was impossible, stating as an additional reason the fact that hostilities had recently been resumed. Of the efficacy or sincerity of an election, which depends upon the accession of territory by the triumphant progress of an army, no opinion need be expressed.

But although a uniform and remarkable success had attended the French arms during the year, and the question of the establishment of the empire seemed practically settled, a series of events took place in the city of Mexico, in November and December, which indicated that the "regeneration" of the country would prove a less easy task than had been anticipated, even should intervention succeed in tranquillizing it. The clerical party, who had brought about intervention, hoped, with some show of reason, that when the French army should occupy the city of Mexico, the Imperial Government would annul the laws of reform issued by the Liberal Government in 1860, and hasten to restore to the clergy the property which had been taken from them, nationalized and sold. Among the largest purchasers of ecclesiastical property, however, were a number of French subjects, who would be seriously injured, if not ruined, by its restitution; and as the French Government had intervened partly in favor of the claims of this class of persons, it could not, without stultifying itself before the world, abrogate the reform laws of 1860, and still less permit the regency to do so. Whether Napoleon at length appreciated the true means of regenerating the country, and was preparing to throw off his alliance with the Church party, and, in imitation of Juarez and the liberals, to destroy its power by distributing its wealth; or whether he was unscrupulously working out a policy of his own, it is at present difficult to say. The fact only remains, that at the close

of the year, by the acts of their generals, the French found themselves committed to that policy of Juarez, which had induced the reactionists to seek intervention, and at the same time engaged in compassing the overthrow of the liberals.

On the 24th of October Gen. Bazaine caused notices to be published in the official papers of the city of Mexico, that the proceedings pending in the courts relative to the sale of ecclesiastical property, and involving the validity of titles therein, should take their due course, without regard to the events of the last few months; and on November 7th, certain judges having abstained from taking cognizance of these causes, he requested the Regency to expedite them by an official decree. At the request of the Archbishop of Mexico, one of the regents, who had opposed the publication of these notices, and who thought the subject was too important to be hastily decided, further time for consideration was granted; and on the afternoon of the 8th he laid before Bazaine various reasons, which, in his opinion, rendered it expedient to postpone a decision in the matter until the arrival of the Archduke Maximilian. Almonte, one of his colleagues, was present, and sustained his views on several important points. Bazaine appearing unconvinced by the representations of the archbishop, the latter promised to send him the next day his views in writing at length, and took his departure. His surprise may be conceived, when, having just completed an elaborate communication to Gen. Bazaine, he received a notice from the under Secretary of State and of Justice (the latter being his own special department) that the Regency had issued a decree, in conformity with the request of Gen. Bazaine, to expedite the ecclesiastical property suits. This decree had been issued by two members of the Regency only, Almonte and Salas, without consulting him, and to add to his mortification, he subsequently ascertained that it had been signed and was in operation on November 8th, several hours before his interview with Bazaine. The latter, inflexibly determined to carry out his purpose, had detected from the outset the temporizing policy of the archbishop, and finding in the two other members of the Regency ready instruments, determined to dispense in this matter with the services of their coadjutor.

The archbishop, however, was not to be thus silenced. On the 10th he sent to Almonte and Salas, and to the president of the Supreme Tribunal, protests against the decree of November 8th, which he declared to be null and of no binding effect. On the 14th he declared that he would not again meet at the sessions of the Regency until the decree should be repealed, and on the 17th he was notified by his colleagues that, having arrayed himself in open opposition to the Regency, he thenceforth ceased to form part of it, General Bazaine concurring. To this he replied, that, being a part of the Re-

gency, he could not be in opposition to it; that he had not specifically declared his unwillingness to meet with his colleagues; and that the Assembly of Notables was alone competent to remove him from office. He also requested that his protest might be sent to General Bazaine.

Subsequently he received from the latter the following communication:

EXPEDITIONARY CORPS OF MEXICO, HEADQUARTERS
OF THE GENERAL-IN-CHIEF,
MEXICO, Nov. 20th, 1863.

YOUR GRACE—I have received the protest which his Excellency General Almonte has caused to reach me, with reference to the measures which have been adopted by the Regency to remove your Grace from the Provisional Government. I must make known to your Grace that this measure was rendered necessary by the attitude of your Grace, and it was taken with my approbation, persuaded, as I am, that this was the only means of avoiding the interruption of the march of events.

May I be permitted to express the desire that your Grace, well inspired, will accept the position as it is to-day, and will reject the advice and the suggestions of imprudent friends, against whom, notwithstanding, I have determined to take the most rigorous measures that I am authorized to employ under the powers with which I am invested. I rely on the abnegation of your Grace, and on your devotion to the country, that, at the moment I am about setting out for the interior, on the work of the pacification and regeneration of Mexico, your opposition will not delay the march of the Government.

Your Grace will please receive the expression of my high and respectful consideration. BAZAINE.

General Commanding-in-Chief.

To his Grace the ARCHBISHOP OF MEXICO.

In reply, the archbishop argued that his removal would delay rather than facilitate the "march of events," and denied the authority of the general in the premises. "This Government," he observed, "was terminated on the day of my removal. That which exists to-day may be whatever you wish, but it will not be the Government announced by General Forey to the Mexican people, to France, to the world," whence he concluded that the act of General Bazaine was null and void.

On December 15th, at the instigation of General Bazaine, a further order was issued by the Regency, removing all obstacles and legal impediments to the exercise of rights of action respecting church property, which were in existence at the time of the arrival of the French in the country. This seemed to indicate a policy on the vexed question of sequestration too plain to be misunderstood; but for the purpose of putting on record their opinions, and with some lingering hope, perhaps, that they might be able to avert the impending calamity, the Church party, represented by the archbishops of Mexico, Michoacan, and Guadalajara, and the bishops of San Luis Potosi and Oajaca, united, on December 26th, in a protest to the Regency, which, in some respects, is the most remarkable paper produced during the war.

After reciting the various illegal acts of the Regency, who, they allege, bound themselves under solemn obligations to the Church and the nation, "not to decide any ecclesiastical

questions, except in accord with the Holy Apostolic See," they observe:

All these acts manifest with the most weighty evidence that the Holy Catholic Church in Mexico suffers to-day, at the hands of the Government which actually exists in the capital, a compulsion in its most holy rights and in its canonical liberties entirely equal to that which it suffered when the authorities emanating from the plan of Ayutla* were in power, because such compulsion consists, not in the form of Government nor in the persons of those who compose it, but in the character and importance of its acts; and those of your Excellencies tend to expedite the consummation of the work which those authorities began, for you declare in full force the rights and actions which spring from the sacrilegious and illegal laws and from the acts committed against the immunity of the Church by said authorities, and even in the same language, for the same odious expression is now used which was then employed to designate the ecclesiastical property.

Grievous would be the evils which the Church suffers to-day, were they no greater than they were; but, by a misfortune which we can never sufficiently deplore, there are peculiar circumstances which render still worse the situation of the Church in Mexico, and which increase its grief to an extraordinary degree.

Then the Government frankly manifested its principles. It appeared to the view of all this Catholic people in the character of an opposition armed with power against religion and the Church; and the latter, as a victim immolated by the Government, defended itself heroically, suffering the consequences of a terrible persecution and perishing nobly for the holy cause of justice. To-day a Government inaugurates itself with professions eminently religious and moral, after the French army has destroyed, in the capital, that of Juarez, and it presents itself before the Mexican people as the protector of its faith, of its religion, of the Church, and of the priesthood. Then we were banished; to-day we are invited and received with expressions of consideration; creating by this means among the people a feeling of confidence as regards their tenderest affections, their dearest interests. Then the prelates leaving our country carried with them the hope that the first political change which should take place would bring with it a complete moral and religious restoration. To-day, returning after such a change to be present at the immolation of all our principles, the consummation of the ruin of the Church, we have received a blow such as is only received at the death of all human hope. Then the Church had only one enemy—the Government that persecuted it. To-day it has two: that same Government which still lives in the country, which still has resources of its own, an army that contends hand to hand for every foot of ground, and that counts upon the aid of its principles and interests in the enemy's camp; and in the capital an enemy whose first business it is to carry into effect the destructive plans of its opponent in religious and moral affairs. Then we received the blow from the hand of an open enemy: to-day we are attacked by those who call themselves friends of the Church and protectors of its liberties. Then the attack and the defence did not pass beyond strictly national bounds: to-day we have to lament the character which intervention has given to these attacks, and that from it have arisen the exigencies which have obliged your Excellencies to adopt your present course. Then we verified our episcopal acts simply as bishops; to-day we have to make our defence passive and legal, because we cannot pass that limit also as Mexicans. Then, notwithstanding the restrictions imposed by the laws of the press, we could publish our protests and our pastorals to the people, because there existed no other restraints than such as would result from the incon-

* The plan of Ayutla (1854) led to the overthrow of Santa Anna and the reactionary party, and the establishment of the liberal administration of Comonfort, under which were passed the first laws for the sequestration of church property.

veniences of a trial. To-day the press is bound in such a manner that it is open only to those who favor the intervention. The publication of a Pontifical allocution, of an edifying and moral retraction, and of any paragraph copied from abroad in which allusion is made to the authority of the Holy Father with respect to the ecclesiastical questions of this country, are the subjects of formal admonitions to the press, and of prohibitions to insert in the future this class of articles, at the same time that anti-ecclesiastical, and sometimes even scandalous doctrines pass unnoticed.

It is for these reasons that, speaking of the situation in which circumstances have now placed us, we consider it worse than before.

Then follow several passages of denunciation against the "sacrilegious laws of spoliation" which the Regency are attempting to reënforce, and which, notwithstanding their "illegal, ruinous, unpopular, and sacrilegious character," they complain, are "pompously called laws of reform." Alluding to the surprise and confusion which the course of the Regency has caused them, and to the absence of any justifiable motive, founded on public convenience, for adopting such a course at this time, they add:

That Senor Juarez with his party should enact such laws, and should work unceasingly to carry them into effect, this we can well conceive, as well as the energetic opposition of the prelates and the conscientious resistance of all true Catholics; but that a Government under the protection of France (not as a conqueror, not as attempting to overthrow our independence, but as respecting it and offering to save it, and instructing its commander-in-chief not to interfere with the freedom of its acts), which has just been established as the Government of a nation in virtue of the vote of a Council of Notables, and in opposition to the Government of Senor Juarez, that such a Government should work for the laws which this latter has dictated, these being, as they are, the essential and sole cause of the division among the Mexicans and of the civil war, this we cannot understand. * * *

We well know that to present such proceedings in a favorable light a thousand plausible excuses are invented, principally to win over by surprise the Court of France, which lacks the data indispensable to judge of the state of society here. But the truth will not be long in appearing in its true light, and to the scandal of the world it will be known that the immense majority of the Mexicans are essentially Catholic, that they respect the laws of God and of their Church, that they bewail the attacks received from the Government of Ayutla, and that if they manifested themselves in favor of the intervention, it was because it presented itself as their protector, not against the persons—for that would be but a childish jest—but against the acts of the Government of Senor Juarez. But the attitude that the intervention to-day takes by such dispositions has transformed its triumphs to victories over the party oppressed, for it gives force and vigor to the claims and rights emanating from such acts.

The bishops then examine the conduct of Gen. Bazaine and the Regency by the light of the instructions given to the former by M. Drouyn de L'Huys in August, and find that these instructions have been obeyed neither in letter nor in spirit. The motive for this disobedience they allege to be a trivial one:

And what has been the cause. What powerful motive has precipitated this crisis? Perhaps the supreme interests of society? Perhaps an extreme necessity, a sudden emergency, a tempest which could not be assuaged by any other means? No! it was the most

trifling cause, the most insignificant in regard to the effect.

The complaint of a French subject, and the request of the General-in-Chief made to your Excellencies by virtue of this complaint. This is the cause of all; this is what Mexico has to hope from the impartiality that was promised, and from the non-interference of that chief in order to leave the Government free in its acts; this is the melancholy synopsis of the situation in which the Mexican Church to-day finds itself.

They therefore hope that all the proceedings instituted by the Regency may be suspended; but if this hope should prove fallacious, they desire to utter their solemn protest against every act affecting injuriously the property of the Church, declaring all such acts utterly null and void; and conclude with the following declarations:

First—That it is not lawful to obey the communications of the 24th October, the circulars of the 8th of November and the 15th instant, nor any orders tending to aid the execution of the said decrees of Senor Juarez, nor to coöperate therewith.

Second—That neither that Government nor any Government, whatever it may be, has any authority to take possession of the property of the Church; that, therefore, both the decrees of that Government and the notices and circulars issued by order of your Excellencies, involve an illegal and tyrannical disposition of the most sacred property, and are subject to the censures of the holy Church, and especially to the excommunication fulminated by the Holy Council of Trent, in chapter 11 of session 22 *de reformatione*. In consequence there are comprehended in this canonical penalty not only the authors and executors of the decrees, notices and circulars aforesaid, but also all those who in any way coöperate or have coöperated toward their fulfilment.

Third—That the political change which has taken place in Mexico in consequence of intervention has not altered or lessened in any respect the obligations and moral and canonical responsibilities to which those of whom we have just spoken are subject, and that therefore all of our protests, circulars and diocesan orders, issued by reason of the so-called constitution and laws of reform, remain in all their force and vigor, and are applicable to the notices and circulars of your Excellencies already mentioned, and to whatever other dispositions of your Excellencies that tend to place in execution the laws, decrees and acts to which our canonical protests, said manifestation, circular and diocesan orders refer.

Those incurring the censure of the said canon, in virtue either of the law of the 25th of July, 1856, of the decrees published in Vera Cruz by Senor Juarez in July, 1859, or afterward in Mexico, of the communications and circulars issued by order of your Excellencies, or of the disposition or orders of whatever authority or person, public or private—that is to say, the authors, executors or coöperators in the despoliation of the Church in its property, lands, rents, possessions, claims, rights, temples, objects contained therein destined to public worship, &c., are strictly obliged to make restitution and reparation for the scandalous crime; and they cannot be absolved, not even at the point of death, if they do not comply with the conditions established by the Church and set forth in our circulars and diocesan decrees aforesaid.

So frank an acknowledgment that the sequestration policy of Juarez was "the essential and sole cause" of the present complications, and that there has never been any question at issue in Mexico but that of the Church property, was unexpected by the liberals, and seemed to justify the charges so freely made against the Church party. The protest, however, except

as a confession extorted from incensed and disappointed men, attracted little notice, the arguments contained in it having been often stated before; and the Regency pursued with unruffled complacency the course marked out for them by Gen. Bazaine. The judges of the Supreme Tribunal, who were all members of the Church party, having, in defiance of the decree of December 15th, refused to expedite the ecclesiastical property cases, were promptly removed from office by the Regency, who announced in a manifesto to the Mexican people that their "line of conduct was traced beforehand by gratitude to the intervention, and by the interests of the country, which it was necessary not to separate from the French policy."

The following correspondence between Gen. Neigre, whom Bazaine had left in command of the city, and the Archbishop of Mexico, though occurring after the close of the year, is appended as forming an important and indispensable part of the proceedings above related:

MEXICO, Jan. 16th, 1864.

Your Grace: There has just been brought to my knowledge a matter of very grave import. Certain incendiary publications, which have been put under the doors of various houses and scattered clandestinely among the public have reached my hands.

The authors of these culpable publications magnify petty material interests which our holy religion repudiates, and appeal to the most detestable passions against the army of his Majesty the Emperor, which has come to rescue Mexico from anarchy, and to afford protection to the pastors of souls, in order to allow them the greatest liberty in their holy ministry. They forget that those prelates of whom they pretend to be the organ, and whom they make to appear as humiliated and despised, have never been surrounded with more respect and veneration.

I desire to believe, your Grace, that you are ignorant of these criminal proceedings. I therefore have to denounce them to you, and to address to you an entreaty in the interest of public order and tranquillity; since, in the name of the Catholic religion, of which we Frenchmen are the eldest sons, and in the name of the prelates whom we cover with our respect, a degraded party is in movement to disturb the national repose. Tell that party, your Grace, that we are watching it, and know its machinations; that the French army, in accord with the lawful Government of the country, will maintain tranquillity; tell it that, although we are always reluctant to employ violent measures of repression, we shall know how, if circumstances put us under that painful obligation, to make them return again to the obscurity from which they are daring to put forth diatribes which prove them to be the real enemies of Mexico.

Be pleased to tell them this, your Grace, and if they stop at your evangelical words, your Grace will have done a great service to humanity, and, failing their gratitude, you will have ours.

BARON NEIGRE, General in Command.

To his Grace the ARCHBISHOP OF MEXICO.

REPLY OF THE ARCHBISHOP TO GEN. NEIGRE.

Your Excellency: In reply to the communication of your Excellency of the 16th instant, I have the honor to assure you, with respect to incendiary writings distributed through the city, that I have not had, nor even now have, any knowledge of them up to the present time. It would, therefore, have been necessary that I should have read them to be able to answer you, and I would thank you sincerely if you would have the kindness to send me a copy of them.

Here I would finish my letter if you did not make in yours certain assertions that, independently of the

writings referred to, you throw upon the Mexican clergy. It is, therefore, indispensable to rectify these assertions in case they are not exact.

There is an acknowledged fact—one publicly notorious—which is, that we have all protested against the two individuals who assume to be a government, and against the circulars of the 9th of November and 15th of December last, and we declare categorically that the Church, in its immunities and rights, is at present the object of the same attacks that it had to suffer during the government of Juarez; that never was the Church so bitterly persecuted; and that we, the chief prelate, from the position in which we have been placed, find ourselves in a worse situation than at that period.

Your Excellency tells me that in the exercise of their sacred ministry the pastors of souls enjoy the greatest protection and the most complete liberty, and that they have never been held in greater respect and veneration. Your Excellency, then, will perceive that the two documents quoted (our manifesto and your letter) represent, with respect to the position of the Church, two propositions entirely contradictory, and that of the two propositions one is necessarily true and the other consequently false.

In conformity with this statement of facts, and the deductions of logic, it results that we, a Mexican prelate, find ourselves, according to your assertion, in the alternative of denying those writings or of retracting our words.

We cannot retract, because we have spoken the truth, protested justly, and acted rightfully, and we feel in our conscience that we have been placed in the painful necessity of acting thus.

From what your Excellency tells me, I infer that you are ill informed with regard to the situation of the Mexican Church, and I am convinced that had you known the facts, the interests involved and the motives which have determined our conduct, you would have done us justice in the opinion which you would have formed of that conduct.

I have the honor to enclose to your Excellency a copy of my protest.

Your Excellency will be pleased to accept the expression of my consideration.

PELAGIO ANTONIO, Archbishop of Mexico.

To his Excellency BARON NEIGRE,

General in Command.

The position of the United States during the year, in relation to the Mexican question, was a peculiar one. On the one hand, the Government was supposed, in accordance with the popular interpretation of the so-called "Monroe doctrine," to be pledged to oppose any interference by foreign Powers with the political affairs of the American continent; while, on the other, the exigencies of the existing civil war monopolized her military resources to an extent which would render protest or opposition to the schemes of France of little effect. The popular sympathy lent itself to the cause of the Mexican liberals, and, notwithstanding the hands of the Government were in a measure tied, there were not wanting many persons, friends as well as opponents of the administration, who thought that the traditional policy of the country should not be abandoned, and who believed that a protest, even though accompanied by no military demonstration, would have prevented the establishment of an empire in Mexico. This led to a discussion in the public prints respecting the history and object of the promulgation of the Monroe doctrine, with a view of ascertaining exactly what the Government pledged itself to do in

cases of foreign intervention, and what action was required of it under existing circumstances.

In his message to Congress in December, 1824, Mr. Monroe, speaking of the Spanish American States, whose independence was not yet acknowledged by Europe, says:

The deep interest which we take in their independence, which we have acknowledged, and in their enjoyment of all the rights incidental thereto, especially in the very important one of instituting their own governments, has been declared, and is known to the world. Separated as we are from Europe by the great Atlantic Ocean, we can have no concern in the wars of the European Governments, nor in the causes which produce them. The balance of power between them, into whichever scale it may turn in its various vibrations, cannot affect us. It is the interest of the United States to preserve the most friendly relations with every power, and on conditions fair, equal, and applicable to all. But in regard to our neighbors our situation is different. It is impossible for the European Governments to interfere in their concerns, especially in those alluded to—of instituting their own Governments—which are vital, without affecting us; indeed, the motive which might induce such interference in the present state of the war between the parties, if war it may be called, would appear to be equally applicable to us. It is gratifying to know that some of the Powers with whom we enjoy a very friendly intercourse, and to whom those views have been communicated, have appeared to acquiesce in them.

This passage was considered by some writers to demonstrate that the Monroe doctrine was aimed against the balance of power constituting the political system of Europe, and was intended to guard the United States from being mixed up in that system, and also to notify the European Powers that they should not be allowed even to attempt to bring the country into their complications. The dangers apprehended by the statesmen who supported these views were averted by the promulgation of the doctrine. But now, it is claimed, the Emperor of France, taking advantage of the crippled condition of the American Government, is preparing to involve the country in just such complications as Mr. Monroe apprehended, as appears by the following extract from his letter of instructions to Gen. Forey, dated July 3d, 1862:

In the present state of the world's civilization Europe is not indifferent to the prosperity of America; for it is she which nourishes our industry, and gives life to our commerce. It is our interest that the republic of the United States shall be powerful and prosperous, but it is not at all to our interest that she should grasp the whole Gulf of Mexico, rule thence the Antilles as well as South America, and be the sole dispenser of the products of the New World. We see today, by sad experience, how precarious is the fate of an industry which is forced to seek its raw material in a single market, under all the vicissitudes to which that market is subject.

If, on the contrary, Mexico preserves its independence, and maintain the integrity of its territory, if a stable Government be there established with the aid of France, we shall have restored to the Latin race on the other side of the ocean its force and its prestige; we shall have guaranteed the safety of our own and the Spanish colonies in the Antilles. We shall have established our benign influence in the centre of America, and this influence, while creating immense outlets

for our commerce, will procure the raw material which is indispensable to our industry.

Mexico thus regenerated will always be favorable to us, not only from gratitude, but also because her interests will be identical with our own, and because she will find support in the good will of European Powers.

Hence it was concluded that the Government was bound, if it wished to maintain its standing among the nations, and if the Monroe doctrine was something more than a mere *brutum fulmen*, to protest against the acts and designs of the French in Mexico.

On the other hand, the Monroe doctrine was asserted to be contained in the following passage from Monroe's message of December, 1823, which is nearly a repetition of the language employed by John Quincy Adams, then Secretary of State, in a despatch to the American minister in Paris, dated in July of the same year:

The occasion has been judged proper for asserting as a principle on which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects of future colonization by any European Power.

In a despatch to the American minister in Mexico, dated March 25th, 1825, Mr. Clay, recently appointed Secretary of State in the Adams administration, explained that the doctrine enunciated by Monroe in his message of 1823, embodied two principles: First, that the American continents are not henceforth to be considered as subjects for future colonization (*i. e.*, a colonization founded on priority of discovery and occupation) by any European Power; and second, that the United States, while not desiring to interfere in Europe with the political system of the Allied Powers, would regard as dangerous to its peace and safety any attempt on their part to extend their system to any part of America, neither continent having the right to enforce upon the other the establishment of its peculiar system.

During the session of Congress of 1825-'26, Mr. Adams suggested in a message, dated December 26th, 1825, the propriety of having the United States represented in the Congress of Spanish-American States, to be held in Panama, using the following language in explanation of the policy already adopted by Government:

An agreement between all the parties represented at the meeting, that each will guard, by its own means, against the establishment of any future European colony within its borders, may be found advisable. This was, more than two years since, announced by my predecessor to the world, as a principle resulting from the emancipation of both the American Continents. It may be so developed to the new Southern nations that they will all feel it as an essential appendage to their independence.

And in the protracted debates which followed, Mr. Van Buren declared that Mr. Monroe had not *pledged* the United States to any course whatever, and never intended to do so. Other statesmen expressed similar views.

From all which a writer in the "National Intelligencer," of Washington, draws the following conclusions:

1. The Monroe declaration of 1823, in both its phases, had its origin in the changed relations and new responsibilities imposed upon the several States of the American Continents arising especially from the emancipation of the Spanish Colonies.

2. The Monroe declaration, in so far as it related to the threatened intervention of the Holy Alliance in the concerns of the Spanish American States, was intended to meet a particular contingency of events, and therefore passed away with the occasion which called it forth.

3. The Monroe doctrine, in so far as it relates to the colonization of the American Continents by any European Power, was not intended to bind the United States to guard the territory of the New World from such occupation by European States; but was intended to indicate as an important principle of American public policy, that "each State should guard by its own means against the establishment of any future European colony" within the jurisdiction of its flag. That is, the American Continents were no longer held open to colonization as derelict territory, capable of occupation by right of discovery and settlement.

4. The Monroe doctrine was not in any of its aspects a pledge committing the Government of the United States to any line of policy beyond that which seemed expedient and necessary at the time of its announcement. As Mr. Van Buren well said, "no declaration of the Executive could have this effect," and none such was "intended" by Mr. Monroe.

It was therefore denied that the United States Government was bound by traditional policy, precedent or pledge, to demand the immediate recall of the French troops from Mexico, however earnestly public opinion might pronounce in favor of such a course; and it was urged that to embarrass the Government at the present time by the consideration of questions of this kind, or to cause it to humiliate itself before the world by making a demand which it had not the power to enforce, would be factious and unreasonable.

These may be taken to represent the opinions publicly expressed as to the part to be taken by the United States in the Mexican question. The President in his message of December, 1863, made no allusion to the subject, and the views of Government can be ascertained only by referring to the diplomatic correspondence of the year.

In a despatch, dated June 26th, Mr. Corwin, the United States minister in Mexico, announced to Mr. Seward that the Government to which he had been accredited had retired to San Luis Potosi, and that under the circumstances in which he found himself situated, he had declined the invitation of Juarez to leave Mexico and repair to that place. In reply, Mr. Seward informed him, under date of August 8th, that his course met with the approbation of the President, and observed that the most convenient and favorable position for the American legation, with reference to the protection of American interests, must depend upon the contingencies of war. "It is not perceived," he added, "how you could effectually assert those interests at the present moment by representations to the Government at San Luis, which is

cut off from communication with the legation, while, on the other hand, you will not be expected to address yourself, under present circumstances, to the new provisional government which bears sway in the capital." No subsequent communications between Mr. Corwin and the department of State have been made public.

On September 22d, Mr. Seward informed Mr. Dayton, the American minister in Paris, that he had received from "M. J. M. Arroyo, who calls himself under Secretary of State and Foreign Affairs of the Mexican Empire," a note announcing the organization of the new Government in Mexico; and on the 26th he addressed to Mr. Dayton an elaborate despatch, referring in part to the Mexican question, which he authorized him, at his discretion, to communicate to the French Minister of Foreign Affairs. The United States, he observed, had neither a right nor a disposition to intervene by force in the internal affairs of Mexico, whether to establish and maintain a republic, or even a domestic government there, or to overthrow an imperial or a foreign one, if Mexico should choose to establish or accept it. In like manner they had neither the right nor the disposition to intervene by force on either side in the existing war. The American Government was well aware, however, that the normal opinion of the Mexican people favored a government republican in form and domestic in its organization, in preference to any monarchical institutions to be imposed from abroad; and believed that foreign attempts to control American civilization would fail, and that its own safety and happiness depended upon the cultivation of republican institutions on this continent; whence he was induced to fear, that if France should persist in her present course, seeds of jealousy and distrust might be scattered, which might ultimately ripen into collisions. (*See DIPLOMATIC CORRESPONDENCE.*)

Mr. Dayton replied on October 9th that he had communicated the substance of this despatch to M. Drouyn de l'Huys, who informed him that the vote of the whole Mexican people would be taken on the question of establishing the Empire; also that the dangers of the government of the Archduke would come principally from the United States, and the sooner the latter showed itself satisfied and willing to enter into peaceful relations with that government, the sooner would France be ready to leave Mexico. But the French would not consent to desert the Archduke before his government was firmly established. The early acknowledgment of that government by the United States, he added, would tend to shorten, or perhaps to end all the troublesome complications of France in Mexico, and the French troops would thereupon retire.

In reply to this despatch Mr. Seward wrote to Mr. Dayton, on the 23d, that the United States were still of the opinion, that the permanent establishment of a foreign and monarchical government in Mexico would be found

neither easy nor desirable. With reference to the election proposed to be held, and the suggestion of M. Drouyn de l'Huys that an early acknowledgment of the Empire by the United States would be convenient to France, he observed, "that the United States could not anticipate the action of the people of Mexico, and had not the least purpose or desire to interfere with their free choice, or disturb them in the enjoyment of whatever institutions of government they might, in the exercise of an absolute freedom, establish." He also requested that the French minister might be informed, "that the United States continue to regard Mexico as the theatre of a war which has not yet ended in the subversion of a government long existing there, with which the United States remain in the relation of peace and sincere friendship; and that, for this reason, the United States are not now at liberty to consider the question of recognizing a government which, in the further chances of war, may come into its place. The United States, consistently with their principles, can do no otherwise than leave the destinies of Mexico in the keeping of her own people, and recognize their sovereignty and independence in whatever form they themselves shall choose that this sovereignty and independence shall be manifested."

MICHIGAN. The Legislature of Michigan assembled at Lansing on the 1st Wednesday of January, 1863, and was organized by the choice of the republican candidates for presiding officers in both branches. Austin Blair, reelected by the republicans governor in the preceding November, was inaugurated on the 8th, and in his message represented the financial condition of the State as satisfactory. The number of troops furnished by Michigan to that date he stated at 45,000; but 2,900 were still wanting to complete the quota of the State under the President's call of 1862. He sustained the emancipation policy of Mr. Lincoln and favored the employment of colored men in the U. S. army. On the 9th the Legislature by joint ballot reelected Zachariah Chandler a U. S. senator for six years, from March 4th, 1863. The following resolutions were adopted:

Whereas, The present rebellion threatens the peace and perpetuity of the Union of the States, and requires the united efforts of all patriotic and loyal citizens to sustain the Administration to restore a permanent and honorable peace to the whole country; therefore

Resolved, That we will sustain the National Administration with all the means in our power, in all its efforts to quell the present rebellion, and restore peace to the Union.

Resolved, That we unreservedly approve the Proclamation of the President of the United States, issued on the first day of January, one thousand eight hundred and sixty-three, abolishing slavery in the insurgent States and districts of the Union, believing it to be a measure demanded by the necessities of war, as well as by the soundest dictates of humanity.

Resolved, That we are unalterably opposed to any terms of compromise or accommodation with the rebels, while under arms, and acting in hostility to the Government of the Union, and on this we express but one sentiment—unconditional submission, and obedience to the laws and Constitution of the Union.

Resolved, That the governor be requested to forward a copy of the foregoing preamble and joint resolutions to each of our senators and representatives in Congress, and to the governors of the several loyal States.

The only election held during the year was one for the choice of Supreme Court and Circuit Judges and Regents of the University. The democratic nominating convention met at Detroit on Feb. 11th, and among the resolutions adopted by it were the following:

Resolved, That the allegiance of the citizen is due alone to the Constitution and laws made in pursuance thereof—not to any man or officer, or administration; and whatever support is due to any officer of this Government, is due alone by virtue of the Constitution and the laws.

Resolved, That the Union has no existence separate from the Federal Constitution, but, being created solely by that instrument, it can only exist by virtue thereof, and, when the provisions of that Constitution are suspended, either in time of war or in peace, whether by the North or the South, it is alike disunion.

Resolved, That the Constitution cannot be maintained, nor the Union preserved, in opposition to public feeling, by the mere exercise of coercive powers confided to the General Government, and that, in case of differences and conflicts between the States and the Federal Government, too powerful for adjustment by the civil departments of the Government, the appeal is not to the States or to the General Government, but to the people peacefully assembled, by their representatives in convention.

Resolved, That, to attain the objects of the foregoing resolution, we hereby memorialize the Congress of the United States, the Administration at Washington, and the Executives and Legislatures of the several States, to take such immediate action as may be necessary to enable the people to meet in convention aforesaid; and we, therefore, earnestly recommend to our fellow citizens everywhere to observe and keep all their lawful and constitutional obligations, to abstain from all violence, and meet together, and reason each with the other upon the best mode to attain the great blessing of peace, union, and liberty.

Other resolutions denounced the attempt to abridge freedom of speech, the suspension of the *habeas corpus*, arbitrary arrests and imprisonments, the establishment of a censorship of the press, "the proposed taxation of the laboring white man to purchase the freedom and secure the elevation of the negro," and other "flagrant and monstrous usurpations of the administration." The "ruinous heresy of secession" was also condemned as "unwarranted by the Constitution and destructive alike of the security and perpetuity of the Government, and the peace and liberty of the people."

The republican convention met at the same place on Feb. 12th. Their resolutions sustained every prominent administrative act of the President, and declared that, in subduing the rebellion, he should employ every means established by the rules of warfare among civilized nations. The following embody the substance of their opinions:

Resolved, That so long as the rebels, with arms in their hands, set at defiance the Constitution and laws of the United States, and openly proclaim their purpose to be the destruction of the Government, no terms of compromise or accommodation can be offered or accepted. Unconditional surrender of all armed traitors is the first great law of national life.

Resolved, That while we express our cordial approval of the measures of the Administration thus far, we hereby declare our unalterable purpose to stand by and for the Government and Constitution of the United States, as against all secret enemies and armed traitors, and with the legally constituted authorities against all sympathizers, croakers, and grumblers, whether we shall consider each future act of the Administration the wisest possible or not; with or without our choice of measures, we are for the Government—for law and order, and for such administration as the people, by their ballots, have and shall order.

The election took place on April 6th, with the following result:

ASSOCIATED JUSTICE OF THE SUPREME COURT.

James V. Campbell, Republican.....	69,283
David Johnson, Democrat.....	61,331
Republican majority.....	7,952

Blair's majority for governor in the preceding November was 6,614. The following candidates of the republicans were also elected regents of the University by an average majority of a little more than 7,000: Edward C. Walker, J. Eastman Johnson, Geo. Willard, James A. Sweesey, Alva Sweetzer, Jas. J. Joslin, Henry C. Knight and Thomas C. Gilbert.

The number of troops enlisted in Michigan from Jan. 1st to Oct. 1st, 1863, amounted to 6,322, distributed as follows: infantry, 1,059, cavalry, 3,573, artillery, 510, all other branches, 1,180; and of these 4,842 entered new regiments, and 1,480 regiments already in the field. This number added to that of troops previously enlisted shows a total of about 51,500 men furnished by the State, from the commencement of the war to Oct. 1st, 1863. The quota of the State under the draft ordered by the President in May, 1863, was 16,000 men, upon which she was entitled to a credit of about 9,500 for troops furnished by her in excess of previous calls. The draft went into operation in October, but failed to produce the quota assigned to the State, and the deficiency was subsequently largely increased by the addition of the quota assigned under the October call for 300,000 volunteers. By an act of the Legislature of March, 1863, the governor was authorized to pay a bounty of \$50 to each volunteer; but this sum proving totally inadequate to induce enlistments, various towns and counties made large appropriations of money for bounties. With a view of legalizing these acts and of increasing the amount of the State bounties, the governor in December issued a proclamation for an extra session of the Legislature on Jan. 19th, 1864. Among the new military organizations authorized to be formed was a regiment of colored men, which at the close of the year was nearly full.

On March 6th the peace of Detroit was disturbed by a riot, growing out of the arrest of a negro charged with violating a young white girl. The former, while being conveyed to the city jail under a military escort, was set upon by an excited mob, who wished to lynch him on the spot. The soldiers fired upon and dispersed the rioters, who soon after commenced

an attack upon the colored population of the city, many of whom were wounded and otherwise maltreated, and driven out of their houses, which were burned and gutted. All the available military in Detroit and its vicinity were called out, and by evening tranquillity was restored. On the 8th the riot broke out afresh, but was soon subdued by the military, and owing to the vigorous preparations of the authorities, no subsequent attempts were made to disturb the peace.

The total interest-bearing debt of the State amounted, at the close of 1863, to \$2,993,299.80. The total available resources of the treasury during 1863, were \$3,481,676, of which \$2,009,210 were derived from the sale of State bonds. The total expenditures of the year were \$3,127,555.52, of which \$2,080,310 were for the repayment of State bonds, leaving a balance in the treasury, at the close of the year, of \$354,120. The following table exhibits the condition of the banks on Nov. 30th, 1863:

Capital Stock.....	\$558,192 71
Circulation.....	198,966 00
Deposits.....	1,619,707 03
Due to other banks.....	77,763 38
Other liabilities.....	82,272 01

Total liabilities.....	\$2,535,801 13
Notes and bills discounted.....	\$1,235,614 62
Specie	98,388 56
Due from other banks.....	554,753 41
Notes and securities of the U. S. and State	440,757 00
Mortgages, real estate, &c.....	206,287 54

Total resources.....	\$2,535,801 13
----------------------	----------------

The report of the Superintendent of Public Education for the year ending January 1st, 1863, shows that during 1862, 207,332 children, out of 261,323 in the State, attended the public schools; that the number of teachers was 8,338, who received salaries amounting in the aggregate to \$491,293.55, and that the value of school houses and sites was \$1,673,258. The school revenues for the year amounted to \$783,394.04, and the expenditures to \$689,072.12, and the amount reported on hand on September 1st, 1862, was \$94,321.92. The University of Michigan had, in October, 1863, 706 students, of whom 213 were connected with the literary and scientific department, 188 with the department of law, and 305 with that of medicine, showing an increase in all the departments of 232 over the corresponding period of the previous year. The receipts for the fiscal year ending June 30th, 1863, were \$53,369.96, and the expenditures \$45,618.94; leaving a balance on hand of \$7,751.02.

The development of the mineral resources of the Lake Superior region seems to have been increased rather than diminished since the commencement of the war. In 1862, 115,721 tons of iron were shipped from Marquette, and the estimate for 1863 exceeds 200,000 tons. The following table indicates the amount of rough copper produced since the first attempts at regular mining:

1845 to 1854.....	7,642	1861.....	7,400
1855 to 1857.....	11,312	1862.....	9,062
1858.....	3,500	1863.....	8,548
1859.....	4,200		
1860.....	6,000	Total.....	57,664

Estimating this at an average price of \$500 per ton, the gross amount will equal \$28,832,000. Important discoveries of silver and lead mines are also reported to have been made in the Lake Superior region during the year. In 1862, 1,270,000 bushels of salt were produced from the salt wells of the Saginaw valley, and operations were pushed in the succeeding year over a wide area of the adjacent country. Frequent traces of petroleum having been met with at Jackson, Dexter, Paw Paw, and other places, measures have been taken to test the productiveness of the State in this material.

The wheat crop of 1863 was relatively less than in the preceding year; the ravages of insects, and the heavy rains of midsummer having done considerable damage in some parts of the State; but in view of the increased breadth of land sown the yield was probably as large, if not larger, than in the previous year. The corn crop, however, was greatly reduced by the sudden and severe frosts of August 29th and 30th, which devastated the whole Northwest.

MILITARY GEOGRAPHICAL DEPARTMENTS. The geographical extent of each of the Military Departments into which the country was divided during the latter part of 1863 is thus defined. Some changes were made in them at different periods by which the number was increased or reduced.

Department of the East.—The New England States, and the State of New York. Headquarters at New York City.

Middle Department.—The States of New Jersey, Delaware, Western Virginia, the eastern shore of Maryland and Virginia, and the counties of Cecil, Harford, Baltimore, and Anne Arundel, Maryland. Headquarters at Baltimore, Maryland.

Department of Washington.—The district of country north of the Potomac River from Piscataway Creek to Annapolis Junction, and the mouth of the Monocacy; and south by Goose Creek and Bull Run Mountains, to the mouth of the Occoquan. Headquarters at Washington, D. C.

**Department of Virginia.*—Fortress Monroe, Virginia, and sixty miles around the same. Headquarters at Fortress Monroe, Virginia.

**Department of North Carolina.*—The State of North Carolina. Headquarters at Newbern, North Carolina.

Department of the South.—The State of South Carolina, Georgia, and all of the State of Florida, except Key West, Tortugas, and West Florida. Headquarters at Hilton Head, South Carolina.

Department of the Gulf.—Key West and the Tortugas, and all the coast of the Gulf of Mexico west of Pensacola Harbor, and so much of the Gulf States as may be occupied by the United States forces, and the State of Texas. Headquarters at New Orleans, Louisiana.

Department of the Northwest.—The States of Wisconsin, Iowa, Minnesota, and the Territory of Dakota. Headquarters at St. Paul, Minnesota.

†*Department of the Ohio.*—The States of Ohio, Michigan, Indiana, Illinois, Western Virginia, and Ken-

tucky, east of the Tennessee River, including Cumberland Gap. Headquarters at Cincinnati, Ohio.

†*Department of the Cumberland.*—That portion of the State of Tennessee east of the Tennessee River, and such parts of northern Alabama and Georgia as may be taken possession of by the United States troops. Headquarters in the field.

†*Department of the Tennessee.*—Cairo, Illinois; Forts Henry and Donelson, Tennessee; Northern Mississippi, and the portions of Kentucky and Tennessee west of the Tennessee River. Headquarters in the field.

Department of the Missouri.—The States of Missouri, Arkansas, and Kansas; the bordering Indian Territory; Alton, Illinois; Nebraska and Colorado Territories. Headquarters at St. Louis, Missouri.

Department of New Mexico.—The Territory of New Mexico, district or Western Arizona, and Fort Garland, Colorado Territory. Headquarters at Santa Fé, New Mexico.

Department of the Pacific.—The country west of the Rocky Mountains. Headquarters at San Francisco, California.

Department of Monongahela.—That portion of the State of Pennsylvania west of Johnstown and the Laurel Hill range of mountains, and the counties of Hancock, Brooke, and Ohio in the State of Virginia, and the counties of Columbia, Jefferson and Belmont in the State of Ohio. Headquarters at Pittsburg.

Department of the Susquehanna.—That portion of the State of Pennsylvania east of Johnstown and the Laurel Hill range of mountains. Headquarters at Chambersburg.

MINNESOTA, a Northwestern State of the American Union, organized as a territory March 3d, 1849, and admitted into the Union as a State in 1857. Its area is 83,531 square miles. Population in 1860, 173,855. An election was held for State officers and Legislature in October, 1863, and the Republican and Union ticket was elected; Samuel Miller, the Union candidate, receiving 19,616 votes, and H. T. Welles, the Democratic candidate, 12,777. The Legislature stands as follows: *Senate*—Republican Union, 16; Democrats, 4; Union Democrat, 1. *House*—Republican Union, 27; Democrats, 11; Union Democrats, 4. The receipts into the State Treasury (including a balance on hand Dec. 1st, 1862), for the year ending Dec. 1st, 1863, were \$695,865. The expenditures for the same period were \$576,539, leaving an unexpended balance of \$119,326. The State debt is \$350,000, \$250,000 of which are in 8 per cent. bonds, and \$100,000 in 7 per cent. bonds. The U. S. Government paid \$200,000 to the State on account of the Indian war of the previous year. The State valuation for the tax levy of 1863 was \$30,000,000, and a tax of 4½ mills was levied on it—2½ mills for State revenue, and 2 mills for interest on State loans. Minnesota is a young State, and has had so serious experience in civil war and war with the Indians that her educational and benevolent institutions have as yet made but little progress. Her school system is not yet in good working order, though she is destined to have a school fund as ample as any in the Union. There are several colleges, but as yet they are only in a rudimentary state. A slight provision has been made for the insane, but none for the deaf and dumb, the blind, or the idiotic.

* Consolidated into one, under General Butler.

† Consolidated under General Grant.

† Consolidated under Gen. Grant.

The State has done its full part for the war. Up to the 30th of Nov. 1863, it had furnished the following troops: 10 regiments of infantry, 9,053 men; 2 regiments of cavalry (one a twelve-months regiment), 1,556 men; three companies of cavalry attached to 5th Iowa cavalry, 271; one mounted battalion for Indian war, 287; two batteries of light artillery, 298; one company of sharpshooters, 103; recruits for these regiments and companies, 666; men from Minnesota drafted in other States but credited to Minnesota, 37; one regiment of three-months men, 930; making a total of 13,201 men, or nearly one in thirteen of the inhabitants. Omitting the three-months men and reducing the twelve-months cavalry to three-years men, the aggregate of three-years men furnished by the State is 11,549. In addition to these troops, 2,779 volunteers were raised for the defence of the State in the Indian war of 1862, and a considerable number in the war of 1863.

Minnesota again experienced trouble with the Indians in the summer of 1863, though there was no general massacre like that of August and September, 1862. Although the frontier was guarded by a force of 2,000 men, yet the Indians of Little Crow's band, in companies of half a dozen or more, penetrated within the lines and even approached to within a few miles of St. Paul. They had murdered, before the first of July, about thirty persons, and about a dozen Indians had been killed. This prowling of the Indians through the State kept the entire body of citizens in a constant condition of excitement and anxiety, and the military authorities were bitterly denounced for their supposed inactivity.

General Sibley, who was in immediate command on the frontier, was not, however, so remiss in his duty as the complaining parties supposed. He had kept constant watch, by means of his spies, of all the movements of the Indians from the time of their defeat in the autumn of 1862. He knew that these marauding bands composed but a small part of the Indian force; that the main body of that force was still in Dakota Territory; that Little Crow had endeavored to enlist the other tribes in a general war against the whites, but had been unsuccessful; that he had in the spring visited St. Joseph and Fort Garry in the British possessions, and asked for a grant of land to settle with his band and the other Indians who had been concerned in the massacre, and had been refused; that he had gone a second time and asked for ammunition, and had been refused that also. The great body of the insurgent Indians, Gen. Sibley had ascertained, were in the vicinity of Miniwakan or Devil's lake, a salt lake nearly five hundred miles northwest from St. Paul. The number of Indians gathered here, including women and children, was not far from five thousand, the greater part of them belonging to the Minnesota tribes of Sioux, to whom had been added perhaps one thousand Yanktonais Sioux.

In the early part of June General Sibley, with a force of between two and three thousand men, set out for Devil's lake by way of the Minnesota river and Fort Abercrombie. About the same time Gen. Pope sent Gen. Sully, an officer of the regular army who had had large experience as an Indian fighter, from Sioux City up the Missouri river to cut off the retreat of the hostile Indians whom General Sibley might drive before him from Minnesota and Eastern Dakota, and eventually to form a junction with Sibley. The two movements were not accurately timed and no junction was effected. While these two expeditions were making their toilsome progress over the plains scorched by the terrible heat of the summer, and suffering from the intense drought, which more than once threatened to destroy their horses and cattle, the Indian leader, Little Crow, who, accompanied by one of his sons, had ventured within the lines in the neighborhood of Hutchinson, Minnesota, was killed by a settler named Lampson, but his body was not recognized with certainty till nearly a month later. His eldest son succeeded him as chief of the insurgent Indians.

Gen. Sibley pursued his line of march, encountering but few Indians, and these generally flying before him, some into British territory, but the greater part retreating toward the Missouri river, whither, as rapidly as his train and troops, greatly distressed by the heat and drought, could move, he pursued them. Arriving at Big Mound near a lake on the western base of the hills of the Côteau du Missouri, on the 24th of July Gen. Sibley first encountered the Indians in force, and after a sharp action, begun on their part by the treacherous murder of a surgeon who approached them to meet a flag of truce, they fled, and were pursued about ten miles across the prairie. Sibley's loss in this battle was four killed and one wounded. The Indians lost heavily and abandoned the greater part of their wagons and stores. On the 26th at Dead Buffalo lake, the Indians made a dash at the horses and mules of the command, but were repulsed with great promptness and a considerable number of them slain. On the morning of the 28th of July they had another skirmish with the Indians at Stony lake, in which the whites suffered no loss but several Indians were killed. On the 29th Gen. Sibley's force reached the banks of the Missouri, in lat. 46° 42', lon. 100° 35', but had the mortification to find that the Indians had made good their escape across the Missouri, and were posted upon the opposite bank. They had abandoned almost all their provisions, and were evidently disabled from doing any further serious mischief. Gen. Sully had not been heard from, and as Gen. Sibley had but fifteen days' rations, and no hope of obtaining more till he reached the settlement, almost four hundred miles distant, he reluctantly abandoned the pursuit and turned his face eastward. In these successive battles the loss of the Indians had

been not less than one hundred and twenty killed and a considerable number wounded. The loss of the white troops had been seven killed, only four of them, however in battle, and three wounded. The distance marched was 585 miles from St. Paul.

From some unexplained cause Gen. Sully did not reach the Upper Missouri till a month later. On the 3d of September he encountered a considerable force of Indians at White Stone Hill, about 130 miles above the Little Cheyenne river, and 30 or 40 below the point where they crossed in July. A part of those encountered had been engaged in the battles with Sibley. A sanguinary battle ensued, resulting in the complete defeat of the savages, who lost a large number in killed and wounded, and 156 prisoners. Sully's loss was 20 killed and 38 wounded. Measures have since been taken for removing the Indian tribes now holding reservations in

Minnesota, westward to reservations around the head waters of the Missouri. The Winnabagoes have already been removed, and the Chippewas and Sioux are to follow. This accomplished and Minnesota will soon take the position which belongs to it among the States of the Northwest.

MISSIONS, FOREIGN AND AMERICAN.—The missions of both the Protestant and the Roman Catholic Churches have made, since the beginning of the present century, considerable progress, and are steadily advancing in almost every pagan country of the world. The results of these missions, whether viewed from a religious, or a political and social point of view, are becoming from year to year of more importance. The operations of the various missionary societies of the Protestant world are shown by the following list, which has been mostly compiled from the reports of the societies for 1859:

ASSOCIATIONS.*	AGENCIES.	SCENES OF LABOR.	INCOME.
I.—BRITISH.			
The Society for the Propagation of the Gospel in Foreign parts (1704).	500 Missionary Agents, Home and Foreign, including many Native Assistants, 300 Students, Catechists and Teachers.	East and West Indies, South Africa, Australia, New Zealand.	\$333,765
The Baptist Missionary Society (1792).	75 Missionaries, 112 Native Assistants, 43 Schools, 6,512 Scholars, 16,994 Communicants.	India, the W. Indies, Western Africa & Brittany in France.	132,565
The London Missionary Society (1795).	153 Missionaries, 700 Na. Agents, 183 Churches, 735 Schools, 33,625 Scholars, and 19,781 Communicants.	South Seas, W. Indies, South Africa, Mauritius, India, China.	525,985
The Church Missionary Society (1800).	227 Ordained Missionaries and Assistants, 2,170 other Assistants, 33,546 Scholars and 18,613 Communicants.	West. Africa, Rupert's Land, India, China, W. Indies, N. Zealand, East. Africa, Constantinople, Palestine.	806,880
The London Society for Promoting Christianity among the Jews.	78 Missionaries, Jewish College.	Europe, Persia, Palestine.	193,805
The General Baptist Missionary Society (1816).	8 Missionaries, 24 Assistants.	India, China.	17,500
The Wesleyan Missionary Society (1817).	216 Ordained Missionaries and Assistants, 1,611 other Assistants, 117,190 Scholars, 128,165 Communicants.	West Indies, India, China, Africa, Polynesia, Australia, etc.	645,381
The Church of Scotland Foreign Mission (1824).	9 Missionaries, about 60 Assistants and Agents, 3 Missionary Establishments in India, and staff of Agents.	India, European Continent, the Colonies.	51,825
The Irish, Presbyterian Ch. Foreign Mission (1840).	11 Missionaries.	India, European Continent, the Colonies, Syria.	36,370
The Welsh Foreign Missionary Society (1840).	4 Missionaries.	Brittany, India.	6,000
The British Society for Propagating the Gospel among the Jews.	24 Missionaries, Jewish College.	North Africa, European Continent.	28,090
The Edinburgh Medical Mission (1841).	2 Agents.	China.	3,575
The Reformed Presbyterian Church For. Miss. (1842).	4 Missionaries.	New Hebrides, Jewish Mission in London.	4,260
The Free Church of Scotland Foreign Mission (1843).	28 Missionaries, 14 Native Assistants, 79 other agents, 10,000 Scholars, Missionary Establishments in India.	India, South Africa, European Continent, the Colonies.	157,530
The Lew-Chew Naval Mission (1843).	1 Missionary and 1 Assistant.	Lew-Chew.	1,510
The English Presbyterian Ch. Foreign Mission (1844).	3 Missionaries.	China.	5,465
The United Presbyterian Ch. Foreign Mission (1847).	35 Ordained Missionaries, 65 Catechists and Teachers, exclusive of Canada and Australia.	W. Indies, Wes'm Africa, India, Southern Africa, Syria, North'n Africa, European Continent, the Colonies.	102,240
The Chinese Evangelization Society (1850)	5 Missionaries (1 Medical).	China.	13,742.50
The Turkish Miss. Aid Soc'y.		Turkey.	18,910
The Christian Vernacular Education Soc. for India (1853).		India.	8,940
The Moslem Miss. Society.			
The Primitive Methodist Missionary Society.	143 Missionaries, 88 Stations, 19,595 Communicants.	Australia.	72,804
The Chinese Society for Furthering the Gospel.		China.	
The Patagonian Miss. (1844).		Patagonia.	
Scriptural Knowledge Institution.	22 Missionaries.	Syria, India, Penang, China, British Guiana, British N. America.	8,800

* The figures enclosed by parentheses indicate the year of the foundation of a Society.

MISSIONARY ASSOCIATIONS—(Continued).

ASSOCIATIONS.*	AGENCIES.	SCENES OF LABOR.	INCOME.
II.—CONTINENTAL.			
The Moravian Missions (1732).	305 Missionaries and Assistants, 74,538 Converts and Catechumens.	W. Indies, Greenland, North America, Tartary, S. Africa, S. America, Persia, Egypt, Nicobar Islands, Labrador, China, India.	\$72,265
The Netherlands Missionary Society (1797).	23 Missionaries, 146 Native Assistants, 8,200 Scholars.	East Indies.	37,500
The Basle German Mission (1816).	51 Missionaries, 18 Assistants, 69 other Assistants, 1,212 Communicants, 2,342 Scholars.	Western Africa, India, China.	65,000
The Paris Society for Evangelical Missions (1822).	14 Missionaries, a number of Native Assistants, 1,300 Communicants.	South Africa.	22,725
The Rhenish Missionary Society (1828).	31 Missionaries.	China, South Africa.	18,000
The Berlin Missionary Society (1833).	15 Missionaries and several Assistants, about 200 Communicants and 600 Scholars.	South Africa.	20,750
Gossner's Evangelical Union for spread of Christianity (1856).	5 Missionaries, 13 Assistant Missionaries, 25 Male and Female Assistants.	India, Australia, the Chatham Islands.	3,980
Herrmannsburg Miss'n'ry Society (1852).	150 Missionaries, of whom 100 are colonists, 14 Stations.	East Africa.	29,012
Jerusalem Society.		Palestine.	3,430
Danish Miss. Society (1860).		Greenland.	
Stockholm Miss. Soc. (1835).		Lapland.	
Heldering's Miss. Soc. (1857).		Dutch Colonies.	
The Evangelical Lutheran, or the Leipsic Missionary Society (1836).	6 Missionaries, 67 Assistants, 2,152 Communicants, and 890 Scholars.	India, New Holland.	10,000
The North German Missionary Society (1836).	12 Missionaries.	Africa, India. (about)	20,000
The Norwegian Miss'n'ry Society (1842).	6 Missionaries and Assistants.	South Africa. (about)	10,000
The Berlin Missionary Union for China (1850).	3 Missionaries.	China. (about)	5,000
The Swedish (Lund) Mission.	2 Missionaries.	China. (about)	2,000
III.—AMERICAN.			
The Board of Commissioners for Foreign Missions (1810).	26 Missions, 127 Stations, 131 Out-stations, 161 Missionaries, 8 Ordained and 4 Unordained Physicians, 224 Male and Female Assistants, 21 Native Pastors, 222 Native Preachers, 254 Native Assistants, 5 Printing Establishments, 153 Churches, with 23,155 Members, 8,994 Scholars, not including Sandwich Islands.	India, Indian Archipelago, Western Asia, European Turkey, China, West Indies, Pacific Isles, North American Indians, Africa.	372,84
The Baptist Missionary Union (1814).	84 Stations, 539 Out-stations, 66 Missionaries, 64 Female Assistants, 220 Native Helpers, 192 Churches, 15,219 Members, 88 Schools, 2,000 Pupils, including European Agency.	Burmah, Assam, Teloo-goo country, North American Indians, Europe.	110,900
The Methodist Episcopal Missionary Society (1819).	56 Stations, 81 Missionaries, 30 Local Preachers, 6,869 Members, 63 Schools, and 2,535 Pupils, including the South Church.	North American Indians, Western Africa, China, India, Turkey.	84,245
The Episcopal Board of Missions (1820).	16 Stations, 23 Missionaries, 3 Native Preachers, 47 American and Native Teachers, 1,106 Church Members, 402 Scholars.	Greece, Western Africa, China, Japan.	99,476
The Society for Ameliorating the condition of the Jews.	10 Missionaries, 7 Colporteurs.	America.	15,405
The Free Will Baptist Foreign Missionary Society (1833).	4 Missionaries, 4 Native Preachers, 2 Churches, 75 Members and several Schools.	Orissa.	4,780
The Board of Foreign Missions of the Presbyterian Church (1837).	56 American and 2 Native Missionaries, 25 Male, 79 Female, and 32 Native Teachers, 512 Ch. Members, and 4,000 Scholars.	North American Indians, Western Africa, India, China, San Francisco.	237,975
The Foreign Missionary Soc. of the Lutheran Ch. (1837).	5 Ordained and 2 Unordained Native Missionaries, 86 Church Members, 355 Scholars.	Hindoostan. (about)	2,500
The Seventh Day Baptist Missionary Society (1842).	3 Missionaries.	Western Asia, China.	2,115
The American Indian Mission Association (1842).	6 Stations, 8 Sub-stations, 28 Missionaries and Assistants, 21 Churches, 1,300 Members, 165 Scholars.	North American Indians.	17,000
The Baptist Free Missionary Society (1863).	1 Missionary, 3 Female Assistants, 1 Native Pastor, 4 Native Teachers.	Hayti. (about)	2,500
The Associate and Associate-Reformed Presbyter'n Chs. (1844).	8 Missionaries.	India, Turkey, the Pacific.	Income included in account of Am. Pres. Board.
The Southern Baptist Convention (1845).	40 Missionaries, White and Colored, 26 Assistants, 11 Native Helpers, 1,225 Church Members, and 633 Pupils.	China, Western Africa, N. American Indians.	54,145
The American Missionary Association (1846).	14 Churches, 1,160 Members, 9 Teachers, 70 Male and Female Missionaries and Assistants.	West Indies, North American Indians, Pacific Islands, Si-am, California, Egypt.	45,150
The Nova Scotia Presbyterian Church For. Miss. (1848).	1 Missionary and several Native Assistants.	New Hebrides.	1,695
The American and Foreign Christian Union.	140 Missionaries and Laborers.	Roman Catholic and Greek Communities.	80,485
Missionary Society (1860).	38 Missionaries.	Hayti.	19,189

* The figures enclosed by parentheses indicate the year of the foundation of a Society.

It is safe to estimate the aggregate annual income of all the above societies at about \$5,000,000. These figures do not include the receipts of the purely home missions, either of Great Britain, the continent of Europe, or America. Nor does this calculation include the money raised for the Bible and tract societies of the Protestant nations of the world.

The aggregate number of missionaries at work in different parts of the earth is about 2,400, aided by about 7,000 assistant missionaries, native pastors and catechists.

Nineteen of the above societies reported, in 1859, an aggregate membership of 310,524. The total Protestant population of Asia was estimated, in 1863, at 479,000; in Africa at 719,000; in Australasia and Polynesia at 1,000,000.

The Roman Catholic Church has, since 1822, an Association for the Propagation of the Faith, which has its centre in Lyons, France, and receives its contributions from the Roman Catholics of the whole globe. Its annual receipts were, from 1843 to 1857, between three and four million francs (with the exception of the year 1848, when they fell to 2,845,691 francs, and 1852, when they rose to 4,790,468). Since 1857 they have been as follows: in 1857, 4,191,716 fr.; in 1858, 6,684,567 fr.; in 1859, 5,260,595 fr.; in 1860, 4,547,399 fr.; in 1861, 4,700,227 fr.; in 1862, 4,721,194 fr. More than one half of this sum is contributed by France alone: in 1862, 3,175,473 fr. Austria and Bavaria have special associations for foreign missions,—the Society of S. Leopold, and the Society of St. Louis,—but the annual income of each is small. There is also a juvenile missionary society called the Society of the Holy Childhood of Jesus, which was established in 1843, and like the Society for the Propagation of the Faith, receives its contributions from all Roman Catholic countries. Its receipts in 1861 amounted to 1,401,601 francs. For the results of the Roman Catholic missions, and statistics of Roman Catholic population in pagan countries, see ROMAN CATHOLIC CHURCH.

MISSISSIPPI. The desolation wrought in this State during the year, in consequence of the war, is almost indescribable. When Gen. Grant's army advanced as far south as Oxford and the Yallahusha at the close of 1862, the inhabitants had an opportunity to purchase a few of the most indispensable articles of clothing and household economy, but in the part of the State between Jackson and Granada there has not been even the most meagre stock of goods taken for three years. The destitution of the poor there reduced them almost to a state of barbarism. Of the fifty plantations on the road from Lagrange, Tennessee, to Holly Springs, Mississippi, only five were occupied. The rest were abandoned, and in a majority of instances, the buildings were burned. On the 26th of May, an expedition consisting of the 10th Missouri, 7th Kansas and 15th Illinois cavalry and 9th Illinois mounted infantry, left Corinth for the

purpose of a raid through a portion of country which had escaped the ravages of war. The expedition passed to Florence, Ala., and Savannah, Tenn., and returned to Corinth on the 31st, being absent five days and nights. What it accomplished in so short a space of time is thus described:

We burned seven cotton factories, costing an average of \$200,000 each. The Southern Confederacy had offered for the largest \$1,000,000, containing three hundred looms. They employed on an average one hundred men and the same number of women and children each. But their contents were more valuable than the buildings and machinery, having a large amount of stock and manufactured goods on hand. A large amount of steam flouring and saw mills were likewise burned. A number of blacksmiths' and wagonmakers' shops were destroyed, they being employed on Government work, and containing large numbers of wagons, arms of all kinds, &c., &c. A ton of powder, a large number of arms of English manufacture, 600,000 rounds of fixed ammunition, each cartridge having the crown of England stamped upon it, and several boxes containing shell were destroyed. A number of dwelling houses were accidentally burned by our shells. The splendid bridge near Florence was burned. All along the route, both going and returning, our command marched in line through the waving wheat, just ripe, utterly destroying it. An immense ("immense" is not the word—language cannot describe the scene—the smoke arising from burning corn cribs in every direction, and for miles each side of our path) amount of forage was destroyed; some was passed by on account of the close proximity of dwelling houses. Large quantities of meat, &c., were used, but more wasted and destroyed. The people appear to think that starvation is staring them in the face; but let their Government protect them, and they will no doubt fare very well. We captured two majors, two captains, four or five lieutenants, and about one hundred men. A large rebel flag was also captured. An immense amount of stock—horses, mules, oxen, cows, carriages, &c., &c.—was taken and turned over to the Government. About twenty men, who have escaped conscription by lying in the bush and other places of concealment, accompanied us into camp, and are joining some one of our regiments here. We brought about one thousand contrabands—men, women, and children—about two hundred and fifty of them joining the negro brigade. And all with a loss of less than thirty wounded and missing.

About the same time an expedition consisting of six brigades, and numbering about ten thousand men, moved up between the Big Black and Yazoo rivers. The object was to destroy the resources of the country, to prevent the enemy from subsisting their armies, and to drive out any force that might be in that region. The results of the expedition are thus described:
